| Liberality | Charity, Hospitality. |

# LISTS OF ABBREVIATIONS

## I. General

A.H. = Anno Hijrae (A.D. 622).
Ak. = Akkadian.
Alex. = Alexandrian.
Amer. = American.
Apoc. = Apocalypse, Apocalyptic.
Apocr. = Apocrypha.
Aq. = Aquila.
Arab. = Arabic.
Aram. = Aramaic.
Arm. = Armenian.
Ary. = Aryan.
As. = Asiatic.
Assyr. = Assyrian.
AT = Altes Testament.
AV = Authorized Version.
AVm = Authorized Version margin.
A.Y. = Anno Yazdagird (A.D. 639).
Bab. = Babylonian.
c. = *circa*, about.
Can. = Canaanite.
cf. = compare.
ct. = contrast.
D = Deuteronomist.
E = Elohist.
edd. = editions or editors.
Egyp. = Egyptian.
Eng. = English.
Eth. = Ethiopic.
EV = English Version.
f. = and following verse or page: as Ac $10^{34f.}$
ff. = and following verses or pages: as Mt $11^{28ff.}$
Fr. = French.
Germ. = German.
Gr. = Greek.
H = Law of Holiness.
Heb. = Hebrew.
Hel. = Hellenistic.
Hex. = Hexateuch.
Himy. = Himyaritic.
Ir. = Irish.
Iran. = Iranian.
Isr. = Israelite.
J = Jahwist.
J" = Jehovah.
Jerus. = Jerusalem.
Jos. = Josephus.
LXX = Septuagint.
Min. = Minæan.
MSS = Manuscripts.
MT = Massoretic Text.
n. = note.
NT = New Testament.
Onk. = Onkelos.
OT = Old Testament.
P = Priestly Narrative.
Pal. = Palestine, Palestinian.
Pent. = Pentateuch.
Pers. = Persian.
Phil. = Philistine.
Phœn. = Phœnician.
Pr. Bk. = Prayer Book.
R = Redactor.
Rom. = Roman.
RV = Revised Version.
RVm = Revised Version margin.
Sab. = Sabæan.
Sam. = Samaritan.
Sem. = Semitic.
Sept. = Septuagint.
Sin. = Sinaitic.
Skr. = Sanskrit.
Symm. = Symmachus.
Syr. = Syriac.
t. (following a number) = times.
Talm. = Talmud.
Targ. = Targum.
Theod. = Theodotion.
TR = Textus Receptus.
tr. = translated or translation.
VSS = Versions.
Vulg. = Vulgate.
WH = Westcott and Hort's text.

## II. Books of the Bible

### *Old Testament.*

Gn = Genesis.
Ex = Exodus.
Lv = Leviticus.
Nu = Numbers.
Dt = Deuteronomy.
Jos = Joshua.
Jg = Judges.
Ru = Ruth.
1 S, 2 S = 1 and 2 Samuel.
1 K, 2 K = 1 and 2 Kings.
1 Ch, 2 Ch = 1 and 2 Chronicles.
Ezr = Ezra.
Neh = Nehemiah.
Est = Esther.
Job.
Ps = Psalms.
Pr = Proverbs.
Ec = Ecclesiastes.
Ca = Canticles.
Is = Isaiah.
Jer = Jeremiah.
La = Lamentations.
Ezk = Ezekiel.
Dn = Daniel.
Hos = Hosea.
Jl = Joel.
Am = Amos.
Ob = Obadiah.
Jon = Jonah.
Mic = Micah.
Nah = Nahum.
Hab = Habakkuk.
Zeph = Zephaniah.
Hag = Haggai.
Zec = Zechariah.
Mal = Malachi.

### *Apocrypha.*

1 Es, 2 Es = 1 and 2 Esdras.
To = Tobit.
Jth = Judith.
Ad. Est = Additions to Esther.
Wis = Wisdom.
Sir = Sirach or Ecclesiasticus.
Bar = Baruch.
Three = Song of the Three Children.
Sus = Susanna.
Bel = Bel and the Dragon.
Pr. Man = Prayer of Manasses.
1 Mac, 2 Mac = 1 and 2 Maccabees.

### *New Testament.*

Mt = Matthew.
Mk = Mark.
Lk = Luke.
Jn = John.
Ac = Acts.
Ro = Romans.
1 Co, 2 Co = 1 and 2 Corinthians.
Gal = Galatians.
Eph = Ephesians.
Ph = Philippians.
Col = Colossians.
1 Th, 2 Th = 1 and 2 Thessalonians.
1 Ti, 2 Ti = 1 and 2 Timothy.
Tit = Titus.
Philem = Philemon.
He = Hebrews.
Ja = James.
1 P, 2 P = 1 and 2 Peter.
1 Jn, 2 Jn, 3 Jn = 1, 2, and 3 John.
Jude.
Rev = Revelation.

## III. For the Literature

**1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.**

Baethgen = *Beiträge zur sem. Religionsgesch.*, 1888.
Baldwin = *Dict. of Philosophy and Psychology*, 3 vols. 1901–1905.
Barth = *Nominalbildung in den sem. Sprachen*, 2 vols. 1889, 1891 ([2]1894).
Benzinger = *Heb. Archäologie*, 1894.
Brockelmann = *Gesch. d. arab. Litteratur*, 2 vols. 1897–1902.

## HYMNS.

**HYMNS** (Babylonian).—In the extensive literature of Assyria and Babylonia a considerable number of hymns are found, most of them in the old Sumerian language, and generally accompanied by renderings into Semitic Babylonian. Several examples of this class of literature, however, are known to us only in the Semitic idiom, and do not seem to have been based on any Sumerian original. These compositions are generally in praise of the gods, and are such as might be expected from a nation so appreciative of the benefits showered down upon them from on high as the Babylonians. Hymns to heroes are exceedingly rare, unless those addressed to Merodach, Tammuz, and other deities who are stated to have been originally kings may be regarded as poems of that nature.

Though the Sumero-Babylonian hymns are addressed to various deities, it cannot be said that they vary greatly. They sing the gods' praises, extol their might, and descant on the glories of their temples. They also speak of the gods' mercies, their places in Nature with regard to man, and the benefits which they conferred on the world as the Babylonians knew it. The wording is often well-chosen and even elegant, whether the idiom is Sumerian or Semitic.

The poetical form is somewhat monotonous, variety in these compositions, whether Sumerian or Semitic, having apparently not been aimed at. This is probably due to the fact that most of them were composed by the priests, with whom all religious forms originated, and who copied the style of older compositions.

Naturally many theories concerning the nature of primitive Sumerian poetry are possible, but in all probability it was the root-syllable, or the principal root-syllable, which was accentuated, the others being passed over lightly. The lines are generally divided into two parts by the cæsura, indicated by a space so arranged that the text seems to be written in two columns. The Sumero-Babylonian hymns are often of considerable length, but among the shorter compositions of this nature may be cited the hymn to the setting sun, from the temple-library at Borsippa—a gem in its way:

'Šamaš in the midst of heaven, at thy setting
May the bolt of the limpid heavens speak thee greeting;
May the door of heaven bless thee;
May Mišarum, thy beloved minister, direct thee.
At É-babbar, the seat of thy lordship, thy supremacy shall shine forth.
May Aa, thy beloved spouse, joyfully receive thee;
May thy heart take rest;
May the feast of thy divinity be set for thee.
Leader, hero Šamaš, may there be praise to thee;
Lord of E-babbar, may the course of thy path be straight;
Make straight thy road—go the direct road to thy resting-place.
Thou art the country's judge, the director of its decisions.'

The above being part of a series (the next was a hymn to the Sun-god on his rising), the composition deals only with the satisfaction and peace that the god experienced when, after fulfilling his task in the sky, he was greeted by his home and his spouse, and, having been refreshed, thought over all that he had seen on his course above the earth, the decisions of whose tribunals he directed. The first four lines are alternately of 11 and 15 syllables, while the 5th and 6th contain 18 each. At this

point are again four short lines (10–12 syllables), followed by two long ones (18–19 syllables). Evidently this regularity of form is intentional.

The Sun-god was one of the deities whose influence the Babylonians could appreciate, hence the tone of the above composition addressed to him. Enlil, the older Bel, however, was a divine personage whose ways were more inscrutable, and in some of the compositions addressed to him there is noticeable a tone of reproach. This is exhibited by the text beginning *Ame umašana šegibbi nebgin* (G. Reisner, *Sumerisch-babylon. Hymnen*, Berlin, 1896, p. 130 ff.)—a composition in dialect, where the god is called Mullil:

'The fold of the lord bitterly laments;
The fold, the fold of the lord, bitterly (laments).
O lord of the lands, honoured one, lord of the lands;
O lord of the lands, heart-remote, whose word is faithful;
He does not turn—with regard to his command he does not turn—
The honoured one, Mullil, changeth not his utterance.'

Troubling the waters, he caught the fish, he snared the birds, he sent 'the son of the plain' up to the mountain, and he sent 'the son of the mountain' down to the plain, etc.:

'O lord of the land, heart-remote Mullil, how long will thine heart not be appeased?
Father Mullil, who regardest, how long will thine eye not pity?
Thou who coverest thine head with a garment, how long?
Who sinkest thy chin (lit. 'neck') to thy bosom, how long?[1]
Who closest thine heart like a reed, how long?
Honoured one, who placest thy fingers in thine ears, how long?'

A kind of litany closes this long and interesting enumeration of 'the older Bel's' inattention to the world created under his auspices. It contains much hidden teaching of the Babylonian priesthood.

Before the rise of Merodach, the worship of Enlil was probably more favoured in Babylonia than that of almost any other god except Ea, and the importance of Niffer, which was originally his city (before the adoption of Ninip as patron), always maintained Enlil's supremacy. This is shown by the descriptive hymn published in *PSBA*, March 1911, p. 85 ff. After describing the district wherein the temple of Enlil and his spouse Ninlil lay, the text continues as follows:

'The god fixing the fate of (? everything)
Causeth Enlil to be taken to the reception-hall.
Enlil, may the sodomite (?) go forth from the city;
Nu-namnir,[2] may the sodomite (?) go forth from the city—
O Enlil, for the fate which thou hast decided;
O Nu-namnir, for the fate which thou hast decided.
Enlil cometh, Ninlil descendeth—
Nu-namnir cometh—the king.
Enlil calleth to the man of the great gate:
"Man of the great gate, man of the lock—
Man of the bolt, man of the holy lock—
Thy lady Ninlil cometh!
If (anyone) ask thee for my name,
Thou shalt not reveal to him my place."
Enlil calleth to the man of the great gate:
"Man of the great gate, man of the lock—
Man of the bolt, man of the holy lock—
Thy lady Ninlil cometh—
The handmaid who is so bright, so shining!
Let none woo her, let none kiss her—
Ninlil so bright, so shining!"

Enlil, the bright, the fair, will pronounce the decision.'

In contradistinction to the 'heart-remote Enlil' or 'older Bel' is his younger representative, Bel-Merodach, 'the merciful one,' who, later, took Enlil's place. The hymns to Merodach are naturally, from the attributes of that deity, among the most interesting:

'The merciful one among the gods,
The merciful one who loveth to vivify the dead—
Merodach, king of heaven and earth,
King of Babylon, lord of E-sagila,[3]
King of E-zida, lord of E-maḫ-tila,
Heaven and earth are thine;
Even as heaven and earth are thine,
The incantation of life is thine,
The philtre of life is thine,
*Mu-azaga-gū-abzu*[1] is thine,
Mankind, the people of the black head;
The living creatures, as many as there are, which bear a name in the land;
The four regions, as many as there are;
The Nun-galene, which are the host of heaven and earth, as many as there are,
To thee do they (turn) their ear.'

More popular than other deities of the Bab. pantheon were in all probability Tammuz and Ištar, whose worship goes back to the fourth millennium B.C. Hymns to them are generally composed in dialectic Sumerian, and are, therefore, of comparatively late date. As examples of Semitic Babylonian hymns to these deities will be found farther on, an extract from the exceedingly well-preserved bilingual hymn to Ištar, excavated by George Smith, is given here:

'The light of heaven, which dawneth like fire in the land, art thou.
Goddess in the earth, in thy fixed abode;
She who, like the earth, stately advanceth, art thou.
As for thee, a path of righteousness blesseth thee.'

The goddess then answers:

'Twin sister of the sun, the adornment of the heavens,
To produce the omens I exist—in perfection I exist;
To produce the omens for my father Sin I exist—in perfection I exist;
To produce the omens for my brother the Sun I exist—in perfection I exist,' etc.

Though daughter of Anu, the god of the heavens, Ištar is here called daughter of Sin or Nannar, the Moon-god, probably because, like the moon, the planet shows phases. She was regarded as the sun's sister because she accompanied him on his course, sometimes at his rising, at other times at his setting.

One of the gods of war and also god of pestilence—Nergal, patron-deity of Cuthah—was worshipped as one of the sons of Enlil, the great divinity who, as the author of the story of the Flood informs us, desired to destroy mankind to prevent them from increasing too quickly on the earth. Notwithstanding Nergal's unsparing nature, hymns were addressed to him, and he was glorified therein with every confidence that harm would not overtake the Babylonians at his hands, but would befall their enemies:

'Let me glorify the hero of the gods, the powerful, the brilliant one, the son of Enlil;
Urra (*i.e.* Nergal) let me glorify, the hero of the gods, the powerful, the brilliant one, the son of Enlil;
The beloved of Enlil, the supreme leader, the avenger of his father:
The offspring of the Lady of the gods, the great queen, the son of the king, who trusts in his might;
The clever one of the gods, the sublime oracle-priest, the great hero, the trust of Enlil.'

He is, after this, addressed as the one who overcomes evil devils and fates, the evil and powerful foe, subduing the evil gods, and loving the saving of life. Bêl-rêmanni, who seems to be mentioned as the composer of the hymn, asks for the god's favour upon the city of Marad, where the god was worshipped; and for the saving of his own life, which was threatened by some hostile fate. Another noteworthy Sumerian hymn addressed to Nergal is in the form of verses chanted by the priest, and repeated by the people, as follows:

Priest: 'His bright image (?) overshadoweth the demons right and left.'
People: 'His bright image,' etc.
Priest: 'The long arm whose blow (*i.e.* disease and pestilence) is invisible, the evil one with his arm [he smiteth].'
People: 'Nergal, the long arm,' etc.

This text, which is very mutilated, was of considerable length when complete, and is important not only on account of its form and the words used, but also because of the light which it sheds upon the Babylonian conceptions of this deity.

Another Sumerian hymn (*WAI* iv. pl. 26, no. 8, and 27, no. 3), regarded as being in the form of a

[1] Cf. 1 K 18[27].
[2] Probably another name (or title) of Enlil.
[3] The temple of Bel there.

[1] 'The holy incantation, the word (from) the Abyss,' so called because communicated to Merodach by Ea, king of the Abyss and lord of wisdom

dialogue, differs widely from the above. To what god it is addressed, however, is uncertain:

Priest: 'In [affliction] of heart, in evil weeping, in sighing
    he sits;
In bitter crying, affliction of heart,
  In evil weeping, in evil sighing,
  He moans like a dove, in anguish night and day.
To his merciful god he lows like a wild cow—
  Bitter sighing he constantly makes.
To his god in supplication he has bowed down his face;
He weeps, crying out without ceasing.'
Penitent: 'I will tell my deed—my unspeakable deed!
I will repeat my word—my unspeakable word!'
(These lines are repeated, after which the text is broken away.)

From the other inscriptions of a similar kind, it would seem that the gods of Babylonia loved to hear the confessions of their worshippers, which, composed in poetical form, were regarded as having weight with them to the penitent's advantage (cf. also art. CONFESSION [Assyr.-Bab.], vol. iii. pp. 825–827).

The above extracts show the nature of the Sumero-Babylonian hymns, composed, apparently, in that ancient idiom, and generally, on the tablets which have preserved them to us, provided with a Semitic (Assyro-Babylonian) translation. Those composed in the Semitic Babylonian (Assyrian) idiom only were modelled, to a certain extent, upon the Sumerian hymns, but, naturally, as the language is a widely differing one, the poetical form departs from that of the old writers of Sumer. The personal and prepositional infixes of the Sumerian verb, and the use of post-positions instead of prepositions, account for such differences as are noticeable.

As far as can be judged, the diction of Semitic Babylonian poetry is more regular, and, therefore, has an appearance of greater dignity. Each half-verse has four principal accents, as a rule, though this is by no means without exceptions. The following will give an idea of the nature of the Semitic compositions:

Thou, Ištar, whose spouse is Tammuz,
Daughter of Sin, the heroine traversing the land,
She who loveth reproduction, she who loveth all men art thou.
I have given to thee thy great gift—
A *vaśa* of lapis-lazuli, a *multi* of gold, the adornment of thy
  divinity.
To Tammuz, thy spouse, take my pledge—
May Tammuz, thy spouse, take away mine indisposition.'

After this the suppliant addressed Tammuz himself:

'Tammuz, the lord, shepherd of Anu, son of Êa art thou;
  Spouse of Ištar the bride, ruler of the land;
  Clothed with the scarf (?), bearing the staff;
  Producer of all things, lord of the fold;
  Eater of pure (food), the ashcake;[1]
  Drinker of water from the sacred skins,' etc.

In certain of the Semitic compositions a similarity with the Hebrew psalms has been pointed out. The following is from a tablet of this nature:

'God, my lord, maker of my name;
Keeper of my life,[2] causing my seed[3] to be:
My angry[4] god, may thine heart be appeased;
My wrathful goddess, be at peace with me.
Who knoweth, my god, thy seat?
Thine holy dwelling-place, thine abode, have I never seen.[5]

. . . . . . . . .

As for ill-luck (?), let (it) pass from me—
Let me be preserved with thee.
Allot to me then the lot of life;
Let my days be long—grant (me) life.'[6]

Among the most noteworthy texts of the nature of hymns may be mentioned also those which accompanied the new-year ceremonies in honour of Merodach. The lines are couplets, the first of each being dialectic Sumerian, and the other Semitic Babylonian. Though the second is regarded as a translation of the first, this is only exceptionally the case. One of the couplets reads:

'Celestial king of men, celestial king who bestoweth;
Lord of kings, bestower of gifts,'

[1] So Zimmern; a cake baked in the ashes is apparently intended.
[2] Cf. Ps $66^{9}$. [3] Ps $89^{29}$. [4] Ps $7^{11}$.
[5] Cf. Job $11^{7}$ $37^{23}$. [6] Ps $21^{4}$.

and every other line at most merely reflects the sense of that preceding.

Among the royal hymns are compositions containing the names of Nebuchadrezzar I. of Babylon (about 1200 B.C.), Sargon of Assyria, Esarhaddon, and Aššurbanipal. The name of the last occurs in a dialectic bilingual psalm. A hymn containing the name of Nebuchadrezzar is an acrostic upon the name of the god Nebo.

LITERATURE.—Further examples will be found in A. H. Sayce, *Origin and Growth of Religion* (Hibbert Lectures, 1887), London, 1891, p. 149 ff.; H. Radau, *Sumerian Hymns and Prayers to the God Nin-ip* (= *Bab. Exp. of the University of Pennsylvania*, vol. xxix. pt. 1), Philadelphia, 1911; *PSBA*, 1906, pp. 203 ff., 270 ff.; 1908, pp. 53 ff., 77 ff.; 1909, pp. 37, 57 ff.; 1911, p. 77 ff.; and the works mentioned in art. BABYLONIANS AND ASSYRIANS, vol. ii. p. 319, section (*d*).

T. G. PINCHES.

**HYMNS (Buddhist).**—The word 'hymn' is ambiguous. It has been defined as a 'song of praise,' a 'religious ode,' a 'sacred lyric,' a 'poem in stanzas written to be sung in congregational service.' In the last of these various senses the Buddhists, who have neither churches nor chapels, neither congregations nor services, have consequently no hymns. In the other senses there are quite a number of hymns scattered throughout the longer prose books in the canon; and in the supplementary *Nikāya* we have twelve anthologies, mostly short, of religious poems of different kinds. These are collected in the anthologies either according to subject (as in the *Vimāna* and *Peta Vatthus*) or according to the kind of composition (as in the *Udānas* and the *Iti-vuttakas*).

An example or two will make this clear. In the *Sutta Nipāta*, undoubtedly containing some of the very oldest of these hymns, we have seventy-one lyrics of an average length of sixteen stanzas each. These are arranged in five cantos (each of which existed as a separate booklet before they were brought together in one book),[1] and in them the arrangement and order of the lyrics have little or no reference to the subjects of which the lyrics treat. Quite the opposite form of arrangement is found in the well-known *Dhammapada*, where all the verses are arranged according to subjects—such as Earnestness, Thought, Wisdom, Foolishness, the Path, Craving, Happiness, and so on. The title means 'Verselets of the Norm'—that is, of the *Dhamma*. This word is often rendered 'religion'; but the idea is not the same, and the word 'religion' is not found outside the European languages. More than half of these 'Verselets of the Norm' have been traced back to the extant canonical books.[2] The rest were verses current in the community at the time of the rise of Buddhism; and some of them may even be pre-Buddhistic, belonging to the stock of moral sayings handed down in verse among the general body of Indians interested in such questions. This will, however, always remain doubtful, as no verse has as yet been traced in pre-Buddhistic literature. We can only say for certain that quite a number of the verses are reproduced, in either identical or closely similar words, in the various sectarian books of later speculation. We cannot be sure that these verses were not first composed among the Buddhists.

The fact is (though it has not been noticed anywhere in the voluminous literature on the *Dhammapada*) that the 'Verselets of the Norm' deal for the most part with the lower morality of the unconverted man—that is, with the ethics more or less common to all the higher religions. This may explain the great vogue that this anthology

[1] See, on the growth of the *Sutta Nipāta*, Rhys Davids, *Buddhist India*[2], London, 1903, pp. 177–180. The Pāli work has been translated by V. Fausböll (*SBE*, vol. x.[2] [1898]), and a second edition of the text by D. Anderson appears in the *PTS* for 1913.
[2] For the details see Rhys Davids, *JRAS*, 1900, p. 559 ff.

has had in Europe.[1] Most of its verses were easily understood. They had none of the strangeness and difficulty of those dealing with the ethics of the Path. So also in India. When the Buddhists began to write in Sanskrit, they imitated the *Dhammapada*, changing the title, however, omitting the difficult verses, and adding others. This new anthology, the *Udānavarga*, became very popular, was current in different recensions, and was translated into both Chinese and Tibetan.[2]

The fate of the *Sutta Nipāta* has been exactly the opposite. It is concerned mostly with the higher ethics of the Path, and in both form and matter its hymns come much nearer to Christian hymns than do the 'Verselets of the Norm.' But it is scarcely read in Europe except by Pāli philologists, and except for three ballads which it contains. In India it did not survive the decline of Pāli, and it has not been translated into Tibetan or Chinese.[3]

In early times in N. India such hymns or verses were intoned or chanted either for edification or for propaganda. In the 7th cent. of our era I-Tsing gives an interesting account of the manner in which, in his day, the Sanskrit hymns then current were used as processionals, either round a monument to some religious leader or through the halls of the great Buddhist monastery at Nālandā.[4]

The *bhikkhus* in Ceylon now chant certain of the above-mentioned Pāli hymns in a kind of visitation of the sick—a ceremony called *Parittā*, instituted as a protest against the charms used by those of the peasantry who are still pagans at heart.[5] It is not known when or under what authority this custom was introduced, or to what extent it has been adopted.

LITERATURE.—M. Winternitz, *Gesch. der indischen Litteratur*, Leipzig, 1905 ff., ii. 60–134, gives a detailed account, with examples of all the early Buddhist anthologies. An earlier account is in Rhys Davids, *Buddhism: its Hist. and Lit.*, London, 1896.

**HYMNS** (Celtic).—Apart from scanty notices in classical authors, documentary information regarding the continental Celts is lacking, and we have no relics of their sacred chants or poetic invocations or hymns. Cæsar writes that those who went for instruction to the Druids 'are said to learn there a great number of verses' (*de Bell. Gall.* vi. 14); and there can be little doubt that many, if not all, of these were of a religious or magical character—runes, poetic invocations and incantations, and hymns. The prayers which accompanied sacrificial rites or were used in invocations and the like were perhaps couched in formulæ of verse like the Roman *carmina*. This is certain so far as the battle-chants are concerned. These, as well as the loud war-cries, are referred to by several writers, and are called *cantus*, or ᾠδὴ ἀπειλητική. These ritual battle-chants were accompanied by a dance, as well as by the waving of weapons and shields, and by measured noises—the clashing of the weapons, etc. (cf. Livy, xxi. 28, xxxviii. 17; Dio Cassius, lxii. 12; Appian, *Celtica*, 8). In single combats, warriors chanted or declaimed as they advanced on their opponent (Sil. Ital. iv. 278–280, Livy, vii.). After a victory an exultant chant was sung (Livy, x. 26. 11, *ovantes moris sui carmine*; cf. xxiii. 24). These warrior-chants were composed by bards, and doubtless included both invocations of the war-gods and the recital of ancestral deeds; and they may have been a kind of spell ensuring the help of the gods. Chants were likewise sung by the 'priestesses' of Sena for the purpose of raising storms (Mela, iii. 6).

Such hymns were used also by the Irish Celts (cf. CELTS, vol. iii. p. 298b). A curious archaic chant, preserved in the *Book of Leinster*, is said to have been sung by Amairgen, the poet of the Milesians, as they approached Ireland, and by its means the magical dangers raised against them were overcome. It is an invocation of Nature or of the natural scenery and products of Ireland, and was evidently a ritual chant used in times of danger. The following represents the translation given by H. d'Arbois de Jubainville (*Cours de litt. celt.*, Paris, 1883–1902, ii. 250; *Book of Leinster*, 12, 2; cf. the gloss on these lines cited by E. O'Curry, *Manners and Customs of the Ancient Irish*, London, 1873, ii. 190):

'I invoke the land of Ireland!
Shining, shining sea!
Fertile, fertile hill!
Wooded valley!
Abundant river, abundant in waters!
Fish-abounding lake!
Fish-abounding sea!
Fertile earth!
Irruption of fish!
Fish there!
Bird under wave!
Great fish!
Irruption of fish!
Fish-abounding sea!'

Such archaic formulæ, unrhymed and alliterative, which have parallels in savage ritual, may have been in common use. There is a similar one in the words spoken after the destruction of Da Derga's hostel, by MacCecht on his finding water. He bathes in it and sings (*RCel* xxii. [1901] 400):

'Cold fountain,
Surface of strand,
. . .
Sea of lake,
Water of Gara; stream of river;
High spring well; cold fountain.'

At a still later period there is a trace of hymn-invocations in Highland folk-custom in Lewis. A man waded knee-deep into the sea and poured out an offering of ale or gruel into the waters, chanting:

'O god of the sea,
Put weed in the drawing wave,
To enrich the ground,
To shower on us food.'

Those on shore took up the strain in chorus, their voices mingling with the noise of the waves (A. Carmichael, *Carmina Gadelica*, Edinburgh, 1900, i. 163; cf. M. Martin, *Descr. of the W. Isles of Scotland*[2], London, 1716, p. 28). In Ireland, the Scottish Highlands, and Brittany many charms still survive and are sung or chanted in connexion with magical rites, usually for healing, or as invocations for a variety of purposes. In these, names of the Persons of the Trinity, the Virgin, and the saints have taken the place of those of older divinities (for these see CHARMS AND AMULETS [Celtic] and reff. there given). Scanty as these data are, they prove sufficiently that the pagan Celts must have had a large number of hymns, chants, and the like in common use.

**HYMNS** (Chinese).—It must be premised that idolatry is not social in its service in the way in which Christianity is. The worshippers do not gather together in a congregation to hymn the praises of the gods, nor is singing employed by those who go into the temples to present their solitary petitions and prostrate themselves before the images.

In ancestor-worship there is an approach to a united service, but it is confined to the family or

[1] The translations into European languages are specified by M. Winternitz, *Gesch. der ind. Litteratur*, ii. 68.

[5] See R. C. Childers, *Pali-Eng. Dictionary*, London, 1872–75, s.v.

clan, and the use in such worship of an ode or hymn of praise is not entirely unknown. The *Shi King* (or *Book of Poetry*) contains among odes and folk-songs some hymns or sacred songs of filial piety, which were in use in ancient times in the worship of ancestors. The following is one used at one of the services and addressed to the progenitor from whom the kings of the Chow dynasty (1122–249 B.C.) traced their origin:

'O, thou accomplished great Hâu-chi,
To thee alone 'twas given
To be, by what we owe to thee,
The correlate of Heaven.

On all who dwell within our land
Grain-food didst thou bestow:
'Tis to thy wonder-working hand
This gracious boon we owe.

God had the wheat and barley meant
To nourish all mankind.
None would have fathomed his intent
But for thy guiding mind.

Man's social duties thou didst show
To every tribe and state:
From thee the social virtues flow,
That stamp our land "The Great."'[1]

A hymn in honour of his ancestors was sung before the Emperor of China when he performed ancestor-worship. It was divided into three parts, and was begun when His majesty stood before the table or altar on which were placed the representations of his ancestors. The second part was sung while he performed the kow-tow; and, after the offerings had all been made, the third part followed, during which the spirits of the ancestors were supposed to return to heaven. The hymn was accompanied by music of a slow and solemn nature, played on a number of instruments. The solemnity and pomp of the occasion were increased by grave men who postured, and by their motions and attitudes expressed the feelings which the Emperor should evince at such a time, while the singers also expressed in the words of the hymn the sentiments that should actuate him. The first stanza of the second part was as follows:

'To you I owe my all, as I willingly confess.
Your body is the source of this body I possess.
The breath I breathe it comes from you,
From you the strength to dare and do.
When my deep gratitude I wish to make appear
And prompted by high duty devoutly I draw nigh,
I rejoice, Paternal Spirit, that you are present here,
Descending to greet me from your glorious home on high.'[2]

In the worship of Confucius—a State-worship performed at stated times by high officials of government—a stanza adulatory of the Sage was chanted by a chorus:

'Confucius! Confucius!
Great indeed art thou, O Confucius.
Before thee
None like unto thee;
After thee
None equal to thee.
Confucius! Confucius!
Great indeed art thou, O Confucius.'[3]

Hymns also are used in the worship of Heaven and Earth. In the Taoist canon there are several hymn-books containing hymns of aspiration and of repentance, and hymns to the 'Three Pure Ones,' as well as to other deities, such as 'The Dipper,' or 'Charles's Wain,' and certain other constellations and stars.[4] In the Buddhist books used in worship there are also stanzas which are chanted with the rest of the ritual employed in the services. In both Taoist and Buddhist tracts short hymns of praise to deities are to be found.

The old rural processions in Greece and Rome, which were mixed with religious ideas, had a counterpart in the China of Confucius, and the Sage countenanced them.[1] These ceremonies of *No*, as they were called, were somewhat of the nature of a play, and the processions were composed of singers. The performers at the present day sing as they go round. The name now is *Yang ko*, 'raising a song,' and a Buddhist priest in modern times forms one of the number.[2]

The celebrated Venetian traveller, Marco Polo, in his account of funerals at the city of Kinsay (the modern Hang Chow), says that the mourners follow the corpse to the sound of music 'and singing hymns to their idols,' and that

'the instruments which they have caused to be played at his funeral and the idol hymns that have been chaunted shall also be produced again to welcome him in the next world; and that the idols themselves will come to do him honour.'[3]

LITERATURE.—This is cited in the footnotes.

J. DYER BALL.

**HYMNS** (Greek Christian).—The vast accumulation of Christian hymns in the Greek language falls, in respect of form, into three sections differing widely in magnitude and importance. Thus we have (1) the prose hymns of Christian antiquity; (2) Christian hymns in the ancient quantitative metres; and (3) the new rhythmical compositions of Byzantine hymnody, the metre of which depends upon the enumeration of syllables and the stress accent.

**1. Prose hymns.**—The first praise-book of Greek-speaking Christians was the Psalter in the LXX version. This was at an early period supplemented by an appendix containing other Biblical passages, nine of which, already brought together in the *Codex Alexandrinus*, form the group of so-called *Songs*, viz. (i.) and (ii.) the Songs of Moses (Ex $15^{1-19}$ and Dt $32^{1-43}$); (iii.) that of Hannah (1 S $2^{1-10}$); (iv.) Habakkuk (Hab 3); (v.) Isaiah (Is $26^{9-20}$); (vi.) Jonah (Jon $2^{3-10}$); (vii.) and (viii.) the Three Holy Children (Dn $3^{26-56}$ and $3^{57-88}$ LXX [=Three $^{3-34.\ 35-61}$]); and (ix.) Mary and Zechariah (Lk $1^{46-55.\ 68-79}$). Here we should note that the mode of rendering these Biblical lyrics was of decisive importance for the development of Greek hymnody in the centuries to follow: they were recited by a single person, while the congregation, or, as representing it, the choir, simply responded at the end of every verse with a short refrain, the *hypopsalma*. Such *hypopsalmata* (a list of which, as used in Constantinople in the early Middle Ages, is still extant [*DACL* i. 3031 ff.; cf. 2467 f.]) may be said to constitute the simplest form of Christian prose hymnody in the Greek language.

Even in the 1st cent., however, we can trace the production of new Christian hymns, for which the Greek text of the 'Psalms of David' served as a model; and, as that text has no regular metrical structure, the imitations likewise were composed in prose form. Now and then we hear the echoes of such 'psalms and spiritual songs' in the Epistles of Paul and the Apocalypse (see Eph $5^{14}$, 1 Ti $1^{15}$ $3^{16}$ $6^{15f.}$, 2 Ti $2^{11-13}$, Tit $3^{4-7}$, Ja $1^{17}$ [Julian, *Dict. of Hymnol.*$^2$, London, 1907, p. 458$^b$]); and in the 2nd cent. we find a non-Christian writer, Pliny the Younger (*Ep.* x. 97), speaking of the 'carmen' in which—as an essential element of their worship—the Christians of Bithynia glorified 'Christ as their God secum invicem,' *i.e.* probably, in some kind of antiphonal song. The statement of the heathen writer strikingly recalls 'the psalms and hymns written by the brethren from the beginning,' which, on the testimony of a work against Artemon, quoted by Eusebius (*HE* v. xxviii. 5) as by an unknown writer of the early part of the 3rd cent.,

[1] Legge, *Chinese Classics*, i. 97.

praised 'Christ the Word of God, calling Him God.' The hymn which was composed by Athenogenes, who suffered martyrdom in the reign of Septimius Severus (193–211), and to which St. Basil appealed (*de Spir. Sanc.* 29) in support of the Deity of the Holy Spirit, was probably one of those primitive prose hymns. An early Christian hymnal of this kind—the 'Odes of Solomon'—fragments of which had long been known in a Coptic translation, has been recently re-discovered, almost complete, in a Syriac version. But whether the Gr. text upon which the two versions undoubtedly rest was the original or was itself a translation from Hebrew; whether these spirited lyrics are, as a whole, of Christian origin, or simply a Christian redaction of a Jewish original; whether they are Gnostic or Montanistic productions or hymns of the Catholic Church—these questions are still in dispute, and may perhaps never find a definite answer. It may at all events be taken as a fact that a type of religious poetry designed to compete with the OT Psalter was zealously cultivated in Gnostic circles. Certain pieces in the Apocryphal Acts of Thomas and Acts of John give us an idea of the nature of such heretical compositions, although in the case of those in the Acts of Thomas the Syriac text is probably the original.

The favour enjoyed by such non-Biblical pieces among heretics naturally led the Church to make a stand against them and their use in Divine service. Thus Paul of Samosata, writing not later than A.D. 260–270, sought to justify the suppression of certain 'psalms' in praise of Christ, to which he objected on the ground that they were of quite recent origin (Eus. *HE* VII. xxx. 10). Nevertheless, the Church of the 4th cent. still held in high regard various prose hymns which were undoubtedly a legacy from the pre-Constantinian period, and at least two of these maintain to the present day an important place in the worship of the Greek Church. (*a*) The evening hymn sung at the close of vespers, the Φῶς ἱλαρόν, is attested *c.* 375 by St. Basil (*loc. cit.*) as a universally known part of Evening Prayer, the origin of which was altogether unknown. (*b*) The corresponding morning hymn, the *Δόξα ἐν ὑψίστοις, θεῷ*, called 'the Great Doxology'—an extended form of the original on which the Western 'Gloria in excelsis' is based—occurs in the group of hymns appended to the *Codex Alexandrinus*, and also in a more archaic redaction at the end of bk. vii. of the *Apostolic Constitutions*. In the former place is found another evening hymn and a hymn-like grace before meat. Moreover, the Gr. original of a short hymn to which the Rule of St. Benedict (ed. Woelfflin, Leipzig, 1895, p. 25. 20) gives a place in the monastic Morning Office of the Western Church is, at least, not of later origin than these. A relatively early origin must be assigned likewise to another prose text having the essential features of a hymn, viz. the 'Prologue,' which in the consecration of water at the Feast of Epiphany precedes the consecration prayer proper, and is a glorification of the day upon which Jesus was baptized in the Jordan, akin to the Easter 'Exultet' of the Roman liturgy. Of this there are, besides the Greek, a Slavic and a remarkably interesting Armenian version. Certain Gnostic features still adhering to it show that its composition was long prior to the days of St. Sophronius of Jerusalem († 638), to whom it is ascribed, apparently without MS authority, in the printed edd. of the Gr. Euchologion.

**2. Hymns in classical metres.**—Besides the prose hymns connected with the Gr. version of the OT, we find also, from the 2nd cent., a Græco-Christian hymnody employing the ancient poetic forms. It is in accordance with the general position of Gnosticism in the religious sphere that it took the lead here, and guided the development along fresh lines.

We are unable to say whether the 'psalms' or 'odes' of Basilides and a psalm-book of Marcion or the Marcionites attested by the Fragmentum Muratorianum belonged to the prose or the metrical type. But a hymn of the Naasenes and a specimen of the psalms of Valentinus, inserted by Hippolytus in his *Philosophoumena* (v. 10, vi. 32), both exhibit logaœdic anapæsts, and thus, in spite of a certain irregularity of treatment, show indubitably that here the Gnostic hymnology studiously followed the traditional forms of ancient lyrical composition.

In the sphere of Catholic Christianity the new style appears in the hymn to Christ with which Clement of Alexandria closes his *Pædagogus*. Apart from its introductory lines, which are of very doubtful authenticity, this hymn is manifestly composed in anapæsts, and, as compared with the Gnostic survivals, exhibits an even more rigid adherence to the laws of classical metre, while its contents do not seem to preclude the possibility that compositions of the kind were actually used in the service of the Alexandrian churches about the beginning of the 3rd century. The further stages of a development which doubtless begins at this point are certainly very obscure.

The list of the works of Hippolytus inscribed upon his statue in the Lateran makes mention of 'Odes.' We hear of an Egyptian bishop named Nepos as a prolific writer of psalms about the middle of the 3rd cent. (Dionysius of Alexandria, *ap.* Eusebius, *HE* VII. xxiv. 4), and of Hierakas, a rigorously dualistic ascetic, likewise an Egyptian (*c.* 300), who wrote 'psalms of a new kind' (Epiphanius, *adv. Hær.* lxvii. 3 [*PG* xlii. 176]); and we may assume that all these writers worked upon the lines of the development in question, although the historical data are not sufficient to substantiate the hypothesis.

To the hymn of Clement, however, is closely allied in a formal way a fragment preserved in a papyrus of the Amherst Collection; this also is in anapæstic metre, and dates probably from the 3rd rather than the 4th century. It has been described as a versified ethical catechism of early Christendom, although it might quite as fitly be regarded as a hymn forming part of the liturgy of initiation, and addressed to the newly baptized. By reason of the formal characteristics which differentiate it from Clement's hymn to Christ, it is of great interest in the development of Greek hymnody.

Its anapæsts, *e.g.*, are constructed with as much regard to accent as to quantity, and it thus marks the transition from the older metres of quantity to the newer metres of accent; while its verses are linked together by the thrice-repeated artifice of the alphabetical acrostic, which was to form so prominent a feature in the rhythmical hymns of the Church.

This artifice is also the connecting medium between the strophes of a hymn—likewise in anapæstic measure—which purports to be sung by a soul entering after death into the enjoyment of eternal bliss, and the conclusion of which is found in a Berlin papyrus. Above all, the acrostic forms the connective between the strophes of the 'psalm' of the virgins with which St. Methodius of Olympus († *c.* 311) concludes his *Symposion*. The latter is perhaps not entirely unrelated to the ancient *Parthenia* of Alcman and Pindar. But in the expansive freedom of its iambic rhythms it conforms not less closely to the accentual style of rhythmical verse than does the anapæstic text of the Amherst papyrus, and in the *ephymnion* repeated after each strophe there appears for the first time another feature which came to be of great importance for that kind of composition. We may, therefore, regard this production, which was in the first instance purely literary, as the representative of really vital elements in contemporary liturgy.

An altogether different type appears in the archaic Græco-Christian lyrics of the subsequent part of the 4th and the beginning of the 5th century. While it is explicitly said of the heresiarch Apollinaris, bishop of Laodicea from A.D. 361, that he sought to win acceptance for his doctrines by composing short metrical lyrics intended for the use not only of the community in public worship, but also of individuals in their hours of work or recreation (Soc. *HE* iii. 16), yet in general this type of lyric took a course which from the outset diverged widely from the sphere of congregational worship. This is true not only of the lost 'Odes' in which the younger Apollinaris (rather than his father) tried to emulate the art of Pindar, and of the

extant hexameter paraphrase of the Psalms which bears his name; it holds good equally of the hymn-like poems which are found in the rich and varied literary heritage of St. Gregory of Nazianzus, by far the most eminent representative of this school († 389 or 390). As altogether subjective expressions of personal piety, these compositions of Gregory, which in their learned perfection of form are closely akin to the Hellenistic poetry of the Ptolemaic period, cannot possibly be regarded as liturgical prayers uttered by a Christian assembly. Of the ten extant 'hymns' in the Doric dialect composed by the Neo-Platonic philosopher Synesius, who became bishop of Cyrene in 406 or 409, not more than five in all (nos. 5 and 7–10) belong to the Christian period of their author, and these, no less than the poems of Gregory, exhibit an individualistic spirit and a technical structure incompatible with their liturgical use.

In the Byzantine period the classical metres sometimes employed in hymnody as in other kinds of poetry came to be reduced in effect to two, viz. the Anacreontic strophe and iambic trimeter. Hymns to saints are first found among the Anacreontics of St. Sophronius, in which the artistic devices and forms of the new rhythmical poetry appear in the linking together of the regular strophes by the alphabetical acrostic and the introduction of a stanza with a different metrical structure after every four strophes. As regards the poems which in their general style may be compared with the hymns of the Western writer Prudentius, there is, again, good reason to doubt whether they were ever actually used in the liturgy. Such liturgical use, on the other hand, is clearly implied by the note indicating the ecclesiastical tone to which the Anacreontic penitential hymn of a certain Syncellus Elias was to be sung, and here, too, the strophes are connected by the alphabetical acrostic. The iambic trimeter was used by Georgius Pisides, deacon in the Church of St. Sophia in Constantinople in the reign of Heraclius (610–641), in an Easter hymn of 129 verses; though it is certain that this work never held a place in the liturgy. As regards a truly liturgical type of composition in rhythmical verse, we find that St. John of Damascus (cf. below, 3 (5)) employed the ancient dramatic metre in his three canons —for Christmas, Epiphany, and Pentecost, respectively—in which the initial letters of the iambic verses form an acrostic of two elegiac distichs. It is true that this artifice produced no imitations worthy of note, and it was left for a much later writer, Manuel Philes, in the first half of the 14th cent., to commit the barbarism of recasting in quantitative iambic trimeters one of the noblest examples of accentual sacred song in the early period, the hymn *Akathistos* (cf. below, 3 (2)).

3. **Rhythmical hymnody.**—The earliest examples of Græco-Christian sacred poetry in a metrical form based upon the stress accent alone are found in two of the poems of St. Gregory of Nazianzus, where they appear strangely out of keeping with their surroundings. One of them at least, an evening song addressed to Christ, is of the nature of a hymn. The fact which conditioned the development of the new type of hymnography was that Greek had in ever greater measure lost the quantitative distinction of its vowels. The development was prepared for by the artistic prose of the rhetoricians, and was in an equal degree influenced by the example of Christian Semitic poetry, which was accentual from the outset. Besides the abandonment of quantitative metre, there were two artistic devices which had an important influence upon the new *genre*, viz. rhyme and the acrostic. The purely rhetorical use of rhyme emanated unquestionably from Greek prose, which in the hands of Christian preachers made use of it with increasing frequency, while the employment of the acrostic was based essentially on Semitic models, though, as has already been noted, an occasional use of this artifice can be traced in the earlier poetic composition. Whether and to what extent, in addition to the influence of the ancient literary prose, that of ancient quantitative metre made itself felt in the extraordinarily copious and artistic forms assumed by the new rhythmical poetry must be left an open question.

(1) The simplest type of rhythmical hymnody—a type to which the two merely tentative pieces in the poems of St. Gregory of Nazianzus form a direct link of transition—is found in a class of hymns with lines of equal length, to which attention has been paid only in recent times. Of a group of primitive compositions of this type one example, found in a papyrus of the 6th or 7th cent., has permanently maintained a regular place in the 'Great Apodeipnon,' the solemn compline for Lent in the Greek rite. The other components of the group must also have been actually intended for a place in the liturgy. One of them is a special form of Evensong for the twofold festival of the Birth and Baptism of Christ, still celebrated together on the 6th of January (cf. artt. CHRISTMAS, EPIPHANY). Another begins with what are in reality the opening words of a hymn after communion, of which a piece in the *Antiphonary of Bangor* (ed. F. E. Warren, London, 1893–95, i. 32 *v*, *Ad commonicare*, 'Corpus domini accipimus') may be a Latin translation. All these were probably composed in the 5th century.

To the same period belongs a song in adoration of the Cross on Good Friday which is found only in MS liturgies of the Italian Basilians. Its two-line strophes, which already indicate the beginnings of a less simple metrical structure, are connected by means of the alphabetical acrostic, which it has in common with several other kindred poems (on the Mother of God, for Christmas, for the festival of the Presentation in the Temple).

This form was resorted to at an early period in Greek imitations of the poetic meditations of St. Ephraim. Subsequently it was used only exceptionally and in unpretentious compositions of a wholly personal character; as, *e.g.*, in a *ὕμνος ἐκ προσώπου Βασιλείου τοῦ δεσπότου* by Photius († 891), and in a penitential hymn of the Emperor Leo VI. (886–912)—compositions in strophes, which exhibit alphabetical acrostics, and the accentual metre of which seeks to imitate the quantitative Anacreontic.

(2) Dependence upon the Semitic poetry of Syria, of which St. Ephraim († 373) was the chief representative in Nisibis and Edessa, appears in the principal form of ancient Byzantine hymnody, viz. the *kontakion*. Here the Eastern Aramaic class of *sôgîthâ* was of fundamental importance, though this, again, in its characteristic features can be fully understood only as a product of Hellenistic influence. Its fructifying effects upon the work of Greek hymn-writers, according to a recent theory, were to a great extent mediated by Greek preachers. The use of the (originally alphabetical) acrostic, an introductory stanza of a different metrical structure, the refrain, or *ephymnion*, sung by a choir, which, breaking in upon the solo parts, bound together the *procemion* or *kukulion* and the ordinary strophes, or *oikoi* ('houses'), and a highly dramatic treatment of the subject—such were the features borrowed from Syrian hymnody. The rhetorical splendour of the diction, and an artistic structure of line and stanza which was intimately related to the melody and did not need to fear comparison with the most elaborate metrical examples of ancient choral lyric poetry, were contributions of the Greek genius. Of Greek origin likewise were those forms of the acrostic which, instead of being alphabetical, give the name of the writer, or the theme, or the liturgical purpose of the piece—forms which, it is true, are found also in the *Carmina Nisibena* of Ephraim.

If the *Virgins' Psalm* of Methodius may be regarded as a transitional form between the hymns imitative of ancient models and the *kontakion*, there are other two early compositions which show how the new mode was related to the prose hymn. These are (*a*) a purely prose hymn which is found, almost intact, in a 6th cent. papyrus in the John Rylands Library, and which in its alphabetical acrostic and its short *ephymnion* (Κύριε, δόξα σοι) exhibits two essential features of the *kontakion*; and (*b*) a complete *kontakion* for Good Friday, which, however, surrenders the prose form for accentual metre only in the *ephymnion*, and which, like a related poem for Palm Sunday, is known thus far only in the Italo-Greek liturgy. The Good Friday *kontakion* is of interest also as regards its theme, being the earliest example of a lamentation supposed to be spoken by the suffering Saviour, after the style of the Western *improperia*.

The new species of poetic composition is first met with in its full maturity in a series of hymns and fragments of hymns which, like the earliest

examples just specified, are anonymous. The oldest instance is probably a *kontakion* on the first man, showing simple four-line strophes and the alphabetical acrostic. A lamentation of Adam for the loss of Paradise, as also a *kontakion* (dating from before 553) on the 'holy fathers' of the earliest councils, and a fragment of another on Elijah and the widow of Zarephath, deserve mention as compositions of singular vigour and beauty. If Cyriacus, the writer of a hymn on the raising of Lazarus, could with confidence be identified with the Palestinian ascetic of the same name who, on the testimony of his biographer, Cyril of Scythopolis (*AS*, Sept. viii. [1865] 151), acted as choirmaster (κανονάρχης) in the Laura of St. Chariton for thirty-one years (from 488), we should have to regard him as the earliest writer of *kontakia* known to us by name. But the unrivalled master in this kind of composition was Romanus, the deacon, who in the centuries following was revered as a saint and distinguished by the epithet of 'the Melodist.'

Romanus, born at Emesa of Jewish parents, removed from Beirût, where he had laboured in the Church of the Resurrection, to Constantinople in the reign of the Emperor Anastasius (491–518), probably towards its close, and filled the magnificent churches of Justinian's day with the music of his hymns. His sacred poems, according to a notice that is probably legendary, numbered nearly one thousand. Some eighty pieces bearing his name have survived, though with a legacy of authentic productions of undeniable merit tradition has mingled much that is spurious and inferior. The poets Dometius and Anastasius may be regarded as nearly contemporary with Romanus. Of the anonymous compositions of his time the most outstanding is the festal hymn for the second dedication of the Hagia Sophia of Justinian (562).

In this first and golden age of Byzantine hymnody, however, as in later times, it was not customary to create a new form of strophe and a corresponding melody for each fresh composition. On the contrary, the metre and melody of older pieces were frequently adopted. The typical strophe used as the pattern either of the *kukulion* or of the *oikoi* of a later song was called its *heirmos* ('series').

The heirmos reproduced in the *oikoi* of the so-called hymn *Akathistos* had already been used by Romanus, and the nucleus of that hymn must therefore have been composed as early as the 6th cent., and probably in the first third of it. Tradition assigns the highly esteemed Song in honour of Mary variously to Romanus himself and to a considerably later writer, Sergius, patriarch of Constantinople († 638), while Georgius Pisides and even as late a writer as Photius have also been credited with its authorship.

Originally a *kontakion* on the Annunciation, this production of the 6th cent. seems to have been subsequently transformed by the addition of a new *kukulion* into a song of thanksgiving addressed to the Most Blessed Virgin by the city of Constantinople for deliverance in the stress of war, and in all probability the change was made at the time when the city was threatened by the Avars in 626. It was at that period also that twelve of its twenty-four strophes were furnished with doxologies beginning with the word χαῖρε—ascriptions which form a signal contrast to the short *ephymnion* of a simple Alleluia at the end of the other twelve, and give a peculiar stamp to the whole.

In its enlarged form the hymn *Akathistos* was occasionally imitated, as in a lyric on St. Sabas the Younger by a melodist named Orestes, and in others on the Falling Asleep of the Most Holy Mother of God and on the Holy Cross by unknown authors. Even in later centuries, indeed, certain writers added not a little to the store of *kontakia* in the Greek Church. Writers whose compositions belong in the main to another and a later poetic type, such as Theodorus Studites and Joseph the Hymnographer (cf. below, (5)), cultivated also the older form. But in genuine poetic qualities the productions of the later period, destitute as they are, above all, of dramatic power, are far inferior to those of the 6th century. Then from the 10th cent. the *kontakion* itself lost the place which it had hitherto held in the liturgy.

The book known as the *Tropologion*, in which the hymns of this class were collected, fell more and more into oblivion. Only a few strophes of the older hymns, and at length—apart from the *kukulion*—generally but one, retained a permanent place in the daily office, and the poems composed for this office under the names of *kontakion* and *oikos* (or *oikoi*) were mere imitations of such mutilated survivals. The *kontakion* of Romanus for Christmas, however, continued to be sung annually on the 25th of December, even at the Emperor's festive board, until the downfall of the Eastern Empire. The *Akathistos* still forms the nucleus of a festival office dedicated to the Mother of God on the Saturday of the fifth week in Lent, and for the popular religious sentiment of the Orthodox East it takes the place filled conjointly by the Litany of Loreto, the rosary, and the *Te Deum* in the Roman Catholic West. Finally, the impressive funeral *kontakion* of Anastasius—though in a much mutilated form—is used to the present day in the office for the burial of priests.

(3) As compared with the *kontakion*, which in the zenith of its vogue appears to have been called also the *tropos*, the term *troparion*, a diminutive of the latter word, signified a shorter form of what was essentially the same thing: it was a single strophe constructed generally of accented lines of various kinds, the part performed by the precentor being, at least originally, supplemented by an *ephymnion* sung by the congregation or the choir.

We learn the nature of this species of sacred song in its earliest form from the *troparia* with which St. Auxentius, a prominent representative of Greek monachism, enriched public worship in Bithynia and Constantinople in the first half of the 5th cent., and specimens of which have been preserved by his contemporary biographer Georgius (*PG* cxiv. 1412). They are artless pieces, composed of a few short lines of lyrical rhythmical prose, in which genuine piety finds homely though effective expression. Anthimus, a pupil of Auxentius, once a court official, latterly a deacon and presbyter of the Church, and Timocles, his contemporary, who are said to have flourished *c.* 457, are named as the leading representatives of what was probably a more artistic type of *troparion*, although nothing survives that can be definitely ascribed to them.

The rich development which this form of liturgical poetry likewise speedily attained, more especially on the native soil of the *kontakion*, *i.e.* in Greek-speaking Syria, can still be seen in the so-called *Octoëchos* of Severus of Antioch—a complete hymn-book, the groundwork of which was laid by that celebrated exponent of Monophysitism in the years 512–518. This invaluable liturgical monument, lost in the original, is preserved in the revised form which Jacob of Edessa re-constructed in 675 from the older Syriac translation executed by a bishop of Edessa named Paul.

Its component pieces, 366 in number, are, without exception lyrics of a single strophe, and in their general structure are al to be classed as *troparia*, although they exhibit a special and characteristic feature in the fact that by far the larger numbe of them were meant to be sung in connexion with a verse from the Psalms. Many of them already show an affinity, in manifol forms of expression, with the numerous *troparia* found in th later liturgical books of the Greek rite. On the other hand a group of its texts, meant for use in the celebration of th Eucharist and called *prosphorikoi*, bear, in virtue of their archai style, a close resemblance to the *troparia* of Auxentius.

Besides Severus, two contributors of specia importance are John bar Aphtônyâ († 538), an John surnamed Psaltes, both archimandrites i the monastery of Qen-nešrê on the Euphrates. A *terminus ad quem* even for the latest poems in th original collection is found in the date of Paul' translation, which may be assigned to 619–629 A number of very short pieces seem to be of eve earlier date than those of Severus. Two of th lyrics in this Syriac hymn-book are definitely calle 'Alexandrian.'

In point of fact the ancient Greek liturgy of Egypt also mu have had its own stock of *troparia*. To that must be assigne first of all, the residue of hymns for the Feast of Epiphany foun in a papyrus of the Archduke Rainer's Collection—lyrics whic some, probably overshooting the mark, would trace back t the first half of the 4th, if not even to the 3rd century. B sides ostraka and various papyrus fragments, the Egyptia Monophysite Church has preserved further materials of gre value in this connexion. Thus *troparia*, definitely so designate in their original Greek and in a Saidic translation, are furnishe by fragments of the earlier MS liturgies of the Coptic rite. T almost indescribable state of neglect in which the Greek te of these fragments has been left points to the lapse of a co siderable interval between the date of their composition a that of the surviving transcripts. Nevertheless, a *termin ad quem* is indicated by the fact that several of them are bas

on the *Trisagion* in its distinctively Monophysite expansion. These Egyptian texts may, therefore, be regarded as of contemporary origin with those of the hymn-book of Severus.

The rapidity with which the entire public worship of the Greek Orthodox Church came to be permeated by the *troparion* is shown by a very interesting account which two monks named Johannes and Sophronius have given of a visit paid by them to Mt. Sinai, probably towards the close of the 6th cent. (Pitra, *Juris eccl. Græc. hist. et mon.* i. 2205). Here they found an anchorite, Nilus by name, living in complete seclusion from the world, and adhering to a form of Church daily prayer which on principle he kept clear of the new-fangled embellishments of liturgical poetry.

With his uncompromising devotion to antiquity, the writers contrast what, in its conjunction of *troparia* with the essentially Biblical elements of the Sunday Office, was for them 'the rule of the Catholic and Apostolic Church.' According to that rule, they say, the *Κύριε ἐκέκραξα*, *i.e.* Pss 140. 141. 129 and 116 in vespers, and a selection from the nine Biblical songs, viz. the 7th, 8th, and, from the 9th, Lk $1^{46-55}$ (the 'Magnificat' of the West), as also Pss 148–150, called the *Αἶνοι*, in matins, were associated with a series of *troparia*. Each of the three parts into which the psalmody of matins preceding the rendering of the odes was divided was followed by a hymn of the same class, called a *kathisma*, and in the rendering of the odes a corresponding piece, called a *mesodion*, marked a pause after the 3rd and 6th odes. In vespers, finally, a *troparion* was conjoined with the evening hymn Φῶς ἱλαρόν, and in matins, another, specially commemorative of the Resurrection, was combined with the Great Doxology.

We shall meet with not a few of such elements of a poetic character in the final form of the Greek Office, and we may, therefore, safely assume that many of the compositions performing a like service in that office date from the 6th century. Although we have not the necessary external evidence from which to draw definite conclusions regarding such ancient works, yet tradition furnishes the date of certain very old *troparia* which hold to this day an honoured place in the Eucharistic liturgy of the Greek Church. We are told that the Emperor Justinian himself (527–565) was the author of the Christologically important *troparion* entitled Ὁ μονογενὴς Υἱός, which comes shortly before the Scripture lessons. In the reign of his successor, Justin II. (565–578), the 'Cherubic Hymn' which accompanies the procession known as the 'Great Entrance' was inserted in the Byzantine Mass; while other two pieces, the Τοῦ δείπνου σου τοῦ μυστικοῦ and the Σιγησάτω πᾶσα σὰρξ βροτεία, which are substituted for that hymn on Maundy Thursday and Easter Even respectively, are probably not of later origin. The introduction of a *troparion* to be sung after Communion (Πληρωθήτω τὸ στόμα ἡμῶν) is assigned to the year 624, and of another (Νῦν αἱ δυνάμεις τῶν οὐρανῶν), which takes the place of the Cherubic Hymn in the Mass of the Pre-sanctified, to 645.

(4) The early Antiochene *troparia* of Severus's hymn-book, perhaps because they are essentially connected with verses from the Psalms, are assigned to a distinct class, the *antiphon* (Syr. *ma'nîthâ*). On the testimony of the Western pilgrim Etheria, or Eucheria (*Peregrinatio*, xxiv. 5, xxvii., xxix., xxxi. 5, xxxv., xxxvii., xl., xliii. 5, xlvii.), lyrics bearing that title, together with 'hymns' and 'psalms,' had already won an important place in the worship of the churches in Jerusalem towards the close of the 4th century. In the Greek liturgy of the following period a hymn formed of a Biblical passage and a *hypopsalma* rendered between the verses by two different choirs alternately was regarded as 'antiphonal.' Here it was customary at first to render whole psalms in this way; later, with increasing frequency, a few verses only were sung. The *hypopsalma*, again, in extending beyond the narrower limits of the formulæ originally employed, developed first of all into a somewhat longer prose formula, as found, *e.g.*, in the three antiphons at the beginning of the Eucharistic liturgy. Afterwards, however, it became the practice to introduce a real *troparion*, of which either the whole or the concluding part was repeated between the verses of the Biblical passage; characteristic examples of the latter method are retained to the present day in the vespers for Christmas and Epiphany. This unvarying repetition of a single *troparion*, however, was at length superseded by a whole series of such pieces, each of which was sung but once by either of the choirs, and thus, when these *troparia* were welded into an integral whole either by an acrostic or by an *ephymnion* common to all, there arose a distinct artistic type of antiphon.

It may be assumed that the use of this form of choral art was not altogether infrequent at an earlier stage of liturgical development. An extant example is furnished by the third of the fifteen so-called antiphons of Good Friday, which an unreliable tradition ascribes to St. Cyril of Alexandria. Generally, however, what we find here in the early period is a combination of verses of psalms with *troparia* which have no definite inner link of connexion, and at the present day even the verses of psalms formerly so employed have disappeared, so that only the name of the antiphon now survives.

The name 'antiphon' came also to be associated with the so-called *anabathmoi*, which had a recognized place in the matins of Sundays and important feast days, as also in the office of burial. The *anabathmoi* are two series of poetical paraphrases of the beginning and middle of the Psalms of Degrees (119–130 and 132) in two *troparia*, to which was attached, as a sequel to the Lesser Doxology (Δόξα Πατρὶ καὶ Υἱῷ, κ.τ.λ.), a third *troparion* in praise of the Holy Spirit. It must be taken for granted that these very ancient forms likewise were originally intended to be used in an antiphonal rendering of the psalms in question.

Finally, special significance seems at one time to have attached to an antiphonal rendering of Ps 118. That psalm, sung antiphonally in combination with a *hypopsalma* of very short formulæ, has remained a regular feature of the burial service. In similar manner the *stichera* (see below, (6)), called from their opening words Αἱ ἀγγελικαί, which come before us as the work of Romanus, and which, divided into short groups, are used at the present day in the matins for the 20th–24th, 28th, and 30th of December for quite a different purpose—forming a peerless festal hymn on the Redeemer's birth in the stable at Bethlehem—must originally have been the poetic investment of an effective threefold antiphon constructed with the aid of the same psalm. On the other hand, a lyric in its own way not less magnificent, though doubtless of much later date, is now combined with Ps 118 in a peculiar antiphonal rendering for the matins of Easter Even.

These are the so-called *enkomia*—comprising a markedly poetical lament at the Saviour's bier—which, surviving in various recensions, and bearing the names of various writers, as, *e.g.*, Germanus, Michael Files, an archimandrite called Ignatius, and a patriarch called Arsenius, perhaps go no further back than the 12th or 13th century. Similar *enkomia* were composed at a later date in honour of the Mother of God and John the Baptist, and—at least in the local form of worship prevalent in Jerusalem—a funeral hymn upon the former, an imitation of the *enkomia* of Easter Even, has permanently retained a place of importance as a special feature in the matins of the 15th of August.

(5) The essential feature of the antiphon, *i.e.* the organic combination of *troparia* with a Biblical passage, appears also in the structure of the *canon*, which was the leading form of hymnody from the 8th cent., and which from the 10th cent. superseded the older *kontakion* in the liturgy. The canon, to speak more precisely, is a mode in which the singing of *troparia* is combined with all the Biblical songs recited in matins, the short and unvarying *hypopsalma* of an earlier day giving place to poetical strophes of considerable length and of the same metrical structure. The consistent application of this principle led necessarily to the composition of very long poems in nine parts, in each of which the number of strophes formed upon a particular model strophe as a *heirmos* corresponds to the number of verses in the associated Biblical song. A composition essentially of this kind is actually found in the so-called 'Great Canon,' a penitential poem of two hundred and fifty *troparia*,

which, notwithstanding its rhetorical embellishment and its wearisome diffuseness, is of a most impressive character, and is now recited annually on the Thursday of the fifth week in Lent, in exactly the same way as the hymn *Akathistos* two days later.

Its author was Andreas, archbishop of Crete († 740), a native of Damascus, who, trained in the clerical circles of Palestine, became in his youth secretary to the patriarch of Jerusalem, and then lived in Constantinople for a considerable time previous to his promotion to the archbishopric. He was a prolific writer, and in the tradition of the Eastern Church is actually regarded as the inventor of the new poetic form, to which was applied the name of 'Canon,' hitherto given to the whole morning office, or to its most important part, viz. the nine Biblical songs.

Certain other compositions of Andreas, as, *e.g.*, the canon on the Myrophori, sung on the second Sunday after Easter, and one of 180 *troparia* on Simeon and Anna, approximate in length to the Great Canon. But, in general, the practical necessity of limiting the duration of public worship soon led to the practice of attaching not more than three or four poetical strophes to each Biblical song. The same requirement led here, as in other parts of the office, gradually to the entire omission of what was originally the cardinal feature, *i.e.* the Biblical passages, or to their being restricted to a few verses. Thus the essential nine sections of the poetic canon—to which the term 'odes' was henceforth specially applied—actually came to take the place of the very elements with which they were once intended to be combined. A further departure from the earliest order is seen in the regular omission of the second ode of the lyrical group, the reason being that the second Biblical song had been previously left out of the actual recitation—from a superstitious dread, it was said, of uttering the imprecatory threats contained in it. Then, besides complete canons, *diodia*, *triodia*, and *tetraodia* were composed to be sung with groups of two, three, and four Biblical passages respectively. Of special importance are the *triodia* and *tetraodia* of the Lenten season, which owe their existence to the circumstance that during Lent one of the Biblical songs, i.–v., was recited on week-days from Monday to Friday, and nos. vi. and vii. on Saturday, these being followed each day by nos. viii. and ix. The term *heirmos*, conformably to what was noted in the case of the *kontakion*, denotes here the model strophe which was in most cases borrowed from an older canon, and with which the *troparia* of each ode had to conform both in metre and in melody.

The entire mass of compositions which follow the norm introduced by Andreas of Crete comprises two strata differing in date and place of origin. The earlier stratum had its origin in the ancient Byzantine form of worship found in Jerusalem, and embraces the lyrics of Passion Week, and of the chief festivals of the Christian Year, and the morning canons of the so-called *Octoëchos*, which contains the ordinary Sunday offices arranged for the eight ecclesiastical tones. The birthplace of this group was the Laura of St. Sabas in the Kedron Valley, where, in the first half of the 8th cent., its standard forms took shape in the hands of St. John of Damascus († *ante* 754) and his adoptive brother Cosmas, surnamed the Hagiopolite, who was consecrated bishop of Maiuma, near Gaza, in 743. The later stratum was deposited in Constantinople, where the Stadion monastery, as a centre of sacred poetry, attained an eminence corresponding to that of the Laura of St. Sabas. It was, above all, three of the most prominent residents of that monastery—Theodorus the Studite († 820), his younger brother Joseph, subsequently archbishop of Thessalonica, and Theophanes, surnamed Graptus, promoted to be metropolitan of Nicæa in 842—who, during the Iconoclastic conflicts of the 9th cent., completed the work of their Palestine forerunners in composing canons for Lent, for numerous Saints' Days, and for the festal offices arranged for the eight ecclesiastical tones in the so-called *Parakletike*. John of Damascus and Cosmas the Hagiopolite had been pupils of a Sicilian named Cosmas, who is also said to have been a writer of poetry, and was ransomed from slavery among the Arabs by the father of the former; and afterwards another Joseph, a Sicilian, like his fellow-countryman Methodius of Syracus, developed his talent as a hymnographer in the capital of the Eastern Empire alongside of the three just mentioned. The poets Georgius of Nicomedia, Metrophanes, and Theodorus of Smyrna, with other
hymnographers of the Studion—as, *e.g.*, Antonius,
Basilius, Gabriel, and Nicolaus—were all natives of th

In the hands of these and of later writers the artist
the canon, once it had become completely independe
nine Biblical songs, came to occupy an essentially
position in the liturgy as a whole, being now employ
most diverse parts of it. Thus, in the midnight offic
of eight successive Sundays, the psalms were supersed
of the eight canons on the Most Holy Trinity, two of
least were the work of Metrophanes. A canon occupies
position in the various forms of the burial office, in the
tration of Extreme Unction, and in the Frocking o
When the land suffered from drought or earthquak
threatened with war or pestilence, the canon was t
form of Church prayer, and it was likewise used at the
and the death-bed. Of two canons thus employed, t
worthy of note as the work of Andreas and the other
connected with the Western form of prayer called the
*datio animæ*, and with the sepulchral paintings of
Christian art. In confession and in preparation for Co
a canon was used for private devotion, and for a like
one on the Guardian Angels, composed about the mid
11th cent. by Johannes Mauropus, bishop of Euch
frequently employed. The 'small' and the 'large'
τικοὶ κανόνες on the Mother of God—the former prob
monk named Theosterictus, the latter by the Emperor T
Ducas Lascaris (1254–58)—form the nuclei respectivel
votive offices of the Virgin.

In real poetic merit, not only such prod
of a relatively late period, but even the ca
the 8th and 9th centuries, are far inferior
classical creations of the writers of *kontakia*,
we cannot ignore the high achievement of
like the celebrated Easter canon of John of I
cus, or the Christmas canon of Cosmas. As
its form, the canon borrowed from the *kon*
the frequent device of linking its strophes to
by the acrostic, which in some cases was, as
simply alphabetical, and in others—where
used to indicate the substance or purpose
poem, often naming the author as well—wa
to take the form of a hexameter or an iamb
meter. The solitary attempt to apply the l
classical metre to the composition of canon
noted above (2).

(6) In the final form of the Greek litur
canon is the central feature in what is call
*akoluthia* ('sequence') of a particular litu
day or festival—a term which correspond
manner to the Western *officium*. But, besid
canon, numerous other compositions belong
various classes of rhythmic poetry occur as
or less regular elements in every *akoluthia*
say nothing of *kontakion*, *oikos*, and *anaba*
we may recognize here, generally without
culty, the types of *troparia* which, on the
mony of the monks Johannes and Sophroniu
above under 3 (3)), found a place in public w
during the latter half of the 6th century.
the ancient *troparion* to the Φῶς ἱλαρὸν see
survive in the *apolytikion*, the closing *trop*
of vespers.

The *kathismata* formerly sung in matins after the thr
tions from the Psalms have also been retained—or, a
two of them, as, on Sundays, instead of the third, a
strophe of rhythmical poetry called the *hypakoë* leads
*anabathmoi*. Of the two *mesodia*, the first, now also
the *kathisma*, interrupts the continuity of the canon af
third ode, just as at an earlier period it interrupted the
of Biblical songs at a corresponding point, while the seco
superseded by *kontakion* and *oikos*. The *megalynaria* s
connexion with the ninth ode of the canon at the chief fe
of Christ and the Mother of God recall the *troparia* fo
associated with the 'Magnificat' (Lk $1^{46-55}$).

Next to the canon, the most important elen
in an *akoluthia* are the *stichera*, which al
always occur in groups. They derive their
from the fact that they are combined with v
of Biblical passages (στίχοι) usually taken
the Psalms. The *stichera* to the Κύριε ἐκέκρα
vespers and to the *ainoi* are manifestly iden
with the *troparia* which in the 6th cent.
attached to these Scripture passages; and
present usage of reciting in matins, not the w
of Pss 148–150, but only a few verses, in
nexion with the appropriate *stichera* is m
a later abbreviation. Another class of *stic*

however, which are rendered towards the close of vespers, just before the canon, in the hours of prime, tierce, sext, and nones, in general, and, in particular, in the so-called 'great hours' of Good Friday and of the vigils of Christmas and Epiphany, as well as in the most diverse parts of the liturgy outside the regular Daily Office, were meant from the first only to be inserted between two *stichoi* separated by the Lesser Doxology, and appear to have some affinity with the ancient Antiochene antiphons of Severus's hymn-book. A third class of *troparia*, which now have no connexion with any Biblical passages, were in all likelihood originally rendered in a similar way.

On their purely formal side the *stichera* fall into three groups. Those which in metre and melody are not in any way related to the rest are called *idiomela*, and are generally of considerable length. Those which serve as the metrical, and therefore also the musical, patterns of others are *automela*. Those, again, which in the form of their strophes follow the pattern of particular *automela*, and are set to their tunes, are *prosomoia*.

There are several other distinct forms of the *troparion*, but all of minor importance. Thus in matins the 'hymns to the Trinity' (*ὕμνοι τριαδικοί*), composed according to the eight ecclesiastical tones, are sung regularly at the beginning, and the *exaposteilaria* after the canon; the *eulogetaria*, devoted to prayers for the dead or to the praise of the Resurrection, are used especially on Saturdays and Sundays, and the *photagogika*, which hail the light of the dawning day, in Lent. In the Eucharistic liturgy of Sunday, in the nocturn of Good Friday, and in the burial office, the singing of the so-called *makarismoi* is interwoven with the text of Mt $5^{3-12}$. A *troparion* in praise of the Mother of God, called a *theotokion*, is conjoined with the single odes of each canon and with all other forms of *troparion*; and here the strophes specially devoted to her maternal sympathy with the sufferings of her Son are called *staurotheotokia*. Of less frequent occurrence are the so-called *triadika* and *nekrosima*, expressing respectively a doxology to the Trinity and a prayer for the dead.

The vast mass of texts exhibiting these various kinds of *troparia* in the MSS and printed editions of the liturgical books was, of course, a slow and gradual growth. The texts themselves are for the most part anonymous. Not a few of them were the work of writers who have already been mentioned as authors of canons. Among other writers whose names are found, the most prominent is a certain Anatolius, who should not be confounded with his namesake, the patriarch of Constantinople in the 5th century. Like Anatolius, Sergius, a Hagiopolite, Stephen sometimes called a Hagiopolite, sometimes a Sabbaite, and probably also Andreas Pyrrhus belong to the older Palestinian school of rhythmical composition; the characteristics of this school appear also in a few *idiomela* by St. Sophronius, whose work is generally on such radically different lines. It is not easy to say whether, or to what extent, certain extant compositions bearing the name of Johannes 'the Monk' are the work of a writer not to be identified either with John of Damascus or John of Mauropus. In Constantinople, St. Germanus the patriarch († 740) and the nun Casia or Icasia, a woman of undeniable and peculiar gifts, who flourished in the reigns of Theophilus (829–842) and Michael III. (842–867), won repute in historically traceable compositions, especially in the class of *idiomela*. A series of morning hymns on Sundays attached to the eleven Resurrection gospels of their matins were composed by the Emperor Leo VI. (886–911), and the series of corresponding *exaposteilaria* by his son Constantius VII. Porphyrogenitus (912–959). These fall below mediocrity, while the *apolytika*, *kathismata*, and *stichera* of an earlier age surpass the contemporary canons in sheer poetic qualities.

In Byzantium and the East, hymnography as an active and living development virtually came to an end in the 11th cent., with the codification of the definitive liturgical books of the Greek rite, viz. the *Octoëchos* and the *Parakletike*, and, above all, the *Triodion*, the *Pentekostarion*, and the *Menaia*, which contain the choral texts respectively for Lent and Passion Week, for the period between Easter and Pentecost, and for the fixed feasts of the Christian year. Only in the Italo-Greek West was there about the same time a noteworthy revival of rhythmical hymnody. The art was assiduously cultivated in the famous and still surviving Basilian Abbey of Grottaferrata, near Rome, till well into the 12th century. The founders of the abbey, St. Nilus the younger († 1004), and his successors, Paulus and Bartholomæus, were the heads of a school to which Arsenius, Germanus, Joseph, Procopius, and others belonged. Within the Greek Orthodox Church itself, moreover, whole *akoluthiæ* and single lyrics were incorporated in the liturgical books at a still later date. Mention may be made of Nicephorus Xanthopulus and the Patriarch Philotheus († 1379) in the 14th, and Nicolaus Malaxus in the 16th cent., as authors of such later elements of the liturgy.

LITERATURE.—i. *TEXTS.*—An excellent selection of examples of all the various types will be found in W. Christ and M. Paranikas, *Anthologia Græca carminum Christianorum*, Leipzig, 1871, which contains a complete critical edition of the hymns of Synesius, and is the most convenient authority for the Naasene hymn, the *Parthenion* of Methodius, the hymn at the end of the *Pædagogus*, the ancient prose-hymns for morning and evening, and the compositions of Syncellus Elias, the Emperor Leo, and Photius; J. R. Harris, *The Odes and Psalms of Solomon published from the Syriac Version*[2], revised and enlarged, Cambridge, 1911; Apollinaris's metrical paraphrases of the Pss., in *PG* xxxiii. 1313–1538, and in a critical ed. by A. Ludwich, *Apollinarii Metaphrasis psalmorum*, Leipzig, 1912; the poems of St. Gregory of Nazianzus according to the Benedictine ed., *PG* xxxvii.–xxxviii., and his iambic poems in a Syriac version, ed. J. Bollig and H. Gismondi, *S. Gregorii Theologi liber carminum iambicorum, versio Syriaca antiquissima*, Beirût, 1895–96; the *Anacreontics* of Sophronius, in *PG* lxxxvii. 3733–3838, based on A. Mai, *Spicilegium Romanum*, iv., Rome, 1840; another hymn, lacking in *PG*, ed. L. Ehrhard, *S. Sophronii anacreonticorum carmen xiv.*, Strassburg, 1887; the Easter hymn of Georgius Pisides, in Migne, *PG* xcii. 1373–1384. P. Maas, *Frühbyzantin. Kirchenpoesie*, i. 'Anonyme Hymnen des v.–vi. Jahrh.,' Bonn, 1910, gives a critical ed. of equilinear hymns and of the oldest anonymous *kontakia*. The papyrus hymn on the Birth of Christ is given in A. S. Hunt, *Catalogue of the Greek Papyri in the John Rylands Library, Manchester*, i. (London, 1911) 18 ff., while the hymn of the Amherst Papyri can now be most conveniently consulted in C. Wessely, 'Les plus anciens Monuments du christianisme, écrits sur papyrus,' in *Patrologia Orientalis*, IV. iii. [1907] 95–210, no. 28, and the fragment of the Berlin Papyrus, in C. Schmidt and W. Schubart, *Altchristl. Texte*, Berlin, 1910, p. 125 f. The rich store of ancient *kontakia* was first drawn upon by J. B. Pitra, *Analecta sacra spicilegio Solesmensi parata*, i., Paris, 1876; the Russ. ed. of a Moscow *Κονδακάριον* by the archimandrite Amfilochij, 2 vols., Moscow, 1878, is too defective to be of any service; other *kontakia*, especially those of Romanus, or ascribed to him, and modern critical edd. of single pieces: J. B. Pitra, *Sanctus Romanus veterum melodorum princeps; Cantica sacra ex codd. MSS monasterii S. Joannis in insula Patmo primum in lucem ed.*, Rome, 1888; K. Krumbacher, 'Der heilige Georg in der griechischen Überlieferung,' ed. posthumously by A. Ehrhard in *ABAW*, philos.-philol. u. histor. Klasse, xxv. iii. [1911] 84–102; and P. Maas, 'Kontakion auf den heil. Theodoros unter dem Namen des Romanos,' in *Oriens Christianus*, new ser., ii. [1912] 48–63. A complete critical ed. of the hymns of Romanus was prepared by Krumbacher, and will be published by Maas. The *kontakion* on the dedication of the Hagia Sophia was ed. by (S. Gassisi), 'Un antichissimo "Kontakion" inedito,' in *Roma e l'Oriente*, i. [1911] 165–187; the *troparia* of Auxentius, in Pitra, *Analecta sacra*, I. xxiii. f. The *editio princeps* of Severus's hymn-book: E. W. Brooks, 'James of Edessa: The Hymns of Severus of Antioch and Others,' in *Patrologia Orientalis*, vi. 1, vii. 5. There is as yet no collection of the ancient Egyptian *troparia* scattered through edd. of Greek papyri and catalogues of Coptic MSS, but T. Schermann, *Ägyp. Abendmahlsliturgien des ersten Jahrtausends in ihrer Überlieferung*, Paderborn, 1912, pp. 211–230, may be consulted. The liturgical books of the Greek rite for use in the Greek Orthodox Church were formerly printed for the most part in Venice, latterly also in Athens. A text critically collated with the older MSS, and, on the whole, the best, is that of the Roman edd. prepared for the use of the Uniat Greeks, *Τριῴδιον*, 1879; *Πεντηκοστάριον*, 1884; *Παρακλητικὴ ἤτοι Ὀκτώηχος ἡ μεγάλη*, 1885; *Μηναῖα τοῦ ὅλου ἐνιαυτοῦ*, 6 vols., 1885–1902; canons of John of Damascus and Cosmas respectively, in *PG* xcvi. 817–856 and xcviii. 459–524.

ii. *GENERAL WORKS.*—The *Prolegomena* of Christ and Paranikas, and of Pitra, *Analecta sacra*, i., are of paramount importance; based on them and on the textual material furnished by them are: H. Stevenson, 'L'Hymnographie de l'église grecque,' in *Revue des questions historiques*, xi. [1876] 482–543, and L. Jacobi, 'Zur Gesch. des griech. Kirchenliedes,' in *ZKG* v. [1882] 177–250; E. Bouvy, *Poètes et mélodes: Étude sur les origines du rythme tonique dans l'hymnographie de l'église grecque*, Nîmes, 1886; K. Krumbacher, *Gesch. der byzantin. Litt. von Justinian bis zum Ende des oström. Reiches*[2], Munich, 1897, pp. 656–705, 'Die byzantin. Kirchendichtung'; in the 3rd ed., which is in preparation, this section will be edited by P. Maas; also F. Cabrol, *L'Hymnographie de l'église grecque*, Angers, 1893; O. Bardenhewer, *Patrologie*[3], Freiburg im Br., 1910, pp. 485–492; H. Jordan, *Gesch. der altchr. Lit.*, Leipzig, 1911, pp. 455–470; and, above all, the excellent art. of L. Petit, 'Antiphone dans la liturgie grecque,' in F. Cabrol's

*DACL*, Paris, 1903 ff., i. 2461–2488; A. Baumstark, 'Psalmenvortrag und Kirchendichtung des Orients,' in *Gottesminne*, vii. [1912–13] 290–305, 418–432, 540–558, 887–902.

iii. *SPECIAL STUDIES*.—On the origin of rhythmical form in poetry: W. Meyer, 'Anfang und Ursprung der latein. und griech. rhythm. Dichtung,' in *ABAW*, erste Klasse, XVII. ii. [1885] 270–450; E. Norden, *Die antike Kunstprosa vom vi. Jahrh. vor Christo bis in die Zeit der Renaissance*[2], Leipzig, 1909, p. 841. On equilinear hymns: P. Maas, G. S. Mercati, and S. Gassisi, 'Gleichzeilige Hymnen in der byzantin. Liturgie,' in *Byzantin. Zeitschr.* xviii. [1909] 309–356 (with recension of texts). On the composition of *kontakia* and on Romanus (with recension of texts throughout): K. Krumbacher, 'Studien zu Romanos,' in *SMA*, 1898, ii. 69–268, 'Umarbeitungen bei Romanos, mit einem Anhang über das Zeitalter des Romanos,' *ib.* 1899, ii. 1–156, 'Romanos und Kyriakos,' *ib.* 1901, pp. 693–766, 'Die Akrostichis in der griech. Kirchenpoesie,' *ib.* 1903, pp. 551–691 (with an exhaustive collection of *kontakia* already printed or known in MS), 'Miszellen zu Romanos,' in *ABAW*, philos.-philol. u. histor. Klasse, XXII. iii. [1902]; T. M. Wehofer, 'Untersuchungen zum Lied des Romanos auf die Wiederkunft des Herrn,' in *SWAW*, 1907; P. Maas, 'Die Chronologie der Hymnen des Romanos,' in *Byzantin. Zeitschr.* xv. [1906] 1–44, 'Das Kontakion, mit einem Exkurs über Romanos und Basileios von Seleukeia,' *ib.* xix. [1910] 285–306. On the hymn *Akathistos*: P. de Meester, 'L'Inno acatisto,' in *Bessarione*, vi. [1903–04] 9–16, 159–165, 252–257, vii. [1904–05] 36–40, 213–224; P. F. Krypiakiewicz, 'De hymni Acathisti auctore,' in *Byzantin. Zeitschr.* xviii. [1909] 309–356. A good introduction to the music associated with liturgical poetry in the Greek Church will be found in J. B. Rebours, *Traité de psaltique: théorie et pratique du chant dans l'église grecque*, Paris, 1907, to which may be added the valuable special artt. of H. Gaisser, 'Les Heirmoi de pâques dans l'office grec,' in *Oriens Christianus*, iii. [1903] 416–510, and H. J. W. Tillyard, 'A Musical Study of the Hymns of Cassia,' in *Byzantin. Zeitschr.* xx. [1911] 420–485.

A. BAUMSTARK.

**HYMNS** (Syriac Christian).—Our knowledge of the hymnody of the Syriac-speaking Churches has been greatly increased during the last 25 years by the publication of much literature in that language which formerly existed only in MSS, and in particular of many of the East Syrian or Nestorian service-books in Syriac, with English translations. But much still remains to be done, and until a similar work is effected for the West Syrian, or Monophysite (Jacobite), service-books, some considerable gaps in our knowledge will remain.

**1. Early history of Syriac hymnody.**—The earliest known writer of Syriac hymns was Bardaiṣān (Bardesanes), whose book of 150 hymns after the number of the Psalter was in the hands of Ephraim the Syrian (see below). Bardaiṣān was born at Edessa (Syr. Ur-hāi), the capital of Osrhoëne, A.D. 155 (for the date, see *DCB* i. 250), and was deemed by his successors to be heretical (for his doctrines see Eusebius, *HE* iv. 30). Sozomen (*HE* iii. 16) tells us that his son Harmonius was learned in Greek erudition, and

'was the first to subdue his native language [Syriac] to metres and musical laws; the verses he delivered to the choirs, and even now the Syrians frequently sing, not the precise copies by Harmonius, but the same melodies.' As these verses were somewhat infected with Bardaiṣān's heresy, 'Ephraim . . . applied himself to the understanding of the metres of Harmonius, and composed similar poems in accordance with the doctrines of the Church. . . . From that period the Syrians sang the odes of Ephraim according to the law of the ode established by Harmonius' (cf. Theodoret, *HE* iv. 26).

From these statements of Sozomen it has been deduced that the hymns ascribed by Ephraim to Bardaiṣān were really written by Harmonius, or at least that father and son worked together. It is clear, if Sozomen is to be trusted, that the Syrians derived their methods of hymnody from the Greek Christians in the first instance; and we know from Eusebius that the latter used sacred poetry at an early date. That historian speaks (*HE* v. 28) of the 'many psalms and hymns, written by the faithful brethren *from the beginning*,' celebrating 'Christ the Word of God, speaking of Him as Divine (θεολογοῦντες).' There is no indication *here* that these hymns were sung in church; but there is such an indication in Pliny's famous letter to Trajan (*Ep.* 96):

'They affirmed . . . that they were accustomed on a fixed day to assemble before dawn and to sing antiphonally a hymn to Christ as to a god.'

In Eusebius (*HE* vii. 24), Dionysius of A
(†265) is quoted as praising the schismat
an Egyptian bishop early in the 3rd cent
'extensive psalmody,' and saying that
positions still delighted many of the
Probably Antioch led the way in the use
in church. Socrates (*HE* vi. 8) ascribes t
of singing antiphonal hymns to Igna
martyr, who 'saw a vision of angels hym
Holy Trinity in alternate chants.'

The most famous hymn-writer of the
speaking Christians was Ephraim (*c.* A.D.
a native of Mesopotamia. He is alwa
sented as a deacon, and his words 'Christ
the talent of the priesthood' (*Op. Syr.* iii
*DCB* ii. 138) are not really against this,
Syriac *kāhnūthā* ('priesthood') includes

E. Syr. *Sūnhādhūs* (Book of Canon Law
In addition to his numerous other works,
posed metrical homilies and other religious
including commentaries in metre on Hol
ture; and he also wrote a large number o
for liturgical purposes, many of which
sung (see below, § 4 (*a*)). He made use of h
to spread orthodox doctrine, just as Bardai
Harmonius had used it, and as the Arians
spread their erroneous teaching (for the lat
Socrates, *HE* vi. 8, where we read that the
about Constantinople at night chanting ant
hymns to support their heresy, while the C
imitated their example). Ephraim seems
done much to promote and improve eccles
music, and his compositions became ext
popular (for an account of his writings
Payne Smith, in *DCB* ii. 137). His met
irregular, and, as is the case with all the
Syriac poetry (see below, 3), his lines
rhyme. There is no good reason to suppo
he ever wrote in Greek; his extant works i
language are doubtless translations. A ver
resting and newly published Syriac metrical
by him on Bardaiṣān may be seen, with E
translation, in *JThSt* v. [1904] 546 ff.

After the separation of Nestorian and
physite Syrians, the most famous Syriac
writer was the Nestorian Narsai (Narses),
as the 'Harp of the Spirit' (*kinārā d'rūkhā*)
after spending 20 years at the great sch
Edessa, left it A.D. 457 to preside over the s
less celebrated school at Nisibis; he died A.
His metrical compositions include 360 hon
of these 47 have been published in Syriac
Mingana (Mosul, 1905), together with 10
poems (*sōghyāthā*); and four of these hon
dealing with the Liturgy and the Baptismal
have been translated into English by R
Connolly, with illuminative Introduction
Notes ('The Liturgical Homilies of Narsai
viii. 1, Cambridge, 1909). These homilies,
ever, were not meant for church use, and fo
hymns by this writer used in the services refe
must be made to the East Syrian office book
below, § 4 (*a*)). Narsai's favourite metre was th
syllable line (see E. A. W. Budge's ed. of Th
of Marga's *Book of Governors*, London, 189
300 n.), but hymns by him in other metres are f

and some account of them may be seen in *J*

viii. [1906–07] 581 (R. H. Connolly). It has been disputed whether he was Monophysite or Orthodox (see E. Renaudot, *Lit. Orient. Collectio*, Frankfort, 1847, ii. 366 f., and *DCB* iii. 327). He ordinarily wrote in twelve-syllable lines. A third well-known hymn-writer was Balai (Balaeus), who wrote in quinquesyllabic metre (Connolly, 'Narsai,' p. ix; *DCB* iii. 296ª), which he seems to have invented. He was a disciple of Ephraim, and a chorepiscopus (R. Payne Smith, *Thesaur. Syr.*, Oxford, 1897–1901, i. 534).

The plan of writing homilies and expositions in metre continued for a long time. We find one by Thomas, bishop of Marga, inserted in his *Book of Governors*, a long biographical composition of 415 stanzas in the twelve-syllable metre (9th cent.; Budge, i. 172, ii. 345). Thomas afterwards became metropolitan of Beth Garmai (east of the Tigris).

**2. Syriac hymns and poems translated from Greek.**—We have seen that the Greeks gave the Syrians the incentive to compose religious poetry. The Syrians also used many hymns translated from Greek. Of these the earliest example, probably, is to be found in the *Odes of Solomon*, poems in Syriac (some also in Coptic), which have been lately recovered. J. H. Bernard (in *JThSt* xii. [1910–11] 1 ff., and in his ed. 'The Odes of Solomon,' *TS* viii. 3, Cambridge, 1912) suggests that they are a collection of Christian hymns 'packed with allusions to baptism, and comparable to Ephraim's Hymns on the Epiphany' (*JThSt* xii. 29), though perhaps his theory of their object and contents goes too far. He dates them *c.* A.D. 150–200; R. H. Connolly (*JThSt* xiv. [1912–13] 311) possibly a little later; J. Rendel Harris, the first editor (*Odes and Psalms of Solomon*, Cambridge, 1909), a little earlier; E. A. Abbott (*Light on the Gospel from an ancient Poet*, Cambridge, 1912) thinks that they were written by a Jewish Christian in the 1st cent.; Harnack considers them to be a Jewish work with Christian interpolations—against this see Connolly in *JThSt* xiii. [1911–12] 298. That the *Odes* were used in public worship in the 4th cent. is made probable by a reference to them in the *Testament of our Lord*, which we know only by a Syriac translation made by Jacob, bishop of Edessa, in the 7th cent. († A.D. 708 or 710). This Church Order has a direction (i. 26): 'Let them sing psalms and four hymns of praise (*tishbkhāthā*, see below, § 4 (*a*)), one by Moses, and of Solomon, and of the other prophets.' The present writer accepts Bernard's correction (*JThSt* xii. 31) of his own suggestion in the English edition of the *Testament* (Edinburgh, 1902) that the Song of Songs is meant, and adopts his view that the *Odes* are here referred to. Now, though it has been suggested by Abbott (*Light on the Gospel*, and *JThSt* xiv. 441) that Syriac, or some Semitic dialect, is the original of the *Odes*, yet the argument by Connolly (*JThSt* xiv. 315 f., 530 ff.), that our Syriac text is translated from the Greek, appears to be very strong (see also *JThSt* xv. [1913–14] 44 ff.). If it be sound, we have here a good example of the use by Syriac-speaking Christians of Greek hymns.

Another example is the Syriac version of the Greek hymns of Severus, Monophysite patriarch of Antioch (A.D. 512–519), made by Paul, bishop of Edessa (A.D. 510–526; see *DCB* iv. 259), and revised by Jacob (see above). The Syriac has been edited by E. W. Brooks in *Patrologia Orientalis*, vii. 5 (Paris, 1912).

**3. Rhymed poetry.**—The metrical compositions hitherto mentioned are not rhymed, but about the 12th cent. the Syrians learnt from the Arabs the art of rhyming. A. Mingana states (Connolly, 'Narsai,' p. xiii) that after A.D. 1150 all the poetry had this characteristic; and Connolly (p. xxxviii f.) gives from Cardakhi (see in Literature) a list of 9 or 10 writers of the 13th cent. who wrote in rhymed verse. Of these the most famous were the Monophysite Bar-hebraeus, and the Nestorian Audīshū[1] ('Abhdīshō', Ebedjesus) the bibliographer, Khāmīs (West Syr. Khamīs), and George Wardā. From Wardā and Khāmīs, hymn-writers of great repute, have been named two East Syrian service-books, containing 'propers' for festivals, etc., several of them probably having been written by these authors.

These later writers are distinguished by an extremely artificial style, and by a profusion of Greek words and strange forms. For examples of their compositions reference may be made to the anthems at the Blessing of the Months, sung at Evening Service on the first day of every month except February (A. J. Maclean, *East Syrian Daily Offices*,[2] p. 230). The stanzas attributed to Mār Abraham of Slūkh (Seleucia) on the Tigris contain the following: Ahīyāh = אהיה, Tī'ūn = *θεόν*, Aghūsṭūs = Augustus, the reigning king, and Tī'ūlūgh = *θεολόγος*, the reigning patriarch (these stanzas rhyme in *-tā*). In the anthems given on p. 231 ff. each line of a stanza ends in *-tā*, *-nā*, *-ān*, *-thā*, *-rā*, *-zā*, *-ākh*; while the last four stanzas are non-rhyming. The authors of these rhyming stanzas are of the 13th cent. or later. A good example of the style of these later writers may also be seen in the highly artificial prayers said before the psalms in the East Syrian Morning Office on festivals, composed by Mār Elīyā (Elijah), Catholicos, surnamed Abūkhalīm (J. S. Assemani, *Bibl. Orient.*, Rome, 1719–28, III. i. 289); they are given in an English translation in Conybeare-Maclean, *Rituale Armenorum*,[3] Oxford, 1905, pp. 377–379. They are taken from the book called *Abūkhalīm* after Elīyā; they abound in foreign words to such an extent as to make them quite unintelligible to the Syrian. The famous Audīshū (see above) was a great composer of hymns of praise (*tishbkhāthā*) and anthems (Payne Smith, *Thes. Syr.* ii. 4028; Assemani, III. i. 708), but his style is greatly disfigured by its artificiality.

**4. Hymnody in the present service-books.**—In what follows the East Syrian service-books are those principally dealt with. They were largely re-modelled and systematized by Ishuyaw III. (Ishō'yahbh, Jesujabus, lit. 'Jesus gave'), who was the Nestorian Catholicos from A.D. 647 to 658. Till his time there was no system of hymns, and probably he borrowed ideas from the Byzantine churches when he visited Antioch and other Greek cities. He revised the *Khūdhrā* (lit. 'Cycle'), or book of 'propers' throughout the year, and introduced much hymnody into it. For some account of this Catholicos see Thomas of Marga, bk. ii. § 11; Budge gives some of his Epistles in Syriac in his edition of Thomas (ii. 132–147), and relates what is known of his life (i. pp. lxxxiv–xcvii). In addition to his work on the *Khūdhrā*, Ishuyaw remodelled the baptismal rite.

The hymns in the East Syrian books are of different kinds, and may now be considered in order.

(*a*) The *Hymn of praise*, Syr. *tishbūkhtā* (pl. *tishbkhāthā*), lit. 'praise.' This word, which is used in the Peshiṭta of the hymns in Ex $15^{1}$, Dt $31^{19, 30}$ etc., and of the Song of Songs (*tishbkhath tishbkhāthā*) is used also in the service-books, both

[1] In this article the more common names are given in their Western form, as George, Ephraim; others are given as pronounced by the East Syrians, with the exact transliteration of the Syriac added if necessary, and with their Westernized forms. In the pronunciation *au* = *ō*; *ai* = French *é* (usually); *kh* and *gh* are hard and soft gutturals; *aw* final is halfway between *ow* (as in 'cow') and *āv*; *dh* and *th* represent the two sounds of *th* in English. Consonants in words derived from the Pa'el conjugation, etc., are not doubled in pronunciation.

[2] Hereafter cited as *ESDO*.

[3] Hereafter cited as *RA*.

East and West Syrian, of prose hymns like the 'Gloria in excelsis' (called by the West Syrians the 'hymn of praise of the night') and of the 'Song of the Three Children' (called by the East Syrians the 'hymn of praise of the company of Ananias'). The ordinary 'hymn of praise,' however, is a metrical composition consisting of a number of stanzas sung alternately by the two choirs (which are called respectively 'the former' and 'the latter'), and usually of two lines each, though occasionally of four or more. Rarely these hymns of praise are acrostic, beginning with the letters of the alphabet (*ESDO*, 231, 233), or with the letters of a name, as Ishū Mshīkhā ('Jesus Christ') or Shimshā-sahrā ('sun and moon') or the like (*ESDO*, 167, 230).

The East Syrian service-books frequently (but not always) ascribe these hymns of praise to definite authors. The following, among others, are mentioned: Ephraim and Narsai (above, § 1); Shīmūn (Shim'ōn) Barsabā'ē (Simeon Barsaboē), Catholicos in the 4th cent.; Awā (Abhā, Abbas), Catholicos in the 6th cent.; Thomas of Ur-hāi (Edessa), contemporary and friend of Awā; Bāwai (Bābhai, Babaeus: W. Syr. Babai) the Great, Abbot of Mount Izlā early in the 7th cent. (see Budge, *op. cit.* ii. 46), Bāwai of Nisibis (8th cent.; Budge, *ib.*; he was famous for his beautiful voice); George, Monophysite metropolitan of Nisibis (7th cent.; see *DCB* ii. 642, Assemani, III. i. 456); 'Abraham, Doctor' or 'Abraham of Izla,' *i.e.* Abraham of Kashkar, the reviver of monasticism in the 6th cent., the head of the monastery of Mount Izlā near Nisibis (Budge, ii. 37); Abimelech (date?); Abraham of Nithpar, whose life was written by Saurīshū Rūsṭām (Sabhrīshō Rōsṭām, Sabarjesus Rostam), a disciple of Narsai (Thomas of Marga, bk. i. § 32, bk. ii. § 17; see also Budge, ii. 108 n.); John of Bēth Rabān (6th cent.), founder of a monastery in Dāsin, a district on the Great Zab south of the modern Qūchānis, the seat of the present Nestorian Catholicos Mar Shimun (Budge, ii. 67, 301; *DCB* iii. 405); Saurīshū, Catholicos *c.* A.D. 600; Barsaumā (Barsumas) of Nisibis (5th cent.); Khnāna of Kh'dhayaw (Kh'dhayabh, Adiabene), a district east of the Tigris, between the two Zabs (Assemani, III. i. 81). The ascriptions are in some cases doubtful, and the scribe himself sometimes hesitates, and gives two names as alternatives.

(*b*) The *Madrāshā* (lit. 'commentary,' Payne Smith, *Thes. Syr.* i. 956; pl. *Madrāshé*), said to be a 'doctrinal hymn.' This is a less common form of hymn. It consists of an antiphon ('*ūnāyā*) and two or more verses (*bāté*: these two names are used by the West Syrians also). The antiphon is said first, and the two choirs then sing the verses in turn. There is a daily Madrāshā at Compline (which is uncommon as a daily service, but is used, combined with Evensong, on saints' days and in Lent; it is, however, used by the more religious as a private devotion; see Maclean-Browne, *Catholicos of the East*, p. 234); two Madrāshé are said at the Night Service on Feasts of our Lord; one is said on Sundays, on saints' days, and on week days in Lent. A Madrāshā is sometimes called a 'station' (Syr. *isṭaṭyūnā*).

(*c*) The *Anthem* ('*ūnīthā*, pl. '*ūnyāthā*; this word sometimes denotes a stanza of an anthem) is at once the most characteristic and the most common form of East Syrian hymnody. It consists of a number of stanzas; each stanza is prefaced by a clause from the Psalms (occasionally from other books of the Bible) said in monotone; then the metrical stanza is sung to a chant. The Anthem usually ends with a stanza prefaced by 'Glory be to the Father and to the Son and to the Holy Ghost,' and often with another prefaced by 'For ever and ever, Amen,' sometimes with a third prefaced by 'Let all the people say Amen' (Ps 106[48]). The length of the stanzas varies greatly; but they are usually short, consisting of 2, 4, or 6 lines; the lines are often of 4 feet (spondees or dactyls), sometimes of 3½ or of 5 feet or more. Under the heading of the 'Gloria' and of 'Let all the people' there are frequently grouped several stanzas, and these are sometimes elaborate and probably late compositions; they often commemorate the East Syrian martyrs and other worthies (see, *e.g.*, *ESDO*, 134 ff., where several other groups of stanzas are added after the 'Gloria').

As this form of hymnody is unknown in the West, it may be useful to give a specimen, taken from the Ferial Evening Service of First Tuesday (*ESDO*, 24):

*Our help is in the name of the Lord* (Ps 124[8]). Our help is from God: who by means of His mercies chastiseth us all: for He is the giver of our life: The hope of the salvation of our souls shall never more be cut off: but let us cry and say: Keep us, O my Lord, in thy compassion and have mercy upon us.

*And our helper in times of trouble* (Ps 46[1]). Our help, etc. (*repeat*).

*Glory be to the Father and to the Son and to the Holy Ghost.* O Christ, who didst reconcile at thy coming all creation with Him who sent thee: pity thy Church saved by thy blood: and bring to an end within it strifeful divisions: which allow the devil to enter: to the wonderful dispensation of thy manhood: and raise up in it priests to preach the sound faith.

In the Anthems some of the stanzas inserted before the 'Gloria Patri' are often called 'Of prayer' (see, *e.g.*, *ESDO*, 145, 195); but the meaning of this heading is not clear. Some are 'occasional' stanzas, as 'for a journey' or 'for rain' (p. 149). The Anthems at the Night Service, especially on Festivals of our Lord, are extremely long; the translation of those appointed for the Epiphany takes 84 octavo pages of small print in *RA*; but the daily Anthems are only of from 3 to 6 stanzas. The 'Martyrs' Anthems' in praise of the heroes of the past, which are sung twice daily on ferias except in Lent (according to the rubric, they are appointed for Sundays also), are somewhat longer. They are a great feature of the services. The martyrs are called architects, the beams of a building, combatants (*āghūnisṭé*, ἀγωνισταί), merchants buying the pearl, precious stones, etc. In almost every one of these Martyrs' Anthems the following are mentioned: St. George, the famous martyr under Diocletian (*DCB* ii. 645 f.); St. Cyriac, the boy-martyr in the same persecution, and Julitta, his mother (T. Ruinart, *Acta Sincera Martyrum*[2], Amsterdam, 1713, p. 477); St. Pithyūn, 'who opposed the magi' and was martyred by Adhūr-prazd'gard (for a detailed account see the anthem in *ESDO*, 139); St. Sergius, martyr in Syria under Maximian or Maximin (*DCB* iv. 616: sometimes his companion, St. Bacchus, is mentioned, for whom see *DCB* i. 236); and the sons of Shmūnī (the seven martyrs of 2 Mac 7), and Elī'āzar (Eleazar) their teacher (4 Mac 5 ff.): their names are given (*ESDO* 111) as Gadai, Maqwai (Maqbhai, Maccabæus), Tarsai, Khyūrūn (Khibhrōn, Hebron), Khyūṣūn (Khibhṣōn), Bākūs (Bacchus), Yūnādāw (Yōnādabh, Jonadab). [In the Latin paraphrase of 4 Mac 8 ff., published by Erasmus (the *Rule of Reason*), the names are given as Maccabæus, Aber, Machar, Judas, Achas, Areth, Jacob; and the mother's name is Salamona (W. R. Churton, *Uncanonical and Apocryphal Scriptures*, London, 1884, p. 579 ff.).]

Anthems are used at each of the four daily services (Evening, Night, Morning, and Compline —for the last, see above, (*b*)) and also in the Eucharistic Liturgy, in the baptismal service, and in large numbers in the occasional offices such as marriages and funerals. Many of the anthems at the burial of the dead are of great beauty, and are highly dramatic. Those used at the Eucharist

are: the 'Anthem of the Sanctuary,' sung after the psalmody at the beginning of the service; the 'Anthem of the Gospel,' sung after the Gospel is read; the 'Anthem of the Mysteries,' sung after an unnamed and fixed offertory anthem; an Anthem at the Fraction; and the '[Anthem] of the Bema,' sung by the choir in the nave during the communion of the people, which is unlike other anthems, and more nearly resembles a Madrāshā, consisting of an antiphon and verses (for that sung on Ascension Day see F. E. Brightman, *Liturgies Eastern and Western*,[1] Oxford, 1896, i. 298; for that sung on the Epiphany see *RA*, 388).

While 'Anthems' are most highly developed in the East Syrian books, somewhat similar compositions are found in Greek (see *LEW*, 354, where three parts of a prayer are 'farsed' with the clauses of the 'Gloria Patri'; the prayer, however, is not metrical). Much nearer to the East Syrian anthem is the West Syrian *sedrō* (E. Syr. *sidrā*, lit. 'order'), though it is not so highly developed (for specimens see *LEW*, 71, 74, 80, 108). The *sedrō* begins with a *prūmiōn*, or antiphon (*προοίμιον*), and this is followed by stanzas. The psalm-clauses, however, have in some cases dropped out; the best example is that on p. 108, which retains not only the clauses of the 'Gloria,' but also Ps $36^{8b}$. Payne Smith (*Thes. Syr.* ii. 2534) says that a *sedrō* is so called because it is arranged in order, and often is acrostic, or rhymes.

The authorship of the Anthems is seldom mentioned in the East Syrian service-books, but the Martyrs' Anthems are said in some MSS of the *Qdhām-ū-wāthar* (lit. 'Before and After')—the book of the daily offices less the 'propers' of the season, etc., named after the two choirs who sing the services—to have all been composed by Mār Mārūthā (Maruthas), metropolitan of Mīparqat (Maipheracti), a city on the Tigris between Mosul and Baghdad, otherwise known as Takrit (Tagrit) or Martyropolis. Mārūthā became metropolitan A.D. 640, or, as some say, A.D. 624; for his life, by his successor, Mār Dinkhā, see *Patrologia Orientalis*, iii. 1 (ed. F. Nau, Paris, 1912). G. T. Stokes, in *DCB* iii. 859, appears to confuse him with one or two earlier namesakes. The Sunday Martyrs' Anthems differ in style from the week-day ones, and seem to be of a later date (*ESDO*, 173). A few names of authors are given in the service-books to particular parts of other Anthems, especially to certain long and elaborate groups of stanzas added, in some cases, at the end. In the MSS translated in *ESDO* and *RA* these are: Khakīm of Bēth Qāshā (lit. 'house of the presbyter'), Shimahā Ṣaidnāyā, Audīshū the bibliographer (13th cent.; see above), Shīmūn, metropolitan of Amīdh (Diarbekr), Abraham of Slūkh (Seleucia on the Tigris), and Gabriel. The Anthem of the last-named is dated in the MSS '1910 of the Greeks,' *i.e.* A.D. 1599 (*ESDO*, 231). It would seem that, when an author's name is given to an Anthem, the composition is comparatively late. Some of the Anthems in *RA* are said in the MSS to have been derived from the *Wardā* (above, § 3), and the *Gazā* (lit. 'treasury'), a large volume containing propers for Festivals of our Lord, etc.

(*d*) The *Tūrgāmā* (lit. 'interpretation') is an expository hymn sung in the Liturgy. An invariable *tūrgāmā* is sung before the Epistle ('Apostle,' *i.e.* St. Paul), and a variable one before the Gospel (*LEW*, 257, 259).

(*e*) The *Canon* (Syr. *qānūnā*=*κανών*) is a hymn, metrical or non-metrical, consisting of verses 'farsed' with a psalm or other composition (for other meanings of this word see *ESDO*, 292); it is another great feature of the East Syrian services. A conspicuous example is the Canon 'Terrible art thou,' sung on Feasts of our Lord (*LEW*, 297), which runs thus:

'Terrible art thou, O God most high, out of thine holy place, world without end. Blessed be the glory of the Lord from His place,'

and is sung between several clauses proper to the particular festival. A very elaborate Canon occurs in the Third Mōtwā (*Mautbhā*, a series of anthems sung sitting, Gr. *κάθισμα*) at the Night Service on Epiphany (*RA*, 365). The stanzas farse the clauses of Dt $32^{21b-43}$, and are remarkable as including four unique verses in an old Persian dialect, in metre of lines of 8 syllables. D. S. Margoliouth judges them to belong to a dialect of Christians in Persia before the Muhammadan Conquest (*JRAS*, Oct. 1903, and *RA*, 367 n.). Another instance of a Canon is the *Lākhū mārā* (lit. 'Thee, Lord'), named from its first words, and sung at almost all the services:

'Thee, Lord of all, we confess: thee, Jesus Christ, we glorify: for thou art the Quickener of our bodies, and thou art the Saviour of our souls.'

This is used as a farsing of a psalm-clause with 'Gloria Patri' (see *ESDO*, 3, 104, etc.; *LEW*, 249). Yet another instance is the 'Holy God, Holy Mighty, Holy Immortal, have mercy upon us,' which is farsed with the 'Gloria Patri' (*ESDO*, 10; *LEW*, 250). These two compositions, however, are not called 'Canons' in the service-books. It may be added that 'farsing' is a favourite practice of the East Syrians; the psalms, and even the Lord's Prayer, are farsed (for the last see *LEW*, 252; *ESDO*, 1 f.).

LITERATURE.—As the subject is so little known, it may be desirable to name certain East Syrian service-books where specimens of the hymns described above may be found. The following two service-books, published in Syriac by the Archbishop of Canterbury's Mission in London and at Urmi in Persia, may be mentioned out of several similar works: *Ṭakhsā* (lit. 'Order,' *τάξις*), the Missal (1890); *Qdhām-ū-wāthār*, the book of daily offices (1892), for which see above, 4 (*c*). These contain the services as used by the Nestorians. The services as modified for the 'Uniat Chaldæans' may be seen in the *Breviarium Chaldaicum*, Paris, 1886. For Eng. tr. of the services see A. J. Maclean, *East Syrian Daily Offices*, London, 1894; F. C. Conybeare and A. J. Maclean, *Rituale Armenorum and the East Syrian Epiphany Rites*, Oxford, 1905; F. E. Brightman, *Liturgies Eastern and Western*, i. do. 1896 (contains one Liturgy, with the 'propers' for the Ascension); *Liturgy of Adai and Mari*, London, 1893 (contains three Liturgies and the baptismal service).

Besides the works mentioned in the course of the art., reference may be made to Gabriel Cardakhi, *Liber Thesauri de Arte Poetica Syrorum*, Rome, 1875 (an anthology of poems of different dates); G. Bickell, *S. Ephraemi Syri Carmina Nisibena*, Leipzig, 1866; J. Julian, *Dictionary of Hymnology*[2], London, 1907, art. 'Syriac Hymnody.' A few Syriac hymns have been rendered in English verse by R. M. Moorsom *Renderings of Church Hymns*, London, 1901, and by others.

A. J. MACLEAN.

**HYMNS** (Ethiopic Christian).—Hymns enter largely into the services of the Abyssinian Church, and in catalogues of Ethiopic MSS the names of certain hymn-books are usually found, viz. the *Degwa*, the *Egziabḥer nages* ('The Lord is king'), the *Me'rāf* ('Chapter'), and the *Mawāsheet* ('Responses'). Like other hymns, they are dedicated to particular persons, and intended for special occasions; a complete hymn-book is one which contains hymns for every solemnity in the year. A specimen of a Response or Antiphon is given by A. Dillmann in his *Chrestomathia Æthiopica* (Leipzig, 1866, § 10); it consists mainly of Scripture texts, chanted by the minister, and partly repeated by the choir; their response is called *Meltān*. Although it bears the title *Wāzēm* ('Hymn'), which resembles the Arabic *wazn* ('metre'), it bears no trace of rhythm or rhyme. Other hymns exhibit rhyme similar to that used in Arabic versification; *i.e.* a series of lines all terminate in the same consonant or consonant and vowel: but, whereas in Arabic this rhyme pervades the poem, in Ethiopic it pervades the strophe, which is ordinarily of five lines (see examples in

[1] Hereafter cited as *LEW*.

E. A. W. Budge, *Miracles of the Virgin Mary*, London, 1900); sometimes, however, it is only of three. The lines of a strophe do not appear to correspond exactly in other respects, and at times vary considerably in length and sequence of syllables. The chanting is of three styles: *Geez* (or *Zēmā*), *'Ezel*, and *Arārāi*, said to be suited respectively to holy days, fasts, and feasts; of these names the second appears to be identical with the Arabic *Ghazal*, 'love songs,' but the others are obscure. The *Degwa* is supposed to be the composition of one Yārēd of the 8th cent.; but this ascription is probably valueless. The matter contained in these hymns does not differ from the contents of analogous compositions in other branches of Christianity.

LITERATURE.—Catalogues of Ethiopic MSS, especially A. Dillmann, *Cat. codd. MSS æthiop. Bibliothecæ Bodleianæ*, Oxford, 1848; W. Wright, *Cat. of the Ethiop. MSS in the Brit. Mus.*, London, 1877; H. Zotenberg, *Cat. des MSS orient. de la bibliothèque nat.* iii., Paris, 1877.

D. S. MARGOLIOUTH.

**HYMNS** (Latin Christian).—I. *EARLY CHRISTIAN HYMNS.*—The language of the Western liturgies was originally Greek, not Latin, and the numerous Greek expressions in the present Roman liturgy remind us of this original dependence. Greek, moreover, was the written language of the early Fathers and ecclesiastical writers till Tertullian, so that it is not surprising to find that no original and independent Latin hymns were composed before the 4th cent. after Christ.

Isidore of Seville designates Hilary of Poitiers as the first hymn-composer of the Latin-speaking West,[1] and, according to Jerome,[2] he composed a whole book of hymns, but had apparently no decisive success.[3] The reason of his failure was that he made no attempt to condescend to the uncultivated Gallic populace, but tried to raise them to his own level.

Regarding the hymns of Hilary there was no certain information until quite recently. The *Liber hymnorum* of which Jerome spoke was lost, and the other compositions which circulated under his name in anthologies and literary histories either could not be proved authentic or were associated with his name only through an error which has found its way from Daniel's *Thesaurus hymnologicus* into countless works.[4] In 1884, G. F. Gamurrini discovered fragments of the missing *Liber hymnorum* in the public library of Arezzo, and published them in 1887 in the *Biblioteca dell' academia storico-giuridica*, vol. iv., under the title, 'S. Hilarii Tractatus de Mysteriis et Hymni et S. Silviæ Aquitanæ Perigrinatio ad loca sancta.' Unfortunately, the hymn-book is in a mutilated condition; it contains only three hymns, which are all incomplete, two being defective at the beginning, and one at the end; two of them are acrostics, or alphabet-hymns. In spite of this mutilation, the hymns are of priceless value to us, for they help us to estimate the oldest Latin hymns, and the poetical attempts of the great Gallic Church Father. Their contents—especially those of the first hymn, which deals with the doctrine of the Trinity and the consubstantiality of the Son—are not very clear, and have no popular characteristic. They are metrical in form, but show no artistic taste; and great liberties have been taken with the metre.[5]

Although Hilary was the first Western writer to compose hymns in Latin, Ambrose may be rightly called the Father of Latin hymn-composition, and, indirectly, of all Church hymnody and popular song.[1] There is far more evidence of the activity of Ambrose as a hymn-writer than in the case of Hilary. Many testimonies from Christian antiquity, among which his own takes the first rank, assure us of his poetical activity as well as of his striking success.[2] Augustine, his younger contemporary, has preserved quotations from the hymns of Ambrose; we have his good authority for four of them, viz. 'Æterne rerum conditor,' 'Deus, creator omnium,' 'Jam surgit hora tertia,' and 'Intende qui regis Israel.' If, by means of these four hymns, which are undoubtedly genuine, we examine the characteristics of Ambrose's style of thought and poetical expression in language and metre, we may be able to prove his authorship of a series of other hymns in the collection of the Church of Milan.[3]

The first fact that strikes us in connexion with the success of Ambrose is that his influence as a hymn-writer was as strong as it was lasting. Both Augustine and Ambrose himself describe the inspiriting and even fascinating effect which these hymns exercised when they first appeared. They were songs for the people and the congregation in the fullest sense of the term, being thoroughly popular in contents, form, and melody. Of course, the population of an imperial seat of residence like Milan stood at a higher level of culture than the people of a Gallic provincial town like the Poitiers of Hilary, and those who could follow the sermons of Ambrose with intelligence and affection would also appreciate his hymns, and sing them with enthusiasm.

The hymns of Ambrose spread rapidly over the West, and became popular everywhere. The ancient Latin hymns were also folk-songs, and they continued to be so as long as Latin remained a living tongue. When it became a dead language of liturgy, the sphere of influence of these hymns naturally became narrowed; instead of being the property of a whole people, they became, as poetry of the Church and cloister, the possession of a privileged class. But, later on, a popular form of poetry was evolved from this poetry, which continued to exist, and even flourish luxuriantly, in a dead language—an evolution which took place not in one, but in many languages; and thus we have the surprising phenomenon of a popular form of composition passing through an artistic stage to return again to the popular level. In this sense, also, Ambrose is the father of our popular ecclesiastical hymns; even to-day some of his poems and melodies are sung by the people. It is impossible now to discover the stages through which the popular hymn of Ambrose passed in its development into the clerical and monastic hymn of the Middle Ages, or the time when the transformation was completed. The want of liturgical records, and especially of MS hymns, reduces us almost entirely to the expedient of combining fragments—an untrustworthy method when the data are so scanty and uncertain. With the exception of a few MSS, such as *Vaticanus Reg. 11* and the *Antiphonary of Bangor* (ed. F. E. Warren, London, 1893–95), which, however, belong to quite a different environment and a different kind of composition, we have hardly any hymn-collections before the 10th century. In all of them the transforma-

1 See G. M. Dreves, *Aurelius Ambrosius*, '*der Vater des Kirchengesanges*,' Freiburg im Br., 1893.
2 *Ib.* pp. 4, 28.
3 This is the aim of Dreves's *Aurelius Ambrosius*. Following the example of L. Biraghi (*Inni sinceri e carmi di S. Ambrogio*, Milan, 1862), he proves fourteen hymns to be undoubtedly authentic, and four others to be probably composed by Ambrose (see *Aur. Amb.*, pp. 127–140, and *Anal. hymn.* l. 11–21). Dreves is also the first to attempt to ascertain by the same critical method the melodies which we are justified in regarding as originating from Ambrose (*Aur. Amb.* p. 129 ff.). His statements on both points have not been contradicted or disproved.

tion is complete; and they also show another change—the hymn governed by quantity and metre has evolved one governed by rules of accent. The single certain fact in this long period we derive from the monastic rules of Benedict, and of Aurelian and Cæsarius of Arles, which show us a small number of hymns as existent in the 6th cent., and the Latin hymn almost completely transformed into the monastic hymn.[1]

Contemporary with Ambrose, although his hymns appeared later, Prudentius[2] introduced a new kind of religious poetry; the non-liturgical hymn appeared and developed alongside of the liturgical; to the poetry expressing official and public congregational devotion was added the poetry of personal and domestic edification.

Besides his greater works (he wrote in all over ten thousand verses), which are mostly didactic and polemic, Aurelius Prudentius Clemens composed two works of mixed lyric and epic content, the *Cathemerinon* and *Peristephanon*, which have given his name a leading place in the history of hymnology. The first is a collection of hymns for the different hours of prayer in the day and the festivals of the year; the second consists of a series of poetical narratives celebrating the sufferings, conflicts, and victories of various martyrs, especially those belonging to Spain. These compositions belong to epic rather than to hymnic verse, but some of them were adopted into popular use as hymns.

Prudentius presents a striking contrast to his immediate predecessor Ambrose, writing as he did from an entirely different point of view, and only for private reading. Among the early Christian hymn-writers, Ambrose may be called the Classic and Prudentius the Romantic. While Ambrose everywhere betrays the genuine Roman character, with its sustained dignity and strenuous self-control, in the poems of the hot-blooded Spaniard there is a sparkle and glow, a thrill and enthusiasm unknown to the ancient Roman poets. The contrast between the liturgist and the poet is also obvious in the external form chosen by the two writers. While the hymns of Ambrose invariably consist of eight stanzas—a number which remained the rule till far into the Middle Ages—those of Prudentius are much longer. All the hymns of Ambrose are composed in the iambic dimeter—a metre whose simplicity was specially adapted to meet the requirements of congregational singing, and in which the majority of Latin hymns have been composed down to the present day; on the other hand, Prudentius takes pleasure in imitating and, if possible, surpassing, the rich variety of metres in Horace; so that, even in poetical form, self-limitation marks the one, and self-expansion the other, of the two protagonists of ancient Christian poetry.

As regards the influence of both writers on the hymn-composition which they originated, we may say that Ambrose has exercised a more powerful influence on the form, and Prudentius on the subject-matter, of sacred poetry, and that in later hymnody the one acted more as a restraint, and the other as a stimulus; the influence of Ambrose has been the more permanent, and that of Prudentius the more extensive, as he did not confine himself within the narrow limits of liturgical hymn-composition. Further, the influence of Prudentius on posterity was as great as that of a conspicuous poet has ever been, because, like the poets of classical antiquity generally, he became the common property of all nations who shared the intellectual wealth bequeathed by ancient Rome.

[1] Cf. C. Blume, *Der Cursus Sancti Benedicti Nursini*, Leipzig, 1908.

[2] *PL* lix.-lx.

In comparison with these two masters of ancient Christian hymnody, the other Christian hymn-writers belonging to this period fall into the background. We possess numerous inscriptional poems of Pope Damasus († 384), which are distinguished by elegance of expression and artistic polish.[1] The hymns attributed to him, however (one in praise of Agatha, and a hymn commemorating St. Andrew, which has long been in liturgical use), apparently do not belong to him; the former is probably of Mozarabic, and the latter of Gallo-Frankish, origin. Augustine († 430) also touches the province of hymnology in so far as he composed a 'rhythm' against the sect of the Donatists, each strophe beginning in alphabetical order from *a* to *v*. He himself calls it 'Psalmus contra partem Donati: liber unus.'[2] It was intended for popular singing, in order to make the common people better acquainted with the distinctive teaching of the two parties, and had a refrain (*hypopsalma*). Although the form is lyrical, the contents are so pronouncedly didactic that the poem can hardly be counted among sacred lyrics; but it is of the highest importance for the history of rhythmic Latin poetry because of its indisputable authenticity. Pontius Meropius Anicius Paulinus, bishop of Nola in Campania († 431), composed a whole 'book of hymns.'[3] Either this refers to the *Carmina Natalitia* on St. Felix or the book has been lost. Among the extant poems of Paulinus, all that can be called hymns are the 'Prayer' (*Carm.* iv.) and three paraphrases of Ps 7–9.[4] Cælius Sedulius, who flourished about the middle of the 5th cent., has left two poems besides his great 'Carmen Paschale.' These he himself intended to be hymns, although the first is really a combination of didactic and lyrical poetry; and the second, the famous 'A solis ortus cardine,' is a poem in iambic dimeters, the initial letters of whose strophes form an acrostic. This hymn was used in the Mozarabic liturgy, where it was divided into six sections for the Festivals of the Annunciation, of the Virgin Mary, the Birth of Christ, the Epiphany, Innocents' Day, the Feast of Lazarus, and Maundy Thursday; it is also used in the Roman liturgy, but in a condensed form. Some verses from the 'Carmen Paschale' have a place in the Roman missal, in the Introit of the votive Mass of the Virgin.[5] Pope Gelasius († 496) also composed hymns in the manner of Ambrose.[6] Unfortunately his hymnary is lost, and we cannot authenticate any single hymn as his literary property.

II. *MEROVINGIAN HYMNS.*—Between early Christian and mediæval hymn-composition there are two transitional periods—the time of the Merovingians, which shows a further development from metre to rhythm, and the Carlovingian period, which is a time of artistic renaissance, and which also inaugurates a completely new epoch. Ennodius, bishop of Pavia († 521), like Gelasius, belongs in time to the Merovingian period, although in his whole character and tone of thought he is a product of the former early Christian age. We possess a complete hymnary written by him containing twelve hymns, most of which have survived only in a single Brussels MS.[7] Ennodius was obviously roused to poetical activity by the example of Ambrose, and at any rate wrote his hymns as archdeacon of Milan for the use of the Church there. His hymns, with the exception of the eighth, are in the same measure as those of Ambrose. He always divides them into eight

stanzas, and chooses only subjects that had not already been treated in verse by Ambrose. The Church of Milan, however, did not respond to his desire; his hymns were not adopted in her liturgy, and only three of them can be traced in other liturgies. Ennodius is one of the poets on whom, as a rule, literary historians pour out the vials of their wrath. His hymns hardly deserve the censure generally heaped on them; in spite of being modelled on those of Ambrose, they are not entirely devoid of originality, and, notwithstanding their obscurity of style, they do not lack a certain inspiration.[1] We must mention here Pope **Gregory the Great** († 604)—not as a hymn-writer, but as a supposed hymn-writer. Just as all the reforming energy of this Pope with regard to the Liturgy lies in obscurity, so nothing is known about his poetical activity. All that we read about hymns which he is said to have composed is either the product of private supposition (such as that of Mone) or derived from Jodocus Clichtoveus, who, in his *Elucidatorium ecclesiasticum* (Basel, 1517), was the first to assign a few hymns to Gregory, without any reason. During the whole mediæval period, down to the time of Gregory himself, almost absolute silence prevails on the subject.[2]

The greatest and most conspicuous figure of this period is Venantius Honorius Clementianus **Fortunatus**, who was made bishop of Poitiers in 599. His poetry, with the exception of the four books of his *Life of St. Martin*, is 'occasional poetry' in the strictest sense of the term. According to Paulus Diaconus,[3] he also composed numerous hymns for the various Church festivals, but these have not been handed down. In his eleven books of 'miscellaneous poems'[4] there are three hymns on the Holy Cross and an 'occasional poem' on Easter, which, in an abbreviated form, was used as a processional hymn. Besides these there are other three hymns ascribed to Fortunatus: the baptismal hymn, 'Tibi laus, perennis auctor' (called 'Versus Fortunati presbyteri' in an 8th cent. office-book from Poitiers preserved in the 'Bibliothèque de l'Arsenal' in Paris), the Christmas hymn 'Agnoscat omne sæculum,' and the beautiful hymn in praise of Mary, 'Quem terra, pontus, æthera.'[5] In spite of neglect of artistic form, the hymns of Fortunatus belong to the acknowledged pearls of Christian literature. Hymns like the 'Pange lingua' and the 'Vexilla regis' have never been surpassed, and will remain immortal. They had a great influence on both text and music of later hymns.[6]

Among the contemporaries of Fortunatus we may mention **Eugenius of Toledo** († 658), who bestowed special care on Church-hymnody, and revised the Church office-books; but, as no ecclesiastical hymns have come down under his name, we cannot ascertain his probable share in the hymn-composition of the Mozarabic liturgists.[7] After Venantius Fortunatus the most conspicuous poet of the period is the **Venerable Bede** († 735). In the last chapter of his *Ecclesiastical History of England*, in which he inserted a synopsis of his original works, he says that he had also composed 'a book of hymns in various verse-measures and rhythms.' We have to lament the loss of this book as a whole; but eleven hymns have been

[1] *Anal. hymn.* l. 61 ff.

[2] Cf. Dreves, 'Haben wir Gregor den Grossen als Hymnendichter anzusehen?' *Tübinger Quartalschrift*, 1907, pp. 548–562. C. Blume, in an art. in the *Stimmen aus Maria-Laach* (lxxiv. [Freiburg im B., 1908] 269 ff.), has ventured to reclaim Gregory for sacred hymnody, but he seems scarcely satisfied with his own arguments.

handed down to us under Bede's name by Georgius Cassander in his *Hymni Ecclesiastici* (Cologne, 1556), regarding the genuineness of which there has been much controversy.[1] Besides these hymns we have an abecedary hymn on St. Edilthrida in the *Ecclesiastical History* (iv. 20), and two Psalm-paraphrases preserved in various MSS. Bede's hymns are of unmistakable sobriety, corresponding with the whole character of their author. They did not circulate widely, however, and exercised no lasting influence on later Latin hymn-writing; only a few of them occur in liturgical MSS. The hymn on St. Edilthrida was imitated in a large series of Anglo-Saxon and Irish hymns, *e.g.* those of Wulstan of Winchester (cf., further, below, p. 20b).[2]

We may mention here a double series of hymns, which began in the Merovingian period, and have a decidedly national character, which is strikingly evident in the national form of writing: the ancient Irish and the Gothic or Mozarabic hymn collections. The ancient Irish Latin hymns are discussed in art. HYMNS (Irish Christian). More important than these, however, are the hymns collected in the Mozarabic Liturgy. This Liturgy, which differs very little from the Roman, was first entitled 'Old Spanish,' then, with the dominion of the Goths, 'Gothic,' and, finally, after the conquest of Spain by the Arabs (A.D. 711) 'Mozarabic,' *i.e.* the Liturgy of Christians living among Arabs. Isidore of Seville seems to have done for this Liturgy what Gregory the Great did for the Roman, but the facts of the case are equally uncertain. The hymns, numbering about 200, which can still be collected out of old Mozarabic breviaries, are by no means the product of one period; on the contrary, there are some in the classical metre of the early Christian period, some which show the gradual transition from metrical to rhythmic composition, and some displaying all the linguistic barbarism of the 10th century. The Mozarabic Liturgy is much richer in hymns than the Roman. It has a whole series of hymns for special occasions, such as the consecration of a bishop, a bishop's birthday, a coronation, a king's birthday, marriages, etc.

With the disuse of the Mozarabic Liturgy this mass of lyrical poetry became obsolete, and found its way from the Church into the libraries and archives.[3]

III. *THE CARLOVINGIAN RENAISSANCE.*—The empire of the Carlovingians, with its Cæsaropapism often resembling that of Byzantium, marks a new epoch for Latin hymnology. During this period two tendencies appear which afterwards run parallel through the whole of the Middle Ages, viz. the artistic reproduction of the old and the obsolete, and the preparation of the new and original. Charlemagne was not only a warrior but a patron of art, and under his rule artistic Latin poetry received a new impetus which has been called the 'Carlovingian Renaissance.' The central focus of these efforts was the 'palace-school' of Charlemagne, with which the most famous learned men of the time were connected. It must be admitted that, considering their numbers and their poetical activity, the authors belonging to the learned circle of the palace and its 'school' composed few hymns—no doubt because the introduction of the Roman Liturgy into the whole empire of the Franks checked the impulse towards hymn-composition. Still, the majority of them made small contributions towards the treasury of Church hymnody.

The most important was **Paul the Deacon** († 799),

[1] See *Anal. hymn.* l. 96 ff.

[2] *Ib.*

[3] See *ib.* xxvii. for Cienfuegos's attempt to resuscitate it. The Liturgy is found most conveniently in *PL* lxxxvi.

who from 782 to 786 stayed at the Court of Charlemagne. Besides a hymn on the miracle-worker, Benedict of Nursia, in his *History of the Lombards* (i. 26), we have the immortal poem on John the Baptist.[1] Paulinus II., patriarch of Aquileia († 802), was a more productive composer. His best known and most popular hymn was that on the Apostles Peter and Paul, beginning 'Felix per omnes festum mundi cardines.'[2] Alcuin († 804), a central figure in this group and one of the most prolific hymn-writers, is represented by only two hymns—one on Vedastus and an evening hymn.[3] Legend says that Theodulf, bishop of Orleans († 821), from his prison-window greeted the Palm Sunday procession in Angers, in which King Louis the Pious took part, with the improvised hymn 'Gloria, laus, et honor,' fragments of which are still in use in the Roman Liturgy. The only other extant hymns of Theodulph are those for 'The Salutation of the King,' *In Adventu Regis*.[4] In this circle of poets we may also include Florus, the deacon of the Lyons Church, and Sedulius Scottus († *c.* 874), the scholar of Liège. We have some hymns by Florus (fl. middle of 9th cent.) composed in elegiac verse, and some free translations of psalms in heroic metre (one Psalm-paraphrase is written in iambic dimeter).[5] The poems of Sedulius Scottus belonging to the rank of hymns are very few.[6]

Besides this group of poets of the early Carlovingian period, there is another in the later period—the 'Singers' school' of St. Gall.[7] The two groups are connected by Rabanus Maurus, who was a pupil of Alcuin, and Walafrid Strabo, who came from St. Gall to Rabanus at Fulda, and later on became abbot of Reichenau. Walafrid, the younger of the two, is the better and more artistic poet, Rabanus the more productive and influential. The poems of Rabanus († 856), especially his hymns, are known chiefly from the ed. of C. Brower (Mainz, 1617), who took them from a MS which probably belonged to the Fulda monastery. A small portion of this MS is preserved in the monastic library at Einsiedeln.[8] In his hymns Rabanus is more original and inspired than in his other works. The immortal 'Veni Creator Spiritus' is assigned to him by a Breslau MS now in London.[9] Walafrid, nicknamed Strabo or Strabus ('the cross-eyed'), abbot of Reichenau († 849), seems to have composed a 'Book of Hymns' (*sacrorum hymnorum librum unum* [J. Pitseus]), but it has been lost. Only a few hymns of Walafrid are known—a Christmas hymn, a hymn on Gallus, well known in Germany in the Middle Ages, hymns on Mammes, Januarius, Sergius, and Bacchus, and poems to welcome the Emperor.[10] Another pupil of Rabanus—the monk Gottschalk of Orbais († 869)—composed hymns, or, rather, spiritual songs. Two of them are specially interesting because of their original rhythms.[11]

The 'School of St. Gall,' to which we now pass, produced two classes of writers—the first class being an offshoot of the Carlovingian Renaissance, cultivating the liturgical hymn in classical metre and developing the processional hymn, and the second (especially Notker and Tutilo) introducing an entirely new art of sequences and tropes.

(1) In the former class Ratpert († after 884) was an active writer, although all that remains of his liturgical writings is a short litany for Sunday processions, composed partly in elegiac, partly in heroic, verse, beginning 'Ardua Spes mundi,' a communion hymn 'Laudes, Omnipotens, ferimus tibi, dona colentes,' a processional hymn for the festival of St. Gall, and a song to welcome the Queen.[1] Waldrammus (wrongly entitled 'deacon' by Ekkehart IV.) composed a processional, 'Sancte Pater, juva nos,' two hymns to welcome the King, and a sequence for the Church-dedication festival.[2] A contemporary and brother-poet of his is the younger Hartmann, abbot of St. Gall († 925), of whose compositions we possess a hymn to be sung before the Gospel (really a precursor of the 'Conductus' which came into use later), a hymn and a processional for the festival of the Holy Innocents, a metrical litany for Sunday processions, hymns to welcome the King, and hymns for the procession bearing the remains of St. Magnus.[3] Others in this class are Notker Physicus († 975), who wrote hymns on the Virgin Mary and St. Othmar,[4] and Ekkehart the Deacon († 973), the author of some sequences.

(2) Notker the Stammerer (Balbulus; † 912) stands at the head of the second class. He introduced rhythmical sequences into the Church liturgy, freed hymn-composition from the trammels of early Christian art, and thus inaugurated the rhythmical composition of the Middle Ages, which afterwards developed so luxuriantly. In Notker's time there was no proper musical notation. Melodies had to be memorized; and the notation in use was merely an aid to memory for the singer, marking the groups of notes and the general rise and fall of the melody, but not the exact intervals between the notes. It was very difficult to remember passages in which a long sequence of notes (sometimes occupying several lines and called 'melisms' and 'jubilations') had to be sung on a single syllable of a word, as, *e.g.*, in the Alleluia at the end of the Gradual. Notker had often wondered how this difficulty could be obviated. When the monastery of Jumièges in Northern France was destroyed by the Normans, one of the monks came to St. Gall. In the choir-books which he brought with him Notker saw that there were words fitted into the long sequences of notes—a syllable for every note; and he determined to attempt something similar. Under the wordless 'melisms' he introduced words of his own composition, so that each note was sung to a single syllable; and he composed two lines of words for each musical phrase (*clausula*), which, if we may infer earlier custom from later, were rendered by choirs of men and boys alternately. After Notker had overcome the first difficulties with the help of his teachers Iso and Marcellus, he composed sequences for nearly all the festivals of the ecclesiastical year, divided them into two books, wrote a preface, and dedicated them to Bishop Liutward of Vercelli, the patron of his monastery. Notker's collection of sequences, which held its ground in Germany till the time of the Council of Trent—and some of it even later—exists in numerous MSS, in many of which, however, there is a mixture of later additions, *e.g.* sequences of Ekkehart and others. In contents, form, and manner of musical phrasing Notker's sequences are entirely original—a liturgi-

[1] From the opening words of this hymn, 'Ut queant laxis resonare fibris,' Guido of Arezzo borrowed the tonic 'Ut, re, mi' notation. For the hymns see *PL* xcv. 472–474, 1597 f.; cf. also E. Dümmler, 'Zu den Gedichten des Paulus Diaconus,' in *Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde*, xvii. [1891] 397–401, and *Anal. hymn.* l. 117 ff.

cal, poetical, and musical innovation—as the hymns of Ambrose had been, and their circulation and influence find no parallel except in the case of the great Milanese. As with Ambrose's hymns, Rome alone showed little appreciation for the Teutonic innovation of Notker—a circumstance which afterwards, at the Council of Trent, proved momentous for sequence-composition. Besides his sequences Notker composed a series of hymns on St. Stephen.[1]

Next to Notker the Stammerer, **Tutilo** († 898) is the most influential member of the St. Gall school; for he ranks as the first writer of 'tropes' (*i.e.* additions in prose or verse to an already existing liturgical text).

These insertions were afterwards more frequent in Missals or Graduals than in Breviaries or Antiphonaries. In the former we find them in the 'Kyrie,' 'Gloria,' 'Sanctus,' 'Agnus Dei,' and in the Epistles (*Epîtres farcis*) as well as in other fixed or changing parts of the Mass (Introit, Gradual, Offertory, Communion); in the latter, as a rule, only in some of the Responses.

Only a few tropes composed by Tutilo remain, and these are mostly in prose, and therefore interesting to liturgists, not hymnologists. As regards hymn-writing Tutilo is important, not on account of what he composed, but for what he inaugurated and suggested: the composition of tropes, introduced in German territory and cultivated to a moderate extent in Germany, spread into France, Italy, and England, where it attained a much fuller development.

The 'School of Saint Amand' (*Schola Elnonensis*) also flourished during this period. **Milo** († 872) was one of its most celebrated teachers and a prolific poet, but none of his hymns have been preserved. The most distinguished, however, was **Hucbald** († 930), one of the first composers of harmony. He discovered the *organum*, or *ars organizandi*, *i.e.* the art of accompanying a melody in perfect fifths; and his name is also connected with the introduction of the metrical or rhymed office (*Historia rhythmica*), *i.e.* a daily liturgical prayer-office, comprising the seven canonical hours, in which the hymns and everything else sung, except the Psalms and lessons, are composed in metre, rhythm, and rhyme. Besides hymns on St. Theodoric of Rheims and St. Cyricus of Nevers, he composed rhymed offices on St. Rictrude of Marchiennes and others. At any rate, the district of St. Omer, St. Amand, and Liège may be rightly regarded as the birthplace of this kind of composition.[2]

IV. *The Early Mediæval Period.*—When treating of the school of St. Gall as a whole, we have already touched on the early mediæval period (10th and 11th centuries). The 10th cent. takes up the task—interrupted and postponed by the Carlovingian Renaissance—of liberating the Latin hymn from ancient metrical laws and of bringing it under the government of rhythm. During the process, which is tedious and confusing, the hymns which appear are neither metrical nor rhythmical; they have neither accent nor metre—in fact, the composers seem simply to have followed the principle of counting syllables. Rhyme appears in a desultory manner in the Carlovingian period, in Rabanus and Gottschalk, but throughout the 10th cent. it remains weak and imperfect. It was not till the 11th cent. that both accent and rhyme reached the pitch of perfection which they maintained in the 12th and 13th centuries. At the same time the art of writing sequences, begun by Notker, continued to be cultivated, although it

[1] The legend of the origin of the 'Media vita in morte sumus,' which attained such celebrity, is the invention of a later time. Notker's hymns are conveniently edited in *PL* cxxxi. 1005–1026, lxxxvii. 58–62.

[2] The rhymed offices of the Middle Ages, as far as they are known, will be found in *Anal. hymn.* v. [1889], xiii. [1892], xvii. [1894], xviii. [1894], xxiv.–xxvi. [1896–97], xxviii. [1898], xlv.*a* [1902].

never again attained Notker's depth of thoug and mysticism. In the 11th cent. sequences a peared in France which, re-constructing Notke prose tropes in poetic form, and his syllab counted cadences in rhythms and strophes, intr duced a new type of sequence. They constitute to borrow a figure from architecture—the tran tion-style, in which Romanesque forms are mix with Gothic elements. During this period, throughout the whole of the Middle Ages, met holds its ground, but, like rhythm, it is re-modell and re-moulded in the disguise of the most variab and purely ornamental forms.[1]

One of the most famous hymn-writers of th period is the Anglo-Saxon **Wulstan**, precentor o St. Swithin in Winchester. We have sever abecedaries composed by him in elegiac measu on local saints of Winchester—Athelwold, Birii and Swithin. They are modelled on Bede's hym on Edilthrida, and have been revised by Ordericu Vitalis.[2] The monastery of the reformed Bene dictine order at Clugny, which at this time ir fluenced not only France but all the Christia kingdoms of the West, is represented in hymn composition by the two most celebrated abbot that it possessed—**Odo**, the best musician of hi time († 943), and **Odilo** († 1048). Only a few frag ments of their hymns remain. Odo celebrated St Martin of Tours;[3] Odilo panegyrized St. Majolus abbot of Clugny, and the empress St. Adelheid, consort of Otto the Great.[4] The German poet-pope **Leo IX.**, a count of Egisheim († 1054), is closely connected with the Clugny group. Besides two hymns he composed a rhythmical office in honour of Gregory the Great.[5]

More famous than all these, however, as theologian, schoolman, and poet, is **Fulbert of Chartres** († 1028). The comparatively few poems of his which are extant are composed in the most varied metres and rhythms. The more widely-circulated of his writings were the sequence 'Sonent regi nato,' the Epiphany hymn 'Nuntium vobis fero de supernis' in France, and the Easter Song 'Chorus novæ Jerusalem' throughout Christendom.[6] Other French hymn-writers of this period are **Adhémar of Chabannes**, a monk of Angoulême († 1034), who panegyrizes in hymns the patron of his monastery, St. Eparchius;[7] **Eusebius Bruno**, bishop of Angers († 1081), who composed a number of rhythmical religious poems, of which one on St. Stephen became the common property of the mediæval Church;[8] and **Anselm**, archbishop of Canterbury († 1109), the composer of some pious prayers. It is to be regretted that we cannot give more substantial proof and a more detailed description of Anselm's activity as a hymn-writer.[9] In a MS of the poems of Eusebius Bruno there is a poem of **Berengar of Tours** († 1088), 'Juste Judex Jesu Christe.'[10]

In Italy, besides pope Leo IX. just mentioned, there are two conspicuous poets, who in other respects differ as widely as two writers can—**Peter Damiani** († 1072) and **Alfanus of Salerno** († 1085). One writes in mediæval rhythms; the other might be designated as a herald of humanism.

**Peter Damiani** belongs to the prolific hymn-writers of the Middle Ages. As regards artistic form, his poetry can hardly bear comparison with

[1] Cf. the countless varieties of Leonine verse with its elaborations and artificialities, the 'versus caudati' and 'bi-caudati,' 'cruciferi' and 'cruciati,' etc. (*Anal. hymn.* v. 12 ff.).

the more polished and elaborated compositions of the succeeding age; but under its bald exterior with the feeble assonantal rhymes are hidden a genuine poetic genius, and a warmth of feeling which at times bursts into a volcanic blaze. In the ordinary hymn-forms he celebrates the Virgin and the local saints of his native place, Ravenna, and depicts the joys of heaven and the terrors of the Judgment. His poem on the joys of Paradise, beginning 'Ad perennis vitae fontem,' has actually been honoured by being wrongly assigned to the 6th cent. or to St. Augustine himself.[1] **Alfanus of Salerno** composed a series of 21 liturgical hymns, a metrical office, and a number of religious lyrics.[2] With one exception all his poems are in classical metre, and are, for his age, remarkably pure in expression and form.

Germany also produced several important hymn-writers. **Heribert of Eichstätt** († 1042), a count of Rothenburg, composed a series of liturgical hymns, some of which, *e.g.* his hymn on the Holy Cross, and a poem on St. Lawrence, found a general circulation in Germany. In other hymns he celebrates the local patron saints of Eichstätt—Willibald and Walpurgis.[3] **Bern of Reichenau** (Berno Augiensis; † 1048) was a musician as well as a poet, and he certainly wrote more than the few hymns and sequences known to us as his. **Othlo**, monk of St. Emmeran in Regensburg († 1072), deserves mention as the composer of a series of prayers in stiff hexameters and stanzas.[4] There were two writers of greater influence than these, however—**Heriman the Lame** (Hermannus Contractus) of Reichenau († 1054), one of the most celebrated men of his time, and **Gottschalk of Limburg** († 1098), the most distinguished composer, after Notker, of sequences in Germany. Heriman was a popular teacher and a prolific as well as celebrated writer. Besides his chief work, his *Chronicon Augiense* (the first universal history of the Middle Ages), he composed mathematical, astronomical, and musical works. Very few of his liturgical writings have come down to us under his name. The sequences which we know to be his are marked by a mysticism going far beyond that of Notker, and by the trick of inserting Greek words in the Latin text. The one most free from the latter mannerism is the most celebrated and widely used of Heriman's sequences, 'Ave præclara maris stella,'[5] which also shows the writer's preference for long cadences in contrast to the much shorter ones of Notker. Besides this we have an office in honour of St. Afra composed mostly in prose, and (probably) the beautiful antiphons still used in the services of the Church, 'Alma Redemptoris Mater' and 'Salve Regina.'[6] As a composer of sequences, **Gottschalk of Limburg** far surpassed Heriman. With the exception of Notker of St. Gall there is no composer of sequences during this period when rhymeless rhythms were in vogue from whose hand we have a greater number of 'proses' than Gottschalk. He writes in a very peculiar style. He is especially fond of the figures known as 'enumeratio,' 'polyptoton,' and 'annominatio.' He shares with Heriman the preference for long cadences, and, without imitating him, resembles him very closely in his manner of conceiving and presenting a subject.[7]

[1] *Anal. hymn.* xlviii. 29 ff.; *PL* cxlv. 861–864, 930 ff.

[2] The list of his hymns will be found in *Anal. hymn.* l. 330, the text, *ib.* xxii. [1895], on the pages referred to in l. 330; his religious poems of a non-liturgical character are collected in *ib.* l. 330–336. This ed. corrects the numerous faults of the earlier ones, since all the original MSS were freshly collated. For a convenient, though less critical, ed. see *PL* cxlvii. 1219 ff.

[4] *Ib.* l. 320 ff.

[5] On the question of the authorship of this sequence see *Anal. hymn.* l. 309.

[6] *Anal. hymn.* l. 308 ff.

[7] *Ib.* l. 339 ff.; Dreves, 'Godescalcus Lintpurgensis,' in *Hymnolog. Beitr.* i. [1897]; *PL* cxli. 1323–1334.

Mention must be made of one more contemporary composer, **Wipo**, a Burgundian, Court-chaplain to the Emperors Conrad II. and Henry III., and, according to a marginal note on an Einsiedeln MS, author of the famous Easter sequence, still in use, 'Victimæ paschali laudes.' This sequence is of special interest because it is a classical example of those transitional sequences in which the old forms initiated by Notker are adorned with rhymes and re-cast in a rhythmical mould.

V. *THE MIDDLE AGES.*—We now reach the acme of mediæval culture, the period of Early and High Gothic, in which poetic composition keeps abreast of the sciences and arts, and not least in the form of religious Latin poetry. There are more writers of reputation; the forms of composition show a richer variety; the rhythms are more correct, the language more tuneful, and the rhymes purer. Good writers of the 12th and 13th centuries obey the rule that the masculine (iambic) rhyme must be two-syllabled.

The writers of this period may be arranged into several groups. The first group is formed round **Hildebert of Lavardin** and the second round **Abelard**. The whole mass of liturgical composition, however, culminates in **Adam of St. Victor.** Another group is dominated by **Philippe de Grève.** Finally, there are several less celebrated writers.

(1) The chief members of the first group are **Marbod**, bishop of Rennes († 1123), **Baudri** (Baldericus), abbot of Bourgueil and bishop of Dol († 1130), and **Reginald**, monk of Saint Augustine's, Canterbury († 1109). All these writers have two characteristics in common: they cultivate classical and metrical poetry, although Marbod and Reginald also write Leonine or rhymed hexameters; and in their poems they incline towards worldly or religious-epical or didactic poetry. **Marbod** wrote a series of hymns and prayers (the latter partly in metre and partly in rhythm).[1] Of **Baudri's** compositions only a few hymns on St. Samson of Dol remain.[2] The form which he prefers is that of the poetic epistle, and the collection of his letters is of great importance from the point of view of the historical student. **Reginald of Canterbury**, in the last book of his chief work, the *Life of St. Malchus*, has collected a series of hymns addressed to God, to Christ, to the Holy Spirit, etc., all of which he puts in the mouth of his hero. These hymns show unmistakably a feeling for poetic form and a certain energy of sentiment which secure for their author an honourable place in the great throng of mediæval writers.[3]

**Hildebert** himself († 1133), archbishop of **Tours**, belongs to the most careful cultivators of form among the mediæval poets. Some of his verses were actually included by modern philologists in the anthology of Latin classical authors, and were taken for genuine productions of antiquity, till Hauréau drew attention to the mistake. It is unfortunate that there are no liturgical compositions of Hildebert known. But, even if Hildebert had given us nothing but the single *Oratio devotissima ad Tres Personas SS. Trinitatis*, 'Alpha et Ω magne Deus,' this one poem would give him a claim to be reckoned with the greatest hymn-writers of all ages and tongues.[4]

(2) Of an 'Abelardian' group we cannot, strictly speaking, say anything from the literary-historical point of view, since Abelard does not belong to any one school or tendency; but, considering the fact that the two men who most deeply and permanently affected his life—Bernard of Clairvaux and Peter the Venerable—were both engaged in hymn-

[1] Cf. *Anal. hymn.* l. 388 ff.; *PL* clxxi. 1647 ff.

[2] *Ib.* xviii. 252 f.

[3] *Ib.* l. 370 ff.

[4] *Ib.* l. 408 ff.; *PL* clxxi. 1411–1414; cf. also B. Hauréau, *Les Mélanges poétiques d'Hildebert de Lavardin*, Paris, 1882.

composition, it is perhaps justifiable to bring them together in a group. **Bernard of Clairvaux** († 1153) composed only a few hymns on the saints Victor and Malachias,[1] which are not very remarkable in contents or form. All the other works ascribed to him in the mediæval period have been proved by B. Hauréau[2] not to be his. The well-known 'Jubilus' of the Name of Jesus, in which two-syllabled masculine rhyme is employed throughout, is certainly not his. It is probably not earlier than the 13th century.

A larger number of liturgical hymns and sequences and extra-liturgical rhymed prayers have come down to us from the hand of **Peter the Venerable**, abbot of Clugny († 1156). His compositions are more numerous and of a higher quality than Abelard's, displaying variety and polish of form. His melodies are also preserved.[3]

**Peter Abelard** († 1142) surpasses both Bernard and Peter the Venerable as a hymn-writer. He is one of the few mediæval poets who composed a whole hymnary. It is very copious in contents, and has come down to our time almost complete. The first book contains the ferial hymns, the second the hymns for the festivals of our Lord, the third for the feasts of the saints. These hymns are not so rounded and complete as the hymns of later writers, and their contents sometimes suggest the philosopher rather than the poet; but their imperfections are due to the fact that the hymnary was not composed gradually in hours of inspiration, but had to be executed all at once. Still, as a whole, it is a remarkable piece of work, not only because of the new forms which Abelard introduces into hymn-composition, but also on account of the beauty of the contents. It is unfortunate that the two original MSS, which mutually supplement each other—the older Brussels codex and the more recent and fuller one at Chaumont-sur-Marne—do not record the melodies of the hymnary, since Abelard enjoyed a wide reputation as a melodist.[4]

(3) The writings of **Adam of St. Victor** († 1192) stand at the head of liturgical composition of the Latin-speaking Middle Ages—indeed, of all Christian lyric poetry. He is unquestionably one of the greatest poets who ever mastered the Latin tongue. His poetical works were edited four times during the 19th cent., three times by Léon Gautier (who deserves to be called his discoverer; Paris, 1858, 1881, 1894), and once by Eugène Misset and Pierre Aubry (do. 1900), whose edition gives the melodies of the sequences.[5] In the contents of his writings —*e.g.* his sequence on the Holy Trinity, 'Profitemur unitatem,' which in theological scholastic knowledge surpasses even the 'Lauda Sion' of Thomas Aquinas—in the euphony of his language, and in the incomparable grace with which he wears all the shackles of rhythm and rhyme imposed upon him, Adam of St. Victor is equally great.

(4) In the 13th cent. we come upon a group of poets who may be called the 'hymn-writers of the Mendicant orders,' although the central figure of the group is a personage who during his life belonged to the most strenuous opponents of the Mendicants —the chancellor, Philippe de Grève. In this group we find **Thomas Aquinas** († 1274), the singer of the Sacrament of the Altar, and the author of the justly-celebrated 'Lauda Sion,' the 'Pange lingua,'

honour of Mary Magdalene;[1] John Hoveden († 1275), Court-chaplain of Queen Eleanor of England, mother of Edward III., composed a series of mediocre religious lyrics, and a narrative lyric poem on the life and sufferings of Christ entitled *Philomela*, which is of conspicuous excellence; Guy de Basoches (Guido de Bazochis), precentor of Chalons-sur-Marne († 1203), in his collection of correspondence, which is important for the literary history of the period, has interwoven numerous hymns and religious poems;[2] Adam de la Bassée (Adamus de Basseia), canon of Saint Pierre de Lille († 1258), composed songs of the most varied kinds to suit existing liturgical or popular melodies;[3] and Orrigo Scaccabarozzi († 1293), the arch-presbyter of Milan, wrote several liturgical hymns, rhymed offices, and Masses, which, however, are not remarkable either for contents or for form.[4]

We must specially mention two female writers: St. Hildegard, the abbess of Rupertsberg in Bingen († 1179), and Herradis of Landsberg, abbess of Hohenburg or Odilienberg in Alsace. Hildegard, the great seeress of the 12th cent., also composed hymns and sequences, or, rather, rough drafts of hymns and sequences, which are corrected by another hand. In the Wiesbaden MS (the only one in which they occur) these rough drafts are set to music—whether by Hildegard or some one else we do not know.[5] The compositions of Herradis of Landsberg († 1167) are of a different kind. She enriched the library of her convent with a MS which is equally interesting for the history of art and the history of literature. The 'Hortus deliciarum,' as it was called, seems to have been a kind of theological Encyclopædia, and was illustrated by interesting miniatures which are quite famous. On 23rd August 1870 the MS was destroyed by fire. This 'Pleasure-garden' of Herradis also contained a series of poems ascribed to the anthologist.[6] Whether these are her composition or not, she certainly wrote poetry, and so far mastered the Latin tongue as to be able to clothe sentiments of simple piety in an unadorned and pleasing garb.

We must here merely mention the fact that a number of hymns had been appearing anonymously during these early centuries, and, in fact, these far exceed in numbers the compositions whose authors are known.

VI. *THE LATER MIDDLE AGES*.—In the 14th and 15th centuries Latin hymn-writing slowly but steadily declined from the high level which it attained in the 12th and 13th centuries. There were more writers interested in the further development of the art, but they do not rouse our admiration. And the great stream of anonymous poetry increased. Some works of first-rate quality appeared, but the gradual falling-off continued. The *form* of hymn-writing seems to have undergone the most rapid eclipse in France, where it had reached its most perfect development. Word-accentuation, which constitutes the basis of rhythmical composition, did not even with Abelard attain the perfection to which Adam of St. Victor brought it, and in Philippe de Grève's work it perceptibly declined. The process of deterioration went on rapidly until hymn-writing was again reduced to the system of syllable-counting from which it had begun to emerge in the 10th century. In England, and perhaps more gradually in Germany, the same deterioration took place; in Italy it had never reached the perfection which it attained in France.

This period begins with Jacopone da Todi († 1306), the Franciscan poet, who composed many celebrated Italian religious poems. He is commonly regarded as the author of the world-renowned 'Stabat Mater,' the most beautiful mediæval elegy in honour of the Virgin. Like the 'Dies Iræ,' the 'Stabat Mater' was originally a hymn for private devotion; but it occurs in many of the 15th cent. books of prayer, and before the end of the century it found its way into the Liturgy. Cardinal Jacobus de Stephanescis († 1343) displayed activity as a liturgical writer and as a composer. Among acknowledged compositions of his are hymns on St. George, antiphons in honour of pope Cœlestin V. (Petrus Morrone), and a few other liturgical and extra-liturgical pieces.[1] Another cardinal, Guillermus da Mandagoto († 1321), more famous as a lawyer than as a poet, composed sequences which his nephew (of the same name) included in the Missal of Usez, and thus handed down to posterity. Faultless in form, these poems are greatly lacking in the glow of inspiration.[2] These writers are succeeded by two Austrian poets, the Cistercian Christan of Lilienfeld († before 1332) and the Carthusian Konrad of Gaming (Gemmicensis; † 1360), who is also called Konrad of Heimburg, after his birthplace. From the pen of the former we have a great number of hymns and sequences, offices and prayers in rhyme, which are all remarkable for their carefully-cultivated form and their tone of deep piety. His rhymed prayers are short; they nearly all contain five stanzas, each beginning with the word 'Ave.'[3] Konrad of Gaming has left liturgical compositions, chiefly hymns in honour of the Virgin and the saints. They are, as a rule, rather long, but reveal a child-like and touching piety.[4] Konrad of Gaming was more widely read in Germany than his model, Christan of Lilienfeld, whose poems are preserved almost exclusively in the MSS of his monastery. There were other imitators of Christan of Lilienfeld besides Konrad, *e.g.* the Carthusian Albert of Prague (first half of 14th cent.), who compiled a book of devotion entitled *Scala Cœli*, in which there is a series of his own compositions. They are inferior in style, and of wearisome prolixity.[5] The prolific writer, Ulrich Stöcklin of Rottach, abbot of Wessobrunn († 1443), shows skilful manipulation of the forms, but suffers from the same weakness of barren verbiage. He followed the lines marked out by Christan and Konrad, and may therefore be mentioned here, although he properly belongs to the next century.[6]

Turning from this group of South German writers to the North, we find in the 14th cent. a small group of Scandinavian hymn-writers of some importance. The oldest of them is Brynolphus I., bishop of Scara († 1317), the author of a rhymed office on St. Helena of Sköfde, with the hymns belonging to it, and probably also of a rhymed office in honour of St. Nikolaus of Linköging.[7] To Birger Gregorsen (Birgerus Gregorii; † 1383), bishop of Upsala, we owe rhymed offices in honour of St. Birgitta and St. Botuidus, with accompanying hymns.[8] The hymns of both these writers are distinguished by carefully modelled poetic forms, showing French influence. A third northern writer, Petrus Olavi, attendant of St. Birgitta and confessor in Vadstena († 1378), seems more careless regarding cadence and rhyme. He arranged the choral office of the nuns of the order of St. Birgitta, and composed a whole series of new hymns for it.[9]

In the first half of the 14th cent. there flourished in France Guillaume de Deguilleville (Guillermus de Deguilevilla; † after 1358), prior of Chaalis,

known through his epic-didactic poems in his mother-tongue, 'Pèlerinage de la vie humaine,' 'Pèlerinage de l'âme,' 'Pèlerinage Jésu-Christ.' He has also left several very long Latin poems, in which is noticeable a vanishing of the word-accentuation.[1] Along with him should be mentioned the Englishman **Gualterus Wiburnus**, a Franciscan poet († after 1367), who composed several hymns in honour of the Virgin, in carefully-handled forms.[2] At the end of the 14th cent. lived two poets who are closely connected through the Feast of the Visitation of Our Lady, which was just then beginning to be observed—Cardinal **Adam Easton**, also called 'Adam Anglicus' († 1397), and **Johann of Jenstein**, archbishop of Prague († 1400). An illuminated edition of Jenstein's works, which he himself revised, appeared in Rome. This is the present *Codex Vaticanus*, 1122. It also contains the ecclesiastical compositions of Jenstein—sequences, tropes, rhymed offices, hymns, and rhymed prayers, which are very unequal in contents and form, his worst being the hymns on St. Wenzel.[3] Jenstein was the first to introduce the observance of the festival of the Visitation of the Virgin into his Archiepiscopal see, and urged Urban VI. to introduce it into the whole Church. Urban VI. was prevented by death from carrying out the suggestion; but his successor, Boniface IX., in 1389 issued the bull commanding the observance of the festival. The office composed by Jenstein, however, was not adopted into the Roman breviary, for that honour was reserved for a rhymed office composed by Cardinal Adam Easton. It begins with the words, 'Accedunt laudes virginis,' and exhibits an acrostic on his name, which, however, has fallen into disorder.[4] This office was handled severely, and not altogether justly, by the Humanist Jakob Wimpheling in his *Castigationes locorum in canticis ecclesiasticis et divinis officiis depravatorum* (1500). The festival of the Visitation of the Virgin caused great activity on the part of poets. There are no fewer than ten different rhymed offices in honour of it. One of them, used by the Dominican order,[5] and beginning, 'Collætentur corda fidelium,' was composed by **Raimund of Capua** († 1399), confessor and biographer of St. Catherine of Siena. Another Dominican, **Martialis Auribelli** († 1473), wrote acrostic hymns in honour of Saint Vincent Ferrer.

We have already entered the 15th century. Among the writers in the earlier part of it is the unfortunate fanatic **Johann Hus** († 1415). Only a few of his hymns remain, composed partly in Czech and partly in Latin. The most widely celebrated was his 'Jesu Christe, nostra salus,' which shows his name woven into an acrostic, and which is still occasionally sung. With the name of Hus we may connect the host of anonymous Bohemian poets who zealously cultivated a special kind of Church hymn, the so-called 'cantiones.' Next to France, no country has so delighted in this form of vocal music as Bohemia. Their form—doubled stanzas, and a concluding song to follow, sometimes similarly doubled—is often very artistic; their rhythm and rhymes, however, show every sign of decadence.

A figure whose fame belongs to universal history marks the end of the 15th cent.—that of **Thomas à Kempis** († 1471). He wrote a number of hymns and rhymed prayers. Some of the prayers seem to have been provided with melodies, most of them not for public but for private use. The compositions of the famous mystic are not of great poetic value.[6] Somewhat younger than à Kempis, and following in his track as a mystic and poet, is

[1] *Anal. hymn.* xlviii. 321 ff.
[2] *Ib.* l. 630 ff.
[3] *Ib.* xlviii. 421 ff.
[4] *Ib.* xxvi. 89 ff.
[5] *Ib.* xxiv. 94 ff.
[6] *Ib.* xlviii. 457 ff.

**Johannes Mauburnus** († 1503), abbot of Liv Most of his works are still unprinted. Th which we know to be his are found in his *Roset exercitiorum spiritualium* (first printed, 149 With these two mystics we may associate a th **Henricus Pistor**, canon of St. Victor in Pa Jodocus Clichtoveus has preserved in his *Eluci torium ecclesiasticum* a fine sequence of his c posed for the festival of St. John the Bapt One of the most prolific theological authors this period is **Dionysius of Rickel**, known als 'Dionysius Carthusianus' († 1471). He has b given the cognomen, 'Doctor Ecstaticus,' althou as a matter of fact, his character appears to h been the prosaic one of compiler. He also c posed some Latin rhythms. There are extant l poems on God and the Holy Trinity, or, ratl rhymed dissertations and reflexions which wearisome from their prolixity. They are kn only from the author's *Opera Minora*, Colog 1532. A few other religious poets of this pe deserve mention. **Matthäus Ronto**, a monk the Olivetan convent at Siena († 1443), wrote s hymns which are preserved in a MS of the V hering monastery.[2]

**Hieronymus de Werdea** (as he was called in convent, though christened John), prior of Mon († 1475), wrote religious poems (which never t the form of liturgical composition) celebrat Christ and the Virgin, Saints Benedict, Flor George, etc. Considering the period in which wrote, their form is well managed, but ther no genuine poetical inspiration in them. We r also mention **Wynandus de Stega**, priest at charach, who has left hymns and sequences honour of St. Werner. A Vatican MS has p served two other poems of his, one in a Ger adaptation. At the close of the century sta the Franciscan **Johannes Tisserand**, who foun an order of Magdalens in Paris in 1493. A P MS has handed down some of his poems, wh form reminds us of those of Guillaume de Degu ville. He composed the Acts of Bernhard de Co and the five martyrs of Morocco, and possibly the rhymed office which exists in honour of th martyrs.

*Summary*.—It would be easy to add to the f going list of hymn-writers, but the purpose of article has been rather to indicate only the pri pal figures and most significant tendencies at w We have seen that all through the Middle A metrical as well as rhythmical poetry was cu vated, while poetry modelled on that of anc Rome was never entirely extinct. But tow the end of the mediæval period the characte this poetry changed; and the so-called human poetry, the product of the Renaissance of class learning, appeared. It is distinguished from metrical poetry of the Middle Ages, not only greater purity of language and poetical form, also by greater dependence on the common mo —a dependence which is sometimes repellent. ' kind of composition first appeared in Italy in beginning of the 14th cent., but soon passed into Germany. At first it was only rarely in form of religious poetry or hymns, but late became quite an important branch of religious l poetry. As this humanistic poetry seldom foun way into liturgical use, for the exigencies of w the period of rhythmical poetry had made a provision, we have here disregarded it. It a new art, alien and hostile to the Middle A Although mediæval composition in its offsh reaches far past the Council of Trent, while beginning of humanistic poetry goes far back the departing mediæval period, we may desig the Council of Trent as the dividing line bet

[1] Cf. *Anal. hymn.* l. 515 ff.
[2] *Ib.* xlviii. 456 f

the intellectual world of the Middle Ages and a more modern period. This line, at any rate, separates the freely developing liturgical composition of the mediæval period from that of the post-Tridentine period, which was executed to order. When the Roman rite obtained exclusive validity, the very conditions of existence were withdrawn from liturgical composition. It had to come to an end because there was no more scope for it in the liturgy; and the liturgy itself was looked upon as something finished and complete. Provision was made for the few necessities of the kind by a Roman Congregation, which gave a commission for hymn-writing, but could not supply poetic inspiration. On one occasion, however, a national Church, a Gallican, burst from these fetters and created liturgies and liturgical poems, although only one poet, J. B. Santeul, deserves mention. Even in the Gallican poems there is no pulse of genuine liturgical life; they were commissioned work; it is a matter of indifference whether the authority who commissioned them resided in Rome, Paris, or Lyons; they were manufactured, not a natural growth, and only furnish another proof that what has been extinguished cannot be called back to life by an arbitrary decree. And, since history is always the representation of life, we may without exaggeration affirm that the history of the liturgy in general and of liturgical poetry in particular closes with the Council of Trent.

G. M. DREVES.

## HYMNS (Irish Christian)

**HYMNS (Irish Christian).**—Like all the hymns of the Middle Ages, the religious poems of Christian Ireland fall into two groups: (1) those directly intended for use in liturgical worship, and (2) those written for purposes not originally connected with the offices of the Church, such as hymns in praise of special saints, or verses composed as charms against disease or pestilence, or as safeguards in moments of danger. Many of these personal poems seem afterwards to have been used in the Church services, although they were not written expressly for this purpose. Of the first group all are in Latin; of the second group some are in Latin and some in Irish.

**1. Liturgical hymns.**—The use of hymns in the offices of the Church seems to have been a very ancient custom in Ireland. In Adamnan's *Vita S. Columbæ*, a *hymnorum liber septimaniorum sanctæ Columbæ manu descriptus*, apparently a book of hymns for use on each of the days of the week, is mentioned (ii. 9), and we learn from one of the prefaces to St. Columba's hymn, 'Altus Prosator' (*Ir. Lib. Hymn.* ii. 24), that Gregory sent a gift to St. Columba of the *Hymns of the Week*. We find also that, on the morning of the death of the Saint (9 June 597), hymns were sung in the monastic offices at Iona; *hymnis matutinalibus terminatis* is the phrase used by Adamnan (iii. 23). These slight indications point to the use of hymns in the offices of the Church as early as the 6th century. That they were so used in times not far removed from this at least is certain. The *Antiphonary of Bangor* dates from the end of the 7th cent., and twelve hymns used in the Church offices are given in it. Again, in the directions given in the liturgical fragment found at the end of the 9th cent. copy of the Gospels called the *Book of St. Mulling*, portions of three (possibly four) well-known Irish hymns are directed to be sung, with certain supplementary stanzas, in the course of a short office which seems to have been designed as a service of intercession against the yellow plague, a pestilence which decimated Ireland at frequent intervals during the 7th and following centuries. An office practically identical with this is appointed in the tract entitled *The Second Vision of Adamnan* (*Leabhar Breac*, p. 258[b] f.) for special days of fasting and prayer; also on the first three leaves of the 10th cent. (?) Greek Psalter at Basel (A. vii. 3), which contains some Latin pieces and directions for what appears to be a monastic office in Irish handwriting, three Irish hymns are found.

In the largest existing collection of Irish and Latin hymns, that known as the *Irish Liber Hymnorum*, of which two MSS, slightly differing from each other in contents, exist—one now in the Franciscan Library, Merchant's Quay, Dublin, which belonged to the Library of Father John Colgan at Louvain in the 17th cent.; the other in the Library of Trinity College, Dublin (classed E. 4. 2), a MS of the 11th cent.—the material does not appear to be arranged in any order of service. It contains in the main body of the collection 17 hymns and poems in Latin and 9 in Irish, also the 'Te Deum,' 'Benedictus,' 'Magnificat,' 'Gloria in excelsis,' an abridgment of the Psalter, etc.; and among the extra matter added at a later time in the Franciscan MS are found two other Latin hymns and the 'Lorica' of Gildas, with the 'Benedicite,' the 'Quicunque vult,' etc.

From the manner in which the material is thrown together and the elaborate prefaces in Irish with which it is accompanied, it would appear that this is a miscellany of religious pieces rather than an actual choir book. The editors suggest that it may have been compiled at a time when the older Celtic services were giving place to the use in England, in order to preserve all those pieces which were most cherished in the memories of the monks, as connected with a system of worship which was being superseded by a new and less national order of religious service.

Several of the poems contained in the *Liber Hymnorum* are ascribed to saints of the 6th and 7th centuries. Besides the 'Lorica,' or hymn of protection, ascribed to St. Patrick himself, there are hymns by St. Sechnall (Secundinus), a contemporary and disciple of St. Patrick, by St. Columba († 597), by St. Ultan († 656), by St. Broccan († 650), by St. Cummian Fada ('the Tall') († 661–2), and by other saints of the 7th and 8th centuries. That many of these hymns are of great antiquity is shown by the use in them of pre-Hieronymian texts in both the OT and NT quotations and allusions, such as are found in Sechnall's 'Audite omnes' in honour of St. Patrick, and in St. Columba's 'Altus Prosator.' The surprise of St. Patrick, expressed in the Preface, at the use by St. Sechnall of the word 'maximus' in the phrase 'maximus namque in regno caelorum' is also interesting, as this is the reading of St. Cyprian and of the Rushworth Gospels, the Vulgate (Mt 5[19]) having 'magnus.' It shows that the hymn preserved a reading already almost forgotten at the time of the composition of the Irish prefaces, which are probably in all cases later than the hymns

themselves, and that the author of the preface was perplexed at the use of a word unfamiliar to him. The ascription of the 'Lorica' to St. Patrick († 461), and of the hymn 'Audite omnes' to his contemporary St. Sechnall, is confirmed by their rude Latinity and by the use of uncouth grammatical forms in the former, as well as by the structure of both poems. The 'Lorica' is not in metre, and, though constructed with a sense of proportion, it shows no knowledge of either Irish or classic forms of verse. It contains allusions to pagan practices, and is evidently the direct descendant of the native pagan rune or charm. The hymn of St. Sechnall is unrhymed, and quantity and elision are completely ignored; nor does it show acquaintance with the Irish poetic rules of composition, which required a certain fixed number of lines and syllables, besides alliteration, rhyme, and assonance. It would seem that these poems were composed before the native poetic metres had reached perfection, and this is in accordance with their early legendary origin. In St. Columba's great poem, the 'Altus Prosator,' we are carried a step forward, for some more definite effort at structural conformity is shown; each line is closed by a word of three or more syllables, with a rhyming sound in the last syllable and a careful choice of concurrent vowels. This hymn recounts in an alphabetical poem of 24 stanzas of six lines each, addressed to the Trinity, the creation and fall of the angels, the creation and fall of man, the foundations of the earth and the under world, and the second coming of Christ and final judgment. It shows curious affinities with the *Book of Enoch* and may be compared with the *Saltair-na-Rann*, the longest Irish mediæval poem on any religious subject, which contains sections treating of the same questions of cosmogony and speculations on the system and fate of the universe. It is found in many MSS among works ascribed to Prosper of Aquitaine (403–465); in three cases or more it follows on the work *de Vita contemplativa*, now known not to be a genuine work of Prosper's. But its subject and character, its barbarous Latinity, and its use of words found only in a few pieces which have Celtic origins (see below, § 3), as well as its use of an O. Lat. text similar to that in early use in Ireland, tend to confirm the traditional ascription of the hymn to St. Columba. The inclusion of a long portion of this poem in a hymn by Rabanus Maurus, archbishop of Mainz (786–856), and its appearance among the works of Prosper, testify to its popularity. It is said in the preface to have been written in Hi (Iona) and sent as a gift to Pope Gregory, who 'found no fault with it except the scantiness in it of praise of the Trinity *per se*, though the Persons were praised through their creatures.' This reproof reaching St. Columba, he wrote the hymn 'In te Christe' to amend this lack in the former composition.

A gradual approach to a more perfect form of verse-structure according to native Irish ideals is seen in the hymn of St. Cummian 'the Tall,' 'Celebra Juda,' which has a rich end-rhyme or harmony of two or more syllables, with a careful correspondence in the vowel sounds and occasional alliteration and internal rhyme. In the later hymns by St. Colman mac Murchon in praise of St. Michael, and in St. Cuchuimne's hymn to the Virgin, written about the middle of the 8th cent. (at a time when we know from the fragments of non-liturgical verse that remain to us that Irish poetry was approaching its highest perfection), we find this verse-system developed with the richest and noblest effect. The prosody of the classical language is replaced by accent and rhyme, and the technical skill of such lines as this, with its rich trisyllabic rhymes, its alliterations, correspondences, and harmonies, could not ea
be surpassed:

aeterna possint praestare regis regni aulia
ut possideam cum Christo paradisi gaudia
(Hymn of St. Colman [† 7

or again:

càntemùs in òmni die còncinèntes vàriè
cònclamàntes Dèo dignum hỳmnum sànctae Màri
(Hymn of St. Cuchuimne [† 7

The only hymn in the *Ir. Lib. Hymn.* not
Irish saints is that ascribed to St. Hilary
Poitiers, 'Hymnum dicat turba fratrum,' a cla
unrhymed poem which is praised by Bede
*Arte met.* 23 [*PL* xc. 173]), but without nam
any author. It is not accepted as Hilary's
Daniel or Dreves; the latter considers that o
the three hymns found in the Gamurrini MS
Arezzo are genuine works of Hilary. Yet th
is much more solid ground for accepting it as
than there is for receiving the seven hymns prin
under Hilary's name by Daniel and accepted
D. S. Wrangham in Julian's *Dict. of Hymnol*
(London, 1907, p. 522), the authorities for wh
are very late. The 'Hymnum dicat' is expre
ascribed to Hilary in the *Antiphonary of Ban*
7th cent., in two ancient codices of St. Gall (co
567 and 577) of the 8th and 9th centuries, and
the two MS copies of the *Ir. Lib. Hymn.*; i
also so named by Hincmar, archbishop of Rhe
(† 882), twice (*de Una et non Trina Deitate*, i.
xii. [*PL* cxxv. 486, 566]); it forms part of
offices in the *Book of St. Mulling*, in the *Sec*
*Vision of Adamnan*, and in the *Book of Cern*
the last a document which shows signs of hav
been formed under Irish influences; in the *Sec*
*Vision of Adamnan*, as in 'de Arreis,' an old I
tract (for which see *RCel* xv. [1894] 285–298
is directed to be repeated as a charm or peni
tial exercise, and the value attached to its rec
tion is shown by the story of the three clerics
Stokes, *Lives of the Saints from the Book of*
*more*, Oxford, 1888, pp. viii, ix). It would ap
from the *Rule* of St. Ailbe of Emly († 542 [?]),
from its place in the *Book of Cerne*, that it was s
in the early morning; but one of the prefaces s
gests another purpose. It says *sic nobis conv*
*canere post prandium*, and the St. Gall MS
567 directs its recitation *omni tempore*. The
eight lines seem to be an addition by an I
writer. Among the additamenta copied into
*Liber Hymnorum* at a later date are the w
known 'Christe qui lux es et dies,' and a hym
praise of SS. Peter and Paul, 'Christi Patri
dextera'; the latter poem is not found elsewh
and it is probably a native composition. Am
the hymns in Irish, the poem in praise of
Brigid, variously ascribed to St. Columba an
St. Ultan († 656), beginning *Brigit bé bithmai*
'Brigid, ever-good woman'—is the most perf
and shows a complete mastery of the diffi
technical laws which governed Irish verse.

In the *Antiphonary of Bangor* are found tw
Latin hymns, ten of them placed close togethe
the first section of the book, and two at the
but probably sung at intervals during the off
for we find the musical rubric 'Post Hymn
attached to four of the Collects. Besides t
hymns proper, there is a whole series of rh
ing Collects for the day and night hours (nos.
26), and similar Collects are found elsewhere in
spersed among the prayers and antiphons.
the twelve hymns, two, the 'Hymnum dicat
St. Hilary and St. Sechnall's hymn in praise o
Patrick, 'Audite omnes,' are found in the
*Lib. Hymn.* and elsewhere. Three (nos. 14,
129) are personal to the monastery of Bangor
Down), from which the service book origin
emanated; they celebrate the praises of this
portant foundation and of its first abbots. It

tains also a hymn in praise of a St. Camelac, of whom very little is known. Of the remaining six hymns, one, 'Mediae noctis tempus est' (no. 10), is well-known and is given both here and in the *Mozarabic Breviary* (see *PL* lxxxvi. 932 f.) for 'medium noctis.' It is cited in the *Rule* (xi. 69) of Cæsarius of Arles († 542; *AS*, Jan. ii. 18) for use at the first nocturn and by the Codex Rhenoviensis (9th cent.) for use at nocturns on Sunday. Daniel (i. 46, iv. 26) thinks that it is an Ambrosian hymn, and that it is distinct from the hymn 'Jesu defensor omnium' with which it has often been printed. It does not seem to be of Irish origin. The remaining five hymns are not found elsewhere, and nos. 3, 8, 9 are almost undoubtedly Irish. Nos. 11, 12 do not show sufficient indications to pronounce upon their origin, but they are found in no other copy, which argues in favour of their local origin. The hymn of the Apostles (no. 3) was very popular in Ireland and is mentioned with St. Sechnall's hymn 'Audite omnes,' St. Colman's hymn to St. Michael, 'In Trinitate spes,' and the 'Hymnum dicat' of Hilary as among the penitential hymns recommended in *The Second Vision of Adamnan* (c. 1096). It consists of 42 stanzas beginning 'Precamur Patrem,' and was probably an Eastertide or Sunday hymn. Daniel thinks, and J. D. Chambers (in Julian, p. 642) agrees with him, that it bears evidence of having been translated from a Greek original.

The beautiful hymn, 'Sancti venite, Christi corpus sumite' (no. 8), is entitled *Hymnus quando communicant sacerdotes*, and was sung during the communion of the priests who formed part of the monastic body. Hence Daniel's argument (i. no. 160, iv. 109) that the administration of the sacrament in both kinds to the laity is implied in such lines as 'Hoc sacramento corporis et sanguinis' falls to the ground so far as this hymn is concerned. Tradition says that, when Patrick and Sechnall were passing a church, they heard this hymn chanted within by a choir of angels at the offering. It is still used in the offices of the Western Church, and is familiar in Neale's translation, 'Draw nigh and take the Body of the Lord.' The hymn 'Ignis Creator igneus' (no. 9), entitled *Hymnus quando cereus benedicitur*, seems to have been sung at the daily lighting of lamps at the 'Hora Vespertina' or else at the annual festival of the benediction of the Paschal candle on Easter even. The custom of lighting a Paschal fire was very ancient in Ireland, and Duchesne thinks that it spread from there to other countries (*Christian Worship*[4], London, 1912, p. 250 f.). The hymn to martyrs, 'Sacratissimi martyres summi Dei' (no. 11), is rhythmic rather than metrical. No. 12, 'Spiritus divinae lucis gloriae,' is for use at matins on Sunday. Its origin is unknown.

It is to be remarked how common was the use of alphabetical hymns in the Irish Church. Nos. 1, 2, 14, 25, and 28 of the hymns in the *Ir. Lib. Hymn.* are alphabetical hymns, and nos. 13, 14, 15, and 129 in the *Antiphonary of Bangor*. In some instances, as in no. 14, the hymn to St. Comgall, abbot and founder of Bangor monastery, the whole poem is a *tour de force*; almost every line in the stanzas of 8 or 10 lines each begins and ends with the same letter or syllable. The hymn of Cælius Sedulius, 'A solis ortus cardine,' is also alphabetical, and there are other examples. Among the Latin poems of St Columbanus (b. 543) and Sedulius Scottus († after 874) are several on religious subjects. Dreves includes seven hymns by Sedulius in his collection, three of them being Paschal hymns (*Anal. Hymn.* l. [Leipzig, 1907] 229). Others will be found interspersed in the *Liber de Rectoribus Christianis* of Sedulius.

A number of Irish hymns which found their way abroad about the 11th cent. are studied by C. Blume in *Der Cursus S. Bened. Nurs.* (Leipzig, 1908).

**2. Hymns used as charms.**—A large number of the Irish hymns were composed as charms, the recitation of them being supposed to ward off famine, disease, fire, or pestilence, or they were used to safeguard a traveller on going a journey. Such are the 'Noli Pater' of St. Columba, the 'Loricas' of St. Patrick and St. Columba, the hymn of St. Colman mac Ui Cluasaigh (*Sén Dé*), the hymn of St. Cuchuimne, 'Cantemus in omni die,' the hymn of St. Colman mac Murchon, 'In Trinitate spes mea,' and many others. The recitation of such hymns was supposed not only to confer protection on the author, but to be a safeguard against similar perils to all who recited them afterwards, besides in most cases securing heaven to those who kept up the practice regularly (see prefaces to these hymns in *Ir. Lib. Hymn.*). In several instances, where the hymn was long or difficult to remember, the same benefits were obtained by reciting the last three stanzas only. For instances of this practice see the office in the *Book of St. Mulling*, in which the last three stanzas of the hymns 'Audite omnes,' 'Celebra Juda,' and 'Hymnum dicat' only are given. In one instance, 'Christus in nostra,' only the last three stanzas of what seems to have been a long alphabetical poem have survived either in the *Ir. Lib. Hymn.* or in the office in the Basel MS (A. vii. 3), where also it is found. A similar custom is the recitation of 365 verses gathered from the Psalms, which was held to be equivalent to that of the whole Psalter.

**3. Loricas.**—Among these charm-hymns, the *Luricas* or *Loricas*, 'Hymns of the Breast-plate,' which were composed as a protection against danger or disease, form a group by themselves, showing special peculiarities. Ten of these are known, but they are, doubtless, only examples of a common form of religious invocation. They usually fall into two or three parts, the first invoking the power of the Trinity and of the angels and heavenly hosts, the second enumerating at great length and with extraordinary minuteness the members of the body which might be subject to injury, with often a third part detailing the dangers to which the body is exposed, as in St. Patrick's 'Lorica.' A common feature of all these charm-hymns is the repetition of the same phrases and invocations, often at great length and with slight variations.

The following are the most important of these Loricas: (1) The *Lorica of St. Patrick* is of early date, though it is not found in Muirchu's Life of the saint. It was traditionally composed as a protection when the saint and his companions were in flight before the king of Tara, and is said to have rendered them invisible. It is uncouth in language; but in spirit and structure, as in religious fervour, it is by far the finest of all the charm-hymns.

(2) More pagan and very fatalistic in tone is an ancient and rude *Lorica of St. Columba*, in which God is addressed as 'King of the White Sun' and Christ as 'My Druid.' It is said to have been composed as a protection when the saint was journeying to Donegal after the Battle of Culdremhne.

(3) The authorship of the long *Lorica of Gildas* (called also the *Lorica of Lathacen*, *Loding*, or *Lodgen*) is uncertain. In the oldest document which contains it—the *Book of Nunnaminster* (Harl. MS 2965 ff. 38a–40; 8th cent.)—it is said that 'Lodgen appointed this Lorica in the year of danger, and that the virtue of it is great if it be chanted three times a day.' The Darmstadt MS printed by Mone, now at Cologne (no. 2106, end of 8th cent.), has at the end, 'Explicit hymnus quem Lathacan Scotigena fecit,' and the *Book of Cerne* (9th cent.) says in its preface, 'Lodgen sang this Lorica three times a day.' The copy in the *Leabhar Breac* (fol. 111a) is more explicit. It has 'Gillus hanc loricam fecit ad demones expellendos eos adversaverunt illi . . .

Lai[d]cend mac Búith bannaig venit ab eo in Insolam Hiberniam, transtulit et portauit super altare sancti Patricii episcopi sanos nos facere, amen.' The Laidcend, son of Buith the Blessed, of the *Leabhar Breac* MS, is evidently the same as the Lathacan Scotigena of the Cologne MS. He was a monk of Clonfert-Mulloe in Ossory, and died 12th Jan. 660. Taking it for granted that Gillus is identical with Gildas the historian, a saint well-known in Ireland, who is so called in the Irish *Ann. of Tighernach*, the *Ann. of Ulster*, and elsewhere, it seems likely that the 'Lorica' was brought into Ireland at a later date by Lodgen, and appointed by him for use in 'the year of danger' or plague as a charm against the disease. If it was frequently used by him, as the *Book of Cerne* states, and placed by him on the altar of Armagh, it might easily be thought to be his own composition. Hugh Williams (*Cym. Record Series*, no. 3 [1901], 304–318) considers that the hymn is later than the time of Gildas, but that it belonged to the S.W. British group in which the name of Gildas was pre-eminent. Zimmer (*Nennius Vind.*, App. 291–342) also ascribes its origin to the S.W. British monasteries, but places it early in the 6th century.

The great interest attaching to this 'Lorica' arises from the number of peculiarities of language that it contains, some of the forms being found elsewhere only in the *Folium Luxemburgense*, a fragment containing an abstract of rare and difficult words from a continuous Latin text with portions of an enlarged recension of the tract *Hisperica famina* (first published by A. Mai in vol. v. of his *Classici Auctores* [Rome, 1828–38], pp. 479–500, from *Cod. Vat. Reg.* lxxxi.; cf. also Migne, *PL* xc. 1187–96).

(4) The same pompous and artificial Latin, interspersed with Greek and Hebrew, is found in the *Lorica of Leyden*, a fragment strongly resembling the *Lorica of Gildas* in its detailed list of the parts of the body as well as in the obscurity of its word forms (V. H. Friedel, *ZCP* ii. [1898] 64).

It will be seen that the two prominent features of all these charm-hymns are (*a*) a tendency to repetition of words and phrases, and (*b*) the use of uncommon words and forms. These peculiarities occur in a greater or less degree in the two remaining 'Loricas' hitherto published, the *Lorica of Mugron*, successor of Columcille († 980) (K. Meyer, *Hibernica Minora*, Oxford, 1894, pp. 42–44, from MS Rawl. B. 512), and a 'Lorica,' classed 23. E. 16, p. 237, in the Royal Irish Academy (partly translated by E. Gwynn, in *Ir. Lib. Hymn.* ii. 210; text printed by K. Meyer, *Archiv für celt. Lexikographie*, iii. [1907] 6 f., from MS 23. N. 10, p. 19, Royal Ir. Acad., and by A. O'Kelleher, in *Eriu*, iv. [1910] 236, with translation). The 'Altus Prosator' of St. Columba shows similar peculiarities of language, while redundancies of expression are a common feature in prayers, confessions, etc., produced under Irish influences (for examples see *Book of Cerne*, nos. 17, 15, 18, 54, 7; *Ir. Lib. Hymn.* ii. 211–212, 213–215).

To any one familiar with the ancient pagan charms or incantations universal among the peasantry of Europe, and in common use among the Gaelic peoples, it will at once be clear that these 'Loricas,' repeated as incantations against evil, come down in direct descent from earlier pagan models. In many cases, as in the *Lorica of St. Patrick*, the Christian tone and sentiment may have been added to an existing pagan charm. Such charms and runes are still found in the Western Highlands and in Ireland, and a glance at some of those collected in A. Carmichael's *Carmina Gadelica* (Edinburgh, 1900), or in Hyde's *Religious Songs of Connacht* (London, 1906), will show that their form is precisely that of the 'Lorica' of St. Patrick or of Mugron. Incantations were taught and practised as a regular part of their profession by the bards down to the 14th–15th cent. or later, and the fragments of incantations on the same model found in the St. Gall MSS show that they were also used in the monasteries. The pagan charms were Christianized in tone but their forms remained unchanged (see, further, HYMNS [Celtic] above, p. 4). It is also to be remarked that all charms contain large numbers of words that hav become so corrupted by constant oral repetitio that they remain as mere meaningless sounds; the are simply spell-words essential to the charm. I it not probable that some of the uncouth form found in the ancient 'Loricas' of Ireland may b explained in this way?

LITERATURE.—J. H. Todd, *Book of Hymns of the Ancien Church of Ireland*, 2 vols., Dublin, 1855–65; J. H. Bernar and R. Atkinson, *The Irish Liber Hymnorum*, 2 vols., Londor 1898; E. Windisch, *Ir. Texte*, i. [Leipzig, 1880]; W. Stoke and J. Strachan, *Thesaurus Palaeohibernicus*, ii. [Cambridg 1903] 298–359; F. E. Warren, *Antiphonary of Bangor*, 2 vols London, 1893–95; H. J. Lawlor, *Chapters on the Book of Mul ing*, Edinburgh, 1897, ch. vii.; C. Blume, *Der Cursus S. Bene dicti Nursini*, Leipzig, 1908; J. Burkitt, 'On two early Iris Hymns,' *JThSt* iii. [1902] 95 f.; A. ELEANOR HULL.

**HYMNS (Modern Christian).**—The rise o modern hymnody may be regarded as synchronou with the rise of Protestantism, and in the earlies hymns is mirrored the antithesis between the ol faith and the new.

**I. German hymns.**—The earliest hymns of th Reformation were those of the Bohemian Brethren of which a collection of 89 was printed at Prague i 1501, and another, of about 400, in 1505; but thes were so effectually suppressed that only one imper fect copy of the former is known to exist, and non of the latter. For practical purposes the history o modern hymnody begins with the publication in 1524, at Erfurt and Wittenberg respectively, o two small books of German hymns, in each o which about three-fourths of the contents wer from the pen of Luther. Altogether, Luther' hymns and sacred songs number 38; of these 1 are wholly or partly translated from the Latin, 4 are revised from pre-Reformation hymns, 6 ar metrical psalms, 6 paraphrases of other portions o Holy Scripture, and 11 original. At least 24 ar still in more or less common use.

The hymnody of Protestant Germany is th richest in Christendom, and by 1820 it was know to include more than 80,000 hymns of varyin merit. The great majority of the authors wer members of the Lutheran Church, whereas th hymn-writers of the 'Reformed,' or Calvinistic Church were comparatively few, and their effusion were generally more suited to private devotio than to public worship. This is due to a belief strongly held by Zwingli and Calvin, and generall accepted by their adherents, that the Biblica Psalms furnish a complete manual of praise fo public worship, and the only one divinely sanc tioned. As a result of this belief, more than 13 German Metrical Psalters, more or less complete,

are known to exist, and seven-eighths of them were composed by members of the Reformed Church.

The great German hymn-writers may be conveniently arranged in seven successive periods, each of which has its own distinctive character.

(1) The first group consists of Luther and his contemporaries, from about 1517 to 1560. Their hymns are neither didactic nor retrospective, but natural, cordial, and fearless, at once popular and churchly. As long as the German language endures men will sing Luther's pathetic 'Aus tiefer Noth,' his child-like 'Von Himmel hoch da komm ich her,' and his immortal 'Ein feste Burg.' With him must be associated Michael Weisse (1480-1534), who translated many of the Bohemian Brethren's hymns into German, but who is perhaps best remembered for his funeral hymn 'Nun lasst uns den Leib begraben,' Paulus Speratus (1484-1551), Nicholaus Hermann († 1561), Paul Eber (1511-69), Johann Zwick, of the Reformed Church (1496-1542), and Hans Sachs, the cobbler-bard of Nüremberg (1494-1576).

(2) The second period, 1560-1618, is one of transition towards the subjective style of later times. There are occasional references to personal circumstances, and didactic matter is sometimes introduced. Many worthless compositions of this age have come down to us, and the best authors were too prolific. Among these may be named Bartholomäus Ringwalt (1532-98), Johann Michael Altenburg (1584-1640), and, above all, Philipp Nicolai (1556-1608).

(3) The third period is that of the Thirty Years' War, 1618-48. The Psalms now become the model and type; prominence is given to personal matters; brevity and terseness give place to enlargement of thought. From this estimate one hymn must be excluded, the 'Nun danket alle Gott' of Martin Rinckart (1586-1649), which is almost the only one of his voluminous writings which has escaped oblivion, and which has become the national doxology of Germany. Martin Opitz (1597-1639) was a literary man of no very decided principles; but he greatly influenced German hymnody by his literary style, and as a reformer of German prosody. This influence operated chiefly on writers of what is called the Silesian School. Of these the foremost place belongs to Johann Heermann (1585-1647), the author of 400 hymns, including 'Herr Jesu Christ, du wahres Licht,' and 'Herzliebster Jesu, was hast du verbrochen?' Johann Rist (1607-67) was also a prolific writer. Others of the school are Josua Stegmann (1588-1632), Paul Flemming (1609-40), Matthäus Apelles von Löwenstern (1594-1648), and Johann Matthäus Meyfart (1590-1642). To the contemporary school of Königsberg belong Simon Dach (1605-59), Georg Weissel (1590-1635), Heinrich Alberti (1604-51), and others.

(4) The fourth period reaches from the peace of Westphalia to the outbreak of the Pietistic controversy, 1648-90. Hymns of this period assume more and more of a subjective character, the objective features tending to disappear, while hymns relating to various circumstances and events in life—as suffering, consolation, death, the family, etc.—become more numerous. There is often a tendency to excessive length, a common fault of meditative verse. The chief singer of this generation—in the judgment of many, the greatest of all German hymnists—is Paulus Gerhardt (1607-76). Foremost among his 120 hymns is the incomparable 'O Haupt voll Blut und Wunden,' and not far behind it comes the ever popular 'Befiehl du deine Wege.' To the same school belong Ernst C. Homburg (1605-81), Johann Franck (1618-77), Georg Neumark (1621-81), and Johann Georg Albinus (1624-79).

Contemporary with these is a group of poets whose hymns are, in general tone, mystic and contemplative. Foremost among them is Johann Scheffler (1624-77), who, becoming a convert to the Roman Communion in 1653, assumed the name of Angelus Silesius. Many of his hymns, written both before and after his transition, display a marvellous sweetness, in strange contrast with the bitterness of his controversial writings, *e.g.* 'Ich will dich lieben, meine Stärke,' 'Liebe, die du mich zum Bilde,' etc. With him may be associated Christian Knorr von Rosenroth (1636-89), Michael Franck, Sigismund von Bircken, Christoph Wegleiter, and others of less note; and in the Reformed Church Joachim Neander (1650-80).

(5) The fifth period is that of Pietism, about 1690-1750. The hymnists of these two generations are far too numerous to be particularly specified, but they may be classified in five groups. (i.) The contemporaries of Spener, pervaded by a healthy and sincere piety. Spener himself wrote few hymns of any value, and those produced by the rest of the group are noticeable for quality rather than for quantity. We may mention Adam Drese (1620-1701), Johann Jakob Schütz (1640-90), Cyriacus Günther (1649-1704), Samuel Rodigast (1649-1708), Laurentius Laurenti (1660-1722), and Gottfried Arnold (1666-1714).

(ii.) The older school of Halle. Their hymns are of a scriptural, practical, and devotional tendency, and are mostly for individual edification and for the closet, rather than for the church. Most worthy of notice are Wolfgang Christoph Dessler (1660-1722), the author of more than 100 hymns, of which the best known are 'Mein Jesu dem die Seraphinen' and 'Ich lass dich nicht, du musst mein Jesus bleiben,' Johann Anastasius Freylinghausen (1670-1739), Johann Heinrich Schröder (1667-99), Bartholomäus Crasselius (1667-1724), and Johann Joseph Winckler (1670-1722).

(iii.) To these succeeded a younger school, representing the decline of Pietism into sentimentalism and trivialities. The better writers of this school are Johann Jakob Rambach (1693-1735), Johann Ludwig Conrad Allendorf (1693-1773), Carl Heinrich von Bogatzky (1690-1774), and Leopold F. F. Lehr (1709-44).

(iv.) Side by side with these is a group of poets devoted to strict Lutheran orthodoxy, and therefore unsympathetic towards Pietism. Three of these composed, among them, nearly 2000 hymns, many of which, though not of the highest order of merit, are of great and permanent value. Salomo Franck (1659-1725) is best remembered by his hymn for Easter even, 'So ruhest du, O meine Ruh'; Erdmann Neumeister (1671-1756) was the author of many cantatas for use in church, and re-modelled a number of older hymns; Benjamin Schmolck (1672-1737) was the most prolific of the school.

(v.) The school which is represented in theology by Bengel and Crusius, mediating between Pietism and orthodoxy, claims a few sacred poets. The chief of these are Johann Mentzer (1658-1734), Johann Andreas Rothe (1688-1758), P. F. Hiller (1699-1769), and C. C. L. von Pfeil (1712-84).

Two distinguished hymnists of the period appear to stand apart from all these various groups. Gerhard Tersteegen (1697-1769), brought up in the Reformed Church, but from early manhood a mystic and a separatist, has more in common with Scheffler than with any other poet. His numerous hymns were long restricted to a limited circle, but during the last 70 years have been represented in most German hymn-books, Lutheran as well as Reformed. 'Gott ist gegenwärtig' is the most popular; but 'Siegesfürste, Ehrenkönig,'

'Gott rufet noch,' and others are of sterling value.

Nicholaus Ludwig von Zinzendorf (1700–60), patron and afterwards bishop of the Moravian Brethren, wrote upwards of 2000 hymns of almost every possible degree of merit, but even at the lowest displaying deep personal devotion to Christ. His extraordinary aptitude for improvising led to the production of a huge mass of rhyme, of which sincere piety is the only redeeming feature. The use of his hymns is almost restricted to the Moravian Church; but 'Jesu, geh voran' and 'Christi Blut und Gerechtigkeit' are hymns that Christendom will not willingly let die; and a few centos, translated into various languages, are current.

(6) The sixth period, from about 1750 to 1830, is that of the 'Enlightenment' (*q.v.*), whose effect on hymnody was for the time disastrous, especially in the dilution of the church hymn-books and sacred poetry in general. During its earlier years the orthodox tradition was worthily maintained by Christian Fürchtegott Gellert (1715–69), who in 1757 published 54 hymns characterized by rational piety and good taste, but generally individual rather than churchly. Many of them are still in use, the most popular being 'Jesus lebt, mit ihm auch ich.' Friedrich G. Klopstock (1724–1803) produced in 1758 modernized re-casts of 29 earlier German hymns, apparently without any doctrinal motive. Of his original pieces, mostly emotional and subjective, by far the best is the triumphant funeral song 'Auferstehn, ja, auferstehn wirst du.' Modernizing of standard hymns, without doctrinal purpose and with undesirable results, was undertaken by Johann Andreas Cramer (1723–88) and Johann Adolf Schlegel (1721–93). The one spiritual singer who stands conspicuous in this dreary time is Johann Caspar Lavater (1741-1801). Of his 700 hymns the best known is 'Jesus Christus, wachs in mir.' Georg F. P. von Hardenberg, commonly called Novalis, was a religious poet rather than a hymn-writer.

(7) A seventh period, one of Evangelical revival, may be dated from the publication by Christian Karl Josias Bunsen in 1833 of his *Versuch eines allgemeinen evangelischen Gesang- und Gebetbuchs*, containing 934 hymns, followed in 1837 by the *Evangelischer Liederschatz* of Albert Knapp, with 3590. Bunsen endeavoured to restore, as nearly as possible, the original text of each hymn; Knapp, unfortunately, was less scrupulous; but from that time the colourless hymn-books of the preceding age gradually disappeared; and those now in use usually contain the best productions of evangelical singers from the Reformation downward. It would be impossible to pass in review the original compositions of the last three generations. Five names are specially worthy of mention: Ernst Moritz Arndt (1769–1860), Christian F. H. Sachse (1785–1860), Johann Wilhelm Meinhold (1797–1851), Albert Knapp (1798–1864), and Carl J. P. Spitta (1801–59), of whose *Psalter und Harfe* 55 editions were printed in as many years.

**2. Dutch hymns.**—Even in the 15th cent. a number of macaronic hymns, partly Latin and partly Dutch, and generally of a Hussite character, were current in the Netherlands. A collection of these was printed at Kempen in 1550. The Reformation in these regions was of so strongly Calvinistic a type, however, that several synods forbade the singing of any hymns except those found in Holy Scripture. A collection of metrical Psalms, with music, was printed at Antwerp in 1539; and two complete metrical Dutch Psalters appeared in 1566. To another Psalter, published in 1580, were added metrical versions of other Scripture canticles, together with the Ten Commandments, the Lord's Prayer, the Creed, and t 'Gloria in excelsis.' Altogether between 30 a 40 Dutch Psalters appeared before 1773, in whi year the Synod of South Holland issued an auth ized version, which is still commonly used in t Dutch Reformed Church.

The Dutch Lutherans, in 1615, published Utrecht a collection of 58 hymns translated fr the German. The suppression of these was tempted by the Synod of Dort (1619); but a fe years later local synods authorized their use festival occasions. In 1659, Willem Sluiter pu lished a volume entitled *Psalmen, Gezangen geestelijke Liederen*, which, together with a posth mous volume of hymns by the same author, w long in popular use for domestic worship. T first religious bodies in Holland to authorize t use of hymns in public worship, however, we dissenters from the Dutch Reformed Establis ment. The Anabaptists published an Append to the Psalter in 1713; a hymnal for a separati congregation, compiled by Jacob Groenewegen 1750, ran through several editions; and a lar volume of Mennonite hymns appeared in the latt half of the 18th century. It was not till 1805 th the first authorized hymn-book of the Dutch R formed Church was offered to the public. It co tained 192 hymns, of which a large proportion we translations. An Appendix, which had been near 20 years in preparation, was authorized in 18 This hymn-book and appendix are still in comm use both in Holland and in South Africa; a nearly all other Dutch hymnals have borrow largely from them.

Of the older Dutch Lutheran hymns almost ha were appropriate only to festivals. It was not ti 1826 that the Lutheran Synod of Holland publishe its own hymn-book, containing 376 hymns, of whic 150 were from the older Lutheran books, and 1 were new compositions. Some serious omissio were supplied in an Appendix 24 years later. Th other most important Dutch hymn-books are th modern Baptist hymnal, a volume of translatio from the Latin by R. B. Janson (1860), and volume of revival hymns, translated from Englis and American originals. Very few Dutch hym are original compositions; according to the be authority, the whole number does not much excee 3000, of which at least two-thirds are translations

**3. Scandinavian hymns.**—The Reformation i the Scandinavian countries was, to a greater exten than elsewhere, the work of the rulers rather tha of the people. The national Churches of Swede Denmark, and Norway were thoroughly Erastia These facts had some influence, if not on the com position of church songs, at least on their publica tion and use in public worship.

The father of Swedish hymnody was Lars Pete sen, archbishop of Upsala († 1573), who, in addi tion to original pieces, made many translation from Latin and German hymns. His brother, Ola Petersen, also has some repute as a hymn-write They were assisted in their poetical work by tw other brothers, Lars and Peter Andersen. These in 1536, published *Swenske songor eller wisor n pa nytt prentade, forökade, och under en anna skick än tilförenna vtsatte* ('Swedish Songs o Hymns, now newly printed, enlarged, and pub lished in a different shape from the former'; wha that former book was we are not informed). Tw kings of Sweden—Erik XIV. († 1577) and Gustavu Adolphus (slain at Lützen, 1632)—contributed t the national hymnody; the latter, shortly before hi death, wrote the renowned battle-song, 'Förfära ej, du lilla hop.'

The number of Swedish hymn-writers is no great. Of the 15 who wrote within the 17th an 18th centuries the greatest was Johan Olaf Walli

(1779-1839). In 1819 he published *Den swenska Psalmboken af Konungen gillad och stadfästad* ('The Swedish Hymn-book, approved and confirmed by the King'), which is still in common use throughout the country. To it he contributed about 150 original hymns, besides translations and revisions.

In 1529 there was published at Rostock, in the Danish language, *Een ny Handbog, med Psalmer oc aandelige Lofsange, wdragne aff then hellige Schrifft* ('A new Handbook, with Psalms and Spiritual Songs of Praise derived from Holy Writ'). This contained translations from the Latin, German, and Swedish, and some originals. Its principal author was Claus Martensön Töndebinder (1500–76); and it was the hymnary of the Danish and Norwegian Lutherans for more than a century. In 1683, Thomas Kingo, bishop of Funen, whose *Aandelige Sjunge-chor* ('Spiritual Choral-Songs') had attracted attention, was commissioned to prepare a new hymn-book for the churches in both countries. The first part appeared in 1689; it contained many of Kingo's own compositions, and was greatly admired by some, while others, of the Pietistic school, unfairly denounced it as rationalistic. The controversy was so violent that the completion of the book was entrusted to a committee, who, however, worked on Kingo's lines, and included many of his hymns. The resultant *Forordnede ny Kirke-Psalme-Bog* ('Authorized New Church Hymn-book'), in its complete form, appeared in 1699. Several attempts were made to supplant it by collections on Pietistic lines. Especially notable was a *Ny Salmebog* ('New Hymn-book') edited in 1740 by Eric Pontoppidan. This contained a large number of hymns, both original and translated, by Hans Adolf Brorson, bishop of Ribe, whose views were decidedly Pietistic. Another attempt in the same direction was made by N. H. Balle, bishop of Seeland, who in 1797 produced a revision of Kingo's book under the title *Evangelisk-Kristelig Salmebog* ('Evangelical Christian Hymn-book'). The attempt failed, however, because of the feebleness of the verse; and more than half a century passed before any real improvement was effected. This at length was brought about, mainly through the influence of Nikolai Frederik Severin Grundtvig (1783–1872). This eminent scholar, true poet, and fervent evangelist waged war for many years against the prevailing Rationalism and Erastianism of the national Church, and suffered accordingly. While under ecclesiastical suspension he wrote and compiled *Sang-Värk til den danske Kirke* ('Song-Work for the Danish Church'). His moral influence at length prevailed so far that his worth was appreciated, and steps were taken to prepare a new *Salmebogen til Kirke- og Hus-Andagt* ('Hymn-book for Church and House Worship'). This was sanctioned for general use in 1853, having been edited by the poet Bernhard Severin Ingemann (1789–1862). It was based on the old book of Kingo, but contained many hymns by Brorson, Grundtvig, and Ingemann.

Iceland is closely bound to Denmark by political relations. For a long time the only hymn-book in use there was the *Graduale* or *Messu-saungs bök* ('Mass-Song-Book'), consisting of translations into Old Norse of a few of the earlier hymns of Martensön's collection. The last edition is dated 1773. Since then local translations of the Danish books have been in use. In 1861, Thordersen of Reykjavik issued *Nýr vidbætir vid hina evangelisku Sálmabók* ('New Contributions to the Evangelical Psalm-book'), much on the lines of the Danish book of 1855.

Norway, until 1814, had been politically united with Denmark; and Danish hymn-books, or revisions of such books in modernized language, have been in common use—the churches allowing themselves considerable freedom. The books now most in use are *Kirke-Salme-Bogen* ('The Church Hymn-book'), edited on the basis of older books by Magnus B. Landstad, and authorized in 1869; and *Christelige Psalmer til Husandagt og Skolebrug* ('Christian Hymns for Domestic Worship and for Use in Schools'), published in 1851 by Johan Nikolai Frantzen.

A very large proportion of the Scandinavian hymns are translated from German Lutheran authors. The older hymns are generally doctrinal or invocative; those of later date are rather subjective, expressing personal sentiments, hopes, and fears. As to the characteristics of individual singers, it is commonly said that 'Kingo is the poet of Easter, Brorson of Christmas, and Grundtvig of Whitsuntide.'

4. French hymns.—The earliest known French hymn-book was printed in 1527. It was entitled *Hymnes communs de l'année*, and consisted of translations of Latin hymns by Nicolas Mauroy. In 1533 appeared the *Miroir d'une âme pécheresse*, by Marguerite de Valois, to which were appended metrical versions, by Clément Marot, of the Creed, Lord's Prayer, Ave Maria, Grace before Meals, etc. Between this date and 1597 nine small books of Huguenot Songs were published, containing hymns, carols, ballads, and paraphrases of Scripture. Meanwhile, in 1542, Marot published his 50 metrical Psalms, which, being sung to ballad tunes, became widely fashionable. In hope of supplanting these, Guy de la Boderie, a Roman Catholic, published *Hymnes ecclésiastiques* in 1578, also *Cantiques spirituels*, consisting of translations from Prudentius, Petrarch, and Vidas, and some paraphrases of Scripture songs. Before the end of the century, several other volumes of devout songs were produced by Huguenot writers, such as Nicolas Denisot, Charles de Navières, Etienne de Maizon Fleur; but none of them were designed for public worship. The Reformed Church in France, as in Germany and elsewhere, limited its church-song to Biblical Psalms and Canticles. Various writers, therefore, sought to supply what was lacking in Marot's work; and in 1550 a complete Psalter was published in Paris, consisting of Marot's versions, with others by Gilles d'Aurigny, Robert Brincel, 'C. R.,' and 'Cl. B.' This was generally supplanted by *Les Pseaumes mis en rime françoise par Clément Marot et Théodore de Bèze*, 1562. Of this at least 24 editions were printed within the year, at Paris, Caen, Lyons, Geneva, and other places. Until the early years of the 18th cent. this Psalter alone was used in the public worship of the Reformed Church; and beyond the bounds of that community its influence has been far wider than that of any other metrical Psalter.

The Lutheran Church in France, besides using the Psalter, made free use of translations of the best German hymns. *Pseaumes, hymnes et cantiques . . . mis en rime français selon la rime et mélodies allemands*, Frankfort, 1612, contains 63 hymns or paraphrases. Successive enlargements or developments of this book appeared under various titles in the 17th and 18th centuries, that of 1739 having 381 pieces. The rigidity of the Reformed Church also gave way in 1705, when Benedict Pictet published *Cinquante-quatre cantiques sacrez pour les principales solemnitez*. Twelve of these were authorized for use in public worship, and became an appendix to the Psalter throughout the Reformed Church. Some of them are among the finest hymns in the French language.

The French Roman Catholic hymnists of the 17th cent. are not numerous. *La Philomèle séraphique*, by Jean l'Evangéliste, 1632, consisted of hymns of

a mystical type, set to secular tunes. It was regarded as a Jansenist book, and was not designed for use in church. Pierre Corneille versified parts of the *Imitatio Christi*, thus producing a few hymns still current. Racine also wrote, in 1689, two hymns which are still in use. A few hymns of a soberly quietistic strain were written by the illustrious Fénelon, and a large number by Madame Guyon (1648–1717); but few, if any, of these have come into common use. A number of hymns by Abbé Pellegrin were published in 1706–15, and set to lively secular tunes; some of them are still in use. A meritorious collection of hymns was made for the Seminary of St. Sulpice in 1765. The *Recueil de cantiques, traduits de l'allemand*, 1743, was a Moravian hymn-book of 75 pieces. In successive editions the number was raised to 576 in 1778, of which about 370 are translations from the German, the rest being French originals.

Probably the greatest of French hymn-writers is H. A. César Malan (1787–1864), pastor at Geneva, champion of Evangelicalism, and the founder of modern French Reformed hymnody. He is said to have written about a thousand hymns; and, though many are weak and full of literary faults, others are of great value. A large number are still in use, and some of them are found in every French Protestant hymn-book. Of contemporary and later writers of the same school may be named Ami Bost, Merle d'Aubigné, Henri Lutteroth, Alexandre Vinet, and Adolphe Monod.

Modern French hymn-books are very numerous, and suited to every phase of Protestant Christianity. The first French Methodist hymn-book was issued in England about 1813, for the benefit of French prisoners of war; it contained many translations of English hymns. Another, for use in the Channel Isles, appeared about 1818, and in an enlarged edition in 1828; it was frequently reprinted, until replaced by a better book in 1868. In 1831, or earlier, appeared *Cantiques chrétiens à l'usage des assemblées religieuses*, which reached a 14th edition in 1881. The Reformed Church has overcome its aversion to 'human compositions,' and since 1787 has sanctioned several good hymn-books. The Walloon Collection (1803) contained 133 hymns; a good collection published at Frankfort in 1849 contained 289; and the *Nouveau Livre de cantiques*, edited by E. Bersier, Paris, 1879, has 217. At least six French Lutheran hymn-books were published in several editions during the 19th cent. at Paris, Montbéliard, Strassburg, and Nancy; and a French Moravian hymn-book, in 1880, contained 700 pieces, mostly translations from the German. Several modern books of the revivalist type have had wide circulation, especially those published in connexion with the Protestant Mission called 'L'Œuvre MacAll.' The most noteworthy of these is *Cantiques populaires*, which with its supplement contains upwards of 60 translations of English and American 'revival hymns.'

An undenominational hymn-book, with music, appeared at Paris in 1834, under the title of *Chants chrétiens*, edited by Henri Lutteroth. Its aim was to collect the best hymns of the older poets, as Racine, Corneille, Pictet, etc., together with others of recent date. It was much modified in successive editions, assuming its final shape, with 200 hymns, in 1857. Its influence has been wide and beneficial, bringing into common use numerous hymns of great merit. Its chief blemish is that it is too didactic—an unusual fault in French hymnody, which is, for the most part, intensely subjective. French hymns rarely or never have the strength of good German or English poetry; but the best of them have much sweetness and tenderness, while some are highly picturesque, and others of delightful simplicity.

This seems a fitting place to mention a gr
of French Roman Catholic poets of the 17th
early 18th centuries, who wrote in Latin,
whose hymns are to be found in the Paris Brev
of 1726 and other Gallican Breviaries. The f

6. **English hymns.**—Popular tradition has
stantly associated hymn-singing with the Lolla
But, although a number of devout songs are

served in MSS of the 14th and 15th centuries, some of them of no little merit, they are all—except a few carols—too intensely personal to have been used in public worship. The earliest printed English hymns are probably those in Marshall's Primer of 1535 and the Sarum Primer of 1538. These are translations from the Latin, and their versification is of the rudest.

The first English hymn-book, properly so called, is the *Goostly Psalmes and Spirituall Songes* of Miles Coverdale, 1539. It contains 41 pieces, all but 5 of them translations or imitations from the German—17 being from Luther. There are versions of 13 Psalms, the 'Magnificat,' 'Nunc dimittis,' 'Gloria in excelsis,' the Creed, the Lord's Prayer, and the Ten Commandments. Efforts were made to suppress this book, but in 1545 Henry VIII. authorized a new Primer, which contained 8 hymns, smoother in versification than the former primers. In this Cranmer is believed to have had a hand, and it was his desire that English versions of the old Church hymns should have a place in the projected new service-books. It is thought that the influence of Calvin and Bucer had to do with the abandonment of this project.

During the interval between the death of Henry and the accession of Elizabeth the 'old version' of the Psalms was gradually compiled, the chief contributors being Thomas Sternhold, John Hopkins, Thomas Norton, William Kethe, and William Whittingham. To several successive editions a few hymns were prefixed or appended; the complete edition of 1562 has 23, including 'The Lamentation of a Sinner' and the earliest known non-Roman Communion hymn in the English language, 'The Lord be thanked for His Gifts.' The next really important hymnological publication is the *Gude and Godlie Ballatis*, which bears the same relation to the Reformation in Scotland as Coverdale's *Goostly Psalmes* does to that in England. The principal, but not the only, authors were the brothers John and Robert Wedderburne, clergymen of Dundee, who became exiles on account of their Protestant principles. The earliest editions have entirely perished, and their date is matter of conjecture; the oldest known perfect copy was printed at Edinburgh in 1578, with the title *Ane Cōpendious Buik of godlie Psalmes and spirituall Sangis*. It contains 116 pieces, all in the Scottish dialect. There are 22 metrical Psalms, 8 Scripture paraphrases, the Creed, 34 hymns, 8 graces, and 43 ballads, some devotional and some satirical. More than a fourth of the whole is translated from the German, and a few pieces are borrowed or adapted from Coverdale. Several of the devotional ballads are remarkable for their beauty and tenderness, while the satirical pieces, some of them coarse as well as humorous, attack the Roman Catholic clergy with considerable vigour.

It may seem surprising that, of about 130 English writers of religious verse in the latter half of the 16th cent., scarcely any contributed to the worship-song of the Church. The explanation lies in the fact that—largely, no doubt, through the Calvinistic influence brought to bear upon the formative period of the English Book of Common Prayer—only the scantiest scope was allowed for hymns in public worship, an injunction of the first year of Elizabeth granting merely that 'in the beginning or in the end of the Common Prayer, either at morning or evening, there may be sung an hymn, or such like song, to the praise of Almighty God.' It was not until the revision of 1661-62 that the insertion, after the third collect at morning and evening prayer, of the rubric for the anthem opened the way, even though slowly taken, to a true hymnody. In modern times a few Elizabethan hymns have come into common use, *e.g.*, the earliest original English morning hymn, 'You that have spent the quiet night,' by George Gascoigne, and the delightful 'Hierusalem, my happie home,' of which the author, 'F. B. P.,' has not been satisfactorily identified.

Between the death of Elizabeth and the outbreak of the Civil War the conditions were much the same; and the sacred poets of the day, such as John Donne, George Herbert, and Phineas Fletcher, for the most part offered no contributions to public worship, though a few of their devout lyrics have found a place in modern hymn-books. A few attempts were made to supplant the Sternhold and Hopkins Psalter, but with little success. The very meritorious version of George Sandys failed to win the public ear; that of William, Earl of Stirling, though put forth in the name of King James, had no better success; and the faithful but intolerably harsh version of Henry Ainsworth found favour only with the Separatists.

To this period, however, belongs the first really great English hymn-writer, George Wither (1588-1667). His poetical works, sacred and secular, are numerous. His noble version of the Psalms has been undeservedly neglected. His *Hymns and Songs of the Church* was printed in 1623, with 'the particular approbation both of the king and of convocation,' but the intrigues of the Stationers' Company frustrated the intentions of the king and clergy, and practically suppressed the book. It contained all the OT and NT Canticles, the Song of Songs, the Lamentations, versions of the Lord's Prayer and 'Veni Creator,' and 44 original hymns for various ecclesiastical seasons and special occasions. In 1641, Wither published *Hallelujah, or Britain's Second Remembrancer*, with a dedication to the Parliament, his sympathies being at that time on the popular side. The book contained 233 hymns, classified as occasional, temporary, and personal; 42 of them are taken from the former book, often with alterations which are not always improvements.

The Sternhold and Hopkins Psalter had become unacceptable to the Puritans, not because of its rugged versification, but because it was not, in their opinion, sufficiently close to the original. They conceived the impossible idea of a literal translation from the Hebrew in an English metre that could be sung. Between 1640 and the end of the century there were at least half-a-dozen attempts to realize this fancy—among them the curious *Bay Psalm-Book* of the Puritan Colonists in New England (1640). When the Long Parliament undertook to remodel the Church of England on Puritanical lines, part of the scheme was to provide a metrical Psalter for general use throughout England and Scotland. The work was assigned to a committee, who, by conflating two versions by Francis Rous and William Barton respectively, produced what is known as 'The Scots Version'—it being approved by the Scottish General Assembly in 1649. With all its faults—and they are neither few nor small—it has endeared itself to the hearts of the Scottish people, and will not be supplanted for generations yet to come. The wonderful 23rd Psalm in this version is probably the most perfect metrical Psalm in Christendom.

Between the fall of the Monarchy and the Revolution several poets produced lyrics which, though not designed for use in public worship, were utilized by later compilers of hymn-books. Such were Henry Vaughan, Richard Crashaw, and John Quarles. There were also at least three genuine hymnists—William Barton, whose work has been unaccountably neglected, Samuel Crossman, and John Mason, whose best productions are still deservedly popular. Mention must also be

made of two rhymesters, whose verses are unmitigated doggerel, but who did excellent work as pioneers. Abraham Cheare, a Baptist minister of Plymouth, who died in prison in 1668, is the first known English author of hymns for children. Benjamin Keach, also a Baptist, had been set in the pillory for seeking to propagate his opinions through the press. His *Spiritual Melody* (1691) is poor; but by it, and by a couple of vigorous pamphlets, he practically broke down the prejudice which until then existed among Baptists against singing in public worship.

In 1692 was printed the first edition, unauthorized and incorrect, of Bishop Thomas Ken's *Morning and Evening Hymns*. At first written for the scholars of Winchester School, they have won an abiding place in the esteem of all English-speaking Christendom. Ken's other hymns, for the festivals of the Church, were a posthumous publication, and have been little regarded.

At the time of the Revolution the Psalms of Sternhold and Hopkins, already archaic, were still almost exclusively used in the Anglican Church; the well-meant attempts of W. King, John Patrick, John Denham, and others had totally failed to supplant them; and the noble versions of Sandys and Wither had apparently been forgotten. About 1698 a New Version, by Nahum Tate and Nicholas Brady, was put forth under royal patronage, and soon became immensely popular. Its one merit is that, smooth and unimpassioned, it suited the literary taste of the day. For 150 years it held the field against all rivals; at present about half-a-dozen psalms of the 'New Version' continue in use, the most popular being the 34th and the 67th.

In the Church of Scotland, on the re-establishment of Presbyterianism after the Revolution, the General Assembly considered the question of an authorized appendix to the Scottish Psalms. Patrick Simson of Renfrew had published, at Edinburgh, six books of *Spiritual Songs or Holy Poems*, consisting of versified paraphrases of all the poetical parts of Scripture except the Psalter. The work is of considerable merit, the rendering being fairly close, without that rigidity which marked the Scottish and New England Psalms. In 1695, Simson being Moderator, the Assembly appointed a Commission to revise the Scripture Songs; but the business was delayed year after year, and in the end nothing was done, so that the Scottish Psalms continued in exclusive use for about 50 years longer.

Among English Nonconformists the manuals of Church Song chiefly in use were the Scottish Psalms, a revision of the New England Psalter, and, occasionally, Barton's. During the last decade of the century several ministers—Robert Fleming, Joseph Boyse, Thomas Shepherd, Richard Davis, and Joseph Stennett—produced hymns for the use of their own congregations, some of which found wider, though very limited, acceptance. Nearly all these hymns are personal rather than congregational; and most of them are mere Calvinistic theology in rhyme. The first selection of hymns for Nonconformist worship of which we have found any trace was published in 1694 under the title *A Collection of Divine Hymns upon several Occasions*. To this seven authors contributed, among whom were Richard Baxter, John Mason, and Thomas Shepherd. The next selection, Matthew Henry's *Family Hymns* (1695), consisted entirely of centos from various metrical versions of the Psalms.

In 1695 a young Nonconformist student commented on the unsatisfactory character of the rhymes in use at the Meeting-house in Southampton, and was challenged to produce something better. The next Sunday the spirited paraphrase 'Behold the Glories of the Lamb Amidst His Father's

throne' was 'lined out,' to the delight o
worshippers. The young man was Isaac Wa

*Hymns of the Children of God in all Ages*, which, expurgated and revised, furnished most of the material of Moravian hymn-books till quite recent times. Its influence is evident in the hymns of John Cennick (1718–55), of James Allen (1734–1804), of Walter Shirley (1725–86), and of Jonathan Evans (1749–1809). Some characteristics of this school are also found in the poems of Augustus Montague Toplady (1740–78) ('Rock of Ages, cleft for me'); but they are modified by his militant Calvinism.

Yet another school, that of moderate Calvinism, is represented by the *Olney Hymns*, first published in 1779, the joint work of William Cowper (1731–1800) and John Newton (1725–1807). The romance of Newton's adventurous youth, and the pathetic story of Cowper's intermittent insanity, are well known; the effect of each on their respective contributions is easily traceable. The features common to both resemble those of J. Mason; Cowper is remarkable for his tenderness, and occasionally for expressions or thoughts that seem suggestive of Moravian sources; Newton is sometimes gloomy, and sometimes descends to mere doggerel, but at his best he exhibits a strength and joyousness to which his colleague is a stranger. His hymns number 280, of which 50 or 60 are still in use; Cowper produced 68 (besides his translations from the French of Madame Guyon), of which nearly half have a place in modern hymn-books. To the Olney school may be referred Thomas Haweis (1732–1820), John Fawcett (1740–1817), John Ryland (1753–1825), and many others of less note.

A few writers of the 18th cent., who cannot be classed with any particular school, are remembered as the authors of single hymns; while the rest of their works, sometimes voluminous, are all but forgotten. Such are Robert Seagrave (1693–1750) ('Rise, my Soul, and stretch thy wings'); James Fanch (1704–67) ('Beyond the glittering starry skies'); John Bakewell (1721–1819) ('Hail, Thou once despised Jesus'); Edward Perronet (1726–92) ('All hail the power of Jesus' name'); and Robert Robinson (1735–90) ('Come, Thou Fount of every blessing').

Two small sects which originated in Scotland about the middle of the 18th cent. yielded hymns of some literary interest. Among the *Christian Songs* of the Glasites, or Sandemanians (1749), are several especially designed for secular tunes; and this idea was still more vigorously carried out by John Barclay (1734–98), the leader of the Bereans. Some of Barclay's hymns, set to familiar Jacobite and other Scottish tunes, possess real beauty. Similar adaptations occur in *A Collection of Spiritual Songs*, published in 1791 by John Geddes, a Roman Catholic clergyman. Here, too, may be mentioned the *Christian Hymns, Poems, and Sacred Songs* of James Relly, the Universalist (1720–78), published in 1777; these display a good deal of rugged vigour.

It seems fitting to notice also some of the more important selections of hymns that appeared in the 18th century. The first of any note offered to the Church of England seems to have been the *Collection of Psalms and Hymns*, 70 in number, published by John Wesley at Charlestown in 1737. This excited little interest, and was not reprinted. More important was George Whitefield's *Collection of Hymns for Social Worship* (1753). The hymns were mostly from Watts and Wesley, often freely altered; and, though compiled by an Anglican clergyman, were chiefly used in 'Tabernacles' and Meeting-houses for Nonconformist or undenominational worship. This collection passed through many editions, the 25th being dated 1781. Martin Madan's *Collection of Psalms and Hymns* (1760) had a great influence on subsequent developments of hymnody, chiefly through his very skilful alterations and corrections. Other collections were those of Dyer (1767), R. Conyers (1767), Richard de Courcy (1775), and Toplady (1775). All these editors were Anglican clergymen of the Evangelical type, and the tone of their books was distinctly Calvinistic. So were the various collections used in the Countess of Huntingdon's chapels from 1764 till 1780, when they were displaced by her own *Select Collection*. A strong Evangelical Arminianism, on the other hand, pervaded the selections edited by John Wesley, from 1741 onward till the production, in 1780, of his *Collection of Hymns for the Use of the People called Methodists*. A mild type of Calvinism characterized the selections compiled by Congregationalists, usually as supplements to Watts's *Psalms and Hymns*. The earliest of these was that of Thomas Gibbons (1769), which was followed by Rowland Hill's (1783), George Burder's (1784; 28th ed. 1829), William Jay's (1797), and a considerable number of local publications. Rather more pronounced was the Calvinism of the Particular Baptist selections of J. Ash and C. Evans (1769), and John Rippon (1787), while the General Baptist Hymn-book (1771) and Dan Taylor's (1793) were just as distinctively Arminian. Two Scottish Baptist books also deserve notice: the collection made by Sir William Sinclair of Keiss (1751) and *A Collection of Christian Songs and Hymns* (Glasgow, 1786).

The growth first of Arianism and then of Socinianism in the English Presbyterian Churches necessitated a special provision for worship. This was usually made by eliminating from the hymns of orthodox writers every allusion to the Trinity, the Incarnation, and the Atonement. The earliest selection made on this principle was printed in London in 1757, and at least 10 such books appeared at various places before the close of the century; one of them, by William Enfield (Warrington, 1778), professed to be 'unmixed with the disputed doctrines of any sect.' Most of these books contain little that could not be sung by a pious Jew or Muhammadan.

The earlier years of the 19th cent. were barren of new or striking hymns; but before long there burst forth such a flood of sacred melody as England had never heard before. It is quite impossible to review, within any reasonable limits, the English and Scottish hymnists of the century, of whom more than 550 are enumerated between 1800 and 1890. A few points may be briefly noted.

(1) The large number of women writers who produced not merely sentimental verses, but genuine hymns of lasting worth. Prominent among them are Cecil Frances Alexander (1823–95) ('The golden gates lift up their heads'), Sarah Flower Adams (1805–48) ('Nearer, my God, to Thee'), Charlotte Elliot (1789–1871) ('Just as I am, without one plea'), Frances Ridley Havergal (1836–79) ('Take my life, and let it be'), Adelaide Anne Procter (1825–64) ('The way is long and dreary'), and Anna Letitia Waring (1820–1912) ('My heart is resting, O my God'). Others have displayed remarkable skill as translators, especially from the German, as Jane Borthwick (1813–97), Frances Elizabeth Cox (1812–97), Sarah Findlater (1823–86), and Catherine Winkworth (1829–78). Others, again, are unrivalled in adapting themselves to the capacities of children, *e.g.* Cecil Frances Alexander ('There is a green hill far away'), Jane E. Leeson (1807–82) ('Saviour, teach me day by day'), and Jemima Luke (1813–1906) ('I think when I read that sweet story of old').

(2) The appearance, for the first time, of really good hymns for children, child thought in child language. Isaac Watts had led the way, but for two generations he had no followers. Even

Charles Wesley's efforts in this direction were far from being a complete success; his famous 'Gentle Jesus, meek and mild,' needs explaining to make it intelligible to children. But Jane Taylor (1783–1824) and her sister, Ann Gilbert (1782–1866), understood child nature; and, though sometimes entangled in theology, their songs for children usually excelled those of Watts as far as his did the efforts of Abraham Cheare. The path they opened up was worthily followed not only by C. F. Alexander and Jemima Luke, but by E. Paxton Hood, W. W. How, Annie Matheson, Albert Midlane, Hugh Stowell, and many more.

(3) The naturalizing, by satisfactory translations, of the best Latin, Greek, and German hymns. The last named have found most favour in the Evangelical section of the Anglican Church, and among the Free Churches. Some of the most capable translators have already been indicated; others are mentioned in the literature at the end of the article. Attention was drawn to the rich stores of Latin hymnody in connexion with the Oxford Movement between the years 1830 and 1840. Naturally the chief, though not the only, translators of the Breviary and other mediæval hymns were men of the High Church school, such as J. D. Chambers (1805–93), John Chandler (1806–76), W. J. Copeland (1804–85), R. F. Littledale (1833–90), and, above all, John Mason Neale (1818–66). With these may be associated a few Roman Catholics, especially Edward Caswall (1814–78). The foremost translator of the late Latin hymns of the Gallican Breviaries was Isaac Williams (1802–65). These hymns first found acceptance in High Church circles; but the best of them are now in common use in almost all Christian communions. The Greek hymns were first urged on public attention by J. M. Neale, and his versions are still most in favour; but many others have been effectively translated by John Brownlie.

(4) The enormous output of mission and revival hymns, mostly subjective or hortatory, and many of them set to the tunes of popular songs. These became common in connexion with the great religious revival of 1858, and were augmented about 1873 by hymns of American origin. Some of them were valuable, but many were sentimental and, when judged by strict canons, not always in the best of taste. It must be owned, however, that songs of this class, used by Evangelistic bodies like the Salvation Army, have often availed to call forth genuine religious emotions in persons of the most degraded type.

The hymn-books of the 19th cent. are literally innumerable. No fewer than 160 were compiled for use in the Anglican Church alone between 1800 and 1860, to which in the next 30 years 90 more were added. The use of many was merely local, while others are fairly representative of distinct schools of thought within the Church. Of the collections in use prior to 1860 by far the greatest number represented the Evangelical school; and it is estimated that these were used in nearly three-fourths of the English parish churches. The most popular books of this class were William Mercer's *Church Psalter and Hymn Book* (1854), Charles B. Snepp's *Songs of Grace and Glory* (strongly Calvinistic, 1872), and Edward H. Bickersteth's *Hymnal Companion* (1870, revised 1876). Of the moderate High Church type was *Hymns Ancient and Modern* (1861, revised 1875; appendix 1889; another revision 1904), which has become the most popular of all English hymn-books. To the same school belong William Cooke and Benjamin Webb's *The Hymnary* (1872), and *Church Hymns* (1871, revised 1903). To the advanced High Church party belong *The Hymnal Noted* (1852), with its many supplements, James Skinner's

than that year. Two Universalist collections were published in 1792; Lutheran and Unitarian collections in 1795; the first Congregational selection of any merit is dated 1799; and no Presbyterian selection was authorized until 1828. It is a noticeable fact that in all these books, and in most of those which followed, by far the greater number of the hymns were by English authors. In 18 of the most extensively used hymn-books of the Episcopal, Presbyterian, Methodist, Baptist, Congregational, and Reformed Churches, published between 1826 and 1880, less than 14 per cent of the hymns are of American origin.

Until the great religious revival which commenced in America about 1858, and extended over a large part of English-speaking Christendom, very few hymns of American authors were included in English collections. Since that time, however, many have gained great popularity, especially hymns embodying the Gospel call, hymns of aspiration, and such as relate to the future life. A common fault of American hymns is a too great tendency towards sentimentalism; and many of them seem to owe their popularity to the light jingling tunes to which they are wedded.

8. **Welsh hymns.**—There is some evidence of the use, in the Early British Church, of hymns in the native language; but no specimens remain, and by the time when Protestantism arose the Welsh had apparently lost the gift of composing hymns. Early in the 17th cent. the celebrated Vicar of Llandovery, Rees Prichard, published a volume of religious poems, largely didactic, entitled *Canwyll y Cymry* ('The Welshman's Candle'), portions of which were commonly sung as hymns. It became immensely popular, was many times reprinted, and its influence is not yet extinct. In 1621 Archdeacon Edmund Prys produced his metrical version of the Psalms, which is still in use, though partially supplanted by the more modern version of William Morris. Skill in poetical composition is so widely diffused among Welsh-speaking people that the number of hymn-writers is very great, while the paucity of family names makes them somewhat difficult to distinguish. Two poets of the 17th cent., Rowland Vaughan (c. 1629–58) and Elis Wyn (1670–1734), are held in honourable remembrance, each by a single hymn. As early as 1703 a collection of sacramental hymns was published by Thomas Baddy, a dissenting minister. A few years later a collection was issued by the celebrated educationalist, Griffith Jones of Llanddowror (1683–1761), but it is not certain whether it included any of his own compositions.

The great outflow of Welsh sacred song began with the religious revival initiated by the early Calvinistic Methodists, in whose ranks are enrolled the greatest of all Welsh hymnists, William Williams of Pantycelyn (1717–91), his contemporary David Williams, Morgan Rhys († 1776), and Ann Griffiths (1776–1805). Outside that circle we find the names of David Jones of Caio, who in 1753 translated into Welsh Watts's *Psalms*, and afterwards his *Divine Songs*. He was a Congregationalist, as was Ioan Thomas of Rhaiadr (fl. 1776–86), many of whose hymns are still in use. The great hymn-writer among the Unitarians was Edward Williams, renowned as an antiquary under the name of Iolo Morganwg (1745–1826). The first Baptist hymn-book in Wales was compiled by Joseph Harris, called 'Gomer,' in 1821; it contained many of his originals.

The most striking characteristics of Welsh hymnody are depth of emotion and abundant use of metaphor—every kind of natural object being enlisted for the illustration of things spiritual. The hymns are for the most part intensely subjective.

9. **Missions.**—Since the year 1800, agents of the various missionary societies have produced hymns in upwards of a hundred and twenty languages and dialects, of which more than half had never previously been reduced to writing. Some of these are in native, some in English, metres, and, as might be expected, a large proportion of them are translations from English or German originals.

[10. **Cumanic and other early vernacular hymns.**—In a Latin-Persian-Cumanic glossary of 1303 (ed. G. Kuun, *Codex Cumanicus*, Budapest, 1880) are a few hymns in Cumanic, the language of a hybrid Turkish tribe then occupying Moldavia and the neighbouring districts. The majority of these hymns are translated from the Latin; *e.g.* there is a rendering of the 'Vexilla regis.' One hymn, however, Eucharistic in character, is thus far believed to be an original composition (cf. W. Bang, 'Beiträge zur Erklärung des koman. Marienhymnus,' in *GGN*, 1910, pp. 61–78, and 'Ueber einen koman. Kommunionshymnus,' in *Bull. Ac. roy. de Belge* [classe des lettres], 1910, p. 230).

It is by no means impossible that a considerable body of early vernacular hymnody was composed in various languages, only to disappear. Thus, the Observantine Minorite Ladislaus (c. 1440–1505) is recorded by his biographer, Vincentius Morawski, writing in 1633, to have composed many hymns, Psalters, etc., some of which were in Latin, but others in Lithuanian ('Vita,' I. ix. 59, in *AS*, May, i. [1866] 579). All trace of these Lithuanian productions has vanished.—LOUIS H. GRAY.]

T. G. CRIPPEN.

**HYMNS (Egyptian).**—The religious literature of ancient Egypt is fairly prolific in the department of hymnology, and a considerable amount of religious poetry has been preserved and translated; but, on the whole, it cannot be said that the quality is on the same level with the quantity. To a great extent the hymns which have survived bear the stamp, not of a genuine personal religious feeling on the part of the writer, as in the case of our own best hymns, but of a purely official and stereotyped attitude towards the divinities whose praises are celebrated. Religion in Egypt, as we know it, was far too much of a business of cast-iron ritual to leave much room for any natural outpouring of thoughts and feelings of devotion and affection. If there were such outpourings, they were probably not on account of the great gods, whose position was infinitely removed from that of the ordinary worshipper, but rather of some of the minor deities, whom, as we know, the common people of Egypt took to their hearts in preference to the distant and unsympathetic figures of the great triads and enneads. Such effusions were not at all likely to survive in any quantity in comparison with the stilted official odes which had the sanction of the priesthood, were multiplied in an infinity of copies, and were continually used for ritual purposes.

In the time of the New Empire, however, there are traces of a feeling of impatience with the stereotyped formulæ of the official religion, and one or two of the hymns which have survived from this period give us what is otherwise very unusual —the expression of a personal and living interest in religion. Thus, from a hieratic papyrus of this period we have the following:

> 'Amen-Ra, I love thee and enfold thee in my heart . . .
> I do not follow anxiety in my heart; what Amen-Ra saith cometh to pass.'

To the same period also belongs a hymn which gives us one of the very few evidences that the devout Egyptian ever realized his own sinfulness: 'Chastise me not,' says a writer whose poem is preserved in the Anastasi Papyrus, 'according to my many sins.' A hymn to Thoth from the Sallier Papyrus presents us with a view of the inward and secret nature of true religion totally alien to the beliefs of the upholders of the great religious cults of the nation, who emphatically seem to have thought that they would be heard for their much speaking:

> 'O thou sweet spring for the thirsty in the desert; it is closed for those who speak there, it is open for those who keep silence there. When the silent man cometh, he findeth the spring.'

Such natural expressions of love, confidence, and inward intercourse with God are, however, quite exceptional in Egyptian hymnology. Taking the ordinary run of the hymns to the great gods, we find a constant repetition of the same cycle of ideas in practically the same phrases—a repetition which becomes wearisome, and gives a very poor idea of the extent to which any genuine devotional feeling can have entered into Egyptian religion. Erman's opinion (*Life in Ancient Egypt*, p. 389 f.) is amply justified:

> 'There seems to be no question of devotional feelings on the part of the singer; in fact, the greater part consists of stereotyped phrases, which could be adapted to any of the mighty gods, and could also be used in adoration of the king.'

In fact, the average Egyptian hymn seems to have been constructed on a certain definite recipe. It was essential that the writer should say that the two countries (Upper and Lower Egypt) together show honour to the god, that his fear is in all lands, that he has subdued his enemies and received the dignity of his father, that he by the great cycle of the gods, that all are full of delight at his coming and beauty, and so forth. All this belonged the gods. In order to make the effusion teristic hymn to Ra or Amen, there we the name of the god in question, and pe or two allusions to the myths associated and to the particular temple or temples most affected; the result was a standa which had this advantage, that with a fe tions it would do equally well for Ptah o

Thus we have the following from 'A Ra when he riseth' (Papyrus of Nekht):

> 'Homage to thee, O thou glorious being, tho dowered with all sovereignty. . . . The regions o and south come to thee with homage, and send for tions at thy rising in the horizon of heaven. . . . T Nut doeth homage unto thee, and the goddess Maat thee at all times. . . . The company of the gods rejo coming, the earth is glad when it beholdeth thy ray

Ani (Papyrus of Ani) can find noth original to say of the same deity:

> 'Homage to thee, O thou who hast come as K creator of the gods. . . . Thy mother Nut doet homage unto thee with both her hands. The land ceiveth thee with satisfaction, and the goddess Maat thee both at morn and eve.'

Osiris fares no better than Ra at the his devout worshipper:

> 'Glory be to Osiris Unnefer, the great god with King of eternity, lord of the everlasting. . . . Eldes womb of Nut, lord of the crowns of the north and of the lofty white crown. As prince of gods and hath received the crook and the whip and the dig divine father. Thou art crowned lord of Busiris a Abydos.'

The great bulk of Egyptian hymn l consists of poems in praise of one or oth three great gods, Ra, Amen, and Osiris.

1. **Hymns to Ra.**—A certain amount religious feeling was apparently awaken Egyptian mind by the contemplation of t and setting of the life-giving sun, and transferred to the Sun-god, though its e is often very stilted.

> 'Homage to thee,' says an interesting hymn in t of Hu-nefer, 'O thou who art Ra when thou risest when thou settest! Thou risest, thou risest, thou sh shinest, thou who art crowned king of the gods. didst create the earth, thou didst fashion man, make the watery abyss of the sky, thou didst forn thou didst create the deep, and thou dost give lig that therein is. . . . Thou art unknown, and no worthy to declare thy likeness: only thou thyself. . of years have gone over the world, I cannot tell t of those through which thou hast passed. Thou over and travel through spaces requiring millions an of thousands of years; thou passest through them and thou steerest thy way across the watery abyss t which thou lovest. This thou doest in one little time, and then thou dost sink down, and dost mak the hours.'

Thus Ra is here adored as the Creator effable, and the Eternal, and in this h least, there is a distinct vein of genuine feeling in the description of the Sun-go journey over space. But even in such hy constant reiteration of the creation forn the endless repetition of the solar journe morning and evening boats become very t

One of the most important of the Ra h that series which is sometimes called the of Ra.' It exists in the form of a long te tured at the entrances of the royal tomb Valley of the Kings at Thebes. Its im lies, not in its poetical merits, which are v indeed, but in the fact that throughout t Ra is successively identified with 75 vari or cosmic elements. They are all form god, who, as primordial deity, embraces from whom emanate all the other gods, only his manifestations.

> 'Homage to thee, Ra, supreme power, he who de the sphere of Amentet, his form is that of Tum. I

thee, Ra, supreme power, he who sends forth the plants in their season, his form is that of Seb. Homage to thee, Ra, supreme power, the great one who rules what is in the Nun, his form is that of Nut,' . . . and so on.

2. **Hymns to Amen.**—Next in importance to the Ra hymns come those addressed to Amen. Of these perhaps the best is that found in a hieratic papyrus (no. 17, Boulaq). It contains, of course, the usual formulæ, which belonged to Amen, as they belonged to Ra, to Osiris, or to any of the great gods, and were mere matter of habit, so many lines to be filled according to the usual recipe,

'Chief of all the gods, lord of truth, father of the gods, creator of beasts, maker of men, lord of existences, creator of fruitful things, maker of herbs, feeder of cattle,'

and it expressly identifies Amen, not only with Ra, but with Tum, Min, and Khepera. Yet it contains also here and there traces of that realization of divine power in the sustenance of living things which always, as Erman has observed (*Life in Ancient Egypt*, p. 391), brings reality, and something of beauty and freshness, into the arid desert of Egyptian hymn-writing.

'He it is who makes pasture for the herds and fruit trees for man; who creates that whereby fish live in the river and the birds under the heavens; who gives breath to them who are in the egg and feeds the son of the worm; he creates that whereby the gnat lives, and also the worms and fleas; he creates that which is needed by the mice in their holes, and that which feeds the birds upon all trees.'

The verses, with their minute description of the divine care for the smallest creatures, suggest a far-off anticipation of Coleridge's

'He prayeth best who loveth best
All things both great and small,
For the dear God who loveth us
He made and loveth all.'

At the same time the writer has a sense, somewhat unusual, of moral quality in his god. To him, Amen is a god

'listening to the poor who is in distress, gentle of heart when one cries unto him, deliverer of the timid man from the violent, judging the poor, the poor and the oppressed, Lord of wisdom, whose precepts are wise, Lord of mercy most loving, at whose coming men live.'

The pantheistic tendency of Egyptian religious thought is clearly seen in the late hymn found in the inscription of Darius at the Oasis of el-Khargeh. The hymn is specifically addressed to Amen; but we find that the god is completely identified with the other great gods of Egypt:

'He is Ra, who exists by himself.' 'It is Amen who dwells in all things, the revered god who was from the beginning. . . . He is Ptah, the greatest of the gods.' 'Thy august ram dwells in Tattu' identifies him with Osiris. 'Shu, Tefnut, Mut, and Khons are thy forms, dwelling in thy shrine under the types of the god Khem.' 'We cannot,' says Naville (*The Old Egyp. Faith*, p. 149), 'sum up more clearly the Egyptian doctrine than in the following phrase: "Thy throne is reared in every place thou desirest, and, when thou willest it, thou dost multiply thy names."'

3. **Hymns to Osiris.**—Of all Egyptian hymns, those addressed to Osiris are perhaps the most disappointing. Here, if anywhere, we should have expected to find the evidence of sincere religious feeling. For the cult of Osiris was not only the most popular and long-enduring of Egyptian cults, but was so precisely because of the human elements in the life of Osiris, the sympathy which these created between him and his worshippers, and the ethical character of many of the beliefs regarding him. If any personal relationship existed between an Egyptian worshipper and any of the great gods, it is to be looked for in the Osiris cult. Yet, when we turn to the Osirian hymns, we find, almost more than anywhere else, only the multiplication of bombastic and meaningless epithets.

'Praise to thee, Osiris, son of Nut, who wearest the horns, and dost lean upon a high pillar; to whom the crown was given, and joy before the nine gods. . . . Great in power in Rosetta, a lord of might in Ehnas, a lord of strength in Tenent. Great of appearance in Abydos . . . before whom the great ones of might feared; before whom the great ones rose up upon their mats. . . . To whom Upper and Lower Egypt come bowing down, because his fear is so great and his might so powerful.' 'Beyond this,' says Erman (*Egyp. Rel.* p. 48), 'this priestly poet could find nothing to say of this most human of all the gods.'

A certain amount of human feeling does, however, enter into the funeral hymn known as the 'Lamentations of Isis and Nephthys,' in which these goddesses are supposed to bewail the deceased Osiris:

'Come to thy house, come to thy house, O god On! . . . O beautiful youth, come to thy house that thou mayest see me. I am thy sister whom thou lovest; thou shalt not abandon me. . . . Come to her who loves thee, Unnefer, thou blessed one. Come to thy sister, come to thy wife, thy wife, thou whose heart is still. . . . I call to thee and weep so that it is heard even in heaven, but thou dost not hear my voice; and yet I am thy sister, whom thou lovedst upon earth. Thou lovedst none beside me, my brother, my brother!'

This is both genuine and touching; but, as it was the typical funeral lamentation, it is permissible to believe that these qualities are due, not to the worship of the god, but to the human loss which was actually bewailed.

4. **Hymn to Hapi.**—Besides the hymns addressed to the great gods, there are others, such as the well-known hymn to Hapi, the Nile-god, in which the formulæ have a little more of life and reality behind them. The worshipper was here addressing a god who was a necessity of his daily life, and there could scarcely fail to be an element of sincerity in his approach to such a deity.

'The flowing stream, laden with blessing, is a visible sacred being, and when the Egyptian treats of the real, and describes the things he daily sees, his art always succeeds the best' (Erman, *Life in Ancient Egypt*, p. 391).

The following extracts are from Maspero's translation of the 'Hymn to the Nile' (from the 2nd Sallier and the 7th Anastasi Papyrus):

'Hail to thee, Hapi, who appearest in the land, and comest to give life to Egypt; thou who dost hide thy coming in darkness. . . . Creator of corn, maker of barley. . . . Do his fingers cease from their labours, then are all the millions of beings in misery; doth he wane in heaven, then the gods themselves and all men perish; the cattle are driven mad, and all the world, both great and small, are in torment. But if, on the contrary, the prayers of men are heard at his rising, then the earth shouts for joy, then are all bellies joyful, each back is shaken with laughter, and every tooth grindeth. . . . Stones are not sculptured for him . . . he is unseen, no tribute is paid unto him, and no offerings are brought unto him; nevertheless the generations of thy children rejoice in thee, for thou dost rule as king . . . by whom the tears are washed from every eye!'

5. **Royal hymns.**—Among all the gods there was probably none who was so real to the ancient Egyptian as the one whom he called 'the good god,' in contradistinction from 'the great gods'—the reigning Pharaoh. It was the duty of all loyal subjects to offer adoration to him, and even the answers of the courtiers to the questions of their sovereign had to be prefaced with a short hymn of praise in which all the stock attributes of divinity were piled upon the king. Two of these royal hymns stand out above others, and are important enough to require notice, though their poetical merit is not very great. The first is that addressed to Senusert III. (Usertsen) of the XIIth dynasty. It is remarkable for its exact strophic structure, and for the illustration which it gives of the fact that at so early a period the Egyptian literary art was already bound, not to say strangled, by hard and fast rules.

'Twice great is the King of his city, above a million arms; as for other rulers of men, they are but common folk.
Twice great is the King of his city; he is as it were a dyke, damming the stream in its water flood.
Twice great is the King of his city; he is as it were a cool lodge, letting men repose unto full daylight.
Twice great is the King of his city; he is as it were a bulwark, with walls built of the sharp stones of Kesem.'

The hymn runs thus, with carefully balanced lines, through six long strophes, in which the king is compared to all sorts of good and gracious influences.

The second hymn was inspired by the warlike prowess of Tahutmes III. of the XVIIIth dynasty. After an introduction in praise of Tahutmes, the poet makes the god Amen guide his son the king round the whole circuit of the world, giving it all

into his power. Occasionally in this long geographical excursion there are passages of vigour and fancy which show that the fierce energy of the old king had awakened the imagination of his subjects.

'I have come, giving thee to smite down those who are in their
marshes.
The lands of Mitanni tremble under fear of thee;
I have made them see thy Majesty as a crocodile;
Lord of fear in the water, unapproachable.
I have come, giving thee to smite the Libyans,
The isles of the Utentiu belong to the might of thy prowess;
I have made them see thy Majesty as a fierce-eyed lion,
While thou makest them corpses in their valleys.
I have come, giving thee to smite those who are nigh thy
border,
Thou hast smitten the Sand-dwellers as living captives;
I have made them see thy Majesty as a southern jackal,
Swift-footed, stealthy-going, who roves the Two Lands.'

By far the most significant relics of Egyptian hymnology, however, are the two hymns addressed to the Aten, or life-giving power of the solar disk by the King Amenhotep IV., better known as Akhenaten, of the XVIIIth dynasty. The longer of these has been frequently translated, and it stands alone in its simple realism, its vivid depiction of the benefits received from the Aten, and its conception of a universal deity to whom all nations are alike dear:

'Thou restest in the western horizon of heaven,
And the land is in darkness like the dead . . .
Every lion cometh forth from his den,
And all the serpents then bite;
The night shines with its lights,
The land lies in silence;
For he who made them is in his horizon.
The land brightens, for thou risest in the horizon,
Shining as the Aten in the day;
The darkness flies, for thou givest thy beams;
Both lands are rejoicing every day.
Men awake, and stand upon their feet,
For thou liftest them up;
They bathe their limbs, they clothe themselves,
They lift their hands in adoration of thy rising,
Throughout the land they do their labours . . .
The ships go forth, both north and south,
For every way opens at thy rising;
The fishes in the river swim up to greet thee;
Thy beams are within the depth of the great sea.'

Then passing to the universality of his deity:

'In the hills from Syria to Kush, and the plain of Egypt,
Thou givest to every one his place, thou framest their lives,
To every one his belongings, reckoning his length of days.
Aten of the day, revered of every distant land, thou makest
their life,
Thou placest a Nile in heaven that it may rain upon them . . .
Oh, lord of eternity, the Nile in heaven is for the strange
people,
And all wild beasts that go upon their feet.
The Nile that cometh from below the earth is for the land of
Egypt,
That it may nourish every field. . . .
Thou makest the far-off heaven, that thou mayest rise in it,
That thou mayest see all that thou madest when thou wast
alone.
. . . Thou art in my heart, there is none who knoweth thee
excepting thy son Nefer-Kheperu-ra-ua-en-ra.
Thou causest that he should have understanding, in thy ways
and in thy might' (Griffith, in Petrie's *Hist. of Egypt*,
ii. 215 f.).

While there is perhaps nothing absolutely original in the hymn except the acknowledgment of a universal and spiritual god to whom all men are dear, yet even the familiar motives are handled with such freshness and vigour as to make Akhenaten's hymn a welcome oasis in the dry and thirsty land of Egyptian hymnology. The misfortune is that it stands practically alone.

JAMES BAIKIE.

**HYMNS** (Greek and Roman).—I. *GREEK*.—The term ὕμνος (first found in Hom. *Od.* viii. 429, and Hesiod, *Works and Days*, 657), of unknown and probably (like ἔλεγος, παιάν, διθύραμβος, etc.) non-Greek derivation,[1] was applied to poems addressed to the gods, as ἐγκώμιον was used to denote eulogies of human beings. In its widest sense it included such species as dithyrambs, pæans, nomes, threni, etc.; but, according to the definition of the grammarians, it was appropriated to narratives of or addresses to divine personages, without dancing and without music, other than that of the cithara (Proclus, *Chrestomathia*, p. 244, *ap.* Phot. *Bibl.* 320 A 12, Bekker: ἐκάλουν δὲ καθόλου πάντα τὰ εἰς τοὺς ὑπερτέρους [ὑπηρέτας MS] γραφόμενα ὕμνους· διὸ καὶ τὸ προσόδιον καὶ τὰ ἄλλα τὰ προειρημένα φαίνονται ἀντιδιαστέλλοντες τῷ ὕμνῳ ὡς εἴδη πρὸς γένος . . . ὁ δὲ κύριος ὕμνος πρὸς κιθάραν ᾔδετο ἑστώτων; cf. also Plato, *Legg.* 700 B, 801 B, *Ion*, 534 C; Aristotle, *Poet.* 1448*b* 27). It will be convenient to distinguish Greek hymns according to their metre, since the character of the hymn varied materially with the metrical form.

1. **Hexameter hymns.**—These originally constituted a kind of department of epos, and were in the hands of its executants, the rhapsodes. They were of different dimensions: some, such as the greater Homeric hymns (see below), were as long as a book of the *Odyssey*; others consisted of a few lines. The latter were known as προοίμια and were used by rhapsodes as a preface to their recitation (Pindar, *Nem.* ii. 1–3, who says that the usual invocation was of Zeus).[2] The word, however, was applied to the longer hymns also, as, for instance, by Thucydides, iii. 104, to the Homeric hymn to Apollo. The lay of Demodocus upon the loves of Ares and Aphrodite (*Od.* viii. 266–366) appears to be an imitation of a hymn of the first class; the first ten lines of Hesiod's *Works and Days* are the earliest specimen of the second. In the same poem (654 ff.) Hesiod says that he won a three-legged pot with ears at the wake of Amphidamas at Chalcis with a hymn; and a quotation from an unknown Hesiodic poem (fr. 265, Rzach) represents Hesiod and Homer competing at Delos with 'new hymns' to Apollo. Another hymn which we can refer to an early period is the προσόδιον written by Eumelus of Corinth (8th cent.) for a Messenian pilgrimage to Delos. Two Doric hexameters are quoted from it by Pausanias, IV. xxxiii. 2.

Hymns began with a formula of invocation—usually to the Muses: Μοῦσαι . . . δεῦτε Δί' ἐννέπετε (Hes. *Works and Days*, 1 f.); Ἑρμῆν ὕμνει, Μοῦσα, Διὸς καὶ Μαιάδος υἱόν (*Hym. Homer. in Herm.* 1); ἀμφί μοι Ἑρμείαο φίλον γόνον ἔννεπε, Μοῦσα (*Hym. Homer. in Pan.* 1) (the last opening was so frequent in the dithyramb as to give rise to a verb ἀμφιανακτίζειν [Suid. *s.v.*])—and ended with one of farewell and transition to another theme (ἀλλά, ἄναξ, μάλα χαῖρε [Zenobius, v. 99]; νῦν δὲ θεοὶ μάκαρες τῶν ἐσθλῶν ἄφθονοι ἔστε [Ælius Dionysius, *ap.* Eustath. 360]; καὶ σὺ μὲν οὕτω χαῖρε, Διὸς καὶ Λητοῦς υἱέ· αὐτὰρ ἐγὼ καὶ σεῖο καὶ ἄλλης μνήσομ' ἀοιδῆς [*Hym. Homer. in Apoll.* 545 f.]).[3]

The extant hexameter hymns may now be considered.

(*a*) *Homeric hymns.*—This name is applied to a collection of 33 poems handed down usually together with the hymns of Callimachus and Proclus and similar poetical literature (ed. A. Baumeister, Leipzig, 1860; A. Gemoll, do. 1877; E. Abel, do.

[1] It is possible, however, that ὕμνος has arisen from *ὕδμος, and is connected with ὕδω, ὑδέω, 'to tell of, celebrate'; cf. Brugmann, *Gr. Gramm.*[4], Munich, 1913, p. 89, and the lit. there cited.

[2] This statement is confirmed by the hymnal language of Theocritus, xvii. 1; Aratus, 1.

[3] Imitations of these formulæ are frequent in literature: Theocr. i. 132, ii. 14, xv. 142, xvii. 135; Ion of Chios, i. 15; Nonnus, xix. 174, 192; inscr. *ap.* Plut. *Vit. Aem. Paul.* 16.

1886; A. Goodwin, Oxford, 1893; T. W. Allen and E. E. Sikes, London, 1904; Allen, do. 1912). The antiquity of the collection as such is limited by the neo-Orphic character of the eighth hymn (to Ares), and cannot at earliest be fixed much before the Christian era.

The first five hymns in the collection were on a large scale, and of them a short account may be given. The hymn to Dionysus (i.) is a fragment, but that to Demeter (ii.) is of considerable poetical value. It narrates the rape of Persephone by Pluto; the wanderings of Demeter in search of her daughter; her reception, disguised as an old woman, in the house of Celeus at Eleusis; and her intention of making the child Demophon immortal. Frustrated in this by the child's mother, Metanira, she reveals herself, orders the foundation of a temple at Eleusis, and causes the fruits of the earth to cease. Zeus eventually commands that Persephone return to the upper world, although she must pass a third of each year in the under world. The crops once more come up, and to the Eleusinians are revealed the rites of Demeter's worship upon which depends happiness in another world. The date of this hymn turns almost entirely on an argument *ex silentio*. The doctrine of the after happiness of the initiate (ver. 480 ff.) is otherwise not found before Pindar, and there is no definite evidence by which to date its first appearance. Further, the hymn makes very large omissions; in fact, it ignores the whole of the mystery proper, as it was practised, nor does it mention one prominent personage, Iacchus, or the obscene part of the Baubo-story. As this was clearly intentional, just as was the dignified and epic tone of the story, no definite date can be inferred from it. Of more importance is the absence of any allusion to Athens, which, it is generally believed, had absorbed Eleusis by 600 B.C. This, together with the lofty style of the poem, leads us to date it not much later than 700 B.C. Subsequently, at a date unknown, it was excerpted and adapted to assist a prose narrative of the story in its fuller and Orphic form (cf. papyrus ed. W. Schubart and U. von Wilamowitz-Moellendorff, *Berliner Klassikertexte*, v. [Berlin, 1907] 7 ff.). Tradition is silent regarding the authorship of the hymn.

The hymn to Apollo (iii.) is unique in that it was ascribed in antiquity to Cynæthus of Chios, a rhapsode (Hippostratus, *FHG* iv. 433), who 'was the first to recite the Homeric poems in Syracuse in the 69th Olympiad.' The date has been recognized to be wrong on the ground that, firstly, it contradicts the other statement in the passage, since it is incredible that Homer should first have reached Sicily in 504 B.C. in the age of Epicharmus; and, secondly, from an argument *ex silentio* derived from the poem itself, which alludes neither to the Pythian games (instituted 586 B.C.) nor to the burning of the temple of Trophonius and Agamedes (548 B.C.). This is decisive against Ol. 69, and Cynæthus may revert to his natural date among the Homeric and Peloponnesian rhapsodes of the 8th century.[1]

The hymn begins with the birth of Apollo. Leto, seeking a place in which to bring forth her son, wandered in vain round the coasts of the Ægean, from Crete to Athos, from Pelion to Cnidus; only barren Delos received her. Here Apollo was born, and the island burst into flowers of gold. So it is beloved by Apollo more than any other place, and there the Ionians gather with their wives and children and ships and possessions, for boxing, dancing, and singing. Here is the marvel of the Delian singing-women, who imitate the words and the music of all men, and here the sweetest of singers, a blind man who lives in Chios. Besides Delos, Apollo inhabits Lycia, Mæonia, and Pytho, as well as Olympus, the home of Zeus. Brides hath he too, but the poet will tell how he set up the first oracle in the earth. To accomplish this, he left Olympus and set foot in Pieria; thence, passing the Ænianes, the Perrhæbi, and Iolcus, he reached Cenæum in Eubœa. The Lelantine plain displeased him, so he crossed the Euripus and travelled [along the later Sacred Way] by Thebes and Onchestus, Haliartus, and the city of the Phlegyæ to Crisa. There, with the help of Trophonius and Agamedes, he built his temple, and shot a great snake which wasted men and sheep, from whose rotting (πύθειν) the place was called Πυθώ, and the god πύθιος. He still required ministers, and them he brought by sea from Minoan Knossos in Crete—meeting their ship in the guise of a dolphin (δελφίς)—and there he established them to pray to him as δελφίνιος, and to maintain themselves upon the sheep that should be sacrificed by the tribes of men. But, in case of idle word, or deed, or insolence, other men should rule them.

It has long been recognized that this hymn consists of two parts, the Delian and the Delphic. The character of the two is different: the former is brilliant, and deals with the Ionians and the poet at least as much as with Apollo; the second is impersonal, and contains a number of essential details, local and historical. Moreover, the lines constituting the junction of the two parts (179–206) are not natural in the context, and the opening of the second hymn is unusual (207–214). If, then, Cynæthus wrote the first part, another author must be sought for the second, and probably in Bœotia, since the interest is entirely continental, and the events take place on the Pilgrims' Way from Mycalessus to Pytho. It is usually supposed, but without definite evidence, that the two parts were put together at a later period; yet it is quite as likely that Cynæthus composed the first part as a preface to the second, which was already existent, and joined them together without much ado. The Hesiodic *Scutum* is an ancient document of similarly composite character. The whole hymn, like the others, is distinguished by its omissions: the Delian portion mentions none of the sights and sacred places of Delos, which were well known at least as early as the 6th cent. (Theognis, 5 ff.); this is probably a proof of its antiquity, as is the cheerful description of the Ionians, and the allusion to Mæonia (*i.e.* Lydia) and Lycia as seats of Apolline worship. This outlook has been recognized to date from a time before the Lydian monarchy had begun to threaten Ionian independence, *i.e.* from the 8th century. Another important omission is that of Apolline worship in the north, and the story of the Hyperboreans (*q.v.*), which was sung by Olen (see below (*e*) (1)). It is uncertain what interpretation is to be put upon this fact. The Delphic portion equally omits most of the features of the oracle, especially the Pythia (see A. P. Oppé, *JHS* xxiv. [1904] 214 ff.), and its allusion to the pre-Apolline worship at Pytho (300 ff.) is superficial and vague.

The hymn to Hermes (iv.) is equally eclectic, and describes only the following features of the god's functions and history: his birth of Maia at Cyllene in Arcadia; the invention of the lyre four days afterwards; the theft of Apollo's cattle at Pieria; the invention of fire (produced by the friction of sticks); the slaughter, dismemberment, and roasting of two kine, and the portioning of the cooked parts into twelve, of which Hermes did not taste; Apollo's search and discovery of the cattle; the terms struck between these two gods—Apollo received the lyre, and Hermes, besides retaining the care of cattle, also received the *caduceus* ('rod of wealth'); and the witchcraft of the three σεμναί or Θριαί. The story, therefore, is very simple, although reference is incidentally made to most of Hermes' functions. The hymn is more ætiological than the others. On the other hand, it has a peculiar raciness; Hesiod is parodied (36), and the indifference of the Olympians towards mankind is roundly asserted (577 f.). The date of the hymn may be obtained by considering the geographical state of the legend; the cows are driven from Pieria (in an earlier form of the tale this had probably been Pereia in S. Thessaly) to the Alphean Pylus; later authors substituted the Messenian Pylus. The Alphean or Nestorian Pylus appears to have been sacked towards the end of the 7th cent. in consequence of the events narrated by Herodotus, iv. 145, and Mimnermus, fr. 9, and it rapidly became forgotten. Hence its mention here appears to make the document not later than the end of the 7th cent., for in Stesichorus, fr. 44, of the same period, we find mention of the adjacent Alphean Samos or Samicum, which was soon also to vanish from memory. Some slight linguistic peculiarities (Allen-Sikes, p. 133) perhaps point to a Bœotian or Eubœan origin. The same story of the invention of the lyre and the theft of the cattle is told in the newly discovered satyr-play, the Ἰχνευταί of Sophocles (*Oxyr. Pap.* ix. [1912]), but the influence of the hymn is not apparent.

The hymn to Aphrodite (v.) is a straightforward account of one episode in the goddess's life, telling how, in revenge for her influence over the whole universe, Zeus inspired her with a passion for the Trojan prince Anchises, who begat on her a child, Æneas, whose stock should rule over Troy for ever (196 f.). The poetical merits of the hymn are very high. Its date and place are uncertain, but the theme, the prophecy, and the detail that the Trojans and Phrygians speak different languages (113 ff., cf. P. Kretschmer, *Einleitung in die Gesch. der griech. Sprache*, Göttingen, 1896, p. 182), as well as one or two verbal usages, point to a colonist, doubtless a Homeric, author.

A word must be said upon the evidence of the presence or absence of the digamma in these hymns, since it affords a legitimate criterion for their relative age. The result of the calculations (Flach, *Bezzenberger's Beiträge*, ii. [1878] 1–43; Allen-Sikes, p. lxxi) is (1) Pythian or Delphic part of the hymn to Apollo, (2) Aphrodite, (3) Delian part of the hymn to Apollo, (4) Demeter, and (5) Hermes. It should also be added that the style of their composition is a continuation of the Homeric manner: it is dignified and anthropomorphic. Although ritual ἀπόρρητα are alluded to (as in Demeter), and the origin of rites is explained (as in Hermes), the details are not given. There is, therefore, the same apparent absence of magic and primitive symbolism as in Homer. This is in striking contrast to the Orphic literature (see below).

The remaining hymns may be briefly dismissed. They appear to be all invocations or προοίμια, and are insignificant except that to Dionysus (vii.) and that to Pan (xix.). Their age is uncertain, but they contain no trace of Alexandrian style or, except in Ares (viii.), of eastern doctrine. It is doubtful if any, except viii., can be brought below 500 B.C.

(*b*) *Callimachus of Alexandria*.—This poet († *c.* 240 B.C.) has left six hymns, handed down in the same MSS as the Homeric, which, until the recent recovery of fragments of the *Hecale* and the *Ætia*, were all the writings of Callimachus that had directly survived. The hymns (ed. O. Schneider, Leipzig, 1870; U. von Wilamowitz-Moellendorff[2], Berlin, 1897) are to Zeus, Apollo, Artemis, Delos, on the Bath of Pallas, and to Demeter. The Λουτρὰ Παλλάδος is in elegiacs, and this and the hymn to Demeter are in Doric. As might be supposed from Callimachus's reputation, these hymns have superior

[1] His antiquity is assumed by Philodemus, who mentions him together with Orpheus (*Herculanensium voluminum quæ supersunt*, Naples, 1793–1855, vi. 156, col. 7; cf. Gomperz, *SWAW* cxxiii. [1890]).

literary quality, but they are quite unepic and frankly modern, and, like the Alexandrian epics in general, find their interest in ætiology.

(c) *Orphic hymns.*—These poems (ed. G. Hermann, Leipzig, 1908; E. Abel, do. 1885), 88 in number, have nothing save the name in common with the older Orphic hymns and poems. They are of mystic signification and no literary value. According to A. Dieterich (*de hymnis Orphicis*, Marburg, 1891, p. 24), they are of different dates; the extremes are, on the one hand, the allegorizing doctrines of the Stoics; on the other, the magical inscriptions (A.D. 100–150) in which the hymns are quoted (see also Petersen, *Philologus*, xxvii. [1868] 385–431).

(d) *Hymns of Proclus.*—This philosopher, the head of the Academy († A.D. 485), composed, amongst his many other works, 8 hymns of a Neo-Platonic character (ed. A. Ludwich, Königsberg, 1895). Like the Orphic hymns, they are contained, for the most part, in the same MSS as the Homeric hymns. Their literary value is not great.

(e) *Lost hexameter hymns.*—Among hexameter hymns which are no longer extant the following deserve mention:

(1) Olen of Lycia wrote hymns to Eileithyia, Hera, and Achaia, which were in use at Delos. According to Pausanias (IX. xxvii. 2), he was the oldest of hymn-writers. His name 'Ωλήν, which is not Greek, confirms their Lycian origin, and Lycia is the most probable source of the Apolline worship. It is remarkable, therefore, that Herodotus (iv. 35) quotes him for the northern extension of Apolline influence, viz. the legend of the Hyperborean tribute, which, as we have seen, is passed over in the Homeric hymn. As Suidas calls Olen ἐποποιός, we may infer that his hymns were in hexameters.

(2) Pamphos (Πάμφως), whom Pausanias (IX. xxvii. 2) puts between Olen and Orpheus, wrote hymns for the Athenian sacral family of the Lycomidæ, who had the hereditary function of performing worship to Demeter at Phlya in Attica. He wrote about Demeter, and perhaps also on other divinities. Two hexameters (on Zeus) are quoted in Philostratus, *Heroicus*, 693.

(3) The quotations of the hymns and hymnal poems which go under the name of Orpheus are collected by E. Abel, *Orphica*, Leipzig, 1885, pp. 224–251 (see also Dieterich, *de Hymnis Orphicis*; H. Diels, *Fragmente der Vorsokratiker*², Berlin, 1906–10, pp. 473–482). According to Clem. Alex. (*Strom.* i. 21), the greater part of the Orphic corpus was composed by various hands in the 6th cent. B.C., although both the hymns and the poems were universally believed to be older than Homer. These hymns, like those of Pamphos, were written for the Lycomidæ for temple-worship at Phlya, and were used also at Eleusis. They were more devotional and less literary than the Homeric (Pausanias, IX. xxx. 12), short and few in number (*ib.*), and appeared incredible and grotesque to the uninitiate (Menander, *de Encom.* v. 41). The poem dealing with the rape of Persephone (fr. 209 ff.) illustrates this criticism, and, compared with the Homeric hymn to Demeter, shows the difference between the Orphic and the Homeric treatment of myth.

(4) Very similar to the Orphic hymns were those of Musæus (Paus. X. vii. 2), which were in use also at Phlya and Eleusis. Plato (*Rep.* 364 E) mentions Musæus and Orpheus together. There are no quotations. On Musæus in general, see Kinkel, *Ep. gr. fr.*, Leipzig, 1877, p. 218 ff.; Diels², 482–488.

Other hexameter hymns hardly require mention. Socrates wrote one in prison to the Delphic god (*Phædo*, 60 D); a beautiful imitation (to Adonis) is inserted into Theocritus's 15th Idyll; and the existence of many short ritual hymns in the classical period is inferred from imitations in drama by Adami, *Jahrb. f. klass. Philol.*, 1901, p. 213 ff.

2. **Melic hymns.**—The pæan is as old as the *Iliad* (i. 473, xxii. 391); the Δηλιάδες also (Eurip. *Herc. Fur.* 607) and the Cretan ministers of Delphi (*Hym. Homer. in Apoll.* 518) sang a pæan; and, if we took the word ὕμνος to cover the pæan, nome, dithyramb, and θρῆνος, a long list of titles would have to be given. When we adopt the somewhat arbitrary ancient restriction of meaning (see p. 40ᵃ), we find the following among poets who wrote hymns: Alcæus, Alcman, Anacreon, Castorio, Lasus, Simonides (all in T. Bergk, *Poetæ lyr. Gr.*⁴, Leipzig, 1882, iii.), Pindar, and Bacchylides, as well as Ion of Chios (*ib.* ii. 251, with a kind of elegiac hymn to Dionysus) and Aristotle (to Arete, *ib.* 360, of uncertain classification). All these, however, have perished, so far as direct tradition is concerned. A certain number of hymns or similar compositions have been preserved on stone; among these are Isyllus's poem on Asclepius (*IG Pel. Ins.* i. 950) of about 300 B.C., of unusual literary merit (see von Wilamowitz-Moellendorff, *Isyllos von Epidauros*, Berlin, 1886); three hymns discovered by the French at Delphi (*BCH* xvii. [1894] 651, xviii. [1895] 71, xix. [1896] 393) by Aristonous, Cleochares, and Philodamus; a hymn sung by the Cretan Curetes (*BSA* xv. [1908–09] 347, with commentary by Bosanquet and Murray); a hymn to Asclepius (*CIA* III. i. 171 [3rd cent. A.D.]). See in general the article 'Hymnus' by S. Reinach in Daremberg-Saglio, *Lex. des ant. gr. et rom.*, Paris, 1896 ff., p. 337.

II. *LATIN.*—Hymns play a very small part in Latin literature. The *axamenta*, hymns of the Salic priests of Mars, unintelligible even to the priests (Quintilian, I. vi. 40), exist only in a few quotations (see Teuffel-Schwabe, *Gesch. der röm. Lit.*⁵, Leipzig, 1890, § 64). The hymns of the Fratres Arvales, however, are preserved in inscriptions first dug up in 1570 in the Vigna Ceccarelli, near Magliana, on the road from Rome to Porto. They are edited in *CIL* vi. (1886) 2023 ff., and by Henzen, *Acta Fratrum Arvalium* (Berlin, 1874). In literature proper we may point to Catullus's 34th poem ('Dianæ sumus in fide') and his invocation of Venus (xxxvi. 11–16), and Horace's *Carmen sæculare.*

LITERATURE.—Besides the sources mentioned in the article reference may be made to the usual Histories of literature, e.g. G. Bernhardy, *Grundriss der griech. Literaturgesch.*, Halle, 1876, i. 301 ff.; K. Sittl, *Gesch. der griech. Lit.*, Munich, 1884, pp. 15 ff., 193 ff.

T. W. ALLEN.

**HYMNS** (Hebrew and Jewish).—It will for the present purpose be best to adhere to the boundary line between Hebraism and Judaism provided by the destruction of the Temple by the Romans, A.D. 70, and the consequent substitution of synagogue worship for that of the Jerusalem sanctuary by the Jewish leaders assembled at Jamnia. We shall thus have to consider (1) the hymns embodied in the OT and the apocryphal and pseudepigraphical writings, which stand in some degree of relation to the Hebrew Canon, and (2) the hymns found in the Jewish liturgy and other literary sources belonging to Synagogue times.

1. **Hymns of the OT and Hebrew writings related to it.**—The ancient Hebrews were endowed with a high degree of poetical sensitiveness which often showed itself in quick lyrical utterance reflecting the inward emotion with wonderful truth and vividness; and, as the select and most refined spirits among them were also pre-eminently gifted with religious feeling and intuition, it was only natural that their lyrical faculty should have often exercised itself in strains of sacred song. Such song, moreover, though in each case naturally

issuing from an individual spirit, generally expressed the feeling and thought of the national or tribal circle to which the poet belonged; for the sense of communal oneness, which is to the present day a marked characteristic of the Jewish diaspora, was probably stronger among the ancient Hebrews than among any of the nations surrounding them, and the religious poet, as a rule, gave genuine utterance to the emotions which at the moment swayed the community to which he belonged, or were supposed to have swayed it in the historical period which his song was intended to celebrate.

The three outstanding national songs of victory indited by some of the most gifted poets of the race are the Song of Deborah (Jg 5), which critics generally admit to be the earliest source for the history of the events which it celebrates; the Song at the Red Sea (Ex 15), which, though apparently composed in the time of the monarchy, may embody a nucleus from very ancient times; and the Song of Victory contained in 2 S 22 and Ps 18, supposed by some critics to be in part a genuine product of the Davidic age. The sense of Jahweh's might and of gratitude to Him for victories vouchsafed is a dominant note in all the three songs, but in power and intenseness of expression the Song of Deborah stands unequalled. 'With might steppest thou onward, O my soul' (v.$^{21}$) fitly expresses the spirit of exultation which pervades the whole poem.

The outstanding antithesis to these strains of triumph is the Book of Lamentations, or *Threni*, which is traditionally ascribed to the prophet Jeremiah, and for the most part undoubtedly reflects the mournful attitude of the community in the early years of the Exile. In the highly finished five elegies comprised in the collection, Israel is seen heartbroken and weeping with bent head in the presence of Jahweh, who has allowed judgment in its fullest measure to fall on the sinful nation. The book thus consists of five dirges of a type akin to 'Dies Iræ,' written, not in the dread contemplation of future judgment, but in actual sight of the havoc wrought by the 'wrath' of the offended Judge whom the nation, in a flood of tears, nevertheless implores to allow His love and pity to reassume its ancient sway.

Striking instances of lyrical utterance occasioned by special situations, real or supposed, in the life of individuals, but affecting the community by reason of the great significance to it of the persons concerned, are the triumphal hymn of Hannah (1 S $2^{1-10}$), the Thanksgiving of Hezekiah (Is $38^{10-20}$), and what may be called the Psalm of Jonah (Jon $2^{2-10}$). The literary prophets, with their souls wrapt in the contemplation of things supra-mundane and hidden from ordinary sight in the counsel of the Eternal, also naturally break out at times in longer or shorter hymnal strains in the midst of scathing admonition or description of happiness to come (so, *e.g.*, Is $9^{1ff.}$ 12. $44^{23}$, Jer $14^{7ff.}$ $16^{19}$, and note particularly Hab 3); and the controversies of the Book of Job regarding the justice, power, and providence of God are as naturally apt to lead to occasional outbursts of hymn-like utterance (so, *e.g.*, 25. $26^{5ff.}$).

Apart, however, from the pieces named and others of a similar nature to be found in different parts of the Hebrew Canon, the Book of Psalms is the great hymnal treasury of the ancient Hebrew Ecclesia, or Church, embodying the typical expression of all possible religious moods, and ranging historically from David and the Davidic age down to the re-awakening of the national and religious life in the time of the Maccabees. Besides the compositions which were primarily communal in character (as, *e.g.*, Pss 33. 47. 50. 66. 106. 113–115), many Psalms appear to have been originally lyrics of individuals; but personal experience of whatever kind—whether of penitence, exaltation, prayer for help, or even of violent resentment of oppression and thirst for vengeance—is there, so far as it was considered to represent a true aspect of Israel's relation to Jahweh and the world, fully owned and echoed by the community at large, so that the original 'I' of the poet has everywhere become the symbol of the great communal self, of which he was, in truth, the genuine mouth-piece, uttering individually the religious emotions of the great body to which he belonged.[1]

The titles most in use to denote a hymnal composition are *shîr, shîrâ, mizmôr, tᵉhillâ*, and *tᵉfillâ*. The first three terms point, in one way or another, to the rhythmical and musical character of the pieces concerned; *tᵉhillâ* denotes a hymn of praise; and *tᵉfillâ*, which primarily means 'prayer' or 'supplication,' sometimes bears the general sense of liturgical composition (see particularly Ps 90). 'Lamentations' or 'Threni' translates the term *Ḳînôth*, though not so styled in the Hebrew Canon, the Synagogue name of the Book being איכה ('How!'), which is the first word of the first chapter.[2]

Regarding the question of rhythm, a subject which has been much discussed of late (for reference to summaries see Literature at the end), one can say that there is now a sufficiently general consensus of opinion in favour of the view that it is the accentual beat which mainly, if not exclusively, counts in Hebrew versification, the intervening number of syllables having (within limits, of course) no determining effect on the poetical structure. The 'parallelismus membrorum,' though 'not a constant phenomenon of Hebrew poetry' (G. B. Gray, 'Isaiah i.–xxvii.,' in *ICC* [1912], p. lxi), is yet almost everywhere as striking a characteristic in hymnal pieces as in gnomic composition. The only special kind of rhythm so far definitely established in OT poetry is the elegiac or *ḳînâ* form (first pointed out by K. Budde), in which the second hemistich of a line is shorter than the first, the mourner being supposed to break off his plaint in a sob.[3]

The proposition, however, that this rhythmic form had its origin in the ancient lament for the dead performed by women mourners (see, *e.g.*, *HDB* iv. 5) is so far incapable of verification, and it is, moreover, true that 'it can no longer be maintained that the rhythm is *peculiar* to elegy, though it may be said to be characteristic of it' (Gray, *op. cit.* p. lxiii, note).

The question of strophical arrangement in Hebrew hymns and OT poetry in general has also been much discussed in recent times (for a summary see *HDB* iv. 7 f.). A decisive factor in favour of, at any rate, occasional strophic structure is the refrain that is sometimes found (see, *e.g.*, Pss 42. 99); and there is, besides, a strong auxiliary argument for fairly frequent strophic arrangement in the undoubted fact that music, both vocal

[1] The question of the individual element in the Psalms has often been discussed in recent times. But we have something very similar in Modern English hymnal collections. Toplady's 'Rock of Ages, cleft for *me*,' and Newman's 'Lead, Kindly Light . . . lead Thou *me* on,' for instance, were primarily utterances of personal religious emotions, but they at the same time express the genuine cry of all Christian believers, that is to say, of the whole community or Church. A striking modern instance of the patriotic emotion of an individual poet becoming truly national in character is that of Theodor Körner, who died while fighting for the liberation of Germany. In the Psalter the national and religious spirit is one and indivisible, so that the hymn-writer is one and the same with the politician and nationalist.

[2] For terms that are used more or less rarely the reader is referred to the Introductions and Commentaries on the Psalms.

[3] Cf. the classic elegiac metre, in which the pentameter alternates with the hexameter.

and instrumental, regularly accompanied the recital of hymns (besides the headings of Psalms, which are by themselves quite conclusive, see 1 Ch $25^{6.7}$, 2 Ch $7^{6}$), for the musical tune is naturally either repeated with the successive longer units of the poetical composition, or else changes its character at the beginning of a part meant to express a different strain of poetical emotion. Congregational responses at certain intervals, for which there is some evidence (see Ps $106^{6.47}$), would seem to lead to a similar conclusion. A composition like Ps 136, in which the second hemistich is throughout the antiphonal response to the first, has, of course, no bearing on the question of strophical arrangement.

The poetical compositions embodied in the Apocrypha stand on a lower level, both with regard to inspiration (using this term in its widest sense) and to their bearing on the national life; yet they do in some limited, and partly sectarian, manner continue on lines similar to the hymnal pieces contained in the Canon.

The Song of the Three Children[1] (the *Benedicite*) has a grand liturgical effect, notwithstanding the deliberate artificial attempt to enlist every part of creation in the great symphony of praise. Among other notable examples are the Prayer of Manasses, portions of Baruch, 2 Mac $1^{24-29}$, Wis 9. The praise of Famous Men in Ecclesiasticus (44–50) is in reality also of the nature of a hymn, all praise being finally ascribed to the God whom the famous men served. Specially noteworthy are the 16 lines which in the Hebrew Cairo text are inserted between vv. 12 and 13 of ch. 51, and of which the first 14 are modelled on the antiphonal strains of Ps 136. It is a disputed point, however, whether these verses formed part of the original composition of Ben Sira.

The most notable hymnal section of the *pseudepigraphical writings* connected with the OT is the collection of 18 pieces belonging to the time of Pompey's invasion of Palestine, which are known as the Psalms of Solomon;[2] but shorter or longer hymn-like strains are also found in the fourth Book of Ezra and the Book of Enoch. The Greek hexameters of the *Sibylline Oracles*, iii., of which the greater part is also Hebraic in spirit, follow the prophetical writings with regard to the presence of an occasional hymnal strain.

Apart from the Psalms of Solomon, which have their root in important national events, the poetical portions of these writings are, as may be expected, as much removed from actuality as the prose frameworks in which they appear; yet they sound a genuine note of the religious idealism by which the *Pseudepigrapha*—largely sectarian in origin—were called into existence.

**2. Hymns of the Synagogue.**—After the destruction of the Temple by the Romans, Judaism definitely succeeded the ancient Hebraism. The bulk of the Hebrew people could not see their way to adopt the form of Christian adoration which, in the minds of its true devotees, was expressive of the most real inwardness of the religious life. The Jews, therefore, clung to their own ceremonial and devotional forms, which, indeed, enshrined a peculiar inwardness of their own, and it is this special Judaic religious inwardness that was perpetuated and developed—very often in beautiful language of true devotion—in a long series of hymnal compositions, which have become more or less closely attached to the general framework of the daily and festival prayers. The great model in the earlier stages of this liturgical development was naturally the Psalter, which, as in the Temple services, was itself largely drawn upon for purposes of synagogal and individual devotions, and which to the present day provides the ritual with some important constituent elements (so particularly the *Hallel* in the festival services and the series of Psalms in the earlier portions of the daily prayers). The liturgy, moreover, in its general idea as well as in its prevailing form, is a systematic elaboration of the *Berākhā*, or Benediction, which is in its simpler form well represented in the OT (see Gn $24^{27}$, 1 K $1^{48}$, Ps $28^{6}$, Neh $9^{5}$), but in the specifically Jewish period gradually developed into a system of prayers and doxologies, to some parts of which the lyrico-religious genius of the race could not but give a high poetical form.

Among the finest and most important of the poetical Benedictions which thus came into existence are the pieces which precede and follow the recitation of the שמע ('Hear, O Israel, the Lord our God is one Lord,' etc.) in both the morning and evening services, the former having two Benedictions before and one after the *Shema'*, and the latter two before and two after this central confession of the Divine Unity (see Mishna *Berākhōth*, i. 4).[1] Among the other pieces whose existence in early times is attested by Talmudical references are the famous *Nishmath* ('The breath of all things living') in the Sabbath and festival prayers, and several compositions in litany form; and the elaborate Benediction at the end of a meal, to which much importance has always been attached, also exhibits a decidedly poetical tone in some of its parts.

Among the various compositions belonging to the time of the *Geonim*, which followed the Talmudical period, are the famous *Bārūkh Sheāmer* of the morning service, and the equally famous *En Kelōhēnū*, which stands in the modern Ashkenazi ritual at the end of the Sabbath service, but is recited every day by the members of the Spanish and Portuguese congregations scattered in different parts of the world. The Aramaic[2] *Yeḳūm Purḳān*, inserted in the Sabbath services, which also belongs to this period, may be classed as an interesting and characteristic congregational supplication in poetical prose.

The earliest synagogal hymn-writer known by name is Jose ben Jose, who appears to have lived in the 6th or 7th cent., and among whose compositions is an '*Abōdā* (on this term see below, p. $45^{b}$) which is still used in Piedmont and other places. His pieces exhibit no rhyme, whereas Yannai, as well as his famous pupil and successor El'azar ben Jacob Ḳalir, adds the use of rhyme to the acrostic and other earlier marks of poetic form. Ḳalir opens a new and most prolific epoch in the history of synagogal hymnology. On his date and birthplace widely conflicting views have been held, but Zunz, who is the highest authority on questions of this kind, places him in the latter half of the 10th cent.,[3] and names southern Italy as the place of his nativity. He composed no fewer than 200 pieces, scattered over divers portions of the Ashkenazi and Italian forms of the *Maḥzōr*, as used at the present day. His subject-matter is derived mainly from Talmudic and Midrashic sources.

[1] The question as to whether Hebrew or Greek was the original medium of composition for this and the other pieces named is not important in the connexion, the spirit pervading them being in all cases Hebraic, though no doubt influenced by Hellenistic tendencies.

[2] It has also been maintained by some that the so-called *Odes of Solomon*, of which J. Rendel Harris discovered a Syriac rendering, were also originally Hebraic; but this opinion is not likely to gain many adherents.

[1] Zunz (*Gottesdienstliche Vorträge*[2], p. 382 f.) considers that in their present form these pieces show later additions; but the rhyme of some parts, on which he largely relies, may be accidental.

[2] On the *Ḳaddish*, which is also Aramaic, see vol. i. p. 459 f.

[3] So in *Gottesd. Vorträge*[2], pp. 376 and 395; in *Literaturgeschichte*, p. 31, however, the first half of the 9th cent. is regarded as the earliest possible date.

His language is very often obscure and to the ear of the Hebrew purist strange and even uncouth, but his synagogal inspiration is of so high an order that the impression which he made on his contemporaries has — notwithstanding much influential opposition—continued its sway down to the present time.

An impetus to an entirely different style of liturgical poetry was given by Sa'adya Gaon (891–941), whose original home was Egypt, but who spent the most active part of his life as head of the Academy of Sura in Mesopotamia. He cannot be said to have been the founder of a liturgical school in the same sense as Ḳalir. His poetical compositions are not very numerous, nor was he strong as a poet, his genius enabling him rather to shine as philosopher, commentator, and controversialist; but, on the other hand, he brought to his task the best literary and scientific refinement of his age and surroundings, and he was in this way able, among his greater successes, to give an important fresh direction to liturgical efforts, which later on developed into the finest poetical achievements of mediæval Jewry. Acquainted as he was with the pure classical themes and forms of Arabic literature, he naturally aimed at similar purity of language in his Hebrew compositions; and the subject-matter of his devotional pieces rested for the same reason on philosophic contemplation rather than on Talmud and Midrash. His strophic system is elaborate, and he also uses rhyme besides the alphabetical acrostic.

Thus arose two distinct schools of liturgical composition, Ḳalir representing the more exclusive Jewish spirit of nationalism which found its chief nourishment in Talmudism, and Sa'adya paving the way in the direction of general human culture and the philosophico-scientific aspect of religion; and so deep-rooted as well as far-reaching were these two tendencies that each in its turn became the starting-point of one of the two main divisions of the Jewish liturgy, the Romano-Germanic order of festival services belonging, in the main, to the school founded by Ḳalir, whilst the Hispano-Arabian liturgy has been built up by the great poets who worked on in the spirit of Sa'adya.

No wonder, therefore, that the names of the leading writers of the last-named school, such as Solomon ibn Gabirol[1] (fl. 1050), in whom the Spanish school reached its most classical development, Moses ben Ezra (11th to 12th cent.), Yehuda hal-Levi († about 1140), and Abraham ibn Ezra († 1167) sound more familiar to the cultured Europe of the present day than the, in their own way, also highly distinguished names of men like Meshullam ben Kalonymos of Lucca (10th cent.), Gershon ben Yehuda (fl. first half of 11th cent.), Solomon Yiṣḥāḳī († 1105), and his son-in-law Samuel ben Meïr.

It was, however,—on account of the general bond uniting all synagogal communities into one great organization,—inevitable that the poetical compositions of each school should exercise an influence on the other. The Jewish liturgical writers of each country were, moreover, naturally to some extent affected by the surroundings amidst which they worked; nor could individual poets help importing into their compositions their own intellectual, doctrinal, or emotional peculiarities. Among the later (post-classical) writers of sacred poetry who thus, for one reason or another, become entitled to particular mention in even a brief historical survey of the subject are Abraham of Beziers (13th cent.), his son Yed'aya (entitled hap-Penini), Yehuda Ḥarizi († before 1235), Moses Rieti (fl. first half of 15th cent.), Israel Nagara (16th cent.), Isaac Loria

[1] Latinized as Avicebron, and widely known under that name as the author of *Fons Vitæ* (מקור חיים).

the Kabbalist (1534–1572), and the Yemenite Shalom ben Joseph Shabbezi (17th cent.). The most prolific authors of short hymnal compositions among those just named were Israel Nagara and Shalom Shabbezi, though of the former only a few penetrated into the liturgy; and of the other apparently none.

Among the most important terms used since early times in connexion with synagogal liturgical poetry are (besides *Payṭān* and *Piyyūṭ*, respectively denoting 'poet' and 'poetical piece of devotion,' the significant part of both words coming no doubt from the Greek ποιητής): (1) *Ḳ'rōbā*, which is sometimes used in the general sense of liturgical poetry (the word denoting 'coming near' in prayer), but in the plural usually bears the more restricted meaning of pieces accompanying the Prayer of Eighteen, or, rather, its festival representative; (2) *Yōṣ'rōth*, *i.e.* Piyyūṭīm accompanying the benediction *Yōṣēr Ōr* ('Creator of the Light'), but sometimes also used in a more general sense; (3) *S'līḥōth*, or penitential pieces; (4) *Ḳīnōth*, or elegies; (5) *'Abōdā*, a species of elaborate composition for the Day of Atonement descriptive of the Temple Service as solemnized on that day, the account being based on the Mishna *Yōmā*; (6) *Azhārōth*, embodying the Pentateuchal commandments; (7) *Hōsha'nōth*, i.e. pieces with a Hosannah refrain, used on *Hosha'na Rabba* (the 7th day of the feast of Tabernacles); and (8) *Widdui*, or confession of sins. The entire collection of the festival services is entitled *Maḥzōr*, *i.e.* '(annual) cycle.'

The introduction of rhyme into liturgical poetry prior to the time of Ḳalir has already been referred to. With regard to the use of acrostics, it is important to mention that, besides the very frequent employment of the alphabetical device, the authors of Piyyūṭīm were very much in the habit of marking their compositions with acrostics of their own names, the motive underlying this practice probably being, not vanity, but the desire of linking their own personalities with their sacred compositions. In the case of Ḳalir it has been shown (see Zunz, *Gottesdienstliche Vorträge*[2], p. 398 f.) that he also often achieved this object by means of *Gemaṭria*, i.e. by the equation of the numerical value of his name with that of a sentence in the poem. Of special interest is the form of metre which has been employed in Hebrew hymns—and, indeed, Hebrew poetry in general—from the time of Solomon ibn Gabirol onwards. The measure rests neither on the quantity of the syllables nor on the accent, but on the difference between a simple syllable (*t'nū'ah*) and a syllable beginning with a moving *sh'wa* (called *yāthēd*, i.e. 'tent-pin' or 'nail'). The simple syllable is in modern editions of Hebrew verse marked –, irrespective of quantity in the usual sense of the term, and the *yāthēd* is marked ⏑–. Seventeen different forms of verse founded on this principle are generally counted, but it will here suffice to give examples of two only, represented by the opening hemistichs of the well-known hymns respectively beginning *Ădōn 'Ōlām* and *Yigdāl*:

1. Ădōn | 'Ōlām | ăshēr | mālākh. |[1]
2. Yigdāl | Ĕlō | him Ḥāi | w'yish | tăbbāḥ.

In the first case the line is described as consisting of a *yāthēd* and two *t'nū'ōth*, followed by another *yāthēd* and two *t'nū'ōth*; in the second case the scansion is two *t'nū'ōth*, a *yāthēd*, and two *t'nū'ōth*, followed by another *yāthēd* and two *t'nū'ōth*.

Among the most popular pieces attached to the daily services are *Adon 'Olam* and *Yigdal* (just referred to), and *L'khā Dōdī*. The first-named poem, which was probably not composed before the end of the 13th cent., lays special stress on the

[1] The poet has, however, allowed himself considerable licence in this piece.

Divine Unity, and was in this way probably meant to enforce the Jewish side of a polemical religious topic. The *Yigdal*, written in Italy by Daniel ben Yehūda Dayyān in the early part of the 14th cent., embodies in brief poetic form the thirteen articles of faith formulated by Moses Maimonides in the 12th century. The *Lᵉkhā Dōdī*, composed by Solomon Ben Moses al-Ḳābiṣ (16th cent.), is a fine poetical greeting of the 'Bride of the Sabbath' recited at its entrance in the Friday evening service.[1] Of considerable popularity are also the *Habdālōth*, *i.e.* poetical pieces recited in the home at the close of the Sabbath, some of which embody legends of the prophet Elijah. Solomon ibn Gabirol's great philosophico-religious poem entitled *Kether Malkūth* deserves special mention; it may be described as a great Hymn of Adoration and Penitence, though only attached, and that loosely, to some of the rituals.

The number of Piyyūṭīm of various kinds for fasts and festivals, and more particularly for the New Year's Feast and the Day of Atonement, is so large that much space would be occupied by even a careful selection. But it should be remarked in conclusion that the note of sadness that is so very prominent in the recital of the nation's manifold sufferings and its deep penitence, as well as the strain of joy in other parts of the liturgy, is very often of so intensely lyrical a character that musical expression becomes almost a necessity, and it is for this purpose mainly that the profession of *Ḥazzānīm*, or Synagogue Cantors, came into existence in early times, and has remained an institution down to the present day.

LITERATURE.—On the Psalms and hymnal compositions in other Books of the OT, see the Biblical Introductions and Commentaries. Summaries of the different theories regarding metre in OT poetry will be found in the artt. 'Poetry (Hebrew),' in *HDB* iv. 3 ff. (K. Budde), and 'Poetry,' in *JE* x. 93 ff. (E. König), as well as 'Poetical Literature,' in *EBi* iii. col. 3793 ff. (B. Duhm). For a general survey of the more primitive period the reader should be referred to *The Early Poetry of Israel in its Physical and Social Origins*, by G. A. Smith (Schweich Lectures, 1910; published London, 1912). Until quite recently the best edition of the Apocrypha and Pseudepigrapha was that of E. Kautzsch (Tübingen, 1900); but there is now R. H. Charles's edition (Oxford, 1913), in which fuller information will be found on points connected with the present article; specially to be mentioned among editions of separate parts is R. H. Charles's *Book of Enoch* [2], Oxford, 1912, in which special attention is given to the rhythmic form of some parts.

The great authority on Synagogal poetry is Leopold Zunz, *Die synagogale Poesie des Mittelalters*, Berlin, 1855, *Die Ritus des synagogalen Gottesdienstes*, do. 1859, *Literaturgeschichte der synagogalen Poesie*, do. 1865, also parts of *Die gottesdienstlichen Vorträge der Juden*, Berlin, 1832, [2] Frankfort, 1892. Consult also M. Sachs, *Religiöse Poesie der Juden in Spanien*, Berlin, 1845; Franz Delitzsch, *Zur Geschichte der jüdischen Poesie*, Leipzig, 1836; the article 'Piyyūṭ,' in *JE* x. 65 ff. (besides ''Abōdah' and the artt. on individual liturgical writers [of varying merit, however] in the same Encyclopedia); 'Liturgische Poesie,' in Hamburger, Supplementband ii. (a very serviceable summary of the entire subject). Among Catalogues of MSS giving lists of hymns may be mentioned A. Neubauer, *Catalogue of the Hebrew MSS in the Bodleian Library*, Oxford, 1886, cols. 218–418, and the present writer's *Catalogue of the Hebrew and Samaritan MSS in the British Museum*, ii. [1905] 197–487.

Among the very numerous editions of the Daily Prayers and the *Maḥzōr* are the *Prayer Book* of Amram Gaon, Warsaw, 1865; *Maḥzōr Vitry* (compiled about 1210; published Berlin, 1893); '*Abōdath Yisrael* (ed. Seligman Baer, Rödelheim, 1868 [the best edition with a Hebrew Commentary]); 'The Authorized Daily Prayer-Book' (with a tr. by S. Singer, London; often reprinted); the Sephardic *Forms of Prayer* (with D. A. de Sola's tr., London, originally published 1836–38; revised by M. Gaster, 1901–06); *Services of the Synagogue: a New Edition of the Festival Prayers with an Eng. Tr. in Prose and Verse*, London, 1904–09.

G. MARGOLIOUTH.

**HYMNS** (Japanese).—Before the introduction of Buddhism, the hymn was not an integral part of the liturgy of Japanese religion. The religious dance (*kagura*)[2] seems to be of a pre-historic origin, and it was performed with musical accompaniments, both instrumental and vocal. The songs chanted on these occasions were called the *kagura-uta*, but the extant ones are not so old as the dance itself; the collection dates from the 9th cent., and their style and language point to their composition at that age.

[1] Compare particularly the designation 'Princess Sabbath' in vogue among the Falashas (see J. Halévy, *Tᵉ'ᵉzāza Sanbat*, Paris, 1902).

[2] Aston's explanation (*Shinto*, London, 1905, p. 238) of the Chinese signs for *kagura* as meaning 'God-pleasure' is misleading; they mean 'divine music.'

It was Buddhism that introduced hymns to Japan, or gave them an important rôle in the religious performances. In the first period of Buddhism in Japan they were sung in Sanskrit or Chinese, and were called *gāthā* (Jap. *ge* or *kada*), which were later adapted to Japanese and gave rise to a new style of poem composition, called *ima-yō*, or 'modern style.' It consisted of a strophe of 48 syllables, namely in four feet, each of which contained 12 syllables. The *kagura-uta* were mostly the regular Japanese verses of 31 syllables, and these were gradually superseded by the *ima-yō*, especially since the 11th century. These hymns were sung after the melody of the Indian *gāthā*, and the art was carefully cultivated in Buddhist colleges and monasteries, according to the theories and traditions of the Indian *śabda-vidyā* (Jap. *shōmyō*, 'theories of language and music'). A collection of these hymns (along with some secular poems) dating from the middle of the 12th cent.[1] is handed down to us, and they show a great extension of the *ima-yō* hymns. The themes are either Shinto benediction and felicitation for worldly prosperity, or they are taken from Buddhist legends and praises of Buddha. Thus, parallel with the distinction in style, these hymns show a division of labour between Shinto deities, who care for the earthly good, and Buddhist deities, who guide men to the other shore of bliss. Here we shall cite some examples:

'What a pity, we cannot see Buddha face to face,
Though he is everywhere at any time;
Yet, as in a vision, he appears to us
In the calm morning hour, when there is no human bustling.

'A mere illusion it was that we saw dispersed
The smoke (of cremation) arising from the Sāla grove (of Kuśinagara);
The Lord Śākya never died (in reality),
But He is preaching the truths eternally on Vulture Peak.'[2]

'The Deity of Mikasa Hill,
Whom we worship and pray now,
He is surely looking upon us;
So long as he blesses us,
Sure is the prosperity of our Lord,
Who rules the lands under heaven.'[3]

These hymns, both Buddhist and Shinto, were not only chanted in front of a sanctuary as a part of the liturgy, but were sung on various occasions, at banquets and musical evenings, in sitting rooms, and on streets. The intention in doing so was not profane, but it was meant to dedicate daily life and even amusement to the praise and glory of the deities. Yet the secularization led to the degradation of the sacred poems; and this circumstance gave rise, on the other hand, to particularly religious hymns, mostly composed by pious monks, in contrast to the composition of the *ima-yō* by court nobles.

We distinguish two categories in these pious or pietist hymns, the one called *wa-san* and the other *go-eika*. The *wa-san* means Japanese *gāthās*; they consist of 48 syllables and differ little from the *ima-yō* in style and themes. Yet there was a certain difference of melody, and the *wa-san* were chanted only at religious performances. The oldest *wa-san*

[1] *Ryōjin Hishō* ('A Precious Collection of Chanting Pieces'), compiled by the monk-Emperor Go-Shirakawa, contained 10 fasciculi; but only one of them was recently discovered and edited by N. Sasaki.

[2] The contrast between the earthly life of Buddha and his true immortal life, the idea taken from ch. xv. of the *Lotus of the True Law*.

[3] A 31 syllable poem; the deity of Mikasa is the famous Kasuga, the ancestral deity of the clan Fujiwara.

are ascribed to Kūya (901–972) and Genshin (942–1017), the famous pioneers of Amita-Buddhism. Though the authenticity of this tradition is not well established, the rise of this category of hymns seems most probably to date from the last part of the 10th century. These pioneers were followed by many composers, and the *wa-san* were almost exclusively dedicated to Amita, the redeemer in the western paradise, Sukhāvatī.[1] The best known and most popular *wa-san* are ascribed to Shinran (1173–1262), the founder of the Shinshū, the largest of Buddhist sects in Japan up to this day. The following are three specimens from Shinran's *wa-san*:

'Beings so numerous as dusts and fine sands, who are in the worlds in the ten directions,
They are all embraced by Amita's grace and never forsaken,
Only if they invoke his name;
Our Lord is, therefore, called Amita, the Infinite.'

'Without end is the dreary ocean of births and deaths,
Immersed in it are we since eternity;
We can in no way be carried across (to the other shore)
But by being loaded on the ship of Amita's vow to save all.'

'Lo! There a torch illumines the ever-dark night of illusion!
Never regret yourself that the eyes of wisdom are troubled.
There is here a ship on the ocean of births and deaths,
No need of groaning over the heavy sins and obstacles.'

Nearly four hundred of Shinran's hymns make up a collection—the largest in the hymnology of Japanese Buddhism; and they are chanted and sung in many temples and families, so that the name *wa-san* has almost been monopolized by them.[2]

The second category, the *go-eika*, consists of the poems composed by deities. It owes its rise to the practice of pilgrimages to various sanctuaries scattered over the country. The mountaineering practice of syncretic Buddhists was very old in its origin, but it was limited to the priest class belonging to regular orders. Towards the end of the 10th cent. the example of an ex-Emperor, who became a pilgrim, was followed by many nobles and common people. During the centuries of civil wars which lasted from the 14th to the 16th, the practice became universal. The disgraced nobles and defeated warriors, the men who had lost dear ones, and those whose properties had been ravaged derived their consolation from their devotion to deities, and especially from the itinerancies made from sanctuary to sanctuary. The most popular of these places of pilgrimage were the thirty-three Kwannon (Skr. Avalokiteśvara, the god or goddess of mercy) in the central provinces, the eighty-eight temples dedicated to Kōbō Daishi,[3] the sixty-six places for the recitation of the *Hokke-kyō* (*Lotus of the True Law*), etc. The pilgrims go their way and prostrate themselves before the shrine, chanting the hymn ascribed to the deity of each shrine. Most of these hymns are simple in idea, saying that the deity appeared on the spot because he loved the place and wished to attract the people to the place and to his worship, and the like. They are also crude in rhetoric, and represent the poetic genius of the uncultured people in the ages of wars. Yet many of these are quite popular even at the present day, and they are chanted at meetings in private houses.[4]

Since the 17th cent., Buddhist hymnology has made hardly any progress (Shinto hymns almost in disuse since the 14th). Changes or development in melody were left to the various branches of secular music (which owe their origin to religious music), and the hymn retains its archaic simplicity, with some minor deviations according to sects. A feature of Japanese hymns (both Buddhist and Shinto) is that they are not always sung by all the worshippers but often by the priests alone. Another characteristic is the absence of refrain. In the case of the Shinshū hymns, Amita's name is repeatedly chanted, in the place of a refrain, between two strophes of the hymns.

[1] Later on, some *wa-san* were composed in praise of various other Buddhas and saints.

[2] Many of the Buddhist sects in Japan do not use hymns, but recite their sacred texts and litanies.

[3] A popular saint who lived in the 9th century.

[4] One group of these hymns is dedicated to Jizō (Skr. Kṣitigarbha), revered as the patron deity of children, especially dead; and they are sung in mournful tones in the houses of the common people where a child has died.

LITERATURE.—The only literature bearing on the subject has been mentioned in the article.

M. ANESAKI.

**HYMNS (Muslim).**—Music and verse have no place in the ordinary worship of the Muslims, so that it might be difficult to find in Islāmic literature anything precisely analogous to the Christian hymn. The Qur'ān is hostile to the poets, and the Prophet was at first careful to dissociate himself from them; he 'had not been taught versification' (Qur. xxxvi. 69), and seems never to have had any appreciation of it, though towards the end of his career he employed a court-poet, and allowed poetical eulogies on himself to be recited. Still it is asserted that his troops inspired themselves on the field with war-songs, which, owing to the religious character of their cause, might be called hymns; and the songs of triumph which celebrated the early victories of Islām seem to deserve the same name; an example is to be found in the verses of the poet 'Afīf celebrating the victory of the Muslims over the apostates of Baḥrain (*Aghānī*, xiv. 49).

In the early poetry the verses had ordinarily little more than an artificial connexion with each other, so that the same poem might contain edifying and unedifying matter; but, with the settlement of the Arabian State and the consequent development of study, the departments of poetry came to be separated, and two which bear some analogy to hymns are encomia of the Prophet and his Companions, and the subject called *zuhd*, *i.e.* 'contempt of the world.' The composition of the former sort began, as has been seen, in the Prophet's lifetime, and has ever since been popular. Perhaps the most celebrated poem of the kind is the *Burdah* of Sharaf al-dīn Muḥammad b. Sa'īd al-Būṣīrī († A.D. 1295), in 170 lines. Miraculous powers are supposed to be attached to this work, which has been frequently interpreted and translated. An example of a poem in praise of the Companions is that by the inventor of the *maqāmah*, Badī' al-zamān al-Hamadhānī († A.D. 1008; see Yāqūt, *Dict. of Learned Men*, ed. Margoliouth, London, 1907 ff., i. 114–116). The Shī'ah naturally have poems in praise of 'Alī, Fāṭima, and their family; an author of celebrity in this line was 'Alī b. 'Abdallah al-Nāshi' († A.D. 976), one of whose laments on Ḥusain was chanted by a professional mourner in a mosque (Yāqūt, v. 240).

The beginnings of ascetic poetry are found very early; the author who is usually regarded as the best representative of this department is Abu'l-'Atāhiyah († A.D. 826, 827, or 829). His *dīwān* (published at the Roman Catholic Press, Beirūt, 1886) is mainly devotional and introspective; and, were the odes rendered into European verse, their content would be found to resemble that of many a hymn-book.

The use of music for the purpose of stirring religious emotions scarcely goes back to the time of Muḥammad, but appears to have commenced early in Islām; 'Aṭā b. Abī Rabāḥ († A.D. 734) is said to have introduced the practice at Mecca during the days of the pilgrimage month called *tashrīq*; he kept two singing-women to perform on these occasions (*Qūt al-qulūb* of Abū Ṭālib al-Makkī, Cairo, 1310, ii. 62), and the custom was maintained in the Ḥijāz. Probably the verses

sung by these women were erotic; but the Ṣūfīs habitually address the Divine Being in the terms of the erotic passion, and it is often difficult to tell whether a poet is allegorizing or not. The erotic poems of Ibn al-Mu'allim († A.D. 1196) were committed to memory by the dervishes of the Rifā'ī order, who sang them at their religious concerts, for the purpose of exciting their souls to a state of rapture (Ibn Khallikān, tr. de Slane, London, 1842–71, iii. 169). These appear to have been primarily erotic; but those of Ibn al-Fāriḍ († A.D. 1238), probably the most affecting in the Arabic language, seem to have been primarily religious.

The propriety of employing music and erotic odes for this purpose was naturally questioned by the orthodox, and some authorities condemn it unhesitatingly. Those who approve of it are inclined to confine it to persons who have attained a high stage of holiness, and in whom the music can wake only sublime thoughts, or with whom it serves as an aid to fasting (*Qūt al-qulūb*, ii. 61). The influence of music on the mind and its effect on persons of different spiritual attainment are discussed by Ṣūfī writers with great subtlety, *e.g.* in the *Kashf al-Maḥjūb* (tr. Nicholson, London, 1911, pp. 397–413). It seems clear that there need be nothing essentially religious about either the verses or the tunes which can be employed devotionally; and the enemies of the Ṣūfīs taunt them with singing frivolous songs in the mosques and even in the great sanctuary of Mecca (*al-'Alam al-Shāmikh*, by Ṣāliḥ b. Mahdī al-Muqbilī [† 1696], Cairo, 1328, p. 380). Naturally the legal systems which forbid all music could be quoted in condemnation of these performances.

LITERATURE.—This has been given in the article.

D. S. MARGOLIOUTH.

**HYMNS** (Samaritan and Karaite).—The hymnal compositions of the Samaritans and the Karaites, though in each case decidedly particularist in spirit, are, nevertheless, properly comprehended in the wider Israelitish family of devotional verse.

**I. Samaritan hymns.**—Out of the great mass of valuable details that have resulted from A. E. Cowley's investigation (see Literature at the end), it becomes evident that the data bearing on the composition of the Samaritan liturgy, which consists of Pentateuchal lections alternating with poetical and prose compositions, appear to justify the assignment of special significance to the following three periods, each marking a fresh departure in liturgical development: (1) the 4th cent. A.D., when Aramaic was the language used; (2) the 10th and 11th centuries, when Aramaic had ceased to be the vernacular, but was still used in liturgy, though it had become artificial and mixed with Hebraisms; and (3) the 14th cent. and after, when Hebrew, mixed with Aramaisms, had become the liturgical language.

The names of great composers of hymns in the 4th cent. are Marqah and Amram Darah, the latter being possibly identical with Amram b. Sered, the father of Marqah; and the leading synagogal reformer, in conjunction with whom both of them worked, was Baba the Great, a contemporary of the high priest Nethanael, who died A.D. 332. Marqah's son Nanah also wrote some devotional poetry. The collection of their poems (Marqah's pieces being referred to in the texts under his name, and Darah's work being known as the *Durran*) constituted, together with the lections from the Pentateuch and a number of prose pieces, the original form of the liturgical canon which later acquired the title of *Defter* (دفتر = διφθέρα), its earliest known representative being the British Museum MS Oriental 5034, the greater part of which was written in A.D. 1258.

The dates of the leading writers of the 10th and subsequent centuries cannot, in the present state of our knowledge, be fixed with much certainty; but Cowley, whilst fully appreciating the confused character of the references found in the chronicles and elsewhere, considers that the style of the compositions assigned to al-Dustān suggests a date in the 11th cent., that Abu'l-Ḥasan of Tyre also belongs to some part of the 11th cent., and that Ab Gelugah and Ṭabiah b. דרתה flourished in the early part of the 12th century. Firmer ground is reached in the allocation of dates in the third period. The founder of the new school of writers was apparently the high priest Pinḥas (1308–63), and the talent and zeal shown by him remained hereditary in his family for some generations. Of his two sons, Eleazar and Abisha, the former, who left only a small number of liturgical pieces, succeeded to the office of high priest, whilst to the latter, who enjoyed a great reputation as a writer, seventeen pieces can be assigned with certainty, and seven others with a high degree of probability. Pinḥas, the son of Abisha, who succeeded his uncle Eleazar in the high priesthood, and died in 1442, was also a liturgical writer.

There is, on the other hand, considerable uncertainty regarding the date of the liturgist Pinḥas b. Ithamar, who was high priest at Damascus. Cowley is inclined to accept A.H. 793 (A.D. 1391) as the beginning of his term of office, but he acknowledges that the possibility of his having flourished about a century later is not excluded. There is also some uncertainty about the dates of several other hymn-writers connected with Damascus (*e.g.*, Abraham היתרי, probably about the middle of the 15th cent.; Seth Aaron b. Isaac, probably about the same date). Of the hymn-writers of later times, chiefly belonging to the Levitical,[1] the Danfi, and the Marḥib families, only a few representative names can be mentioned in this place. A prolific writer of the first-named family was Ṭabiah (or Ghazzāl) b. Isaac († 1787), and among the latest hymn-writers of the same stock was Pinḥas b. Isaac († 1898). The Danfi names which most frequently occur are Murjān and Muslim (=משלמה), and the latest member of the Marḥib family to write liturgical compositions was Abraham b. Ishmael, who was living in 1828.

For a list of the services (which, as may be expected, follow *mutatis mutandis* the order of the Jewish liturgy) and the manner in which the poetical pieces are distributed in them, see Cowley's edition of the Samaritan liturgy, which includes an 'Index of First Lines' of the pieces published in the work (Introd. pp. lxxiii–xcv).[2]

'With regard to *metre* in the poetical compositions,' writes Cowley, 'no certainty is possible, since pronunciation varied at different periods and we know little about it at any time.' He, however, agrees that some pieces seem to be metrical, though the majority exhibit only 'some sort of rhythm.' The alphabetical acrostic has been very usual since the time of Marqah, and the acrostic giving the author's name, which is found once in Marqah (piece beginning מרה ראלהותה רילך הי רבותה), is very usual in later pieces. Rhyme, which is used by neither Marqah nor Darah, becomes very common in the later periods, when it is not infrequently (in the long hymns) employed up to a high

[1] The high-priestly family of Aaronic descent died out in 1623–24; from that date onward the office descended to members of the family of Uzziel, a younger son of Kohath.

[2] The services in praise of the prophet Moses, as exemplified by the British Museum MS Additional 19,021 (Arabic; composed in 1537 by the Shaikh Ismā'īl ibn Badr ibn Abu'l-'Izz ibn Rumaiḥ), should be added to the list embodied in Cowley's edition. It should also be noted that the Samaritan order appears to betray at some points conscious imitation of the Jewish liturgy (so, *e.g.*, the frequently occurring forms of ישתבח).

degree of tediousness, a long row of lines ending in the same rhyme.

2. **Karaite hymns.**—At the foundation of Karaism, about A.D. 750, the traditional liturgy of the Jews was, as a part of Talmudical legalism, discarded by the sectaries, and the Pentateuch, the Psalter, and other parts of the OT were henceforth to constitute the only sources from which, besides lections, prayers and devotional songs were to be drawn. The totally unimaginative and stationary attitude which Anan enjoined on his followers could not, however, be maintained for very long; and, just as the abandonment of Talmudical hermeneutics and general Halakhah led to the gradual development of an almost equally involved system of Karaite legal hermeneutics, so also, in the course of time, the Rabbinic liturgy was replaced by a Karaite ritual running on parallel lines with the Rabbanite services. As, moreover, the Karaite leaders possessed the sense of logical consistency in a much higher degree than the poetic faculty, they for the most part not only found it necessary to imitate the hymnal models of the Rabbanites, but even could not help admitting Rabbanite compositions into their liturgical collections (as by Solomon ibn Gabirol and Yehudah hal-Levi).

The most prominent among Karaite liturgical authors was Moses Dar'ī, who was also successful as a writer of secular poems. He is believed in Karaite circles to have flourished about the middle of the 9th cent., and it is, accordingly, claimed that Solomon ibn Gabirol, Moses ibn Ezra, Yehudah hal-Levi, and other Rabbanite poets worked on models provided by Dar'ī. Investigations—principally by Steinschneider and Geiger—have, however, shown that the position must be reversed, Dar'ī having in reality been the borrower from the Rabbanite poets referred to, so that the end of the 12th cent. is the earliest date that can be assigned to him.

The greatest name connected with the development of the Karaite liturgy is that of Aaron b. Joseph (called Aaron the Elder to distinguish him from Aaron b. Elijah of Nicomedia), who flourished at Constantinople (though born in Sulchat in the Crimea) in the second half of the 13th and beginning of the 14th cent., and who is often affectionately referred to at the head of his poetical compositions in the printed Karaite Service Books as מרנו ז״ל ('the Master, may his memory be for a blessing'). The impression made by Aaron b. Joseph's personality and work (which includes a series of poetical pieces for the pericopes of the Pentateuch as liturgically recited throughout the year) was, indeed, so great that his redaction of the liturgy remained, under somewhat varied forms, the norm of the Karaite services down to the present day. Traces of other rituals, in some cases actually exhibiting different sets of liturgical poems, and in other cases also having no doubt contained pieces by other authors, are, however, not lacking. Joseph b. Mordecai Troki, writing to his countryman Elijah Bashiatsi (both of them having belonged to the Byzantine body of Karaites) towards the end of the 15th cent., states that there were at that time three different rituals in the hands of the Karaites: (1) by one of the early liturgists (א׳ מהפייטנים), (2) by Aaron b. Joseph, just mentioned, and (3) by Joseph, the father of the same Aaron (see Neubauer, *Aus der Petersburger Bibliothek*, Leipzig, 1866, pp. 58, 140). More definite evidence of the existence of different rituals is afforded by the British Museum MSS Or. 2531 (dated A.D. 1700), 2530 (16th–17th cent.), and Or. 2532 (written about A.D. 1700), the first representing the ritual of Damascus, and the last two that of Jerusalem (for full descriptions, with lists of pieces, see Margoliouth, *Cat. of the Heb. and Samar. MSS in the Brit. Mus.* ii. nos. 725–727).

Among the other noted Karaite authors who—for the most part in addition to works of larger compass—composed liturgical poems are Aaron b. Elijah of Nicomedia (14th cent., already referred to), Israel b. Samuel Rōfē (early 14th cent.), Samuel al-Maghribi (*i.e.* of North Africa; in this case, Cairo; early 15th cent.), Elijah Bashiatsi (already referred to), Caleb Efendopolo (latter half of 15th cent., first at Adrianople, then Constantinople), Yehudah b. Elijah Gibbōr (author of מבחר יהודה, consisting of a series of poems on the pericopes of the Pentateuch; beginning of 16th cent.), Daniel b. Moses Pērōz (living at Damascus in the latter part of the 17th cent., where he also composed an introductory treatise on the Damascus ritual), Isaac b. Shalom (end of the 18th cent.), and another writer of the same name (presumably resident in the Crimea, now the only important part of Karaite settlements), who edited the Karaite Service Book printed at Vienna in 1854. In the Museum MSS referred to the name Samuel 'כּי very frequently appears as the author of hymns, and other names (such as משלם = Muslim or Meshullam, and Manṣūr) occurring there also await further investigation. Among the topics dealt with are the praises of Moses, Aaron, Samuel, and Elijah. In the hymns occurring in the MSS, Hebrew is sometimes intermixed with Arabic, and occasionally Arabic only is employed. It furthermore remains to say that the order of the Karaite services corresponds (again, of course, *mutatis mutandis*) to the Jewish Synagogue services, and that in point of metre, rhyme, acrostics (both alphabetical and of authors' names), etc., the Karaite liturgical poems run on parallel lines with the Rabbanite *Piyyūṭīm*.

LITERATURE.—i. *SAMARITAN.*—The most important work to consult is *The Samaritan Liturgy*, ed. A. E. Cowley, Oxford, 1910, on which the section dealing with Samaritan hymns has been based. Other works (or articles) are: W. Gesenius, *Carmina Samaritana e codicibus Londoniensibus et Gothanis*, Leipzig, 1824; M. Heidenheim, *Die samaritanische Liturgie*, Leipzig, 1885 (=*Bibliotheca Samaritana*, ii.), and a number of liturgical pieces in different parts of *Deutsche Vierteljahrsschrift für englisch-theol. Forschung und Kritik*, 1861–71; A. J. Merx, 'Carmina Samaritana e codice Gothano,' in *Atti della reale academia dei Lincei*, Rome, 1887; L. Rappoport, *La Liturgie samaritaine: office du soir des fêtes*, etc., Paris, 1900; G. Margoliouth, 'An Ancient MS of the Samaritan Liturgy' [*i.e.* the Brit. Mus. MS Or. 5034, referred to in the article], in *ZDMG* li. [1897] 499; J. A. Montgomery, *The Samaritans*, Philadelphia, 1907, where also a number of further details on this literature will be found (bibliography, pp. 322–346).

ii. *KARAITE.*—The two principal editions of the Liturgy (both representing forms of Aaron b. Joseph's redaction) are סדר תפלות הקראים, Vienna, 1854, and תפלות כמנהג הקראים, Odessa and Wilna, 1868–72. Complete lists of hymns found in the Brit. Mus. Karaite liturgical MSS are given in G. Margoliouth, *Cat. of the Heb. and Samar. MSS in the Brit. Mus.*, London, 1900 ff., ii. 450–487. Lists of hymns in the comparatively few Karaite liturgical MSS in Berlin are given in M. Steinschneider's *Heb. Handschr.* ii. [Berlin, 1897] no. 198; *Aus der Petersburger Bibliothek*, by A. Neubauer, has been referred to in the body of the art., and scattered information on liturgical topics will be found in the works named in the bibliography appended to A. de Harkavy's art. 'Karaites,' in *JE* vii. [1904] 438.

G. MARGOLIOUTH.

**HYMNS (Vedic).**—1. **Importance.**—The body of literature comprising the Vedic hymns claims a very high place in the history of civilization; for it supplies the investigator not only of Indian but of Aryan life with his most ancient data. The language in which they are composed furnishes the student of comparative philology with his oldest and most abundant material. From the information contained in them can be constructed a fairly detailed description of the social and political conditions of the earliest Aryan inhabitants of India. In them we find the sources of Aryan mythology and religion: here alone can be traced the process of personification by which gods were evolved from natural phenomena, and the stages by which polytheism was transformed into the pantheism that for far more than two thousand years has domi-

nated the thought of the Hindus. In them can be discerned the foundations of the indigenous Aryan religions of India—Hinduism, Jainism, and Buddhism: the first the faith of four-fifths of the Indians of to-day, the last a world religion that has profoundly influenced the civilization of the Farther East. Without a knowledge of them these later religions cannot be understood any more than the NT without the OT.

2. **Definition.**—Owing to the somewhat different sense attaching to the word in other literatures, it is necessary to define the term 'hymn' as applied to the Vedas. Here it means a ritual poem consisting, on the higher side of religion, in praises of the gods, and generally accompanying the sacrifice offered to them; or, on its lower side, in spells or charms directed against hostile powers, and accompanying some domestic practice of a magical character. Hymns of the former type, in which praise of one or more of the gods associated with prayers for all sorts of worldly goods is the chief feature, are collected in the Rigveda, the oldest of the four Vedas. Hymns of the latter type constitute the main contents of the latest of the four, the Atharvaveda. The use of the term 'hymn' is also extended so as to include a certain number of poems, philosophical or even quite secular in character, that have found their way into the canonical form of both these Vedas. These two collections alone consist of hymns.

The other two Vedas are formed of disconnected verses or spells employed solely for application to special ritual purposes. The Sāmaveda contains hardly any independent matter, all its verses (except 75) being borrowed from the Rigveda and used exclusively in the ritual of the Soma sacrifice. These verses are strung together without any internal connexion, being significant only as applicable to a particular rite when they are chanted in the various melodies collected in certain song-books. The Yajurveda consists solely of ritual formulas (about one-half being in prose), which, unlike the verses of the Sāmaveda, are successively applicable to the whole sacrificial ceremonial. About one-half of its metrical portion is borrowed from the Rigveda, the remaining three-fourths of its contents being original. Owing to the compelling force which, by the time of this Veda, the sacrifice was regarded as possessing, its formulas virtually belong to the sphere of witchcraft: they are sacrificial spells, not differing fundamentally from the domestic spells of the Atharvaveda.

3. **Chronology.**—According to the native traditional authorities, the Vedas were the creation of Brahmā, and were only revealed to or, as they express it, seen by various seers (*ṛṣis*). Scientific investigation, however, has shown from internal evidence that not only the four Vedas but parts of the same Veda differ in age, and that they were composed by seers who belonged to various families, and who often refer to the skill with which they have endeavoured to fashion a new hymn to win the favour of the gods. But, although the relative ages of the various Vedas are known, we have nothing in the nature of exact chronology in regard to them. All that we can say is that the lower limit of the period covered by them must necessarily be fixed at several centuries before 500 B.C., the approximate date of the spread of Buddhism on India. For Buddhism presupposes the existence not only of the Vedas themselves, but of the intervening theological and theosophical literature if the Brāhmaṇas and Upaniṣads (see VEDIC RELIGION, 2, *b*, *c*). Since that literature is extensive and betrays a considerable development of ideas within its limits, it cannot be assumed to have begun later than about 800 B.C. Again, the evidence of their language, their religious ideas, and their geographical data proves that the Vedas vary greatly in age. Thus we find that, between the time when the earliest and the latest Vedic hymns were composed, the Aryan invaders had spread right across Northern India from Eastern Kabulistan to the delta of the Ganges. Similar evidence indicates the existence of successive chronological strata within each Veda. To allow for all this gradual development it is necessary to postulate a period of some centuries, decidedly longer, for example, than that between Homeric and classical Greek. Hence the age of the Vedic hymns cannot be assumed to begin later than about the 13th cent. B.C. In the opinion of the present writer, which practically agrees with the earlier moderate estimate of Max Müller in his *Ancient Sanskrit Literature*, five hundred years are amply sufficient to account for the gradual changes, linguistic, religious, social, and political, that this hymn literature reveals. We have only to reflect on the vast transformation wrought on the continent of America by the lapse of only four centuries since the European immigration began. H. Jacobi, however, and an Indian scholar, B. G. Tilak, in 1893 independently arrived at the conclusion, on astronomical grounds, that the period of Vedic culture goes back to a far higher antiquity. The latter claims for some Vedic texts the immensely remote date of 6000 B.C., while, according to the former, the hymns of the Rigveda must at any rate be earlier than 3000 B.C. This is not the place to discuss the complicated arguments on which these results are based. Suffice it to say that such distinguished authorities as Whitney, Oldenberg, and Thibaut all refuse to accept these deductions, which are founded on the assumption that the early Indians possessed an exact astronomical knowledge of the sun's (not the moon's) course in relation to the lunar mansions, such as there is no evidence, or even probability, that they actually possessed. The astronomical calculations are not in doubt; it is the validity of the assumptions and inferences which constitute the starting-point of those calculations that is in the highest degree questionable. The possibility of extreme antiquity seems to be disproved by the relationship of the earliest literature of the Avesta (*q.v.*), estimated to date from the 6th cent. B.C., to the Vedic hymns. That relationship is linguistically (to say nothing of religious ideas and practices) already so close that, if the language of the Avesta were known to us at a stage earlier by six or seven centuries, it could hardly differ at all from that of the Vedic hymns. It therefore seems impossible to avoid the conclusion that the Indians cannot have separated from the Iranians much earlier than about 1300 B.C. By Jacobi's hypothesis the Indians had already separated from them before 4500 B.C. From this it follows that both the Indian and the Iranian language remained practically unchanged for the truly vast period of over 3000 years, whereas in a similar period the Vedic language has undergone the immense changes represented by the present condition of the modern vernaculars of India. The present writer's view does not seem to be invalidated by Hugo Winckler's discovery, in 1907, of the names of the Indian deities Mitra, Varuṇa, Indra, Nāsatya (in the form of *mi-it-ra*, *uru-w-na*, *in-da-ra*, and *na-ša-at-ti-ia*), in an inscription dating from 1400 B.C., at Boghaz-keui in Asia Minor. The phonetic form of these names quite well admits of their being assigned to the Indo-Iranian period, when the Indians and Persians were still one people. The date of the inscription would allow two centuries for the separation of the Indians, their migration to India, and the commencement of Vedic hymn literature in the north-west of Hindustan.

4. **Growth of the hymn collections.**—When the Indo-Aryans entered India by the passes of the Hindu-Kush, they brought with them a religion in which various powers of Nature were personified and worshipped as gods, of whom a few, such as Dyaús (=Ζεύς), go back to the Indo-European period, and several others, such as Mitra, Varuṇa, Indra, to the Indo-Iranian period. A comparison of Veda and Avesta shows that they also brought with them the cult of fire and of Soma, and were acquainted with the art of composing religious lyrics in several metres. The object with which most of these ancient hymns were composed was to win the favour of the gods by praises accompanying the oblation of melted butter in the fire and the offering of the juice of the Soma plant on a litter of grass. Doubtless many hymns of this character composed in the earliest period of the Aryan invasion have been lost. Those which have survived were composed almost exclusively by singers of the hereditary priestly class. They were handed down in different families by memory, not by writing, which cannot have been introduced into India before 800 B.C. at the earliest. These family groups of hymns were by gradual stages brought together till, with successive additions, they assumed the earliest complete form of the Rigveda, from which the later Vedas, when they came into being, borrowed a considerable part of their matter. The different Vedas were then handed down by a separate tradition till they were edited in their final form called *Saṁhitā*, with which the second period of their textual history begins, and in which they have come down to us. The constitution of the Saṁhitā text of the Rigveda must have taken place at the end of the period of the Brāhmaṇas or about 600 B.C., but before the appendages to those works, called Upaniṣads (see VEDIC RELIGION, 2, *c*), came into being. The editors of the Saṁhitā did not alter the diction of the text already in existence, but merely applied to it certain later euphonic rules, by which, in particular, vowels are contracted or changed to semi-vowels in such a way as to obscure the metre. On the completion of this work extraordinary precautions were taken to preserve intact the sacred text fixed in this manner. The first step was the constitution, by a grammarian named Śākalya, of the *Pada*, or 'word' text, in which all the words of the Saṁhitā are separated and given in their original form as unaffected by the rules of euphonic combination, and all compounds are analyzed. This text, which practically constitutes the earliest commentary on the Rigveda, was followed by others of a more complex character devised to prevent the possibility of any change or loss in the sacred collection of hymns. The result of all these safeguards is that the text of the Rigveda has been handed down for 2500 years practically unmodified, with a fidelity elsewhere unparalleled. There is evidence showing that even in the earlier period of the text the hymns of the Rigveda were preserved with such care that, if the Saṁhitā text is pronounced with due regard to metre, it represents the hymns almost in the very form in which they proceeded from the lips of their composers. The Saṁhitās of the other Vedas were also provided with Pada texts and other safeguards, but the tradition in their case has been a good deal less trustworthy than that of the Rigveda.

5. **Language and metre.**—The language in which the Rigveda (and to a less extent the other Vedas) is composed represents the oldest stage of the classical Sanskrit stereotyped by the grammarian Pāṇini (*c.* 300 B.C.), differing from the latter about as much as Homeric from Attic Greek. It is much richer in grammatical forms. Thus it possesses a subjunctive in frequent use and some twelve forms of the infinitive. The former has entirely died out in Sanskrit, while of the latter only a single form survives. The language of the Vedic hymns also differs from Sanskrit in its accent, which is marked in all the Saṁhitās, and, like that of the ancient Greeks, is of a musical nature, depending essentially on the pitch of the voice, not the stress. This accent was, some time after the beginning of our era, exchanged in Sanskrit, as in later Greek, for a stress accent.

All the hymns of the Rigveda are metrical. They consist of stanzas mostly of four verses or lines, but also of three and sometimes five. The line, called *pāda* ('a fourth'), forms the metrical unit, consisting generally of eight, eleven, or twelve syllables. A stanza is usually composed of lines of the same kind; but a few of the rarer forms of stanza consist of a combination of different lines. The metres are about fifteen in number, but of these only seven are at all common. Three of them, the *triṣṭubh* (four lines of eleven syllables), the *gāyatrī* (three of eight), and the *jagatī* (four of twelve), are by far the most frequent, accounting for two-thirds of the total number of the stanzas in the Rigveda. The metres of the Vedic hymns, compared with those of Sanskrit, of which they are largely the foundation, are somewhat elastic and irregular: only the rhythm of the last four or five syllables in the line is fixed, while that of the first part is not subject to any fixed rule. They occupy a position midway between the metres of the Indo-Iranian period, in which (according to the evidence of the Avesta) the metrical principle was the number of syllables only, and those of Sanskrit, in which (excepting the epic stanza called *śloka*) the quantity of every single syllable in the line is determined. Generally a Vedic hymn consists of stanzas in the same metre: a typical variation of this rule is to mark the conclusion of the hymn by a stanza in a different metre. A certain number of hymns are strophic in their construction. The strophes in them consist either of three stanzas in the same simple metre, usually *gāyatrī*, or of the combination of two stanzas in different mixed metres. The latter strophic type is found chiefly in the eighth book of the Rigveda and is called *pragātha*.

6. **Extent and divisions of the Rigveda.**—The Rigveda consists of 1017 or (counting eleven that are recognized as a later addition) 1028 hymns, containing altogether about 10,600 stanzas. The average length of a hymn is thus rather more than ten stanzas. The shortest hymn consists of only one stanza and the longest of fifty-eight. The Saṁhitā text, if printed continuously like prose and in Roman characters, would fill an octavo volume of about 600 pages of 33 lines each. The Rigveda is divided into parts in two ways. The one division is a purely mechanical one into *aṣṭakas*, or 'eighths,' of about equal length, each of these consisting of eight *adhyāyas*, or 'lessons,' each of which is subdivided into *vargas*, or 'groups,' of five or six stanzas. The other division is into ten *maṇḍalas*, or 'books' (literally 'cycles'), and *sūktas*, or 'hymns.' The latter system is a historical one, throwing light on the manner in which the collection arose. It is, therefore, the division invariably followed by Western scholars at the present day in dealing with or quoting the hymns of the Rigveda.

7. **Arrangement.**—Of the ten books, six (ii. to vii.) are homogeneous. The hymns contained in each of them were, according to native tradition, composed ('seen') by singers of the same family, which handed them down as its own collection. This tradition is supported by the internal evidence of the seers' names mentioned in the hymns and of

the refrains occurring in those books. Hence they are generally designated the 'family books.' The principle of arrangement which prevails in them is uniform, each of them being divided in the same way into groups addressed to different deities. Books i., viii., and x. are not the composition of families, and the groups of which they consist are the productions of different individual seers. Book ix. is peculiar in that all its hymns are addressed to one deity, Soma, while their arrangement is in no way connected with their authors, for the groups within it are constituted by identity of metre. In the family books the first group is always addressed to Agni, the second to Indra, and those that follow to less important deities. The arrangement of the hymns within these deity groups is in the diminishing order of the number of stanzas. Thus in bk. ii. the Agni group of ten hymns begins with one containing 16 stanzas, the last having only six. The first hymn of the Indra group here has 21 stanzas, the last only four. The entire group of family books, again, is arranged according to the ascending number of the hymns they contain, if later additions are allowed for. Thus the second book has 43 hymns, the third 62, the sixth 75, and the seventh 104. The homogeneousness of these books renders it probable that they formed the nucleus of the Rigveda, which grew to its final extent by later successive accretions. The first of these additions seems to have been the second part of bk. i., which, as formed of nine groups, each by a different author, came to be collected and prefixed to the family collections, following the latter as their pattern in their internal arrangement. The eighth resembles the family books, inasmuch as it is composed for the most part by members of one family, the Kāṇvas. But it differs from them in other respects. Thus it does not begin with a group of hymns addressed to Agni; and it is peculiar in the predominance of the strophic *pragātha* metre. The fact that it contains fewer hymns than bk. vii. indicates that it was not included in the collection of family books; but its somewhat analogous character caused it to be the first to be added at the end of that collection. The hymns forming the first part of bk. i. (1–50) have various points in common with those contained in bk. viii.; more than half of them seem to have been composed by seers of the Kāṇva family; the strophic metre affected by that family reappears in them; and many similar or identical passages are found in the two collections. The present state of research does not enable us to decide the chronological priority of the two collections or to explain why they were divided. The fact, however, remains that they were added at the beginning and the end of an older collection.

The addition of bk. ix. was the direct result of the formation of the first eight into a unit. This book consists entirely of hymns addressed to Soma and recited while the pressed juice of the plant was 'clarifying' (*pavamāna*). Their composers were seers belonging to the same families as those of bks. ii.–vii., as is shown, among other evidence, by the occurrence of refrains peculiar to those families. The hymns to Soma Pavamāna have all been extracted from the family books (in which no Soma hymn of any kind occurs), as well as from bks. i. and viii. (which contain only one and two hymns respectively to Soma in his general character), being gathered into one book as the hymns proper to the Udgātṛ, or chanting priest (while the rest belonged to the sphere of the Hotṛ, or reciting priest), and added at the end of bks. i.–viii. There is no ground for supposing that these Soma hymns were of later date than the others. On the contrary, the presumption is that the hymns belonging to the Soma ritual, which goes back to the Indo-Iranian period, date from early Vedic times. It has not as yet been possible to detect differences of chronology in this book. As to its internal arrangement the order of its first 60 hymns depends on the number of their stanzas, which decreases from 10 to 4. In the remaining 54, some of which are very long (one having as many as 58 stanzas), this principle is not observed. The two parts also differ in regard to metre; for, while the first 60 hymns are composed (except 4 stanzas) in *gāyatrī*, nearly all the rest consist of groups in other metres: thus 68–86 form a *jagatī*, 87–97 a *triṣṭubh* group.

Book x. was added last of all. It is undoubtedly, as its language and contents show, of later origin than the rest of the Rigveda. Its composers were evidently acquainted with the older books. Not only the position that it occupies at the end of the whole collection, but the fact that the number of its hymns (191) is made up to that of bk. i., is an indication of its supplementary nature. It consists of hymns by a large number of seers of different families, the names of some of which occur in other books. But the traditional names of the authors of a great many of these hymns are very doubtful. Though this book is in general more modern than the rest, it contains some hymns as old, and at least as poetical, as the average of those in other books. Such hymns perhaps found their way into this supplementary collection because they had for some reason been previously overlooked. As a whole, the tenth book approximates in language and general character to the Atharvaveda, with which it is also closely associated. For of about 1350 stanzas from the Rigveda incorporated in the Atharvaveda more than 40 per cent are taken from bk. x. Here, in contrast with the other books, we find earlier grammatical forms and words growing obsolete, while indulgence in abstract ideas and philosophical speculation, as well as the introduction of matter connected with witchcraft, such as is characteristic of the Atharvaveda, has much increased.

8. **Subject-matter.**—The great bulk of the hymns of the Rigveda consist of *invocations* of various deities. Their contents are, therefore, largely mythological, and furnish the main source of our knowledge of Vedic religion (*q.v.*). The gods to whom most hymns are addressed are Agni (about 200), Indra (over 250), and Soma (over 100), who thus between them claim considerably more than one-half of the whole Rigveda.

Only a few hymns (not exceeding 30) are not intended for the worship of gods or deified objects. About a dozen of these, almost restricted to bk. x., are concerned with *magical practices*, the proper sphere of the Atharvaveda. Two such (ii. 42, 43) deal with augury; two others are directed against poisonous vermin (i. 191) and the disease called *yakṣma* (x. 163); two (x. 58; 60, 7–12) consist of incantations for the preservation of life; one (v. 55) is a charm to induce sleep; two (x. 183; 162) are spells for procuring offspring or for warding off a demon destructive of children; one (x. 166) is directed against enemies, another (x. 145) against rival wives; one (x. 159) is a song of triumph over rivals; another (vii. 103) a panegyric of frogs as magical bringers of rain.

Some 20 others are more or less *secular poems*, concerned with social customs, moral questions, riddles, and cosmogonic speculations. Several of these are especially important as throwing light on the earliest thought and civilization of India, though much information of this character may be gathered from incidental references scattered through the rest of the collection. One of the most noteworthy is the long wedding hymn (x. 85) connected with the marriage ceremonial, though containing a large admixture of mythological

matter. There are also in bk. x. five hymns (14-18) dealing with funeral rites. Four of them, however, are addressed to deities concerned with the life beyond the grave. The last, being quite secular in tone, supplies more information than any of the rest about the funeral usages of early Vedic India (see DEATH AND DISPOSAL OF THE DEAD [Hindu]).

Besides several mythological *dialogues* in which the speakers are divine beings (iv. 62; x. 51, 52; 86; 108), there are two in which one or both agents are human. One is a somewhat obscure colloquy (x. 95) between a mortal lover Purūravas and a celestial nymph, who is on the point of forsaking him. The other (x. 10) is a dialogue between the twins Yama and Yamī, the ancestors of the human race. This group of hymns has a special literary interest as precursors of the dramatic poetry of a later age.

Among the secular hymns of the Rigveda are to be included the *dānastutis* ('praises of gifts'), which are represented by one complete hymn (i. 126) and appendages of 3-5 stanzas to over 30 others. They are poems of a *semi-historical* character, being panegyrics on liberal patrons in whose behalf the singers composed their hymns to accompany the sacrifice. They furnish incidental genealogical information about the seers and their employers, as well as about the names and habitat of the Vedic tribes. They are late in date, belonging chiefly to bks. i. and x., and to supplementary hymns of bk. viii.

Four of the secular hymns are of a *didactic* type. One of them (x. 34) is a remarkable poem, being the lament of a gambler who, unable to resist the fascination of the dice, deplores the ruin he has brought on himself and his family. The other three, describing the various ways in which men follow gain (ix. 112) and praising wise speech (x. 71) or the value of good deeds (x. 117), are the forerunners of the sententious poetry which was so assiduously cultivated in post-Vedic Sanskrit literature.

Two of the hymns of the Rigveda consist of *riddles*. One of them (viii. 29) in ten stanzas describes various gods by their characteristic marks, leaving it to the hearer to guess who in each case is meant. A far more elaborate collection of riddles is a long hymn (i. 164) consisting of 52 stanzas. These propound, in mystical and symbolic language, a number of enigmas, many of them connected with the sun. Thus the wheel of order with 12 spokes, revolving round the heavens and containing within it in couples 720 sons, means the year with its 12 months and 360 days.

Lastly, there are six or seven *cosmogonic hymns* containing speculations regarding the origin of the world in connexion with a Creator (called by different names) as distinct from any of the ordinary gods. Only one of them (x. 129), however, treats the subject in a purely philosophic spirit, as an evolutionary process from the non-existent (*a-sat*) to the existent (*sat*), and thus forms the starting-point of Indian philosophy.

From the *geographical data* furnished by the Rigveda, especially the numerous rivers mentioned there, we are justified in concluding that at the time when these hymns were composed the Aryan tribes were in occupation of the territory drained by the Indus river system lying between 35° and 28° northern latitude and 70° and 78° eastern longitude, and corresponding roughly to the North-west Frontier Province and the Panjāb of to-day. This conclusion is borne out by the references to the flora and fauna of the country in which they were settled.

From the *historical data* of the hymns we further learn that the Aryans were still engaged in warfare with the original inhabitants. Many victories over these foes are recorded, and once 1000 of them are said to have been bound and 30,000 slain with the aid of Indra. That the Aryans were still bent on conquest is to be inferred from the mention of rivers as barriers to their progress. Though split up into numerous tribes, they were conscious of religious and racial unity, for they contrasted the aborigines, whom they called Dasyus or Dāsas, with themselves, designating them as non-sacrificers and unbelievers, and calling them 'black skins' and the 'Dāsa colour' as opposed to the 'Aryan colour.' This racial contrast appears to have been the starting-point of the later system of caste (*q.v.*), the Sanskrit name of which (*varṇa*) means 'colour.' The enslaved Dāsas became the Śūdras, the fourth or lowest caste, first mentioned in one of the very latest hymns (x. 90) of the Rigveda.

The names of many of the Vedic tribes are mentioned. There was no political cohesion among them, for, though they sometimes formed coalitions, they were constantly at war with one another. A coalition of several tribes is referred to as taking part in the 'battle of the ten kings,' when Aryans fought against each other on the banks of the Paruṣṇī river (now Ravi).

The hymns also furnish material for a fairly detailed account of the *social conditions* of those early days. Thus we find that the family was the foundation of society with the father as its head, and that women held a freer and more honoured position than in later times. Mention is made of various crimes, of which robbery, chiefly in the form of cattle-lifting, seems to have been the commonest. Indebtedness was known, mainly as a result of gambling, and reference is made to the clearing off of debt by instalments. Various details are given about clothing and personal adornment. Thus we see that it was usual to wear an upper and lower garment, which were made of sheep's wool and were often decorated. Bracelets, anklets, necklets, and earrings were used as ornaments. Hair is mentioned as worn in different ways. Men usually grew beards, but occasionally shaved. The usual food consisted of milk, clarified butter, grain, vegetables, and fruit. Meat was eaten only on ceremonial occasions, when animals were sacrificed. The commonest kind was apparently beef, since bulls were the chief offerings to the gods. But the sanctity of the cow which prevailed, having in fact come down from the Indo-Iranian period, gradually grew in strength till in later times beef in general came to be absolutely forbidden, and has remained so among the Hindus down to the present day. Two kinds of spirituous liquor were made: *soma* was restricted to religious ceremonies or festivals, while *surā*, made from some kind of grain, was that in ordinary use.

That one of the main *occupations* of the invading Aryan was warfare is only natural. He fought either on foot or from a chariot; but, as far as can be seen, not on horseback, as in later times. The usual weapons were bows and arrows, but spears and axes were also employed. Cattle-breeding seems to have been the chief means of livelihood: cows are the most prominent objects of desire in the prayers to the gods. But tillage was also practised to some extent. Fields were furrowed with a plough drawn by bulls. Corn was cut with a sickle, and then threshed out and winnowed. The mention of channels excavated for water seems to indicate that irrigation was not unknown. Wild animals were trapped and snared, or hunted with bows and arrows, sometimes with the aid of dogs. Navigation in boats (doubtless of a very primitive

type) propelled by paddles seems to have been employed mainly for the purpose of crossing rivers. Fishing hardly seems to have been practised, probably because the rivers of Kabulistan and of the Panjāb were in those days, as they are now, poor in fish. Trade was known only in the form of barter, the cow representing the standard by which the value of commodities was estimated.

The primitiveness of life in those days enabled every man to supply most of his own wants. But it is clear that certain trades and crafts already existed, though doubtless in a rudimentary stage. One of them was the combined occupation of the carpenter and the wheelwright, who, since the construction of chariots and carts required special skill, must have been much in demand. Skill in the composition of hymns is often compared by the singers of the Rigveda with the deftness of the wheelwright. Mention is also made of the smith who smelted ore in a forge, and made kettles and other vessels of metal. The tanner, too, is spoken of as preparing the skins of animals. Women practised plaiting mats of grass or reeds, sewing, and especially weaving, but whether they as yet ever did so professionally is not clear.

Among active *amusements* chariot-racing was the favourite one, as might have been expected in a warlike and conquering population. The social recreation most practised was playing with dice, which were four in number. Dancing was also indulged in, chiefly by women. The people were fond of music, playing on the drum (*dundubhi*), the flute (*vāṇa*), and the lute (*vīṇā*). The lute has from those early days been the favourite musical instrument of the Indian. Singing also is often mentioned. This art, at least as applied to religious purposes, must have advanced beyond a rudimentary stage by the time the Sāmaveda was compiled, for the melodies in which it was chanted were numerous, and are already often referred to by their special names in the Brāhmaṇas and Upaniṣads.

9. **Literary merit.**—The diction of the hymns of the Rigveda is, on the whole, simple and natural. The moderate use of compounds, which are practically restricted to two members, contrasts strikingly with their frequency and inordinate length in classical Sanskrit. Considering their great antiquity, the hymns are composed with a remarkable degree of metrical skill and command of language. But, as they were produced by a sacerdotal class and were generally intended to accompany a ceremonial that was no longer primitive, their poetry is often impaired by constant sacrificial allusions. This is especially apparent in the hymns addressed to the two ritual deities Agni and Soma, where the thought, otherwise artless and direct, becomes affected by conceits and obscured by mysticism. This tendency was probably aggravated by the necessity of ringing the changes on a limited range of ideas throughout a large number of hymns, comprising nearly one-third of the whole collection. Here we already meet, in its earliest form, that partiality for subtle and difficult modes of expression which prevails in post-Vedic literature, and which one of the Brāhmaṇas already indicates by observing that 'the gods love the obscure.' In spite of such defects, the Rigveda contains much genuine poetry. Since the gods addressed are, for the most part, personifications of natural phenomena, and their connexion with those phenomena is still felt, the praises addressed to them give rise to much beautiful and even noble imagery. It is, however, only to be expected that the literary merit of so large a body of poetry should vary considerably. Some hymns accordingly consist of commonplace and mechanical verse, while others attain a high level of poetic excellence. The average degree of literary skill is in fact remarkably high. This is perhaps partly due to the fact that these early singers felt the necessity of producing a hymn composed with the highest art in order to please the gods. A poet often says, generally in the last stanza, that he has praised the deity according to his knowledge or ability, that his hymn is like a well-wrought car, a well-woven garment, or a bride adorned for her lover.

The hymns in which literary merit is most conspicuous may be briefly indicated. The group of some twenty addressed to Uṣas, goddess of Dawn, is the most poetical in the Rigveda. It will probably be admitted by all who read them, even if only in a good translation, that their beauty is quite equal, if not superior, to that of the descriptive religious lyrics of any other literature. Some of the hymns to Indra (esp. i. 32) show much graphic power in their account of the conflict of that god with Vṛtra, the demon of drought; those to the Maruts, or storm-gods, often depict with much striking imagery the phenomena of thunder and lightning, and the mighty onset of the wind. One hymn to Parjanya (v. 83) paints the devastating effects of the rainstorm with great vividness. The hymns addressed to Varuṇa, the most ethical of the Vedic gods, describe the various aspects of his sway as moral ruler of the world, in an exalted strain of poetry. Several of the mythological dialogues already referred to set forth the situation with much beauty of language. Such are the dialogue between Indra's messenger, Saramā, and the demons who have stolen the cows (x. 108), and that between the primeval twins, Yama and Yamī (x. 10). The gambler's lament (x. 34) is the finest specimen of pathetic poetry in the Rigveda. Ideas connected with death are treated in language of impressive and solemn beauty in one of the funeral hymns (x. 18). Among the cosmogonic hymns one in particular (x. 129) is an example of how profound philosophic speculation can be clothed in poetry of a high order.

10. **Interpretation.**—In dealing with the hymns of the Rigveda, the important question arises, to what extent are we able to understand their real sense, considering that they have come down to us as an isolated relic from the remotest period of Indian literature? The reply, stated generally, is that as the result of the labours of scholars the meaning of a considerable proportion of the Rigveda is clear, but of the remainder many hymns, and a great many single stanzas or passages, are still obscure or unintelligible, as a comparison of different translations suffices to show. This was already the case in the time of Yāska, the author of the *Nirukta*, the oldest extant commentary on parts of the Rigveda (*c.* 500 B.C.); for he quotes one of his predecessors as declaring the Vedic hymns to be obscure, unmeaning, and mutually contradictory. Detailed critical research has already done much to reduce the number of passages the sense of which is questionable. It cannot be doubted, however, that an irreducible minimum of unintelligible matter will always remain, simply because no evidence survives of the particular circumstances that could enable us to understand the allusions made. Much progress is still to be expected from patient and minute research guided by the method of interpretation now generally accepted. In the earlier period of Vedic studies, commencing in the middle of the 19th cent., the traditional method, which follows the great commentary of Sāyaṇa (14th cent.) and is represented by the translation of the Rigveda begun by H. H. Wilson in 1850, was considered adequate. But now the critical method initiated by Rudolf von Roth, the founder of Vedic philology, is, with some modifications, that which has been adopted

by practically all Western scholars. Roth proved that, though the native commentators were invaluable guides in explaining the theological and ritual texts of the Brāhmaṇas and Sūtras, with the atmosphere of which they were familiar, they did not possess a continuous tradition from the time of the Vedic hymns. They could not in fact possess any such tradition, for interpretation began only when the meaning of the hymns had become obscure. That the gap between the poets and interpreters even earlier than Yāska must have been considerable is shown by his predecessor's opinion quoted above. That Yāska's own interpretations are often merely conjectural appears from his frequently giving two or more alternative meanings for a word. Yet he must have had more and better means of ascertaining the sense of various obscure words than Sāyaṇa, who lived nearly 2000 years later. Sāyaṇa's interpretations, however, sometimes differ from those of Yāska. Hence either Yāska is wrong or Sāyaṇa does not follow the tradition. Again, Sāyaṇa often gives several inconsistent explanations of a word in interpreting single passages or commenting on different passages. In short, it is clear from a careful examination of their explanations that neither Yāska nor Sāyaṇa possessed any certain knowledge about a large number of different words in the Rigveda. Hence their interpretations can be treated as decisive only if they are borne out by probability, by the context, or by parallel passages. For the traditional method Roth therefore substituted the critical method of interpreting the difficult parts of the Rigveda from internal evidence by the minute comparison of all passages parallel in form and matter, while taking into consideration context, grammar, and etymology, without ignoring the help supplied by the historical study of the Vedic language in its connexion with Sanskrit or the outside evidence derived from the Avesta and from comparative philology. In the application of his method, Roth attached too much weight to etymological considerations, while he undervalued the evidence of native tradition. Pischel and Geldner, on the other hand, in emphasizing the purely Indian character of the Vedic hymns, connect the interpretation of them too closely with the literature of the post-Vedic period and the much more advanced civilization which is described therein. There is good reason to hope, from the results already achieved, that a steady adherence to the critical method, by admitting all available evidence, including that of ethnology, and by avoiding the excesses just indicated, will eventually clear up a large proportion of the obscurities and difficulties that still baffle the translator of the Vedic hymns.

II. **The Atharvaveda.**—The Atharvaveda, regarded as a whole, deals with the lower side of religion as represented by witchcraft, the word itself meaning the 'lore of the Atharvans or magicians.' The oldest designation by which this Veda is known in Indian literature is *Atharvāṅgirasaḥ*, 'the Atharvans and Angirases,' the names of two classes of pre-historic fire-priests, referring respectively to the two kinds of spells, the propitious and the hostile, that form the main content of the collection. Very different from the world of the Rigveda is the sphere to which we are now introduced. There we have moved among the beneficent gods of the bright heavens. Here we are confronted with the dark hostile powers that the sorcerer seeks to win over by flattery or to drive away by imprecations. The priest and the magician, though originally one and the same, had from the beginning of the Vedic period been separated, the functions of the former being concerned with the gods, those of the latter with the uncanny world of demons. The ceremonial, moreover, to which the spells of the Atharvaveda apply is that of domestic rites or of such as are connected with the person of the king. It has nothing to do with the great sacrificial ceremonial of the three other Vedas which, in the works of the Brāhmaṇa and the Sūtra period, are constantly characterized as the *trayī vidyā*, or 'the threefold sacred lore.' A long time accordingly elapsed, after its hymns had assumed the form of a collection, before it attained to canonical recognition as the fourth Veda. The Saṁhitā text, in the shape in which it has come down to us, undoubtedly came into being later than that of the Rigveda, for internal evidence of different kinds shows that a good many of its hymns belong to a more recent period than any in that collection. It probably dates from after the completion of the Brāhmaṇas of the Rigveda, which do not mention it, while it is referred to in two of the Brāhmaṇas of the Yajurveda. Its original contents had already been Brāhmanized by the addition of many hymns which are of a theosophic character, or contain references to the sacrificial ceremonial, or were composed directly in the interests of Brāhman priests. But it was probably not till it had been superficially connected with the great sacrificial ceremonial by the addition of bk. xx., which, excepting twelve hymns, is borrowed unchanged from the Rigveda, that the Atharvaveda came to be acknowledged as a canonical work. It appears to have gained that position by the second cent. B.C., when it is referred to in this sense by the *Mahābhāṣya*, the 'great Commentary' on Pāṇini's grammar.

Probably the composition of the Atharvaveda, like that of the Rigveda, extended over a period of several centuries, which, however, is not to be regarded as a period subsequent to that of the Rigveda. While some of its hymns are later than any in the Rigveda, and the Brāhmanized additions are contemporaneous with the late portions of the Rigveda, many of the characteristic hymns forming the nucleus of the collection may be considered just as old as the earliest in the Rigveda. There is, indeed, a probability that some of its spells go back in their original form to a very early prehistoric age, being cognate in form and matter to ancient spells preserved in other Indo-European languages.

The *language* of the Atharvaveda, considered grammatically, is later than that of the Rigveda, but earlier than that of the Brāhmaṇas. Lexically it is noteworthy for the many popular words that appear in it. This is doubtless due to its material having been current among the people and not the priestly class. Another peculiarity of this Veda is the introduction among its hymns of a considerable amount of prose like that of the Brāhmaṇas. The whole of one bk. (xv.) and the greater part of another (xvi.) are composed in prose, while six others (viii.–xiii.) contain prose passages of some length. The *metre* in which the great bulk of the Atharvaveda is written does not essentially differ from that of the Rigveda. But two points in regard to it are to be noted. One is the extreme metrical licence that appears in its hymns: it is so great that the irregular verses probably outnumber the regular ones. The other is the predominance of the *anuṣṭubh* metre, which in the Rigveda comes only fourth in order of frequency.

The Atharvaveda consists of 20 *kāṇḍas*, or books, containing 731 hymns. The number of stanzas in a hymn ranges from one to eighty-nine, their total being about 6000. Leaving out of the calculation what is borrowed direct without alteration from the Rigveda, the Atharvaveda has 5038 stanzas, or about one-half as many as the older Veda. Internal evidence shows that this collection also under-

went a process of growth by successive additions till it assumed the form in which it has come down to us. It is clear that the first eighteen books had been combined before the last two were added. That older collection consists of three main divisions, in the first two of which, bks. i.-vii. and viii.-xii., the hymns are arranged according to the number of stanzas they contain, while the guiding principle in the third, xii.-xviii., is unity of subject-matter in each book. The first group comprises short hymns (none exceeding eighteen stanzas), the second long hymns with more than twenty stanzas, the subjects in both being miscellaneous.

There can be little doubt that the first six books of the first group formed the nucleus of the Atharvaveda, their hymns consisting of its characteristic matter, charms and spells exclusively in metrical form. These six books are arranged primarily according to the amount of text they contain in an ascending scale, the first having 153 stanzas, the sixth 454. This principle is supplemented by the arrangement of these books according to the normal number of stanzas contained in their hymns, also in an ascending scale. Thus bk. i. contains hymns of 4, ii. of 5, iii. of 6, iv. of 7, v. of 8 stanzas. Book vi. contains hymns of only 3 stanzas, occupying this position because the secondary principle here is subordinated to the primary one of amount of text. Book vii. is to be regarded as a supplement to this group. This is indicated by the fact that it infringes both principles that govern the arrangement of the preceding books, being both much shorter than bk. vi. and consisting of hymns which have normally one stanza only, and which can, therefore, hardly be accounted hymns at all.

In the second main division, bks. viii.-xii., the hymns are arranged according to decades, each of the first four containing ten hymns of 20 to 50 stanzas, while bk. xii. has five of more than 50 stanzas. This group further differs from the first in two special points. As contrasted with the mainly popular matter of that group it is clearly of hieratic origin, its sphere of thought being that of the Brāhman priesthood. It also contrasts with the first group in form, each of its books containing an extensive passage of prose like that of the Brāhmaṇas.

The third main division, xiii.-xviii., distributes its hymns among its six books according to their subject-matter. Thus xiv. deals with the wedding ceremonial, and xviii. with burial rites, both borrowing most of their stanzas from bk. x. of the Rigveda, and thus not being specifically Atharvan in character. Bks. xiii. and xvii. consist of hymns addressed to the sun, in the character of Rohita, or the Ruddy one, in the former, and as identified with Indra and Viṣṇu in the latter. The whole of xv. and most of xvi. consists of prose resembling that of the Brāhmaṇas. The former treats mystically of the *vrātya*, probably meaning the religious mendicant; but it is hard to say exactly what unity of subject-matter connects the hymns of the latter.

Some time after these main divisions had been formed into a collection of eighteen books, the nineteenth was added to it as a supplement. That this was the case is proved by a considerable amount of cumulative evidence. The most striking is that the 23rd hymn of this book supplies a sort of table of contents to the eighteen preceding books, and presupposes their existence practically in their present arrangement. It is also to be noted that the corrupt state in which the text of this book has been handed down is in marked contrast with that of the earlier collection. Last of all was added bk. xx., which consists almost entirely of extracts from the Rigveda taken over unchanged (while the material borrowed from the Rigveda at an earlier stage had undergone considerable modification), and is in no way related to the rest of the Atharvaveda. This supplement was appended simply in order to bring the Veda of spells into connexion with the sacrificial Soma ceremonial of the Brāhman priesthood. It is a significant fact that two of the most important auxiliary works belonging to the Atharvaveda and dating from the latest period of Vedic literature, its Prātiśākhya and its Kauśika Sūtra, ignore bks. xix. and xx.

It now remains to give a brief survey of the various *contents* of the Atharvaveda. A large number of its hostile spells are intended as remedies, together with the use of different herbs, against a number of diseases, ailments, and injuries, such as fever, jaundice, scrofula, leprosy, dropsy, cough, baldness, ophthalmia, impotence, poisoning, snake-bite, wounds, and fractures (cf. DISEASE AND MEDICINE [Vedic]). These incantations are addressed to the diseases personified as demons, or to whole classes of demons supposed to cause them. This Veda, supplemented by its Kauśika Sūtra, is thus our earliest source for the history of Indian medicine. Allied to the remedial spells are the charms which invoke or praise healing plants, the purifying waters, and fire, the most potent dispeller of demons. Among the auspicious spells are many prayers for protection from the various forms of death and disease, and for long life, often expressed in the form of a desire to live 'a hundred autumns.' Others are charms for the prosperity of flocks and the produce of the fields, or for luck in undertakings, especially in gambling. Another group aims at the attainment of harmony and concord or of success in the assembly. A large class is concerned with wedlock and love. Several of these are of a pacific character, being charms for the obtainment of a husband or bride, blessings on a newly married couple, prayers for children or a happy wedded life. More numerous, however, is the hostile type, such as imprecations against rivals or incantations to compel the love of an unwilling person. A considerable group of hymns concerns the person of the king. They consist of spells to be employed at the royal inauguration or intended to secure for him the attainment of power, fame, and especially victory in battle. There are, again, a few hymns consisting of spells for the expiation of sins or moral transgressions, such as the non-payment of debts. Finally, there remain three or four classes of hymns which, being alien to the true Atharvan spirit, date from a late period in the growth of this collection. One of these comprises the hymns composed in the interest of Brāhmans. Though the later literature frequently refers to witchcraft and sorcerers in a hostile spirit, their use is even sanctioned when employed by Brāhmans against others. In these hymns the inviolability of the person and property of Brāhmans is emphasized, while imprecations are hurled against their oppressors. They also contain exaggerated panegyrics of the sacrificial fee (*dakṣiṇā*), the liberal bestowal of which is pronounced to be the height of piety. In this group, prayers of a less interested nature, as for wisdom and theological knowledge, are rare. Sacrificial hymns and spells, besides those borrowed wholesale from the Rigveda in bk. xx., occasionally appear in other parts of the Atharvaveda. The group of cosmogonic and theosophical hymns doubtless constitute the latest additions to this collection. Their speculations and terminology indicate a development of philosophy corresponding to that which appears in the Upaniṣads. They are not to be regarded as forming a connecting link between the philosophy of the Rigveda and

that of the Upanișads. They are mystical productions not of genuine seekers after truth, but of sorcerers who utilize the philosophical notions current in their day mainly to subserve their practical purposes. Among the hymns of this class may be mentioned those in which the sun appears as a cosmogonic principle (xiii.; xi. 5), and those in which personifications of Prāṇa, or Breath (xi. 4), Kāma, or Desire (ix. 2), Kāla, or Time (xix. 53-54), and even Uchchhiṣṭa, or 'Remnant' of the sacrifice (xi. 7), are deified as the Supreme Being.

The *literary merit* of the Atharvaveda is, as may be expected from its contents, much lower than that of the Rigveda. But a few of its hymns, besides many isolated verses scattered throughout the collection, furnish specimens of true poetry. Such is the long hymn (xii. 1) in which the Earth is invoked as the supporter of all living things and the bestower of all blessings. Another (iv. 16), though concluding with two verses essentially Atharvan in character, exalts the omniscience of Varuṇa in language unsurpassed by any hymn addressed to that deity in the Rigveda.

The geographical data found in the Atharvaveda indicate that its composers lived in a region much farther east than the home of the singers of the Rigveda. Certain tribes of the north-west are referred to as remote, while the country of the Magadhas (Bihar) and that of the Aṅgas (Bengal) are mentioned as known. By the time this Veda was completed the Aryan migration appears, therefore, to have extended as far as the Delta of the Ganges. It is noteworthy that the Atharvaveda seems never to have penetrated to South India, and that it is practically unknown there at the present day.

The Atharvaveda and the Rigveda combined enable us to understand fully the character and spirit of the oldest poetry of the Aryan Indians. The information we derive from the former supplements in a remarkable manner what we know from the latter about the religious and social conditions of the times, especially the more intimate side of domestic life, the regulated form of which is presented by the Gṛhya Sūtras, or manuals of domestic ritual, belonging to the latest stratum of Vedic literature (*c.* 500–200 B.C.). Between them these two Vedas furnish a body of material which is of inestimable value, not only for the early history of India in its various aspects, but for the study of the development of human institutions in general.

12. Though the two liturgical Vedas cannot be said to consist of hymns, it is perhaps advisable to describe as briefly as possible their form, their arrangement, their contents, and their relation to the other Saṁhitās. The **Sāmaveda** consists of 1549 stanzas chanted in various melodies, called *sāman*, to accompany the Soma ritual. Its stanzas are nearly all borrowed from the Rigveda, chiefly from bks. viii. and ix. The 75 stanzas not derived from the Rigveda are to be found in other Saṁhitās or in ritual works. Its stanzas are mostly composed in the *gāyatrī* metre or in the so-called *pragātha* strophe, both of which metrical forms were originally meant to be sung (their names being derived from *gā*, 'to sing'). It is divided into two parts. The first consists of 585 single stanzas arranged in decades, the first group of which is addressed to Agni, the second to Indra, the great Soma drinker, and the third to Soma. The second part, containing 400 chants, is arranged on a different principle. It consists throughout of small groups of stanzas, closely connected and generally three in number, which follow the order of the main sacrifices. Internal evidence shows that the second book is secondary in character as well as later in date. As regards the age of the Sāmaveda, it is at least certain that the divisions of the first book are known to the Śatapatha Brāhmaṇa. There is also some ground for believing that as a collection the Sāmaveda is older at any rate than two of the recensions of the Yajurveda, the Taittirīya and the Vājasaneyi Saṁhitās. The two parts of this Veda supply only the words. The melodies of the chants were doubtless long handed down by vocal tradition only. They were later collected in *gānas*, or 'song-books,' which indicated in musical notation the manner in which the words were to be sung. These tunes received special names in very ancient times, two of them, the *Bṛhat* and the *Rathantara*, being even mentioned in the Rigveda. There are indications that the oldest of them may have been of popular origin and connected with the rites of pre-Brāhmanical sorcerers. Thus the second part of the Sāmavidhāna Brāhmaṇa, a ritual work belonging to the Sāmaveda, is a manual of witchcraft which prescribes the employment of various *sāmans* for purposes of sorcery. The injunction of the Brāhmanical law-books, that the recitation of the Rigveda and the Yajurveda must cease on the sound of a *sāman* being heard, is perhaps a reminiscence of such early use.

Thus, though the contents of the Sāmaveda are worthless from a literary point of view, they are of some value for the history of sacrifice and witchcraft, and decidedly important for that of Indian music.

13. **The Yajurveda** is the prayer book of 'sacrificial formulas' (*yajus*), from which it receives its name, and which are in prose. These form about one-half of its matter and are original. The remainder is metrical, consisting of stanzas (*ṛchas*), about one-half of which are original, while the other half are borrowed from the Rigveda. The latter are taken over singly or in groups for application to a particular ceremony, but a few entire hymns, such as the *puruṣasūkta*, 'Hymn of Man' (x. 90), have found their way into this collection. In the characteristic prose formulas and prayers of the Yajurveda, the gods are not always invoked or prayed to, but various sacrificial implements or rites are brought into connexion with them. Thus the priest, in offering an oblation, says, 'Thou art the body of Soma, thee (I offer) to Viṣṇu'; or, in taking hold of some utensil, he exclaims, 'At the stimulation of god Savitṛ I grasp thee with the arms of the Aśvins, with the hands of Pūṣan.' The object of most of these formulas is not to worship the gods, but to force them to fulfil the desires of the sacrificer. Many of them are in fact nothing else than spells in prose. Among them imprecations like those of the Atharvaveda are also to be met with. Here, too, we find the beginnings of that form of prayer which seeks to influence a god by the repetition of his various names, and which was greatly developed in later times. This is represented by the *Śatarudriya*, or enumeration of the hundred names of the god Rudra. A similar tendency appears in the frequent employment of sacred but unintelligible exclamations, especially the syllable *om*, which, having originally been a particle of assent, is somewhat analogous to the Hebrew 'Amen.' Thus prayer in the Yajurveda shows deterioration as compared with the Rigveda and a proclivity to revert from the domain of religion to that of witchcraft.

The language and the metre of the prose formulas and of the original verses of the Yajurveda agree on the whole with those of the Rigveda, but represent a distinctly later stage. The internal evidence of the subject-matter points in a similar direction. It shows that the country in which the Yajurveda was composed lay much farther east

than that of the Rigveda, having as its centre the tract between the two small rivers Sarasvatī (Sarsuti) and Dṛṣadvatī (Chautang), somewhat to the west of the Jumna. The organization of society also appears at a more advanced stage than in the Rigveda, the caste system in particular having grown up and been consolidated in the interval.

The Yajurveda has come down to us in six recensions. Four of these form a closely connected group, called the Black Yajurveda, the texts of which are often identical word for word. They agree in mixing up, to some extent, explanatory matter with their sacrificial formulas and stanzas. The two other recensions, which are very closely allied, form the so-called White Yajurveda. This contains the prose and verse formulas to be recited at the sacrifice only, the explanatory matter being collected in a Brāhmaṇa. It is divided into 40 chapters, in which several chronological strata may be distinguished. It appears to have originally consisted of the first eighteen alone, for this is the only portion explained word for word in the Brāhmaṇa and recurring in the Taittirīya recension of the Black Yajurveda. To them were then added the next seven chapters. These 25 chapters together form the older part of this recension and contain the prayers for the most important great sacrifices, which comprise food offerings on the one hand and Soma offerings on the other, both being associated with the cult of fire. The remaining fifteen chapters are evidently of a supplementary character. The fortieth, being an Upaniṣad, was added last of all. Even the original part of this recension must have assumed shape at a later date than any of the recensions of the Black Yajurveda, because the separation and distribution of its matter are more systematic than in the latter.

Though the Yajurveda can scarcely be said to display any literary merit, it is important and even interesting to the student of the history of religions, especially with reference to the significance of prayer.

LITERATURE.—1. *EDITIONS.*—Rigveda: T. Aufrecht[2], Bonn, 1877; F. Max Müller[2], London, 1890–92. Atharvaveda: R. Roth and W. D. Whitney, Berlin, 1855–57; Shankar P. Pandit, Bombay, 1895–99; *The Kashmirian Atharvaveda* (Paippalāda Recension), M. Bloomfield and R. Garbe, Baltimore, 1901; books i.–iii. ed. with critical notes by L. C. Barret, in *JAOS* xxvi. [1906] ff. Sāmaveda: T. Benfey, Leipzig, 1848; Satyavrata Sāmaśramī, 5 vols., Calcutta, 1874–78; Jaiminīya Saṁhitā of the Sāmaveda, W. Caland, Breslau, 1907. Yajurveda: Vājasaneyi Saṁhitā, A. Weber, London and Berlin, 1852; Taittirīya Saṁhitā, A. Weber, Berlin, 1871–72; Maitrāyaṇī Saṁhitā, L. v. Schroeder, Leipzig, 1881–85; Kāṭhaka Saṁhitā, L. v. Schroeder, 4 vols., do. 1900–13, Index vol., 1912.

A. A. MACDONELL.

**HYPERBOREANS.**—A people who, in Greek legend, were fabled to live in the extreme north, beyond (ὑπέρ) the north wind (βορέας), and hence to enjoy a warm climate which continually gave them sunshine and abundance. They were imagined to exist without war, and free from all natural ills; but they were not supposed to be immortal, the life of each Hyperborean being 1000 years in duration. They are mentioned in poems attributed to Homer and to Hesiod, and are described by Pindar and Herodotus. Æschylus (*Choeph.* 373) alludes to their proverbial felicity. Later writers, like Strabo, accept them (on the authority of Pindar, Simonides, etc.) as having at least a legendary existence. They were thought to be worshippers of Apollo, and especially to have sent maidens to Delos for the service of that god. Herodotus (iv. 36) says: 'If Hyperboreans exist, then there must also be Hypernotians' (who live as far to the south as the Hyperboreans live to the north), and seems sceptical as to the real existence of the people, though he narrates the legend of the maidens coming to Delos (iv. 33–35). Pindar (*Pyth.* x. 29–34) says that it is impossible for men to mount to heaven or reach by sea or land the Hyperboreans, 'with whom Perseus once feasted, as they were sacrificing asses to the god' (Apollo). He depicts them as a joyous, music-loving race, to whom disease and old age never came.

The etymology of the name is not certain, but *bor* is probably the same as Skr. *gir*, 'mountain'; and *hyper-borean* may at first have meant (as Otto Schroeder thinks) 'above the mountains' (in heaven); that is, it may have been an appellation of celestials. But, from a comparison of similar myths, it seems more probable that, while 'over the mountains' is the literal meaning of the word, the locality thus indicated had, as is usually understood, the sense 'across' rather than 'above' the mountains. For the Hyperborean myth is not unique. It has a parallel in the Hindu fable of the 'Northern (*uttara*) Kurus,' who live for '10,000 and 1000' years in a land of bliss beyond the northern mountains—a land of perpetual bloom, where the food is the 'milk of the milk-tree, resembling ambrosia' (see art. BLEST, ABODE OF THE [Hindu]). These Hindu Hyperboreans also are ever free from illness. Megasthenes, in the 4th cent. B.C., made the Greeks acquainted with them (*FHG* ii. 424), and the parallel with the native Greek myth is noticed by Strabo (p. 711). In Hindu tradition, Mount Meru is also supposed to be in the north, and is described as the abode of bliss. The Persians, too, had a form of the legend in the myth of Yima's paradise (see art. BLEST, ABODE OF THE [Persian]), a garden of delight having imperishable food, where people live 'without age or

death,' although this paradise seems to be combined out of various elements, and may originally have referred to a happy realm of the blest hereafter.

The tradition of a northern home, which succeeding generations would conceive of as an abode of greater and greater felicity, is not incompatible with the geographical origins of the Indo-Europeans, who entered Greece and India from a northern land; and it is possible that the myth of the Hyperboreans has in it some germ of historical truth, especially as there is other evidence in the Vedic age of the northern origin of the people holding this tradition. The same myth, however, is found among some of the tribes of North America—of course, set in an appropriate frame; and this fact has led to the more or less fanciful interpretation of the story as a tradition belonging to the whole human race, and commemorating descent from the arctic zone, the garden of Yima and Mount Meru being the North Pole. Such a hypothesis is too ill supported to meet with general approval, and much of the literary evidence adduced in its support is unconvincing.

LITERATURE.—Homer, *Epigoni*, and *Hymns* (vi. 29); Pindar, 10th *Pythian Ode*; Herodotus, iv. 32 f.; Strabo, p. 711 (xv. 57); Hesiod and Simonides, as cited by later writers; Plutarch, *Moral.* 1136; O. Crusius and M. Mayer, 'Hyperboreer,' in Roscher, i. 2805–41; B. G. Tilak, *The Arctic Home in the Vedas*, Poona, 1903; J. T. Wheeler, *The Zonal-Belt Hypothesis*, Philadelphia, 1908. For the etymology of the word, cf. Otto Schroeder, in *ARW* viii. [1905] 81; see also W. Mannhardt, *Wald- und Feldkulte*, Berlin, 1875–77, ii. 234 ff.

E. WASHBURN HOPKINS.

**HYPNOTISM.**—Hypnotism is the name now generally given to the study of, and the practice of inducing, a peculiar abnormal state of mind which in some respects is allied to sleep (hence the name, from ὕπνος, 'sleep'). The modern practice of hypnotism has been developed from the practice of 'magnetic' or sympathetic healing, which enjoyed a great vogue in Europe and especially in Paris in the latter half of the 18th cent., owing chiefly to the labours of F. A. Mesmer (whence the term 'mesmerism,' still in popular use). Until the middle of the 19th cent. almost all practitioners of 'mesmerism' followed Mesmer in attributing the effects they produced in their patients to the passage from the operator to the patient of some subtle physical influence or fluid, generally called 'animal magnetism.' The adoption by the mesmerists of this unverifiable conjecture largely accounts for, and to some extent perhaps justifies, the extreme scepticism and hostility with which the arts of the mesmerists were regarded by the great bulk of the medical profession until almost the close of the 19th century.

To a French physician, Alexandre Bertrand, belongs the honour of having first pointed out (*Traité du somnambulisme*, Paris, 1823) that the therapeutic and other effects attributed to 'animal magnetism' are (in so far as they are genuine, and not, as in the early days so many were, errors due to fraud or to malobservation) to be regarded as in the main produced through the mind of the patient working upon the organism, as effects of expectation induced in the mind of the patient by suggestions given directly or indirectly by the operator, these effects being generally favoured and intensified by a peculiar mental and bodily condition of the patient induced by the mesmeric procedures. Bertrand's great discovery remained, however, almost unheeded by the medical world; and twenty years later James Braid, a surgeon of Manchester (*Neurypnology*, London, 1843), arrived independently at the same conclusions, and by his successful application of hypnotic measures in his practice secured for them, under the name of 'Braidism,' a certain consideration even in medical circles. But it was not until the truth was discovered and published independently for the third time in 1884 by H. Bernheim, Professor of Medicine at Nancy, that it began to gain general acceptance in the scientific world and (under the name of 'hypnotism,' which Braid had suggested) to be applied by medical men in all parts of Europe without serious risk of loss of their professional reputations. In the last decade of the 19th cent. it became generally recognized that hypnotism was a legitimate method of medical practice, extremely useful in many cases of nervous and functional disorder.

When Bernheim published his work (*De la Suggestion*, Paris, 1884), he took the view that the therapeutic effects he recorded were secured by creating in the mind of the patient the expectation of the disappearance of symptoms; and the process of inducing such expectation, which generally took the form of confident affirmation on the part of the physician, he called 'suggestion.' He recognized that such 'suggestions' operate more powerfully if the patient to whom they are directed is first brought into a drowsy or half-sleeping state. But he did not recognize that this state, so favourable to the operation of suggestion, differs essentially from a normal state of drowsiness. On the other hand, Charcot, the celebrated physician who extensively applied the hypnotic methods in the Salpêtrière Hospital at Paris (in the eighties), taught that the hypnotic state is a peculiar and abnormal condition which can be induced only in persons suffering from certain nervous deficiencies. These two views of the hypnotic state were opposed to one another in a lively controversy prolonged through many years. It is now generally recognized that the truth is to be found by adopting the middle way. Hypnosis (as the hypnotic state is now generally called) is a peculiar state of mind, involving some abnormal condition of the nervous system, as Charcot maintained; but this condition is one which can be temporarily induced by a skilful hypnotist in the great majority of normal and perfectly healthy persons. The most constant, perhaps the only constant, feature or symptom of hypnosis is the increased suggestibility of the subject; for, although in most cases, especially in cases of deep hypnosis, the subject presents the appearance of drowsy passivity or even profound sleep, this is not always the case; and in this respect much depends upon the methods used for the induction of hypnosis and the general handling of the case by the operator.

In a typical condition of hypnosis of moderate depth, the subject appears completely plastic in the hands of the operator. He remains unresponsive to, and apparently unaffected by, all persons and things of his environment, except the operator and those things or persons to which the latter may direct his attention. But, in relation to the operator, his mind and senses seem to be peculiarly alert and responsive; and he obeys implicitly the slightest indications of the operator's wishes or expectations. This responsive obedience, however, which is the essence of the abnormal 'suggestibility' of the subject, is not a voluntary obedience; it differs from the most abject voluntary obedience in two important respects. First, the hypnotized subject may, and sometimes does, exert his will to resist the suggestions of the operator; and, though such exertion may be attended with more or less success according to the depth of the hypnosis, the degree of training of the subject, and the extent of the personal influence established by the operator, the measure of its success is very much less than in the normal condition, or the effort required for success is much greater. Secondly, the subject's obedience to, or acceptance of, suggestions is much more complete, unhesitat-

ing, and uncritical, than in the normal state. He accepts with conviction suggestions so improbable and against all common experience that in his normal state he could not accept them or believe in them even though he should endeavour to do so. For example, he may be told that he cannot lift his hand from his knee, and forthwith he finds himself unable to perform this simple action. And in a similar way he may be prevented from performing any other movement or be made to execute any 'suggested' movement. In such cases it seems that the essential condition of the effectiveness of the 'suggestion' is that the notion suggested to the subject shall be accepted by him with complete conviction, and shall prevail firmly in his mind without being subjected to the criticism or opposition of other notions. There is good reason to believe that, if any person in a normal condition could be induced to accept any such suggestion with complete conviction, the notion thus established in his mind would be just as effective in controlling his movements as is the suggestion made during hypnosis; for we occasionally observe instances of such control of movement by an idea suggested under peculiarly favourable conditions to a person in a normal state. And not only control of bodily movement, but many others of the phenomena of hypnotism, notably the induction of hallucinations and delusions of all sorts, and the abnormally increased influence of the mind over organic functions such as sleep, the action of the bowels, and the circulation of the blood, may plausibly be brought under the same type of explanation.

According, then, to one view widely prevalent among the more orthodox psychologists and practitioners of hypnotism, hypnosis is essentially a condition in which the suggestibility (the tendency to accept any proposition imparted) normal to all minds is temporarily increased owing to some peculiar condition of the patient's brain induced by the process of hypnotizing him; and this condition of the brain is held to be one of 'relative dissociation,' *i.e.* one in which the interplay of the systems of neurons (the anatomical elements of which the brain is composed) is rendered less free and lively than it normally is, so that, any one system being excited, it works out its effects in an untrammelled and thorough manner.

But there is a class of hypnotic phenomena which does not easily lend itself to interpretation of this simple type; in various ways the subject's behaviour may seem to express two independent but simultaneous streams of mental activity, and this peculiar condition seems in many cases to be prolonged beyond the period of hypnosis into the fully waking state. It is, in fact, in the influence of commands or suggestions given during hypnosis, but designed to take effect after the termination of that period (post-hypnotic suggestions), that the dual stream of mental activity is most clearly revealed. For the waking subject may be quite unable to recall to consciousness any incident of the period of hypnosis or the nature of any suggestions made to him during that period, and yet he may carry out such suggestions with minute accuracy; and these post-hypnotic suggestions thus carried out by the waking subject, without conscious recollection of the instructions given, may be such that their execution implies complex intellectual activities. For example, the subject may be instructed to perform some simple action after the lapse of a given number of minutes; and in some cases the number of minutes so named may be so large that the accurate determination of the appointed moment may necessitate either continuous counting of the passage of the minutes throughout hours, days, or even weeks, or the carrying out of complicated arithmetical operations which seem to be beyond the normal powers of the subject. Such post-hypnotic executions of suggestions are typical of a large class of phenomena which seem to render necessary the notion of subconscious or co-conscious mental activity.

Some of the exponents of the hypothesis of neural dissociation attempt to apply it to the explanation of the facts of this order also. Others, notably Pierre Janet, attempt a rather different line of explanation. They argue that, while truly productive mental process is always fully conscious and involves the activity of a centre of synthetic mental energy, the subconscious processes are always of the nature of semi-mechanical or automatic repetitions of processes previously achieved by true mental activity.

To many students of hypnotism it seems that both these attempts at explanation are wholly inadequate. It may be admitted that neural dissociation of various degrees is characteristic of the hypnotic state, while yet it is recognized that this hypothesis affords but a partial interpretation of a part of the facts. By those who take this view it is urged that, according to both these theories, hypnotic and subconscious mental processes must be of a relatively low grade of efficiency (and many of them, no doubt, answer to this description); yet in some cases, it is pointed out, they far surpass in intellectual level or in range of control over bodily functions the normal mental processes of the subject; and it is insisted that these features of hypnotic process must be considered in relation to a wealth of facts which have been recorded in the course of modern studies of hysteria, spontaneous trance, mediumship, genius, religious conversion and ecstasy, and other unusual mental states and processes in which the bounds of normal mental activity seem to be transcended.

When hypnosis is thus regarded in relation to the larger field of manifestations of obscure but wide-ranging powers of the mind, hypnotism appears as a means of experimental investigation capable of greatly extending and deepening our conception of human personality; and it is from this point of view that many of the most effective students have pursued it, and that many interesting speculations have been made for the purpose of rendering the facts in some degree intelligible. Such speculations are, in the main, of two types. On the one hand, the psychical constitution of man is regarded as indefinitely richer and more complex than is revealed by the course of our normal mental life, as comprising potentialities or faculties which normally find no expression owing to the limitations imposed by our bodily organization, and which find only partial and very incomplete expression in the super-normal phenomena of the abnormal states of which hypnosis is the experimental type. Of speculations of this group, the conception of the 'subliminal self' put forward by F. W. H. Myers (*Human Personality and its Survival of Bodily Death*, London, 1903) is the boldest and most elaborated.

Speculations of the other type (best represented by William James in *A Pluralistic Universe*, London, 1909, and other writings) attempt to account for the super-normal phenomena by conceiving human individuality as relative only and as conditioned by the nature of the bodily organization. Each human mind or personality is conceived as but a fragmentary and temporary expression of some larger psychical whole; and it is sought to explain the super-normal phenomena by assuming that they are rendered possible by some temporary relaxation or breaking down of the conditions by which the isolation of the individual mind is commonly maintained, so that for the time being it may share in

the larger life of the whole, of which it is in reality a part, and may draw psychical or spiritual energy from the common store more freely than is possible in normal conditions.

That some such far-reaching hypothesis would be needed for the explanation of the facts is indisputable, if any large part of the mass of supernormal phenomena reported by careful and credible observers should be finally established—telepathy, clairvoyance, expression of knowledge possessed only by deceased persons, and so forth. Those who attempt to explain all the facts of hypnosis in terms of the hypothesis of the division or dissociation of the normal mind generally ignore or repudiate the alleged super-normal phenomena as the products of fraud or error. The decision as to the type of theory which must eventually gain general acceptance for the explanation of hypnosis thus depends upon disputed questions of fact in that obscure and difficult province of investigation in which the Society for Psychical Research has now for a generation been actively engaged.

Moll, *Der Hypnotismus*, Berlin, 1889 (Eng. tr., London, 1901); art. 'Hypnotism,' in *EBr*[11]; several artt. in *Proc. of Soc. for Psychical Research*, especially those by E. Gurney, in vols. i.–v.

W. McDOUGALL.

**HYPOCHONDRIA.**—In the literature and practice of medicine, hypochondria is regarded as one of the many forms of mental affection embraced under the term 'melancholia.' Any uneasiness or disease of the regions on either side of the abdomen beneath the cartilages of the false ribs, of the hypochondriacal regions in short, was, from the earliest times, associated with those feelings of profound depression and sense of ill-being which constitute the basis of the affection. This is well illustrated in the old Folio frontispiece of *The Anatomy of Melancholy*, where Hypochondriacus is depicted leaning on his arm:

> 'Winde in his side doth him much harm
> And troubles him full sore, God knows,
> Much pain he hath and many woes.'

Underlying all signs of hypochondria are functional disorders, less frequently organic disease, of any portion of the intestinal tract from the stomach downward or of the larger secretory glands in the abdomen, especially the liver and the sexual organs, or a combination of these conditions. Consequent on deranged chemical processes initiated by the abnormal functioning of the abdominal organs and the absorption of poisonous products thus elaborated into the blood system, all parts of the body may be functionally disturbed, and more particularly those organs and tissues which are predisposed. There is a consensus of opinion that hypochondria is induced by poisons arising from the deranged chemical processes above mentioned (metabolic origin); but recent researches suggest that the virus in the blood may be due to the presence of micro-organisms, which find a footing in the disordered walls of the intestinal tract; cases of hypochondria have been recorded in which the mental affection has disappeared with the elimination of such organisms under appropriate treatment (microbic origin).

Sense impressions received by way of the several intestinal and abdominal organs do not intrude on the mind in healthy states save as vague, and not clearly distinguishable, pleasurable emotions. Where disordered or diseased functioning occurs, the affective or emotional elements of mind are of a more or less painful nature. Further, where there is an insane or neurotic inheritance, such as is commonly found in hypochondria, varied manifestations of this malady are excited by worry, shock, or mental stress and strain of any kind.

Hypochondria is more prevalent in men than in women, and is usually met with in middle age; it is rarely seen in persons under thirty. It is preceded, as a rule, by dyspeptic and anæmic conditions, is insidious in its origin, and develops slowly. The attack may be slight, and take the form of mild depression. In such circumstances it does not interfere with one's occupation, and ends in recovery after a few weeks or months of proper attention. In many cases, especially where there is a hereditary taint, the disease develops and may pass the limits of sanity. Here the disturbed general sensations already referred to force themselves on the attention, gradually arrest it, and occupy the whole mental domain. The affected person becomes fearful and anxious. There is marked mental inhibition and particularly of will power. The sensations perceived are much exaggerated; thus excessively painful spots are pointed out, shooting pains are complained of, and loud lamentations are made of loss of power or want of sensation in various parts of the body. The trouble grows worse until the hypochondriac thinks of nothing but his many ailments, and believes he is the subject of some frightful malady. He seeks relief in all sorts of remedies, and consults all kinds of persons in the hope of finding help. He is constantly searching his excretions for signs of serious disease; he reads medical and quack literature in order to diagnose his condition. Any mild disorder he has, or change in his appearance, is magnified into a grave malady; spots on his skin are signs of syphilis; vague pains and throbbing in the head tell him that his brain is dissolving or breaking up. He points to well nourished limbs and says they are wasted or dead. He believes he is the source of infectious disease, and recounts all his ailments in endless variety. The sensations arising from the disordered or diseased organs of the body are falsely interpreted, and are, therefore, to be classed as illusions. These illusions constitute prominent symptoms of hypochondria, and the most striking examples of the serious effects of illusion are seen in this connexion. The misinterpretations thus referred to pass insensibly into false conceptions and judgments. Hallucinations, *i.e.* the experience of sensations, when the terminal sensory organs are not excited, are not common. When they do occur, they are generally auditory and incidental (see, further, art. HALLUCINATION).

A lady known to the writer, when labouring under hypochondria in an advanced stage, believed that an egg, which she had partaken of, had developed into a chicken. She heard the chirp of this chicken for some days coming from the region of the epigastrium. As the chicken grew the chirp was no longer heard, and the beliefs changed into ideas based on the illusion that a fowl was located somewhere in the intestine, and that, whenever food was taken, this bird picked it up. The sensations of the act of picking were graphically described. The gnawing pains of an ulcer, subsequently discovered in this patient, accounted for the sensations and the beliefs experienced, as they disappeared with the surgical treatment of the ulcer.

The mental pain felt by the hypochondriac is more apparent than real. He may look the picture of grief when detailing his distresses, but, unlike the true melancholic, he can for the moment be diverted from his troubles to talk rationally and act brightly. Defective will power and loss of memory are associated with hypochondria. The memory defect is due to the concentration of the mind on the bodily troubles. All other thoughts for the time are excluded, and so the experience of recent events not obtruding on his limited mental outlook is lost.

Hypochondria is not easily confused with other mental affections. Though it differs in degree only from true melancholia, which is more concerned with morbid thoughts than morbid sensations, there are obvious differences: the hypochondriac is restless, always seeking for sympathy and the ear of one to whom he may detail his sorrows; the

melancholic generally keeps to one place and one attitude, and does not dwell on his mental state unless under pressure. The frequency of suicidal attempts, which are generally openly made, is to be explained by the desire of the hypochondriacal to elicit sympathy and not from any impulse to self-destruction, though it has to be noted that in a few cases such attempts may be accidentally successful. The suicidal attempts of the melancholic are generally deliberate and secretive.

The condition known as 'psychasthenia' has been confounded with hypochondria. In this disease, there are irrepressible thoughts, fears, and impulses, and an absence of those morbid sensations which are the central theme of hypochondria. Hypochondriacal symptoms not infrequently arise in the course of many forms of mental disease; they are generally of a temporary nature, and due to the same causes as are at the basis of the real affection.

With appropriate treatment, hypochondria is eminently recoverable. The main lines of treatment are rest, alteratives, tonics, milk and farinaceous foods, and, above all, cheerful surroundings and skilful nursing.

LITERATURE.—D. Hack Tuke, art. 'Hypochondria,' in *Dict. of Pysohol. Medicine*, London, 1892; chapters in the many works on Mental Disease, such as T. Clouston's *Clinical Lectures on Mental Diseases*[4], do. 1896, *Hygiene of Mind*, do. 1906, and *Unsoundness of Mind*, do. 1911; H. J. Berkley, *Mental Diseases*, do. 1900; W. H. B. Stoddart, *Mind and its Disorders*, do. 1908; L. C. Bruce, *Studies in Clinical Psychiatry*, do. 1906; A. Church and F. Peterson, *Nervous and Mental Diseases*[5], New York, 1906; Eugenio Tanzi, *Mental Diseases*, Eng. tr., London, 1909; Ernesto Lugaro, *Modern Problems in Psychiatry*, Eng. tr., Manchester, 1909.

HAMILTON MARR.

**HYPOCRISY.**—Primitive man was so much a member of the society to which he belonged that he was unable to conceive of any existence apart from it. It was all-important to him that there should be a body with power to regulate his habits. What he wanted most urgently was to be disciplined, and early society undertook this task with a will. What he got was a comprehensive rule binding men together, making their conduct in similar matters the same, moulding them, as it were, into a common pattern. The rules evolved covered the whole field of life as completely as a modern bureaucrat could desire. There was no room left for individuality, for conduct in every respect must conform to the common type. Primitive man, too, was most anxious to comply perfectly with the rules laid down for him; he was afraid of the wrath of the gods incurred by any departure from them. The element of fear bulked largely among the motives controlling his life. Like ourselves, from this point of view, he hated trouble, and chose—though he was barely conscious that he made a choice—the line of least resistance. In tropical Africa the country is covered by a network of narrow footpaths, made by the natives. These paths seldom run straight, and their flexuosities witness to small obstacles, here a stone and there a shrub, which the feet of those who first marked the path avoided. To-day one may perceive no obstacle. The prairie which the path crosses may be smooth and open, yet every traveller follows the windings, because it is less trouble to keep one's feet in the path already marked than it is to take a more direct route for oneself. The latter process requires thought and attention; the former does not. Primitive man instinctively felt this, and discouraged all independence of judgment. He was most desirous of creating what Bagehot called 'a cake of custom' to bind all his actions into a whole that would commend itself to his community. Consequently, hypocrisy was an idea outside his line of action, for he wanted to conform.

This intense eagerness to conform can easily be seen in such arrested civilizations as those of the East. The hardening of the cake of custom became too much for India, and men were so stereotyped by this hardening that they were unable to break through it. There is a tendency in descendants to differ from their progenitor, but the Indian discouraged variation from the original type. Among successful peoples the differers dissembled at first, until they became strong enough to soften the cake of custom, though they pretended to themselves that they had changed nothing.

This course, however, was the exception, not the rule; for the propensity of man to imitate what is before him is one of the strongest parts of his nature. In early times it was a case of 'that which hath been is that which shall be; and that which hath been done is that which shall be done: and there is no new thing under the sun' (Ec $1^9$). This extreme propensity to imitation forms one great reason of the amazing sameness which every observer notices among savage nations. No barbarian can bear to see one of his nation deviate from the old barbarous customs and usages of his tribe. All the tribe would inevitably expect a punishment from the gods if any one of them refrained from what was old or began what was new (cf., further, art. CUSTOM). Comparative sociology at once reveals a substantial uniformity of genesis. The habitual existence of chieftainship, the establishment of chiefly authority by war, the rise everywhere of the medicine-man and the priest—these are evident in all early organizations. It is true the old order changes—leaving some room for dissemblers—yielding place to the new, but the new does not wholly consist of positive additions to the old; much of it is merely the old very slightly modified, very slightly displaced, and very superficially re-combined. 'If you want,' remarked Swift, 'to gain the reputation of a sensible man, you should be of the opinion of the person with whom for the time being you are conversing.' It is obvious, then, that all primitive men were profoundly sensible. When Lord Melbourne declared that he would adhere to the Church of England *because* it was the religion of his fathers, he was acting upon one of the most deeply rooted maxims of his ancestors.

Conduct in the olden days was never individualistic; it was always corporative. To early man all his acts were tribal, for all the acts of the tribe involved him in their consequences. Hypocrisy to him was abhorrent, for he could not bear any divergence from the observed ritual. When the street statues of Hermes were mutilated, all the Athenians felt afraid; they thought that they would be ruined because one of their corporate body had mutilated the image of a god. The mind of the citizen had been so permeated by the ideas of the day that they were part and parcel of its mental furniture. His brain, not merely his actions, was so cut and marked as to conform to the orthodox type. His habits, his superstitions, and his prejudices were absolutely those of his fellow-tribesmen. In the Fiji Islands, for example, a chief was one day going over a mountain path followed by many of his people, when he happened to stumble and fall. All his followers, save one, also stumbled and fell. Immediately they beat the defaulter, asking him whether he considered himself better than the chief.

The Greeks and the Romans possessed the seed of adaptiveness, and were, therefore, able to free themselves from the cake of custom. This freedom, however, made possible the existence of the hypocrite, and Æschylus (*Agam.* 788 ff.) analyzes the traits in his character:

πολλοὶ δὲ βροτῶν τὸ δοκεῖν εἶναι
προτίουσι δίκην παραβάντες.
τῷ δυσπραγοῦντι δ᾽ ἐπιστενάχειν
πᾶς τις ἕτοιμος· δῆγμα δὲ λύπης
οὐδὲν ἐφ᾽ ἧπαρ προσικνεῖται·
καὶ ξυγχαίρουσιν ὁμοιοπρεπεῖς
ἀγέλαστα πρόσωπα βιαζόμενοι.
ὅστις δ᾽ ἀγαθὸς προβατογνώμων,
οὐκ ἔστι λαθεῖν ὄμματα φωτός,
τὰ δοκοῦντ᾽ εὔφρονος ἐκ διανοίας
ὑδαρεῖ σαίνειν φιλότητι.

The *Iliad* (ix. 312 f.) speaks even more plainly:

ἐχθρὸς γάρ μοι κεῖνος ὁμῶς Ἀΐδαο πύλῃσιν,
ὅς χ᾽ ἕτερον μὲν κεύθῃ ἐνὶ φρεσίν, ἄλλο δὲ εἴπῃ.

With this passage may be compared *Od.* xviii. 282 f., and Theognis, *Eleg.* 87. So far has the Greek travelled from the old conception that Plato lays down in the *Republic* (iii. 394) that our guardians ought not to be imitators, and that the productions of the imitative arts are bastard and illegitimate (x. 603 ff., *Laws*, xi. 915 f.).

During the last two centuries of the Roman Republic the presence of superstition and scepticism is very noticeable. With the unreality of Roman literature was combined the unreality of education. The teacher often selected questions of casuistry for discussion by the pupil. Such discussions inevitably developed the tendency of the age to affectation and lack of reality. To this Lucian and Seneca, Statius and Velleius bear witness. In the pages of the first writer we meet the sham philosopher, speaking loudly of virtue while his cloak covers all the vices of dog and ape. Cicero (*de Nat. Deor.* ii. 28. 70, iii. 17. 43, *de Div.* i. 3. 6), Seneca (frag. 39), Panætius, Polybius (vi. 56), Quintus Scævola, and Varro (Aug. *de Civ. Dei*, vi. 4) regarded religion as the device of statesmen to control the masses by mystery and terror. It had become impossible for these men to believe in the old faith, yet the people had to continue to take part in a gross materialistic worship. According to Gibbon, all religions were regarded by the people as equally true, by the philosopher as equally false, and by the statesman as equally useful. Cicero quotes a dictum of a Pontifex Maximus that there was one religion of the poet, another of the philosopher, and another of the statesman.

Stoicism maintained the idea of a 'double truth'—one truth for the intellectual classes and one for the common people, the climax being reached in the phrase, 'It is expedient for the state to be deceived in matters of religion' (*expedit igitur falli in religione civitatem*). Thinkers in the community adopted this attitude towards religion in the last cent. B.C. It is too much to say that they were hypocrites, but the outcome of their thought was hypocritical. Sulla used religion for State purposes, and with him it became merely another department of political activity. In Cicero's time old women had ceased to tremble at the fables about the infernal regions (*de Nat. Deor.* ii. 2–5). Even boys, according to Juvenal, disbelieved in the world of spirits (*Sat.* ii. 149–152). Cicero was an augur, yet he quotes with approval Cato's saying that he wondered how one augur could meet another without laughing. On the whole, however, the people still retained their faith in the old gods, which the educated had lost. The latter, in spite of their disbelief, attended carefully to the details of ritual. In their case creed and practice were utterly divorced, and the effects of this divorce on the moral character can easily be imagined. In commenting upon the life of Seneca, Macaulay remarks:

'The business of a philosopher was to declaim in praise of poverty with two millions sterling out at usury; to meditate epigrammatic conceits about the evils of luxury, in gardens which moved the envy of sovereigns; to rant about liberty, while fawning on the insolent and pampered freedmen of a tyrant; to celebrate the divine beauty of virtue with the same pen which had just before written a defence of the murder of a mother by a son' (*Essays*, pop. ed., London, 1870, p. 393).

Just as many a sturdy beggar in the Middle Ages donned the cowl of a begging friar, many an idle vagabond and profligate called himself a Stoic, and brought discredit upon the name. (See Tacitus, *Ann.* xvi. 32, for Egnatius, a hypocrite of this order; A. Grant, *Ethics of Aristotle*, London, 1866, i. 281; J. B. Lightfoot, *Ep. to Philippians*[4], London, 1878, p. 284, note 5.)

The latter-day philosophies of Greece proved to the Roman that the foundations of his religion were baseless, yet its existence was indispensable for the preservation of the State. This conflict between private belief and public conduct can be seen, for example, in Ennius. He wrote treatises, embodying advanced sceptical doctrines, and he also wrote patriotic poems in which the whole cycle of Roman gods was exhibited and most reverently treated. From Augustine's *de Civ. Dei* (iv. 27) we learn that Quintus Scævola develops the 'double truth' of Ennius into the familiar triple one—the religion of poets, of philosophers, and of statesmen. The writing of Scævola and Varro came too late, for Sulla's control of religion by the State had killed it.

Contemporary with the classical possessors of 'double truth' and 'triple truth' were the Pharisees, the people often taken as typical hypocrites. Their hypocrisy was a consequence of their past history, for, in the catastrophe of the Exile, Ezra perceived the danger of associating with the neighbouring peoples. The policy of splendid isolation was that best fitted to save Israel: it must 'observe to do all that is written in this book of the Torah,' that is, what is contained in the five books of Moses. The importance of the Torah forms the central point in the outstanding reformation of Ezra. Henceforward the Jew felt, as he had never felt before, that he had a guide laying down a detailed code of conduct; it was an honest attempt to guard the religious life of the family from the corruption of intercourse with strangers. The strict Jew became the *Pharisee*, 'the separate one.' As his strictness increased, he explored the Torah more thoroughly, and came to see that by analogy its precepts applied to cases not originally contemplated. The Scribes, the *Sôphěrîm*, interpreted the Divine teaching so widely that many traditions came into being; the *Responsa Prudentium*, the 'answers of the learned in law,' furnishes a parallel case from Roman law. The *Sôphěrîm* worked out rules applying to particular cases, much after the fashion of the Jesuits. Their system inculcated deliberation in judgment, which is the key to the casuistry of the Talmud. Moreover, the Scribe and the Jesuit equally urged that this deliberation proceeded from the desire to do justice to every possible aspect of the question at issue.

Under the princes of the Maccabæan house there was a steady tendency towards a stricter enforcement of the Torah. The Pharisees (*Pěrûshîm*, 'separated') frowned upon the worldliness of the rest of the nation, and formed themselves into distinct societies pledged to observe certain rules in the matter of meat, drink, and clothing, according as the Torah or traditions derived from it allowed or forbade these points. The rules of right conduct, the Hălākhāh, increased so much in scope that they practically covered all the actions of a man's life. It is plain that the Hălākhôth imposed upon the many what only the few could obey, and the result was hypocrisy, and formalism became prevalent. The tithing of mint, anise, and cummin was performed, while the motive of these actions was not sufficiently scrutinized. Jesus, then, was obliged to speak plainly in the long speech contained in Mt 23, when He said: 'Woe unto you, scribes and Pharisees, hypocrites!' In their case the letter had killed the spirit. They had played

a noble part in Jewish life, but their hypocrisy (cf. the seven classes of Pharisees, of whom five are hypocritical or foolish, *Soṭah* 22*b*) had destroyed their usefulness. They had been truly patriotic, truly scrupulous, but their social ritual forced them to become unscrupulous. It is the degeneration of the best which makes the worst, and the sincere observer of the Torah in the days of Ezra left for his successors in the days of Christ the most insincere of men.

Most men want their lives regulated for them, and what the *Sôphĕrîm* had done before the Christian era the Christian Church undertook to carry on. Cases of conscience had rules formulated for them, and in the writings of Thomas Aquinas we find an elaborate code of morality. In the *Summa Theologica*, ii. 2, the question of hypocrisy receives careful treatment.

Qu. cxi. art. i. asks, 'Is all simulation sinful?' Simulation, we learn, is properly a lie enacted in certain signs, consisting of outward actions; and it makes no difference whether one lies in word or in action. Hence, as all lying is sinful, so also is all dissimulation. As one lies in word when he signifies that which is not, but not when he is silent over what is—which is sometimes lawful; so it is simulation when by outward signs, consisting of action or things, any one signifies that which is not, but not when one omits to signify that which is; hence without any simulation a person may conceal his own sin.

Art. ii.: 'Is hypocrisy the same as dissimulation?' Augustine says: 'As actors (*hypocritæ*, ὑποκριταί) pretend to other characters than their own, and act the part of that which they are not; so in the churches and in all human life, whoever wishes to seem what he is not, is a hypocrite or actor; for he pretends to be just without rendering himself such.' So, then, hypocrisy is simulation, not, however, any and every simulation, but only that by which a person pretends to a character not his own, as when a sinner pretends to the character of a just man. The habit or garment of holiness, religious or clerical, signifies a state wherein one is bound to works of perfection. And, therefore, when one takes the holy habit intending to betake himself to a state of perfection, if afterwards he fails by weakness, he is not a pretender or hypocrite, because he is not bound to declare his sin by laying the holy habit aside. But if he were to take the holy habit in order to figure as a just man, he would be a hypocrite and pretender.

Art. iv.: 'Is hypocrisy a mortal sin?' There are two things in hypocrisy, the want of holiness and the state of possessing it. If, therefore, by a hypocrite we are to understand one whose intention is carried to both these points, so that he cares not to have holiness but only to appear holy—as the word is usually taken in Holy Scripture—in that understanding it is clearly a mortal sin; for no one is totally deprived of holiness otherwise than by mortal sin. But if by a hypocrite is meant one who intends to counterfeit the holiness which mortal sin makes him fall short of, then though he is in mortal sin, still the mere prudence on his part is not always a mortal sin, but is sometimes only venial. To tell when it is venial and when mortal, we must observe the end in view. If that end be inconsistent with the love of God and of one's neighbour, it will be a mortal sin, as when one pretends to holiness in order to dissemble false doctrine, or to gain some ecclesiastical dignity of which he is unworthy, or any other temporal goods, placing his last end in them. But if the end intended be not inconsistent with charity, it will be a venial sin, as when one finds pleasure and satisfaction in the mere assumption of a character that does not belong to him: of such a one it is said that 'there is more vanity than malice in him.'

This analysis is noteworthy because it is the presentation that dominated mediæval life, and in the *Summa Theologica* Latin Christianity received a definitive form, covering all the transactions of life. The separation between law and custom, thought and action, lies at the very root of all forms of hypocrisy, and literature bears witness to this divorce of creed and life.

The poem *Piers the Plowman* exposes the corruption of the times, while Chaucer's *Canterbury Tales* does not overlook the ecclesiastical courts. In *The Scourge of Villanie*, Marston analyzes the most offensive forms of the hypocrisy of the sensualist. The Reformers devote much attention to this particular vice. Bradford describes a hypocritical profession of the Gospel (*Sermons*, Cambridge, 1848, p. 436 f.). Ridley shows that hypocrisy is a double evil (*Works*, do. 1841, p. 60). Becon points out its prevalence (*Early Writings*, do. 1843, p. 40), analyzes it (*Prayers*, do. 1844, p. 610; cf. Bullinger, *Decades*, v. [do. 1852] 11 f.), exposes the dislike of God's word (*Catechism*, do. 1844, p. 468), the liability to fall away in time of persecution (*Prayers*, 263), and the vainglory of its prayer (*Early Writings*, 130). Bullinger compares hypocrites to chaff and rotten members (*Decades*, v. 12–13). Latimer emphasizes the difficulty in knowing them (*Remains*, Cambridge, 1845, p. 62), dwells on their salutation and conduct (*Sermons*, do. 1844, p. 289) and their desire to sell their works, their 'opera supererogationis' (*ib.* 482; *Remains*, 200). John Woolton notes their observance of rites and ceremonies (*The Christian Manual*, Cambridge, 1851, p. 45). William Tindale observes that they extol their own works above the law of God (*Expositions*, do. 1849, p. 127), notes their alms, prayers, and fastings (*ib.* 78), their desire to be praised of men (*Doctrinal Treatises*, do. 1848, p. 73), their outward abstention from sin (*ib.* 80), their impurity in heart (*Expositions*, 26, *Doctrinal Treatises*, 496), their faith (*Expositions*, 11, 130), their judgment of others (*ib.* 112), that they have the world on their side (*Doctrinal Treatises*, 138), that they must be rebuked (*Expositions*, 44), and their wisdom must be turned to foolishness (*Doctrinal Treatises*, 184).

A perusal of the works of the Reformers proves how conscious they were of the relaxation of moral discipline in the 16th century. Moreover, when persecution overawes, it transforms a man into a hypocrite. The weak bent to the intolerant policy of the time by the use of the weapons of intrigue and falsehood, and both then and ever since escape has frequently been sought from censure—whether ecclesiastical or social—by a feigned compliance which is the mark of hypocrisy.

ROBERT H. MURRAY.

**HYSTERIA.**—Hysteria (ὑστέρα, 'the womb') is a psychical, or at any rate a functional, nervous disease, which is so much more frequent in women that its consideration as regards the male sex may for the present be omitted. The chief clinical feature of the disease, which, however, is not manifested by the majority of the subjects of the affection, is the hysterical fit; the other symptoms are either preliminary or subsequent to the fit, or they occur as isolated symptoms with a tendency to culminate in the fit. The fit may succeed a period of great excitement, or it may come on spontaneously, but it never occurs suddenly, as is the case in epilepsy; and it usually takes place when other people are present. Consciousness is never entirely lost, as may be ascertained by touching the conjunctivæ, when a protective spasm of the eyelids will at once occur. The eyeballs are always turned up, so that the pupils are concealed under the upper eyelids. The hands are clenched, and the thumbs inverted. There is usually clonic spasm of the muscles, and the patient struggles and throws herself about. She may moan or cry and breathe stertorously, but there is no biting of the tongue or bloody froth about the mouth, as in the epileptic fit. The paroxysm generally terminates with crying, laughing, sighing, or yawning, and is followed by a feeling of exhaustion. Various mental, motor, and sensory symptoms appear in hysterical subjects, subsequent to the fit, associated with it, or independent of it.

**1. Mental symptoms.**—The subjects of hysteria are neuropathic, and a hereditary tendency to insanity or the neuroses is usually present in their family history. They manifest prominently those symptoms of instability which are described by modern writers as mental degeneracy. Chief among these are a want of intellectual vigour, excitability, ostentation, vanity, deficient self-reliance, and a craving for sympathy and notoriety. The subjects are extremely susceptible to suggestion by stronger wills than their own, and exhibit

a feeble resistance to various instinctive promptings or temptations to which they may be subjected. At the same time, they are by no means deficient in intelligence, and the ingenuity they display in attracting attention to their supposed maladies, or in simulating diseases, is often phenomenal. Upon such a psychical basis it is easy to see that the diseased mental symptoms may assume many and diverse forms. Some of the patients are depressed and moody; others gay, excited, and reckless in their conduct. Many of them are restless, irritable, impatient, and difficult to manage or to live with. The morbid ambition of others leads them to such means of attaining notoriety as prolonged fasting, the invention of improbable tales of assault upon themselves—usually of an indecent nature—or the simulation of various forms of obscure diseases, of which paralysis of motion is the principal.

2. **Motor symptoms.**—It is a mistake, however, to suppose that true hysterical paralysis is a simulated affection. This paralysis is distinguished from ordinary organic forms in so far as sensation in the paralyzed limb is never abolished, and the nutrition of the affected part is not impaired. In hysterical hemiplegia the face and tongue are rarely implicated, while in hysterical paraplegia the two lower limbs are usually unequally paralyzed.

3. **Sensory symptoms.**—The principal sensory disturbance is a condition of hyperæsthesia, or over-sensitiveness, which involves both the special senses and the general sensibility of the patient. Slight sounds, bright lights, or a small degree of cutaneous pressure produce undue and exaggerated effects upon the nervous system. Neuralgic pains in various parts of the body are often complained of. One of the most common symptoms is the *globus hystericus*, described as a choking feeling or a constriction in the throat or chest, as if a ball were passing up or down the cavity. Anæsthesia of different parts of the body, sometimes involving one whole side, is not an unusual symptom in advanced cases. The patient may be unaware of the presence of the symptom, and the anæsthesia may be either complete or partial. Generally speaking, in hemianæsthesia the condition is permanent, but fluctuates in degree from time to time. Charcot attached great importance to tenderness of the ovary, usually the left, in hysteria. The ovarian hyperæsthesia is indicated by pain in the lower part of the abdomen, corresponding in site to the position of the affected ovary. This pain may be so extremely acute that the slightest touch on the part is dreaded, while in other patients firm pressure is required to elicit it. Firm pressure has usually a decisive effect in checking the advent of the hysterical fit. In other cases it tends to bring out certain sensations which are known as the *aura hysterica*, prominent among which is the *globus hystericus* already referred to. The hyperæsthetic ovary is usually upon the same side of the body as is affected by the various sensory and motor disturbances which have been mentioned.

4. It is necessary to refer briefly to three phenomena which are associated with hysteria. These are: (1) catalepsy, (2) trance, and (3) ecstasy. These three phenomena are so intimately associated with one another that the one may merge into the other in the same subject. In *catalepsy* there is a condition of stupor, accompanied or not with loss of consciousness, and followed or not by a recollection of what took place during the condition. The will to move is in abeyance, and the muscles are rigid. When a limb is moved passively by an observer, it remains in any position in which it may be placed. In the state of *trance* the patient lies as if dead—some persons have even been 'laid out' as dead in this state; the skin assumes a deathly paleness; and the functions of respiration and circulation are so attenuated as to be almost imperceptible. In the *ecstatic state* the patient becomes so vividly hallucinated that complete scenes which she is able to describe fluently pass in sequence before the mental vision. The nature of the 'visions' changes according as the mental condition of the patient varies emotionally from grave to gay. The ecstatic state is accompanied by posturing and gesturing of an exaggerated character, which not infrequently terminate in dancing movements such as are practised by certain religious communities.

5. Estimated by its universal diffusion over the world and by the frequent references to it in the writings of travellers, lay and medical, hysteria must be the most common of all the neuroses. In the very oldest Brāhmanical writings, which precede the Christian era by thousands of years, mention is made of it among the diseases of the nervous system (J. Jolly, *Medicin* [*GIAP* iii. 10 (1901)], p. 119). The origin of the word, derived from the writings of the Greek physicians, is also very ancient. Coming down to comparatively modern times, we find it constantly referred to in the writings of travellers. Judging from the comparative frequency of these references, we can form the opinion that 'one of the principal seats of the malady is the group of countries in the Arctic latitudes of the Eastern Hemisphere, including Iceland, the Faröe Islands, Lapland, and the parts of European and Asiatic Russia in the extreme north. From the last of these we have information of the truly endemic prevalence of hysteria among the women of the Samojeds . . . and of the Jakutes and other Siberian tribes, as well as among the inhabitants of Kamschatka . . . thus hysteria is unusually common among the women of the Baltic Provinces, and among those of Viatka, Simbrisk, Samara and the Kirghiz Steppes' (A. Hirsch, *Geog. and Hist. Pathol.*, Eng. tr., London, 1883–86, iii. 519). Among the inhabitants of the Malay Peninsula a peculiar manifestation of the disease, known as *latah*, is very common, of which an excellent description has been given by Ellis (*Journ. of Mental Science*, 1897, p. 32).

6. When we turn from endemic to epidemic hysteria, a wide and difficult field of inquiry presents itself. As hysteria is a hereditary disease, it must be latent in otherwise apparently normal populations to an enormous extent. This latent potentiality may suddenly become active, under the influence of any powerful excitant, moral or spiritual, acting on a people. It is generally believed that these powerful emotional excitants sharply delimit the neuropathic from the normal elements in a population. The history of religious hysterical epidemics is inextricably associated with the history of the human race, so far as we know it, and can be traced, through the records of the Asiatics and other Eastern races, down to the accounts of the Mad Mullahs of our own day. In Europe, during the Christian era, the most remarkable instance of it was the 'dancing mania' of the Middle Ages. An account of it given by Raynald, as it was witnessed at Aix-la-Chapelle in 1374, is as follows:

'They formed circles hand in hand, and appearing to have lost all control over their senses, continued dancing, regardless of the bystanders, for hours together, until at length they fell to the ground in a state of exhaustion. . . . While dancing they neither saw nor heard, being insensible to external impressions through the senses, but were haunted by visions, their fancies conjuring up spirits whose names they shrieked out. . . . Where the disease was completely developed, the attack commenced with epileptic convulsions. . . . They foamed at the mouth, and suddenly springing up began their dance amidst strange contortions' (quoted from J. F. C. Hecker, *Epidemics of the Middle Ages*, Eng. tr., London, 1844, p. 87).

Those interested in this peculiar form of psycho-

pathology will find a very full description of it in J. F. C. Hecker's *Epidemics of the Middle Ages*. That such epidemics are not necessarily associated with religious fervour alone is seen from the similar outbreaks of hysterical excitement which occurred in Paris during the Revolution and after the close of the Franco-German war. In Madagascar, in the year 1864, an epidemic of hysteria occurred among girls and young married women between fifteen and twenty-five years of age. The occasion of the outbreak, which began at one point and spread gradually over almost the whole island, was the profound sensation caused among the people by the violent death of the king, and the consequent changes in the form of religion and laws. The morbid phenomena were almost identical with those of the dancing mania of the Middle Ages (Hirsch, *loc. cit.* p. 529). See also art. DEGENERATION.

From the above facts and many others that might be cited, it appears probable that in every population there is a certain amount of hysteria; that it varies in amount in different communities or races; and that in predisposed individuals the disease varies in intensity—from those subjects who without known cause present the pronounced clinical symptoms of convulsion, hallucination, mental aberration, or disease-mimicry, up to those who only under extreme excitement manifest perversions of feeling and conduct of a pathological nature.

JOHN MACPHERSON.

# I

**IBĀḌIS.**—The Ibāḍis were a Muslim sect, a branch of the Khawārij (*q.v.*). They were called after 'Abdallah b. Ibāḍ, who figures in the *Chronicle* of Ṭabarī (ii. 517) in the year 65, as separating himself from the Khārijite leader, Nāfi' b. Al-Azraq (founder of the Azāriqah), and taking a more lenient view of the treatment to be accorded to the unorthodox than Nāfi', but less lenient than that of 'Abdallah b. Ṣaffār, founder of the Ṣufriyya. The chronicles otherwise say little about him, and indeed confuse him with other personages; but, in an Ibāḍite treatise excerpted by E. Sachau (*Mittheil. des Seminars für orient. Sprachen*, ii. [Berlin, 1899] 47–83), two letters purporting to have been written by him to the Umayyad Khalīf 'Abd al-Malik are preserved, and his birth and death are said to have taken place in the reigns of Mu'āwiya (A.D. 661–680) and 'Abd al-Malik (685–705) respectively. These letters are homiletic in character, and contain little that is definite respecting the special doctrines of Ibn Ibāḍ, though insisting on the political programme of the Khārijites, who were responsible for the assassination of Othman, and afterwards for that of 'Ali. There is probably little reason for supposing them to be genuine, and analogous forgeries are common. Ibn Ibāḍ appears to have devised a new interpretation for the word *kāfir*, 'denier,' which ordinarily means 'unbeliever,' but may also signify 'ungrateful'; according to him, a Muslim who committed a capital offence might be described as a *kāfir* in the latter sense; and the consequence to be deduced was that the goods of Muslims might not be appropriated as spoil, though their lives might be taken. This doctrine, which is sketched by Ṭabarī (*loc. cit.*), is afterwards said to be characteristic of the Ibāḍis by writers on sects ('Abd al-Qāhir [† A.H. 429], in *al-Farq bain al-Firaq*, Cairo, 1910, p. 82; 'Abd al-Qādir al-Jīlānī [† A.H. 561], in *al-Ghunyah*, Cairo, 1288 A.H., i. 76. 19).

By the end of the Umayyad period the views of Ibn Ibāḍ appear to have found numerous adherents, since the Ibāḍī 'Abdallah b. Yaḥyā, who headed an insurrection in A.H. 130, found support in Baṣra, Ḥadramaut, and Yemen. A detailed account of this revolt is given in the *Aghānī* (1st ed., Būlāq, 1285, xx. 97–114); and perhaps the most authentic documents which we possess about the tenets of the sect are the sermons which in that narrative are ascribed to the heads of the rebellion, which was shortly crushed by the Umayyad forces, after the Ibāḍis had enjoyed brief supremacy in both Mecca and Medina. Early in the Abbasid period they gained ground in Africa, where in A.D. 758 they founded Sijilmasa, and held Qairawan from 758–762. They became prominent again between A.D. 942 and 947, but were defeated by the Faṭimids, and the survivors took refuge in Jebel Nefusa, where they were to be found in the time of Ibn Hauqal († A.H. 366), and where the community still survives. From Africa they spread to Spain, where in the time of the author last quoted they were represented in Castille, and an author of the 5th cent. A.H. (Ibn Ḥazm) speaks of the Ibāḍis in that country rejecting meat slaughtered by Jews or Christians. In the somewhat earlier treatise by 'Abd al-Qāhir they are divided into four subsects, called Ḥafṣiyyah, Ḥārithiyya, Yazīdiyya, and 'Believers in pious acts not done for God's sake'; they differed on a variety of subjects, but all agreed on the interpretation of the word *kāfir* given above, with the consequences deduced.

From an early time they appear to have been dominant in Oman, where their religion is still official. There they were found by Ibn Baṭuṭa in the 14th cent.; he observes that at midday on Friday they have a prayer of four inclinations, and something like a *khuṭba* ('sermon'). They ask God's favour for the first two khalīfs, but say nothing of the third or fourth, and indeed speak of the last as 'the man,' whereas they call the assassin at whose hand he fell 'the faithful servant' (ed. and tr. Defrémery and Sanguinetti, Paris, 1853–59, ii. 228). J. R. Wellsted (*Travels in Arabia*, London, 1838, i. 332) claims to be, after Sale, the first European to give any account of their tenets; he appears to have employed an account drawn up by a contemporary dervish, which he imperfectly understood; the statement that the Ibāḍis deny that the Deity will be *seen* in the next world (as the Sunnis think) is, however, confirmed by Sachau's treatise. The account of W. G. Palgrave (*Travels*, London, 1865, ii. 366) is even less accurate than Wellsted's. Other places, besides Jebel Nefusa, where Ibāḍī communities continue to exist are the island Jerba, and the Cercle Laghouat in Algeria, where the M'zab profess this doctrine. L. Rinn (*Marabouts et Khouan*, Algiers, 1884, p. 143) states

that this settlement dates from about A.H. 400, and that those who started it had originally dwelt south of Vargla at Kerima, Sedrata, and Jebel Ibad. These Algerian Ibāḍis, who in 1884 numbered about 49,000, are, according to this author, more like an ascetic sect than a political community. He speaks very highly of their honesty, morality, and devoutness. Their organization resembles in many respects that of the Ṣūfī confraternities. The most accurate account hitherto published in Arabic is that excerpted, as stated above, by Sachau from a treatise called *Kashf al-Ghummah*, which is only one specimen of a large Ibāḍī literature, little known in Europe. The treatise is evidently late, and appears to be modelled on the manuals in use among the larger Muslim communities; and the differences between the Ibāḍī doctrine and the Sunnī do not appear to be very numerous; moreover, the author, in his polemic against the Sunnī doctors, seriously misrepresents them. Like the Sunnīs, the Ibāḍīs believe in predestination; they define 'faith' as 'word and deed,' and declare that repentance is only for unintentional offences. The bulk of their polemic is directed against views which are associated with the Shī'ah, the Murjis, and the Mu'tazils.

Owing to the French annexation of the M'zab confederation in 1882, the legal system of the community has been studied by French scholars, and a manual of M'zabite legislation was drawn up by E. Zeys (Algiers, 1886). This is based on a work called the *Nīl* by the Shaikh 'Abdal-'Azīz, of the second half of the 18th century. A further list of Ibāḍite works is enumerated by A. Imbert, *Le Droit abadhite chez les Musulmans de Zanzibar et de l'Afrique orientale* (Algiers, 1903); the earliest of these is called *Bāyan al-Shar'* ('Explanation of the Code'), in more than 70 volumes, composed by Muḥammad b. Sulaimān († A.H. 508), while the most authoritative is of about the year 1840 A.D., called *Qāmūs al-Sharī'a* ('Ocean of the Law'), in more than 90 volumes. Imbert gives some account of the peculiar features of the system in the matter of inheritance, based on a monograph by Sachau ('Muhammedanisches Erbrecht,' in *SBAW*, 1894, p. viii).

LITERATURE.—To the authorities quoted above add I. Goldziher, *Vorlesungen über den Islam*, Heidelberg, 1910; E. Mercier, *Histoire de l'Afrique septentrionale*, Paris, 1888-90.

D. S. MARGOLIOUTH.

**IBN EZRA.—I. Ibn Ezra, Abraham ben Meir** (Aben Ezra, Avenares), Jewish philosopher, poet, grammarian, and exegete, and one of the most widely-known Jewish scholars of the Middle Ages, was born in Toledo, Spain, during the last decade of the 11th cent., and died *c.* 1167. The first part of his life was spent in his native country, which he seems to have left in the year 1140. From that year until his death he was a continuous wanderer, his way leading him to Egypt and through Northern Africa, Italy, and Southern France, and to England. His place of death is variously given: some authorities contend for Rome, others for Calahorra on the frontier of Navarre. Ibn Ezra was a prolific writer; his roaming life did not prevent him from composing works upon a variety of subjects. His style is always precise—sometimes so precise as to be slightly unintelligible, especially in his commentaries; and at times hurried—owing to the circumstances of his life.

As a poet, Ibn Ezra is a worthy representative of the Hispano-Jewish Hebrew poetry, which was modelled upon that of the Arabs. While not possessing the simplicity and naturalness of its greatest representative, Jehudah Halevi (*q.v.*), he excels him in the depth of his feeling and in the pungency of his wit. Fully 150 of his religious poems—lyric, didactic, and historical—have found their way into the prayer-book of the Synagogue. His *Dīwān*, or collected poetical works, comprises about 260 different pieces, and contains many that are of a purely worldly character. He often plays with numerical relations, as he was much interested in mathematics. As is the fashion in Oriental literature, he clothed a variety of subjects in poetic garb. Not only did he intersperse short poems in the introductions to his various commentaries on parts of the Bible, but he versified treatises on religion, on calendar-rules, and on chess.

His *Dīwān* has been published by Jacob Egers, *Diwân des Abraham ibn Esra*, Berlin, 1886; and his collected poetical works by David Kahana, *Kôbeṣ ḥokmat ha-Ra'ba'*, 2 vols., Warsaw, 1894; and with German tr. by David Rosin, *Reime und Gedichte des Abraham ibn Esra*, Breslau, 1885-1894. Cf. K. Albrecht, 'Studien zu den Dichtungen Abrahams ben Ezra,' *ZDMG* lvii. [1903] 421-473.

In philosophy, Ibn Ezra shows distinct traces of Neo-Platonic and Pythagorean influences. His Neo-Platonic ideas he seems to have adopted from his earlier contemporary Solomon Ibn Gabirol (*q.v.*); the Pythagorean from the writings of the Arabic 'Brethren of Purity.' According to Ibn Ezra, the whole universe is made up of substance and form—with the exception of God, who is substance alone; though substance is defined as that of which being can be predicated. God is further described as the power out of which comes that which is felt and thought. He is incorporeal and spiritual, 'knowing in a sense very different to the knowledge of man, since He is at one and the same time the Knower and the thing known.' But God knows only general ideas—the immutable and permanent species, not the individuals that go to make up the species. When we attribute wisdom, goodness, and righteousness to Him, we are describing His actions only, not His essence. When we speak of God's creative act, we refer only to the sublunar world; the rest of creation—heavenly bodies, angels, spheres, and stars—have neither beginning nor end. He is thus opposed to what became the official theological doctrine of Judaism, the *creatio ex nihilo*. God determines the species, to which He gives the power to fashion the individual. The sublunar world is created through the instrumentality of the angels. In fact, God acts upon the world through the angels, and through certain human beings who have not entirely lost the character of angels—prophets, pious ones, and the righteous. He also uses as intermediaries the heavenly bodies, which, by their conjunction, work good or evil upon mankind. But, in order to save his religious conceptions, Ibn Ezra holds that God can overpower the workings of the heavenly bodies; and that this interference depends upon the moral condition of the subject affected, thus making free will possible. It is accomplished through the angels. Ibn Ezra does not rationalize the wonders in the Bible, though he warns against exaggerating their importance. The universe is composed of the Highest world (angels), the Middle world (sun, moon, and stars), and the Lowest world of Nature (made up of the four elements and the three kingdoms). With the exception of his *'Aruggat ha-Ḥokmāh* and *Pardēs ha-Meẓimmāh*, written in rhymed prose, Ibn Ezra has left no work of a peculiarly philosophic character. His ideas are scattered throughout his other writings.

See Rosin, in *Monatsschrift für Gesch. und Wissensch. des Judenthums*, xlii. [1898], xliii. [1899]; Hamburger, *Real-Encyclopädie des Judentums*, iii., vi.

Two theologico-religious works of Ibn Ezra deserve mention. The first is the allegory *Ḥai ben Mēḳīẓ*, a rhymed prose description of the Supreme Being, composed upon the lines of Avicenna's *Ḥai ibn Yakẓān*, and to be classed with Ibn Gabirol's *Keter Malkūt* (best text in Egers' ed. of the *Dīwān*). The second is his *Yesōd Mōrā*

(ed. and tr. by M. Creiznach, Leipzig, 1840), a pamphlet written in England, in which he treats of the study of the Law and of the nature of the divine commandments. But Ibn Ezra not only gives semasiological explanations; he tries to find the ethical foundations for the various commandments.

As a grammarian, Ibn Ezra was the first of the Spanish school to write in Hebrew, though his method of treatment and his terminology are still wholly dependent upon his Arabic prototypes. His wish was to popularize the Arabic system among the Jews and to make them acquainted with the works of his noted predecessor, Judah Hayyūj. His largest work on grammar is his *Sefer Ṣaḥōt*, written in 1145. To this must be added a number of smaller treatises: *Yesōd Diḳdūḳ, Sāfāh Berūrāh, Yesōd Mispār, Sefer ha-Shēm, Sefer Yēther*, and a popular treatise entitled *Mōznayim*, a sort of terminological dictionary of Hebrew lexicography. Most of these works are poor and hurried in their arrangement, and written probably merely as text-books.

See W. Bacher, 'Die hebräische Sprachwissenschaft,' in J. Winter and A. Wünsche, *Die jüdische Litteratur*, ii. [1892–95] 184.

Ibn Ezra is best known as a commentator of the Bible. His commentaries were always popular among the Jews, being usually printed together with the glosses of Rashi. He wrote commentaries upon the following books: Pentateuch, Isaiah, Twelve Minor Prophets, Psalms, Job, Canticles, Ruth, Lamentations, Kohelet, Esther, and Daniel; and a second commentary to Exodus, Canticles, Esther, and Daniel. As a commentator Ibn Ezra opens up a new era among his compatriots because of his judicious aloofness to the claims of tradition when they cannot be substantiated by the plain meaning of the text. In the introduction to his commentary on the Pentateuch he discourses upon the methods hitherto employed in explaining the Biblical text: the digressive, the anti-traditional, the allegoric, and the Midrashic. All of these he rejects in favour of his own method, which he characterizes as a combination based on tradition and free research. In this manner a scientific sanity pervades his comments, which causes him to reject the theory of the verbal inspiration of the text, to lay minor stress upon the miracles, and, exegetically, to oppose any insistence upon the difference between *scriptio plena* and *scriptio defecta* as indicating a difference of meaning. Whenever he himself departs from this level, it is either with the object of finding a deeper and more philosophical meaning or of indulging in astrological speculations, to which he was much given. Free research, however, leads him to take up positions on certain questions which, though on a line with currents which were not strangers to the Synagogue (see Gottheil, 'Some Early Jewish Bible Criticism,' *JBL* xxiii. [1904] 1–12), would have rendered him an object of suspicion, had he not at times veiled his real meaning, at times given his reader a choice of explanations by adding such expressions as 'the reader will adopt the opinion which recommends itself most to his judgment,' or 'he who understands the difficulty should keep silence.' Thus, because he does not believe that the writers of the Bible anticipated history, he holds that the latter part of Samuel was written by some one other than the prophet; and that the second part of Isaiah was not written by the author of the first part. His influence upon Spinoza's theories in this respect (*Tract. Theol.-Pol.* viii.) is evident.

See M. Joël, *Spinoza's theol.-pol. Traktat*, Breslau, 1870, p. 64; and, in general, Bacher, in Winter and Wünsche, *Die jüdische Litteratur*, ii. 289 ff.

In addition, Ibn Ezra wrote a number of works on mathematical subjects, e.g. *Sefer ha-Mispār* and *Yesōd Mispār* on arithmetic; *Sefer ha-'Ibbūr* on the calendar; and *Kelē ha-Neḥōshet* on the astrolab, as well as a treatise on chronology.

Despite his tendency to rationalism, Ibn Ezra was a child of his times, and, as mentioned above, was much interested in astrology. As many as eight small treatises on this subject have come from his pen.

See M. Steinschneider, 'Abraham Ibn Ezra . . . zur Gesch. der mathem. Wissensch. im xiii. Jahrhundert,' in *Abhandl. zur Gesch. der Mathematik*, Leipzig, 1880, pp. 57–128.

LITERATURE.—M. Friedländer, *Essays on the Writings of Ibn Ezra*, London, 1876; N. Krochmal, *Mōreh Nebukē ha-Zeman*, Lemberg, 1851, ch. xvii.; H. Graetz, *Gesch. der Juden*, Leipzig, 1861, vi. note 8; W. Bacher, *Abraham ibn Esra als Grammatiker*, Strassburg, 1882, also in *JE* vi. 520–524.

2. **Ibn Ezra, Moses ben Jacob**, Jewish poet and philosopher; contemporary and relative of his greater namesake Abraham ibn Ezra; born in Granada *c.* 1071, died *c.* 1138. He was a most fruitful writer of religious poetry, which is all characterized by gravity and a touch of pessimism. It is not surprising, therefore, that of the 220 such poems ascribed to him the greater part are to be found in the rituals for the solemn festival of New Year and the Day of Atonement. Of his secular poems, which do not possess the wit and sparkle of Abraham ibn Ezra, a large number (300) are found in his *Dīwān*, which is still unpublished. He is also the author of a remarkable poem, variously styled *Tarshīsh* and *'Ānāḳ*, containing some 1210 verses and written in the style of the Arabic *tajnīs*, in which the lines of each strophe end in words similarly written and pronounced, but differing in meaning (homonyms). Ibn Ezra intended by this *tour de force* to show the possibilities of the Hebrew language in the working out of such literary conceits. The poem is divided into ten chapters, in which the *tajnīs*-rhymes are arranged alphabetically. The first chapter is occupied with the praise of some great man, who is supposed to have been the learned astronomer Abraham bar Ḥiyyah of Barcelona.

Even in his secular pieces, Moses ibn Ezra preserves his seriousness; but so varied is his use of the Hebrew language that his compositions are often preferred to those of Jehudah Halevi and Abraham ibn Ezra.

The *Tarshīsh* has been inadequately edited by David Günzburg for the society Meḳiṣē Nirdāmim, Berlin, 1886. See, however, T. Lewenstein, *Prolegomena zu Moses ibn Ezra's Buch der Tajnis*, Halle, 1893.

The most important work that has come down to us from Moses ibn Ezra is his *Kitāb al-Muḥāḍarah*, written in Arabic. It is the only work of its kind written by a Hebrew scholar, and contains a detailed treatise on Hebrew prosody, a history of Hebrew poetry, and a mirror of the history of the Jews of his time. It is evidently fashioned closely upon the model of the Arabic *Adab* books.

Only a portion of it has been edited by P. K. Kokovtsov, in *Vostočnyja Zamětki*, St. Petersburg, 1895 (pp. 193–220); but a general account of its contents has been given by M. Schreiner in *REJ* xxi. [1890] 98–117, and xxii. [1891] 62–81, 236–249.

Moses ibn Ezra also wrote a philosophical work under the title *'Arugat ha-Bōsem*. Only fragments of this composition have been published, so that it is impossible to understand the system to which he adhered. He cites a number of Greek philosophers, al-Farabi, and, of Jews, Saadia Gaon and Ibn Gabirol. It is evident that this work must be of inferior importance, as it has left little trace in the literature of the time.

A few selections have been published by L. Dukes in the Hebrew periodical *Ẓiyyōn*, ii. [1842] 117 ff.

LITERATURE.—L. Dukes, *Moses ben Esra aus Granada*, Altona, 1839; L. Zunz, *Literaturgeschichte der synagogalen Poesie*, Berlin, 1865, p. 202; M. Sachs, *Die religiöse Poesie der Juden in Spanien*, do. 1845, p. 276.

RICHARD GOTTHEIL.

**IBN GABIROL.**—Solomon ibn Gabirol (Gabriel) enjoyed two distinct reputations. To the Synagogue he was known as a hymnologist, to the Church as a philosopher. It was S. Munk who, first in a periodical in 1846 and later in his *Mélanges de philosophie juive et arabe* (Paris, 1857–59), proved the identity of Ibn Gabirol with Avencebrol or Avicebron. This name seems to have arisen by successive corruptions of Ibn Gabirol into Aven-gebrol, Avicebrol, and the other forms familiar from quotations in the mediæval Scholastics. E. Renan (*Averroès*, Paris, 1852, p. 76) describes Munk's discovery as an 'eminent service to the history of philosophy.' For the curious implications of the identification, compare the remarks of Ueberweg-Heinze, *Gesch. der Philos.* (Berlin, 1898) ii. 296.

Ibn Gabirol was a Spanish Jew, who passed the years 1040–50 in Malaga (M. Steinschneider, *Die heb. Uebersetzungen des Mittelalters*, Berlin, 1893, § 219). It is commonly supposed that he was born about 1020 and died about 1070. Some authorities fix his death in the year 1058. The picture drawn of his personal life by H. Graetz may be found in the latter's *History of the Jews* (Eng. tr., London, 1891–92), vol. iii. ch. ix. There are no materials for a more definite narrative. Of his literary activities, however, we are better informed. Many of his Hebrew poems have been preserved in the Synagogue liturgy. Among these may be particularly cited his *Royal Crown*, which has been more than once rendered into German, and is to be found fully in English prose in the Prayer-Book of the Spanish and Portuguese Jews (ed. M. Gaster, *Day of Atonement*, Oxford, 1904, p. 47), and in part in English verse in Alice Lucas's *Jewish Year* (London, 1898), p. 140. It is an interesting fact that Ibn Gabirol, famous philosophically as a Platonist, should in this poem, the masterpiece of the neo-Hebraic muse, have gone for inspiration to Aristotle's short treatise 'On the World.' Gabirol's text is Aristotle's saying: 'What the pilot is in a ship, the driver in a chariot, the coryphæus in a choir, the general in an army, the lawyer in a city—that is God in the world' (*de Mundo*, ch. vi.). Where Gabirol differs from Aristotle is not merely in the moral optimism of his outlook, but in the mystical fervour of his inward gaze. There is, moreover, a charm of 'youthful freshness' in his verse, a quality which led to the erroneous belief that the poet died young. Many others of Gabirol's poems are found in the 'Spanish' liturgy; a short invocation of his, translated by Mrs. R. N. Salaman, is now included in the 'German' service-book (see *Authorized Hebrew Prayer-Book*, annotated ed., London, 1913, p. ccxlvi). Gabirol also wrote didactic hymns, such as his *Azhārôth* (*Exhortations*)—poetical summaries of the Biblical Laws, for recitation on Pentecost. Another long poem of his is termed *'Anāq*; this is a linguistic treatise. Others of his poems previously unknown have been recently published. Ibn Gabirol, like other mediæval Hebrew authors, wrote secular as well as religious poems; several of his epistles have come down to us. His command of a pure Hebrew style is as remarkable as is the elevation of his thought. He stands very high among post-Biblical writers of Hebrew.

Besides his poetical works, Ibn Gabirol composed ethical and metaphysical treatises, some of them of minor importance. A full account of these may be found in the work of Steinschneider cited above. One popular collection of moral maxims, the *Choice of Pearls*, is attributed to Ibn Gabirol, though authorities are divided as to the correctness of this ascription. The book was translated into English by B. H. Asher (London, 1859). More authentic is the *Improvement of the Moral Qualities*, written in Saragossa about the year 1045 (ed. S. S. Wise, in Arabic and English, New York, 1901).

'In two respects the "Ethics" (by which abbreviation the work may be cited) is highly original. In the first place, as compared with Saadia, his predecessor, and Baḥya and Maimonides, his successors, Gabirol took a new stand, in so far as he set out to systematize the principles of ethics independently of religious belief or dogma. Further, his treatise is original in its emphasis on the physio-psychological aspect of ethics, Gabirol's fundamental thesis being the correlation and interdependence of the physical and the psychical in respect of ethical conduct' (*JE* vi. 529). This thought, indeed, permeates the philosophy of our author.

By far the most important of Ibn Gabirol's philosophical treatises was the Arabic work of which the original is lost, but which is known in Hebrew as *M'qôr Ḥayyîm* and in Latin by the equivalent title *Fons Vitæ*. The fullest edition of the Latin is by C. Baeumker, *Avencebrolis Fons Vitæ* (Münster, 1895). Mysticism naturally attaches itself to Platonism; hence the *Fons Vitæ*, being Platonic in spirit, easily influenced the Jewish Qabbālā, especially in its theory of emanations. On the other hand, it did not affect the progress of Jewish scholastic theology, partly because the latter assumed an Aristotelian guise, and partly because the *Fons Vitæ*, though it essentially is an attempt to harmonize the Jewish monotheism with Platonism, is based on extra-Biblical foundations. The *Fons Vitæ* is, however, frequently quoted by Christian scholastics. Albertus Magnus cites its author as an Arab (Ueberweg-Heinze, 266). Duns Scotus, whose hostility to the Jews is notorious, had no suspicion that the author whom he so admired was himself a Jew. Of Duns Scotus the historian just cited (p. 291) says that 'many Platonic and neo-Platonic ideas penetrated into his thought by the channel of the *Fons Vitæ*.'

Holding that every created substance, whether spiritual or bodily, possesses matter as well as form (a position contested by Albertus Magnus and Thomas Aquinas), Duns Scotus asserted: 'ego autem ad positionem Avicembronis redeo.' He agrees with Ibn Gabirol in holding 'quod unica sit materia' (p. 296). Platonic realism and its underlying hypostatization of ideas have obvious relations with Ibn Gabirol's *materia universalis*, though, unlike Spinoza, Ibn Gabirol does not identify God with the *materia universalis*. On the contrary, he absolutely excludes God from any such category. The theory of the identity of substance running through the universe of spirit and body is a hypothesis of far-reaching import, and interest in Ibn Gabirol has been revived in recent times because of the new turn which has been given to mystical and monistic conceptions.

LITERATURE.—Besides the works cited in the course of the article, the following may be added, out of the extensive literature on the subject: M. Sachs, *Die rel. Poesie der Juden in Spanien*, Berlin, 1845, pp. 3–40, 213–248; G. Karpeles, *Gesch. der jüd. Lit.*, do. 1886, pp. 465–483; W. Bacher, *Bibelexegese der jüd. Religionsphilosophen des Mittelalt.*, Strassburg, 1892, p. 45; J. Winter and A. Wünsche, *Die jüd. Litt.*, ii. (Trier, 1894) 723, iii. (1896) 28, 109; D. Kaufmann, *Stud. über Salomon ibn Gabirol*, Budapest, 1899; D. Neumark, *Gesch. der jüd. Philos. des Mittelalt.*, i. (Berlin, 1907) 157, 500, 524, 555.

I. ABRAHAMS.

**IBN HANBAL.**—Aḥmad ibn Ḥanbal, the founder of the Ḥanbalite school, was born in the month of Rabī' the first, A.H. 164 (A.D. Nov. 780) in Baghdād. His lineage was of pure Arabic stock, from the great tribe of Bakr ibn Wā'il. Ḥanbal was the name of Aḥmad's grandfather. His father, Muḥammad, died when Aḥmad was still in infancy. Rarely the *imām* is called Aḥmad ibn Muḥammad ibn Ḥanbal. When 15 years of age, he began the study of tradition and other Muslim sciences. To acquire a full knowledge of the holy texts, he visited Mecca and Medina, Yemen, Syria, Mesopotamia, Kūfa, and Baṣra, and studied under Sufyān ibn 'Uyaina, Abū Yūsuf, al-Shāfi'ī, and many other famous teachers of those days. During this time he often lived in penury and suffering. Yet, when still a youth, he was held in reverence as an authority in matters

of Muslim tradition. Al-Shāfi'ī too seems to have had a great respect and affection for Ibn Ḥanbal. It is told that, when al-Shāfi'ī went at last to Egypt, he said: 'I do not leave behind any one greater as a *faqīh* or more pious and learned than Aḥmad ibn Ḥanbal.'

After this period of travelling, Aḥmad continued to reside in Baghdād. Soon he was regarded as one of the greatest teachers of tradition and *fiqh*. During his whole career he was a great defender of orthodoxy. In his personal life he was very scrupulous in his adherence to the ritual observances. It is said that he was wont to pray every day 300 *rak'a's* at least (every prayer consists of a certain number of *rak'a's*). It was his custom at night, after the last prayer of the day, to sleep only for a short time, and then to arise and offer prayers of supererogation until the morning. He recited the whole Qur'ān once every seven days. His needs were so extremely few that his life might seem a continuous fast. His demeanour was that of a man abstracted from the common concerns of life.

Aḥmad's maintenance of the integrity of orthodox faith, during the inquisition (*miḥna*) ordered by the Khalīf al-Ma'mūn and his successors, is looked upon as one of his greatest merits by his Muslim biographers. Al-Ma'mūn had adopted in the year A.H. 212 (A.D. 827) the doctrine of the Mu'tazilites, that the Qur'ān was *created*. The Khalīf made this tenet obligatory upon his subjects, and sent letters to all the provinces, ordering that his governors should cite the *qāḍis* and learned men and demand of them a clear answer as to Allāh's *creation* of the Qur'ān. Those who would not yield, as the test was applied, were frightened by threats and tortures. But Aḥmad ibn Ḥanbal remained firm in the orthodox faith that the Qur'ān was Allāh's *uncreated* word. He was cast for some time into prison, in chains, but refused to assent to the Khalīf's doctrine. In the year A.H. 219 he was scourged in the palace of the Khalīf Mu'taṣim, Ma'mūn's successor. Finally, as the crowd outside became moved with anger and was preparing to attack the palace, the Khalīf ordered the suspension of the punishment, and soon after set Aḥmad free.

After the scourging Ibn Ḥanbal was let alone. It may be that the Government feared a popular outbreak if any further action was taken against the holy man. In the year A.H. 234 (A.D. 848) the Khalīf al-Mutawakkil stopped the application of the test by public proclamation. When Aḥmad was asked by this Khalīf to undertake the teaching of al-Mu'tazz, his favourite son, in the palace at Surramanra, he excused himself, fearing that the Khalīf was going to make him an attaché to the court.

As a *faqīh* and a traditionist, Ibn Ḥanbal bore a great reputation among his own and the following generations. He was a man of great influence among the people, and the leading representative of the strictest orthodox party in those days. He died on the 12th of Rabī' the first, A.H. 241 (A.D. 31 July 855), at the age of 77 years. When the news of his death became known, there was general grief over the city of Baghdād and even in distant countries. It is told that many thousands were present at his funeral.

In regard to Ibn Ḥanbal's works we know very little. Only one book, the *Musnad*, his great work, is well known. It is a compilation containing about 30,000 or 40,000 traditions relating to the *sunnah* of the Prophet. According to Aḥmad ibn Ḥanbal, only the traditions in it were a reliable basis for argument in *fiqh* and other Muslim sciences, whilst the traditions omitted therein were not at all to be regarded as a sound basis. The *Musnad* is not arranged with any reference to the subjects of the traditions it includes, but only according to the earliest authorities of the cited traditions. The work has always had a great reputation in Muslim circles; it has been used by many traditionists, but its immense size and the inconvenient method of its arrangement prevented it from becoming a popular book. A printed edition was issued at Cairo in 1896.

After the death of Ibn Ḥanbal, his pupils and admirers continued to form the so-called *Ḥanbalite madhhab*, one of the four Muslim schools of *fiqh*, which still exist at the present day. The Ḥanbalites have always distinguished themselves by their aversion to liberal theories in matters of faith, and their enmity against the Muslim rationalists and freethinkers (see, further, art. SECTS [Muslim]).

TH. W. JUYNBOLL.

**IBN ḤAZM.**—Ibn Ḥazm (Abū Muḥammad 'Alī b. Aḥmad), a celebrated theologian and *bel esprit* of Muslim Andalusia, was born A.H. 384 (A.D. 994) in a suburb of Cordova, the Umayyad capital. He belonged to a Spanish family of converts (*muwallad*; cf. *ZDMG* liii. [1899] 602 ff.) hailing originally from Niebla. His great-grandfather, Ḥazm by name, had renounced the Christianity in which he was born, and embraced Islām; but the family subsequently denied their Christian descent, and fabricated for themselves a Persian origin, claiming to be descended from a Persian who had been emancipated (*maulā*) by Yazīd, the brother of Mu'āwiya, the first of the Umayyad Khalīfs, and to be the protégés of that family. Aḥmad, the father of Ibn Ḥazm, had served as vizīr under the 'Āmirids (al-Manṣūr ibn Abī 'Āmir, and his son al-Muẓaffar), and Ibn Ḥazm himself held the office for a short time under the Khalīfs 'Abdalraḥmān IV. (al-Murtaḍā) and 'Abdalraḥmān V. (al-Mustaẓhir), taking part in the wars forced upon the tottering Umayyad Khalīfate by the insurgent Berbers under the claimant 'Alī b. Ḥammūd. He was for a time a captive among the Berbers. After the fall of Mustaẓhir (A.D. 1024), he was thrown into prison by Muḥammad II. (al-Mustakfī), the next occupant of the throne. On regaining his liberty, he withdrew entirely from the political arena, and lived a rather solitary life on his ancestral estate near Niebla, devoting himself to the literary and scientific pursuits which at length made him one of the most prominent figures in Andalusian Islām. He died there A.H. 456 (A.D. 1063).

His literary work was of a varied character. His son, Abū Rāfi', estimates that he was the author of some 400 compositions, consisting in the aggregate of 80,000 pages, and there is no doubt that he was a most prolific writer. He was a tasteful poet, and his love poems are often quoted. He also composed a belletristic monograph on love, entitled *Tauq al-ḥamāma fi-l-ulfa wal-ullāf* ('the dove's neck-ring on sociality and the sociable'), still extant in a single MS (in Leyden), an edition of which is being prepared for publication by a Russian scholar. From this work a charming love-experience of its author has been translated by Dozy. Ibn Ḥazm contributed also to historical study. A short treatise of a historical character, *Nuqaṭ al-'arūs fī tawārīkh al-khulafā*, was recently edited from the sole surviving MS (in Munich), and published with a Spanish transla-

tion ('Regalos de la novia sobre los anales de los califas') in the *Revista del Centro de Estudios Históricos de Granada y su Reino* (i. [1911] 160–180, 236–248), by C. F. Seybold. Of more importance in this field is Ibn Ḥazm's great work entitled *Jamharat al-ansāb* (in Maqrīzī, *Kitāb itti'āẓ al-ḥunafā* ['History of the Faṭimids'], ed. H. Bunz, Leipzig, 1909, p. 8, l. 4—the title appears as *Kitāb al-jamāhir fī ansāb al-mashāhīr*), treating of the genealogy of the Arab and Berber tribes, with special reference to the branches of the former in the Maghrib. This work, a section of which has been published in India by S. Khudā Bukhsh, was highly prized by Ibn Khaldūn ('Ibn Ḥazm is the *imām* of genealogists and learned men'; 'trustworthy, he has no equal'), and was often used by him (*Histoire des Berbères*, ed. de Slane, Algiers, A.D. 1847–51, i. 106 f., 147, ii. 2, and *passim*).[1]

But the bulk of Ibn Ḥazm's literary work is devoted to theology. Even a treatise on Logic—now lost—he is said to have brought into the theological sphere, thus disregarding the position assigned to the former by Aristotle. Voluminous works on the *fiqh*, the *ḥadīth*, the dogmatics, and other elements of Islām are ascribed to him; but, for a reason to be mentioned presently, the greater number have perished. He was at the outset an adherent of the Shāfi'ite school, but, following in the wake of Dāwūd b. 'Alī (*q.v.*), the founder of the Ẓāhiriyya school, abandoned it for the latter. Just as, in a general sense, he vindicates the rejection of the non-traditional sources for the deduction of the Laws in a special work (*Ibṭāl al-qiyās*) first made known by the present writer, so, in particular, he develops his Ẓāhirite polemic against the dominant schools (*madhāhib*) in the special chapters of his work *al-Muḥallā*, which deals with the religious law, while in various works in systematic theology he exhibits the Ẓāhirite method in its broadest application. In one direction, however, he advanced beyond the normal position of the Ẓāhirite school; for, whereas they had hitherto limited the scope of their principle to the science of law (*fiqh*), and had regarded the province of dogmatic theology as indifferent, Ibn Ḥazm applied their method to the latter as well. In controverting, on the one hand, the Ash'arite theology, which in his day represented the orthodox conception of the faith, and, on the other, the dogmatics of the Mu'tazilites, he interprets theology in the light of the Ẓāhirite school, and from that standpoint assails all other views. He develops his criticism in his best known work, the *Kitāb al-fiṣal fi-l-milal wal-ahwā wal-niḥal*—a title usually abbreviated to *Kitāb al-milal wal-niḥal*—of which a printed edition is now available (4 vols., Cairo, A.H. 1317–21; on the MSS cf. *ZDMG* lxvi. [1912] 166).

In this treatise he first of all gives, for polemical purposes, an account of non-Muhammadan religions and their doctrines, and then a critique of the doctrinal divisions of Islām. The first part of the work is devoted mainly to Judaism and Christianity, and to criticism of the OT and NT and the inconsistencies and absurdities therein, his design being to confirm a view already expressed in the Qur'ān and elaborated with increasing distinctness in later Islām, viz. that the alleged documents of revelation in the hands of Jews and Christians cannot possibly be the sacred writings given by God. He deals also with later religious writings of Judaism and Christianity, and, in particular, he submits the Talmud to severe criticism. This side of his work would never of itself have aroused the animosity of other theologians, but it was a very different matter with the bitter and merciless spirit in which, alike in the work before us and in his writings on the *fiqh*, he speaks of the most eminent authorities in Muslim jurisprudence and dogmatics.

In his theological writings his tone is immoderate, fanatical, and unsparing, and he shows not the slightest respect for authority or for the great personalities of the past who stood high in the general esteem. His character for severity became a proverb in literary circles: *Saif al-Ḥajjāj waqalam Ibn Ḥazm* ('The sword of Ḥajjāj and the pen of Ibn Ḥazm'). The result was that he lost all favour with the theologians; his books were banned, and left unstudied (cf. Subkī, *Ṭabaqāt al-Shafi'īya*, Cairo, A.H. 1324, iv. 78), and were seldom quoted. This explains why most of his works are lost, and why some are extant only in rare MSS. Under the Abbadid ruler al-Mu'tamid, indeed, his books were publicly burned in Seville—a proceeding upon which Ibn Ḥazm commented in an epigram charged with supreme disdain:

'Though you burn the paper, you cannot burn what the paper contains, for it is laid up in my breast;
It goes with me whithersoever my camel betakes himself; it stops where I stop, and will be buried with me in my grave;
Let me alone with your burning of parchment and paper, and speak rather about science, so that the people may learn which of us knows anything;
If not, go to school again. How many secrets has God beyond the things you aspire to!'

In his increasing isolation he was shunned even by students. Of the few pupils who availed themselves of his oral teaching the best known is Muḥammad b. Abī Naṣr al-Ḥumaidī († A.H. 488 [A.D. 1095]), who speaks in laudatory terms of his learning, and his moral and religious character.

Amongst his polemical works may also be included a still extant satirical poem of 137 couplets in which he holds up Christianity and its institutions to derision by way of a rejoinder to a Byzantine writer who had assailed Islām and the Khalīfate in verse. A complete text of this poem appears in Subkī (*op. cit.* ii. 184–189). Ibn Ḥazm never speaks of Judaism or Christianity except in fierce and virulent language.

Of his theological writings, besides the polemical work above referred to, his treatise on Abrogation in the Qur'ān (*Kitāb al-nāsikh wal-mansūkh*) has been published (Cairo, A.H. 1297, in connexion with an edition of the Jalālain Commentary; also at the Khairīya Press, A.H. 1308). An ethical work, *Kitāb al-akhlāq wal siyar fī mudāwāt al-nufūs* ('On the healing of souls')—a series of maxims relating to morals and the conduct of life, arranged in chapters—has also appeared in print (ed. Maḥmaṣānī, Cairo, 1905). This tractate, in which the *Imitatio Muhammedis* is set forth as the ideal of the ethical life (cf. I. Goldziher, *Vorlesungen über den Islam*, Heidelberg, 1910, p. 30), is of importance as affording a vivid impression of the author's personal character, and reveals very candidly his qualities and defects. He refers in it to the arrogance which ruled him for a time, but from which he was delivered by self-discipline. His intolerance, his propensity to bitter criticism of his fellow-men, and his ill-humour he ascribes to an enlargement of the spleen resulting from an illness (p. 77). This work is the tranquil outcome of the mature experience to which he constantly appeals. He complains here of the inconstancy of friends; after long years of intimacy his own best friend had deserted him (p. 40). But in spite of all he is able to say:

'Everything has its advantages: I myself have derived great benefit from the attacks of the ignorant. They have stirred up my spirit, quickened my feeling, stimulated my thought, and fostered my activity. They were the cause of my composing large works which I should never have written unless they had disturbed my peace and fanned the spark hidden within me' (p. 52).

Of his sons, besides the Abū Rāfi' mentioned above, we hear also of an Abū Usāma Ya'qūb as the transmitter of one of his father's works (*Nuqaṭ al-'arūs*; cf. Ibn al-'Abbār, *Mu'jam* [*Bibl. arab. hispana*, iv.], p. 29, line 2 from foot).

LITERATURE.—Sources for the life of Ibn Ḥazm: C. Brockelmann, *Gesch. der arab. Litt.* i. (Weimar, 1898) 400; R. P. A. Dozy, *Hist. des Musulmans d'Espagne*, Leyden, 1861, iii. 341 ff. (*Gesch. der Mauren in Spanien*, Leipzig, 1874, ii. 210 ff.); the Arabic periodical *al-Muqtabas*, i. (A.H. 1324) 39 ff., ii. (A.H. 1325)

[1] A quotation will be found in Nawawī, *Tahdhīb*, ed. Wüstenfeld, Göttingen, 1842–47, p. 376, line 4 from foot.

313 ff. For his work on the sects: I. Friedländer, in the *Nöldeke-Festschrift*, Giessen, 1906, pp. 267–277; the same writer has edited and translated the chapter on the Shi'ite sects in *JAOS* xxviii.–xxix. (1908–09). On his criticism of Judaism and Christianity: M. Steinschneider, *Polem. und apologet. Lit. zwischen Muslimen, Christen, und Juden*, Leipzig, 1877, pp. 22, 99; I. Goldziher, 'Muham. Polemik gegen Ahl al-Kitâb,' in *ZDMG* xxxii. [1878] 365; M. Schreiner, *ib.* xlii. [1888] 612, xlviii. [1894] 39; his polemic against the Talmud was published by Goldziher, in Kobak, *Zeitschr. für Gesch. des Judentums*, viii. [1872] 76–104; his dogmatic system with references to his works is set forth in Goldziher, *Die Ẓâhiriten, ihr Lehrsystem und ihre Gesch.*, Leipzig, 1884, pp. 115–170.

I. GOLDZIHER.

**IBN TAIMĪYA.**—Ibn Taimīya (Taqī al-dīn Abu-l-'Abbās Aḥmad b. 'Abdalḥalīm), the most eminent Muslim theologian of the 13th–14th centuries, was the scion of a Syrian family of scholars, and was born A.H. 661 (A.D. 1263) in Ḥarrān, near Damascus, a locality where a rigidly puritanical conception of religion had prevailed from early times (Dhahabī, *Tadhkirat al-ḥuffāẓ*, Ḥaidarābād, n.d., ii. 48, line 3 from foot), and where the Ḥanbalite school was strongly represented. The family of Ibn Tiamīya belonged to that school. As a public exponent of its tenets in Damascus he succeeded his father in A.H. 681 (A.D. 1282), and in a short time his lectures and writings, in which he assumed a position of decided antagonism to the dominant tendencies of Muslim orthodoxy, made a great stir and aroused vehement opposition. He rejected the unthinking and slavish adherence to a particular school of religious law (*taqlīd*), and in the discussion of that subject he called upon his fellow-Muslims to fall back upon the old traditional sources. It is true that he went further than the Ẓāhirites (see art. DĀWŪD B. 'ALĪ), with whose principles he closely agrees, in the range which he assigned to arguments from analogy (*qiyās*). Alike in the sphere of theology and in that of religious usage, he relentlessly assailed the innovations (*bida'*) which had found their way into the religious life, and, above all, he fought strenuously against the spiritualistic interpretation of the anthropomorphic passages in the Qur'ān and the *ḥadīth*, against the Ash'arite method of dogmatics, and against the mysticism of the Ṣūfīs (*q.v.*). In the cultus, again, he declared war upon the worship of saints and tombs which had crept into Islām, and he even objected to the practices of invoking the Prophet and making pilgrimages to his tomb. He differed from the acknowledged schools of jurisprudence with reference to the law of divorce. It is of special importance to note his opposition to the abuses which brought in their train the practice of *taḥlīl*, viz. that a man should not re-marry a woman from whom he had been definitely divorced, unless she had meanwhile consummated a valid marriage with another and been divorced from him. In his writings he is a zealous adversary of Greek philosophy, Judaism, and Christianity. By way of inciting the Muslims against them, he pointed to the Mongol invasion which had just swept over Syria, asserting that the visitation was in part due to the laxity of his co-religionists. He issued a *fatwā* demanding that the Jewish synagogues in Cairo should be destroyed, and urging his people not to allow the chapels of other faiths to exist in their midst (ed. M. Schreiner, in *REJ* xxxi. [1895] 214 ff.). In his criticisms he did not spare the most widely accepted authorities of Islām, not even the first Khalīfs. But the special object of his antagonism was al-Ghazālī, whom he disliked both as an Ash'arite and as a mystic, and whose knowledge of the sources of theological science he greatly disparaged. His opposition to the Muslim *consensus* (*ijmā'*)—a theological growth of centuries—brought upon him a series of prosecutions, and from A.H. 705 (A.D. 1305) till his death he was repeatedly imprisoned both in Damascus and in Cairo. He died in prison on 22nd Dhulqa'da 728 (29th September 1328).

Though a stringent interdict was laid upon the acceptance of his doctrines, he was not left without champions. Even after his death, pamphlets were written on the question whether he was to be regarded as a *kāfir* ('unbeliever') or as a genuine representative of orthodoxy. The tradition of his teaching was continued by his faithful pupil Shamsaddīn ibn Qayyim al-Jauzīya († A.H. 751 [A.D. 1350]) in numerous works. At a much later period his views enjoyed a furtive revival in smaller circles, and the most striking historical result of his teaching is the fact that in the 18th cent. the founder of the powerful Wahhābi (*q.v.*) movement in central Arabia derived his initiative from the writings of Ibn Taimīya (cf. Goldziher, *ZDMG* lii. [1898] 156). His name is the shibboleth of the Wahhābite theologians in their controversy with the orthodox, who in turn take as their watchword the name of Ghazālī.

As regards the influence of Ibn Taimīya at the present day, it should be noted that the party championed by Muḥammad Rashīd Riḍā in his periodical *al-Manār* (now in its 16th year)—a party which rejects the *taqlīd* of the four orthodox schools, appeals to the *ḥadīth*, and is opposed to the worship of saints and the superstitious practices associated therewith—draws its constant inspiration from the writings of Ibn Taimīya and Ibn Qayyim al-Jauzīya. It is perhaps due to this wide-spread acceptance of Ibn Taimīya's views that within little more than a decade so many of the hitherto much neglected works of the great Ḥanbalite theologian have been issued in printed form in Cairo and Ḥaidarābād.

Ibn Taimīya displayed a vast literary fertility in books, tractates, epistles, and *fatwās*. The list of his works given in Brockelmann's *Gesch. der arab. Litt.* ii. 103–105 is by no means exhaustive, and, in particular, attention should be drawn to a series of treatises (*majmū'at al-rasā'il al-kubrā*), published in 2 vols. at Cairo, A.H. 1322.

LITERATURE.—I. Goldziher, *Die Ẓâhiriten, ihr Lehrsystem und ihre Gesch.*, Leipzig, 1884, pp. 188–193, and in *ZDMG* lxii. [1908] 25 f.; M. Schreiner, *Beiträge zur Gesch. der theolog. Bewegungen im Islam*, Leipzig, 1899 (= *ZDMG* lii. [1898] 540–563, liii. [1899] 51–61), with a bibliography of the controversial writings for and against Ibn Taimiya; C. Brockelmann, *Gesch. der arab. Litt.*, ii. (Berlin, 1902) 103. I. GOLDZIHER.

**IBN ṬUFAIL.**—Ibn Ṭufail (Abū Bakr Muḥammad ibn 'Abd-al-malik ibn Muḥammad ibn Muḥammad ibn Ṭufail al-Qaisī), referred to by the Christian Scholastics as Abubacer, was born, probably at the beginning of the 12th cent. A.D., in the little Andalusian town of Guadix (Wādī Ash), and died in the royal city of Morocco in 1185. Besides the name Abū Bakr he also bore that of Abū Ja'far (as in the MS of the British Museum tr. by Pococke), from the name of another of his sons. Our information regarding his life is but meagre, and what we are told is by no means always reliable. It is certain, however, that he was possessed of the learning and culture of his day, that he composed verses, and that he was actively engaged in medicine and politics. Thus we read that he was the physician and vizīr of Khalīf Abū Ya'qūb Yūsuf (1163–84), with whom he lived on terms of friendship. He performed a special service to Muhammadan philosophy by introducing Ibn Rushd (Averroes) to that prince, and encouraging him to write a commentary on Aristotle. This event has been generally assigned to the year 1154, but L. Gauthier brings it down to 1169.

We possess no scientific work from the hand of Ibn Ṭufail. His claim of being able to improve the Ptolemaic system is probably to be interpreted merely as expressing his conviction that he must adhere as closely as possible to Aristotle rather than to Ptolemy.

His only surviving work—a work that secures for its author a niche in the temple of universal literature—is a philosophical allegory entitled *Ḥayy ibn Yaqẓān*. In the introduction to that book he indicates his position in Muslim philosophy. He professes to be an adherent of the philosophy of enlightenment (*ishrāq*, 'illumination'). This is not the crude pantheism current in India and Persia, but a speculative mysticism of a Neo-Platonic type. Having laid the foundations in the observation of Nature and in rational

thought, he aspires to ascend to the highest—*i.e.* to the state of ecstasy, in which the soul experiences what the eye has never seen, the ear never heard, and the heart of man never imagined. Just because such a spiritual process cannot be described easily, or even described at all, in words, it must be presented allegorically. The persons in his allegory, so far as their names are concerned, are borrowed from the mystical treatises of Ibn Sīnā (Avicenna). But 'Salāmān' and 'Asāl' are in all probability derived from the field of Hellenistic-Jewish legend, while 'Hayy' recalls the first syllable of 'Gāyōmarṭ,' a mythical king of Persia. Many features of Ibn Ṭufail's work are of legendary origin, but the arrangement is doubtless his own. The theme proposed was a practical question in Western Islām at the time, just as it had been in the East at an earlier day. The problem was, in fact, the relation of the individual to society, or, to state it more precisely, the relation between the philosophical reflexion and intuition of the individual and the traditional belief of the multitude.

The author seeks to portray as clearly as possible three distinct types: (1) the philosopher, who by natural endowment and his own reflexion and self-abnegation is fitted to receive enlightenment from above—one, that is to say, who rises step by step to a mystic unity with higher spirits, and ultimately with the Divine Being Himself ('Hayy'); (2) the man of traditional beliefs ('Salāmān'); and (3) the speculative theologian, who interprets the figurative language of revelation, as given in the Qur'ān, in a spiritual sense ('Asāl'=Ibn Sīnā's 'Absāl'). The last-mentioned, accordingly, stands for the allegorical method of interpreting the sacred writings—a legacy of Alexandrian thought—which had been far more widely assimilated in Islām than philosophy in the stricter sense as represented by Hayy.

The thread of the narrative is as follows: Hayy ibn Yaqẓān ('The Living, son of the Awake') is, when a mere child, cast upon an uninhabited island below the equator—or, according to another legend, comes into being there by spontaneous generation. He is suckled by a gazelle, and grows up among animals, the language of which he learns, and from which, after trying the leaves of trees, he obtains his first primitive clothing. This is the starting-point of his development, which completes itself in 7×7 years. He has an intense desire to learn. The gazelle that suckled him dies, and shortly afterwards he begins to dismember it, continuing till he comes to the conclusion that the heart is the central bodily organ, the seat of the principle of life. Having discovered how to produce fire, and having found a relish in roasted flesh, he proceeds to dissect various other animals, either dead or alive. Then, just as he studied the animals of his island, even taming a number of them, so he investigates its plants and minerals, its atmospheric phenomena, and, in a word, the whole philosophy of Nature. He is struck by the multiplicity of phenomena, and he endeavours to find unity in all—the unity of the organism, that of the species and the genus, and at length the all-pervading unity of the world. From his study of physical Nature, in every part of which he traces the distinction between matter and psychical or spiritual form, and, accordingly, an ever-recurring birth and decay, he infers the existence of a pure and invariable Form as the cause of all that is, and in this way he comes to know the Deity from His works. The existence of the Divine Spirit he infers also from the fact that space must necessarily be conceived as finite.

Thus far he has recognized the Creator of the world only as the most perfect spiritual being. He now proceeds to study his own spirit as the medium through which he has obtained that knowledge. He perceives that he belongs to a realm above the animal kingdom, and that he is akin to the spirits who control the celestial spheres. It is only as regards his body that he is of the earth; his soul or spirit (*rūḥ*) is indubitably of a celestial nature, and the highest that is in him—that by which he has come to recognize the Supreme Being—must surely be akin to that Being. These reflexions furnish him with the law for his future conduct (cf. the exercises of Buddhist monks and of whirling dervishes). He restricts his physical wants to what is absolutely necessary. By preference he eats ripe fruits and vegetables, and only in case of necessity resorts to animal food, while he fasts as often and as long as possible. He resolves that no species of animate beings shall become extinct on his account. He aims at scrupulous cleanliness, and in his movements, as, *e.g.*, his walks around the beach of his island, copies those of the heavenly bodies. By these means he is gradually enabled to raise his true Self above the heavens and the earth, and so to reach the Divine Spirit; and at this stage, in place of his earlier logical proofs of God's existence, he enjoys the *visio beatifica* and the *unio mystica*. He has now transcended the mathematico-logical categories of unity, plurality, etc. So far as the world still exists for him, he regards it only as a reflexion of the Divine light.

Hayy has often enjoyed the raptures of ecstasy, when at length his solitude is interrupted. Upon a neighbouring island live a people who, though adherents of the Muslim faith, are given to sensuous pleasures. A friend of Salāmān, the ruler of this island—an individual named Asāl—desiring to devote himself to study and self-denial, sets out for Hayy's island, which he supposes to be uninhabited. Here, then, he meets with Hayy, and, when the latter has at length acquired human language, the two become convinced that the religion of the one, in its rational interpretation, and the philosophy of the other are essentially the same. With a view to proclaiming this pure version of the truth to the credulous multitude, Hayy proceeds to the adjacent island, accompanied by Asāl. But their design miscarries; and the two friends have ultimately to admit that Muḥammad had acted wisely in giving the truth to the people under a veil of symbolical language. They, therefore, go back to the uninhabited island, in order that they may further give themselves to a life consecrated to God.

The greater portion of Ibn Ṭufail's book is devoted to the course of Hayy's education, and it is not to be wondered at that those who first translated the work, and gave an account of the author's philosophy, were mainly concerned with the person of Hayy. But the central theme of the allegory, as has been indicated, is the relation between religion and philosophy, and the principle that philosophy is one with religion properly understood. This has been specially emphasized by Gauthier, though perhaps somewhat one-sidedly. It is certainly quite obvious that in several passages Ibn Ṭufail is on Hayy's side: the eyes of Asāl are opened to the profoundest mysteries of the Spirit, not by the direct revelation of the Qur'ān, but by Hayy's philosophy of enlightenment; and at all events the work permits the inference that man may attain to supreme salvation by the inner light alone, and without the aid of prophetic revelation. This point of view was enough of itself to render the book objectionable to the Christian theologians of the Middle Ages, while, in particular, the monopsychitism of its author was stigmatized by Albertus Magnus as 'error omnino absurdus et pessimus' (*de Nat. et Orig. An.* ii. 4), and as a thing 'omnino deliramento simile' (*de An.* III. i. 7).

The *Hayy ibn Yaqẓān* had at first but few readers. The Neo-Platonists of the Renaissance seem not to have known it, else they would have found it acceptable, inasmuch as they taught that there were rays of the one Divine truth in all religions and philosophies. Certain points of connexion between *Hayy* and *El Criticón*, a work by the Spanish author Baltasar Gracián published in 1650–53—links recently pointed out by Menéndez y Pelayo—have not yet been satisfactorily explained.

LITERATURE.—i. *TRANSLATIONS OF HAYY IBN YAQẒĀN.*—The Arabic text with a Lat. tr. by E. Pococke, Jr., and an introduction by his father, was published at Oxford in 1671, and reprinted in 1700. The first Eng. tr. (1674; from the Lat.) was the work of George Keith, who, as a Quaker, probably set a higher value upon the 'inner light' than upon the letter of a revelation. A second Eng. tr. (also from the Lat.), by George Ashwell, appeared in 1686. In 1708, Simon Ockley, the orientalist, published a new English version from the original, and this was recently re-issued with few alterations by E. A. van Dyck, 'for the use of his pupils' (Cairo, 1905). Of Dutch translators probably the first was J. Bouwmeester, a friend of Spinoza, whose rendering (Amsterdam, 1672) was executed from the Lat. of Pococke, and this work was re-published at Amsterdam in 1701, while in the same year another issue, collated with the original Arabic and furnished with notes by the oriental scholar H. Reland, a professor in Utrecht, was published at Rotterdam. The earliest Germ. tr., by J. G. Pritius (Frankfort, 1726), was based upon the English of Ockley; that of J. G. Eichhorn (Berlin, 1783) is more independent. French and Spanish trr. have appeared only in recent times (see below).

Pococke's designation of the work, 'Philosophus Autodidactus,' appears on the title-page of most of the trr., even the Spanish of 1900. Reland (1701) has 'De natuurlijke Wijsgeer' ('The Natural Philosopher'), and Eichhorn, 'Der Naturmensch' ('The Natural Man'). In the 19th cent. Hayy was often compared with Defoe's Robinson Crusoe, but to us it is surely rather the contrast than the resemblance that suggests itself: Crusoe is the pattern of the practical man, while Hayy is the ideal of the reflective and mystical mode of life. Since 1882 the original has been frequently issued in the East—in Cairo and Constantinople—and has thus been brought within the range of active European study.

Afric.* xlii.), Paris, 1909 (with bibliography).

T. J. DE BOER.

**IBN TŪMART.**—Ibn Tūmart was a famous Muslim reformer of Morocco, surnamed 'the *Mahdī* of the Almohads.' According to Ibn Khaldūn, his name was *Amghar*, Berber for 'the chief.' The names of his ancestors were also Berber. The date of his birth is unknown; but it must have taken place between A.H. 470 and 480. He was born in a village of Sūs called Ijli en Warghān. His family were Iserghins, a section of the Hintata, one of the chief tribes of the Atlas. Ibn Khaldūn says that they were celebrated for their piety, and that Ibn Tūmart seemed eager to learn, and frequented the mosques, where he burned so many candles that he received the surname *Asafu* (Berber), 'the fire-brand.' It was probably the thirst for knowledge that drove him to the East.

At this time the Almoravid dynasty, which ruled in the Maghrib and a part of Spain, was declining, and corruption of morals had followed close on conquest. One of the strictest Muslim sects, that of Mālik ibn Anas, was in power; it confined its attention to the study of *furū'*, manuals which had usurped the place of the Qur'ān and the *hadīths*. Ghazālī had strongly opposed its doctrines in the East in a chapter of his *Ihyā 'ulūm al-dīn*—the *Kitāb al 'Ilm*, which called forth the hatred of the lawyers (*faqīh*), such as the *qāḍī* 'Iyāḍ, and even Ash'arites like al-Ṭurṭūshī, who did not admit independent minds into their sects. His works were burned by order of the Almoravid amirs. Further, the grossest anthropomorphism (*tajsīm*) was prevalent; the allegorical expressions of the Qur'ān were taken literally; and God was given a corporeal form.

Ibn Tūmart started his travels in Spain, and it was undoubtedly there that he began to modify his ideas under the influence of the writings of Ibn Ḥazm (*q.v.*). He then went to the East, but the chronology of his travels is not certain. If, contrary to the opinion of al-Marrākushī, it was during his first stay in Alexandria that he imbibed the doctrines of Abu Bakr and Ṭurṭūshī, the latter—a believer in the Ash'arite teaching, although opposed to Ghazālī—must have imparted it to his pupil. He afterwards made the pilgrimage to Mecca, and studied at Baghdād and perhaps at Damascus. There he became imbued with the ideas of Ghazālī. Later writers say that it was under Ghazālī's influence that Ibn Tūmart decided to reform the beliefs of his country; but the two men never met.

These years of travel and study had transformed the Maghrībine *ṭālib*. If his plan was not yet fixed in all its details, he had at least thought of it. On the vessel in which he sailed he preached to the crew and the passengers, who, in obedience to his words, set themselves to read the Qur'ān and to pray. Thoroughly inspired with Ash'arite doctrines, he continued his preaching in Tripoli, in Mahadia, where the ruling sultan, Yaḥyā ibn Tamim, showed him great regard after hearing him state his case, at Monastir and at Bougie. There he played the part of moral reformer without restraint, making liberal application of an early maxim:

> 'Whoever among you sees anything reprehensible must change it with his hand; if he cannot, he must do it with his tongue; if that is impossible, he must do it with his heart. This is the minimum of religion.'

The Hammadite sovereign was annoyed at this impeachment of his authority; the people themselves rose up, and Ibn Tūmart fled to the Beni Uriagol, a neighbouring Berber tribe, who took him under their protection. There he met[1] the man who was to continue his work, 'Abd al-Mu'min, a poor *ṭālib* of Tajira, to the north of Nedroma, who, like himself, went to the East to study. Legend, which ascribes to Ibn Tūmart a knowledge of the qabbālā, which he learned in the East, claims that he recognized, from certain signs in this young man, the person for whom he was looking, just as Ghazālī had recognized the future reformer in him. All that we know is that he had an interview with 'Abd al-Mu'min, that he questioned him minutely, and that he ended by making him decide to give up his travels in the East in order to follow him. He then returned to the Maghrib by way of Warsenis and Tlemsen, out of which he was driven by the governor; and then he passed through Fez and Miknāsa, where the people received his remonstrances with blows. At last he arrived at Morocco, where he asserted more than ever his rôle of uncompromising reformer of morals and doctrines. The Lemtuna women, like the Tuaregs and Kabyle of the present day, did not veil their faces. On this account Ibn Tūmart insulted them, and even assaulted Sura, the sister of the Almoravid amir 'Alī. 'Alī himself was not free from his insults. He rebuked him even in the mosque. 'Alī, who was more patient and tolerant than the reformer, did not punish him as he deserved; he merely summoned a conference at which Ibn Tūmart had to argue with Almoravid lawyers. They discussed such points as: Are the ways of knowledge limited or not? The principles of the true and the false are four in number: knowledge, ignorance, doubt, and supposition. He had no difficulty in defeating them, although among them there was a Spaniard as intellectual and as intolerant as himself—Mālik ibn Wuhaib, who advised 'Alī to put him to death, but in vain. The amir spared him, and Ibn Tūmart fled to Aghmāt, where he took part in further discussions, and thence to Agnilin, where he inaugurated his apostleship in a methodical way. At first he posed simply as the reformer of morals in so far as they were contrary to the Qur'ān and tradition; then, when he had obtained a certain influence over his followers, he went on to preach his own doctrines, inveighing violently against the dynasty 'that followed false doctrines,' and pronounced as 'infidel' any who transgressed his teaching: it was a preaching of holy war, not only with pagans and polytheists, but also with other Muslims. He chose ten companions, 'Abd al-Mu'min among them, and, after preparing their minds by a description of the characteristics of the Mahdī, he made them recognize him as such, and composed a genealogy for himself which made him a descendant of 'Alī ibn Abū Ṭālib. His doctrine was not pure Ash'arism; it was mixed with Shī'ism. The historians mention tricks of jugglery and perfidy to which he resorted in order to justify his claims. He rallied round him all the Hergha and a large section of the Maṣmūda, who had always been hostile to the Lemtuna (Almoravids), so much so that Yūsuf (ibn Tashfīn) had founded Marrākesh in order to keep them at a safe distance. He had written various treatises for them in Berber—a language which he spoke very well.[2] One of them, the *Tauḥīd*, is preserved in an Arabic version, published at Algiers in 1903. He completed the organization of his followers, whom he divided

[1] According to the *Rauḍ al-Qirṭās*, this meeting took place at Tajira, the birthplace of 'Abd al-Mu'min.

[2] The Berbers knew so little Arabic that, in order to teach the uneducated Maṣmūda the *Fātiḥa* (first *sūra* of the Qur'ān), he named each of them by a word of this *sūra*: the first was called *al-Ḥamdu li'llāh* ('praise to God'); the second, *Rabbi* ('lord'); the third, *al-'Alāmīn* ('of the worlds'). By asking them to repeat their names in order, he succeeded in teaching them to recite the *sūra*.

into categories: the first was composed of the ten who had been the first to recognize him; they were called the *juma'a* ('community'). The second was made up of fifty faithful ones; these he sometimes called 'believers' (*mū'minūn*) and sometimes 'unitarians' (*mu'aḥḥidūn*, from which comes the name 'Almohads'). His authority, however, was not recognized all over, as was shown particularly by the inhabitants of Tīnmāl (or Tīnmelel). He entered this town by strategy, massacred 15,000 men, took the women as slaves, divided the land and houses among his followers, and built a fortress. He converted the neighbouring tribes with their consent or by force, and in A.H. 517 he sent an army against the Almoravids under the leadership of 'Abd al-Mu'min. It sustained a terrible defeat, and the Mahdī found himself blockaded in Tīnmāl. Some of his followers suggested surrender. Ibn Tūmart had recourse to charlatanry with the complicity of Abū 'Abd Allāh al-Wansharīsī, whom he had brought from Warsenis; and, having regained his prestige, he massacred those of whom he was not sure. Ibn al-Athīr gives the evidently exaggerated number of 70,000 men as that of those thus slain. The cause of the Almohads revived as the power of the Almoravids weakened in Spain and Africa, and, when the Mahdī died in 524 (522 according to others), 'Abd al-Mu'min, whom he had chosen as his successor, was ready to re-commence the struggle. His tomb is in Tīnmāl, but his name and his history are completely forgotten.

RENÉ BASSET.

**IBSEN.**—Henrik Ibsen (dramatist and poet) was born at Skien, in southern Norway, on 20th March 1828, the eldest son of Knud Ibsen, a substantial merchant. Scottish, German, and Danish strains preponderated over Norwegian in his ancestry. While Henrik was still a child, his father failed in business, and the family removed from his first home, a stately house in the market-place, to a humble suburban dwelling. His schooling was brief, and distinguished chiefly by a bent for art. This could not be indulged, and he was apprenticed at fifteen to an apothecary at Grimstad, a place still smaller and more remote. Here he spent seven years (1843-50), his time of storm and stress. The revolution of 1848-49 quickened his instinct of revolt and wakened his lyric power. He wrote fiery appeals on behalf of struggling Hungary and Denmark. He chose a Roman revolutionary for the hero of his first drama. *Catiline* (1850) excited no attention whatever; but its importance is great. Ibsen re-published it in 1875, with a preface in which he points out that it foreshadows the standing theme of his later drama —'the conflict of will and power.' And he is already a dramatist; in spite of his revolutionary sympathies, he has not idealized his hero; his Catiline is a tragically mixed character, who owes his ruin more to his own inner corruption than to the power of his foes.

A few months before its publication, Ibsen, having completed his apprenticeship, had come to Christiania. Here a second piece, *A Viking's Barrow* (*Kjæmpehöjen*), was acted with some success. He lived precariously by journalism, editing, with two friends, a short-lived periodical. In Nov. 1851 an appointment as stage-poet of the theatre at Bergen cut short these desultory activities, and decided his career. In accordance with the terms of his contract, he spent some months of 1852 in the study of stage arrangements at Copenhagen and Dresden. The five following years at Bergen brought him a practical training in stage technique of the utmost value to him. Besides staging numerous plays by other men, he produced four new pieces of his own—in particular *Dame Inger at Östraat* and *The Feast at Solhaug*. Enthusiasm for the national past was in the air at Bergen, and Ibsen did not escape it. But his mind was utterly unhistorical; history, even the national history, attracted him only as a source of dramatic or psychological problems, and these he was soon to find were furnished in greater abundance by contemporary society. Even when he drew upon history he re-shaped it freely to his needs. The historical Dame Inger was a spirited and high-handed, but not a tragic, figure; Ibsen involves her in a harrowing conflict between ambition and motherly love, which ends in her involuntary murder of the son for whom she has dared and endured. The *Feast at Solhaug* (1855) was the first result of his study of the sagas of Iceland. Something of their tragic grandeur is already reflected in the heroine Margit. But the lyrical form of the dialogue echoes the Norwegian ballads, and the temper of the play has a romantic buoyancy which Ibsen never again recovered. Two other new pieces were written and performed at Bergen—*St. John's Night* and *Olaf Liljekrans*, both based upon Norwegian legend. Both remained till recently unprinted.

In the summer of 1857, his contract at Bergen having terminated, Ibsen accepted a similar post at the Norwegian theatre in Christiania. A few months later he brought a wife to his new home, Susannah Daae Thoresen of Bergen.

The theatre had been recently established expressly to combat the dominant Danish taste by promoting a national Norwegian drama. With *The Vikings at Helgoland* (1857), Norway definitely acquired an original and very noble drama of her own. But the resources of the Norwegian theatre were unequal to staging it, and the older theatres both at Christiania and at Copenhagen rejected it with scorn. Danish poets like Oehlenschläger had dramatized the heroic saga in elegant iambics, and with a persistent effort to assuage and refine. Ibsen kept the rude strength of persons and situations, and the sinewy unadorned prose of their speech. Hjördis, the passionate wronged woman, who slays in deliberate vengeance the man she loves, is a tragic creation worthy of her prototypes in myth and saga, Brynhild and Gudrun.

The rejection of *The Vikings*, which was not played anywhere before 1861, increased Ibsen's estrangement from Christiania society. Conservative in politics, orthodox in religion, and devoted to Danish ideals of culture, the official and mercantile circles of the capital offered a stolid resistance to the young and needy idealists of the Nationalist cause. Björnson, four years Ibsen's junior, a born orator, and already the author of *Synnöve Solbakken* (1857), stood above the taciturn Ibsen both in persuasive potency and in popular repute. And Ibsen's next drama was a satiric comedy which ridiculed well-to-do society at its

most sensitive point, and turned its apathy into furious indignation. *Love's Comedy* (1862) is, on the surface, an amusing exposure of the foibles incident to conventional courtship and marriage; a plea for the subjection of these relations to calm good sense, undistracted by sentiment and romance. But this attack upon 'romance' was inspired by a conception of love romantic in the extreme. Love's 'comedy' concerned only the shallow sentiment which society called by that name. The plight of genuine love in marriage could only, in Ibsen's eyes, be tragic: the routine of married life, the cares of household and children, vulgarized, he thought, the passion of souls. Falk, the young poet who preaches this doctrine, is at once ardent and shallow enough to make it, in his own case, plausible. The heroine, Svanhild, one of Ibsen's loveliest and most pathetic creations, gives him her heart, and they are on the point of adopting the conventional solution when the representative of calm good sense, an elderly merchant, intervenes, poses the young lovers with their own forgotten principles, and offers his own hand to Svanhild, who sadly accepts it. The play is written with abounding wit in ringing rhymes, and is now popular on all Scandinavian stages; but its imperfect technique and impossible ethics have hindered its vogue elsewhere. *Love's Comedy* is, however, important as Ibsen's first essay in the modern 'social' drama. A second saga-drama followed. The *Pretenders to the Crown* was written in a few weeks of the summer of 1863. Like *Dame Inger*, it is built upon Norwegian history, but is at once less unhistorical and more Ibsenian. The two figures, whose prolonged duel for the throne of Norway we watch, are admirably imagined and drawn: Hakon, the born ruler, clear-sighted and strong-willed; Skule, paralyzed by his own doubts. In Skule, Ibsen's own still hesitant faith in his powers may be reflected; but it is Hakon, not Skule, who is suggested by the clear structure and powerful build of this striking play.

Early in 1864 Ibsen's affairs reached a crisis. His outward circumstances, always precarious, had been seriously embarrassed by the failure, in 1862, of the Norwegian theatre. A small appointment as 'æsthetic adviser' at the Christiania theatre barely afforded a livelihood. His inner estrangement from society grew more bitter and intense. Some measure of it is given by the terrible stanzas of *On the Fells* (1860), an autobiographic confession shot through with the passion of Faust and the cynicism of Mephistopheles. The outbreak of the Dano-Prussian war in the spring of 1864 added a new and more definite provocation. Norway and Sweden declined, as in 1849, to support their Danish brothers; and the poet, who as a young man had then striven vainly to rouse them, felt their abstention yet more bitterly now. Some enthusiastic students went to the front as volunteers, but the government remained neutral; and service in the Norwegian army remained, as Ibsen intimated in his mocking verses, *The Ground of Faith*, one of the safest of callings. He sought to leave the country, and applied for a travelling pension, such as had recently been granted to Björnson. But *Love's Comedy* was too recent, and the favour was refused. In April 1864, Ibsen left Christiania for the south. Off Düppel he heard the Prussian guns; at Berlin he saw the Danish trophies, and the first idea of a great retributive poem upon his unfaithful fellow-countrymen flashed into his mind. It was the germ of *Brand*. In May he settled in Rome. The project at first made little progress. *Brand* was originally planned as a narrative poem, but the few cantos executed are laboured, and they were finally thrown aside and lost sight of. Thirty years later the Danish collector Pontoppidan discovered the MS in an antiquarian shop at Rome; it was published at Copenhagen in 1907. Meanwhile Ibsen, better inspired, had reverted to the dramatic form in which he was a master, and to a swift, flexible, ringing verse; he now wrote with fire, and in three months of the summer of 1865 completed the colossal poem. Brand, the prophet of 'All or Nothing,' hero and fanatic, is a great tragic figure, sublimely, but not quite consistently, conceived; and the drama itself is something less and something more, and greater, than the invective against Norway which it set out to be. Types of her prevailing weaknesses—of compromise, sentimentality, faintheartedness—are drawn with brilliant and incisive touch; peasants and artists, officials and clergy, come under the satirist's stroke; but the final upshot is in the spirit of Agnes the devoted wife rather than of Brand, of love rather than uncompromising will. *Brand* has *longueurs*, but in its greatest moments, such as the close of the fourth act, it reaches a tragic intensity unsurpassed in the literature of the century. Contrary to the expectation of both author and publisher, it was received throughout the Scandinavian world with rapturous applause; its fierce invectives counted for nothing with readers who recognized that the poet who lashed his country passionately loved it, or who saw in it, above all, a thrilling religious romance. With *Brand*, Ibsen's Scandinavian fame begins.

A yet greater work was immediately to follow. In *Peer Gynt* (1866), Ibsen found a totally new way of saying essentially the same things. The hero, instead of being the prophetic assailant of Norwegian failings, is their embodiment. The sombre tone and Hebraic intensity of *Brand* are replaced by an action of immense scope and many-coloured diversity. Peer, a romantic egoist, living only to 'fulfil himself,' finds at the close of a career of self-indulgence that he has no self to fulfil. From the Nemesis pronounced by Ibsen upon fragmentary and purposeless lives he is saved, apparently, by the devotion of Solveig, in whose faith and love his 'self' has lived—a beautiful incoherence which betrays the persistence of the romantic heart in Ibsen himself. In wealth of poetry, sometimes, as in Ase's death-scene, of the most daring originality, *Peer Gynt* marks the highest reach of modern Scandinavian literature. Even more than in *Brand* the poetry overshadowed the polemical animus which had inspired its inception.

But in Ibsen himself the polemical animus was still vigorous. The desire to give it more direct and searching expression contributed to shape *The League of Youth* (1869), the first of the prose comedies of modern society. It was written at Dresden, whither he had moved from Rome in the previous year. The Liberal party, which was the main support of Norwegian separatism, is here brought with scathing realism upon the stage. The temper of the piece is as far removed from poetry as the form. Ibsen compared it to the Dresden 'beer and sausages,' after the Roman 'wine' of *Peer Gynt*. The play provoked a storm of obloquy, to which Ibsen retorted in the verses *At Port Said*. A vaster work, meantime, was approaching completion. *Cæsar and Galilean*, published in 1873, had been planned in 1864, and occupied much of the intervening years. The spell of classical antiquity, which inspired Julian's overthrow of Christianity, Ibsen himself, living at Rome, did not escape, and Julian is drawn with unmistakable sympathy. But Ibsen profoundly understood the futility of his enterprise, and portrayed his failure with an emphasis which procured for the drama the plaudits of the orthodox. Julian's character, however, is not perfectly maintained; in the Second

Part he is too far degraded to rouse genuine tragic pity. Ibsen, for the first and last time, appears not completely master of his material. In both the contending forces, Hellenism and Christianity, he saw the seed of failure, and looked forward, like Heine, to the coming of a 'Third Kingdom,' superseding and surpassing both.

The passage containing this prophecy is deeply interesting; but Ibsen never reverted to it. It suggests a belief in the permanence of some form of political or religious community, which events were rapidly sapping in his mind. His fervid championship of Scandinavian brotherhood, of a union of the Northern States, had for years held in check his native individualism. He had allied himself with the Norwegian conservatives, and, not without astute arrangement on their part, had received flattering attentions and distinctions from the Swedish king, as an illustrious pillar of the Union. He was thus drawn into a false position. To political and ecclesiastical institutions as such he had at no time attached value. He had derided them in the persons of the Mayor and the Dean in *Brand*. His letters of the early seventies express a yet more radical antagonism. 'The State must go!' he wrote to Brandes in the crisis of the fate of France, 1871; 'all religion will fall!' The pillars of society, he was convinced, were rotten; and the hope of humanity lay in a revolution which would alone make possible the free development of the individual. That such a revolution was imminent in Europe Ibsen for at least twenty years (1864–84) believed. One who thought thus could not long remain in alliance with the conservatives; in 1877, Ibsen cut himself loose with the drama significantly called *The Pillars of Society*. 'It may pass in some sort as an antithesis to *The League of Youth*,' he wrote to his publisher shortly before its appearance. The satire is now aimed, not at the democratic agitators, but at the men of social standing and prestige, the magnates of finance and business; and it is aimed with more conviction and more passion. In technical mastery and psychological force the *Pillars* falls short of Ibsen's finest work; but the impact of the sharp tonic of truth, in the person of Lona Hessel, upon the fabric of an imposing but hollow respectability is represented with extraordinary verve. The conservatives deeply resented this unexpected blow. One yet more searching followed. *A Doll's House* (1879) probed the roots not merely of social status, but of the family itself. That women were to count with men as individuals, and to share men's claim to self-development, was now first made clear. In marriage this claim seemed to be all but universally ignored. Ibsen's ideal for women had hitherto been the selfless devotion of an Agnes or a Solveig to husband or lover. Even the emancipated Lona shatters the 'Pillars' only that she may vindicate her brother. Nora is the first to discover that she herself has a personality, and a duty towards it, which as the wife of Helmer she cannot fulfil. The play, a capital stage piece, called forth a storm of protest, which made its author's name for the first time widely known in Europe. The weightiest criticism took the form of the inquiry: 'What then of the children?' Ibsen replied in the terrible drama *Ghosts* (1881), a work far greater in technical mastery, as well as in intellectual reach, than any of its predecessors. In laying bare the horrible possibilities of inheritance, Ibsen discovered a new source of tragic terror and pity, analogous to the antique destiny, but indefeasibly real; he also struck a courageous blow for the cause of womanhood. But *Ghosts* only redoubled the scandal of *A Doll's House*. Ibsen, provoked by what he took to be a general conspiracy to ignore ugly facts, retorted the next year with *An Enemy of the People* (1882), an incisive and brilliant satire, in which patricians and democrats fare equally ill, and Ibsen's individualism culminates in the ringing declaration that 'the strongest man is he who stands alone.'

With this challenging cry, however, the polemical phase of Ibsen's drama closes. In his eight remaining plays the temper of revolution is constantly present as a subject, but it no longer altogether reflects his own; on the contrary, he probes its weaknesses as remorselessly as those of conservatism and orthodoxy; and his attitude is now that of the inscrutable doubter who puts searching questions everywhere and answers none. To find answers, as he said, was not his business. *The Wild Duck* (1884), a masterpiece of construction, is a wonderful study of the disasters wrought by the blundering idealist; Gregers Werle is a diminutive Stockmann, Hjalmar Ekdal a mean and shabby Peer Gynt. *Rosmersholm* (1886), perhaps the greatest of the prose dramas, paints the guilty passion of an emancipated woman, and her purification by love and in death. No other modern play is informed with so deep a sense that sin may be forgiven, but must be atoned for, as this masterpiece of the 'immoral' Ibsen. Here, too, the mysterious suggestions of folklore, so abundant in *Brand* and *Peer Gynt*, so severely banished from the revolutionary prose dramas, once more recur. The 'white horses of Rosmersholm' gleam eerily in the background, foreboding the fateful issue; and *The Lady from the Sea* (1888) is a study of such revolt as Nora's, inspired by no doctrine of self-development, but by the spell of the sea. Contrary, too, to Ibsen's wont hitherto, the spell is finally mastered; Eline is reconciled to her husband. In *Hedda Gabler* (1890), even more than in *The Wild Duck*, he is occupied with the meaner and baser types of emancipated character; Hedda is a pitiful parody of romantic revolt drawn with merciless power. *The Master-Builder* (1892), which shows a growing use of symbolism, portrays emancipation in a form at once more fascinating and more dangerous; his old theme of rivalry between youth and maturity is resumed but in other terms. Solness succumbs to no young men's revolt but to the too stimulating homage of a girl. *Little Eyolf* (1894) and *John Gabriel Borkman* (1896) painted other tragic issues with diminishing power. Finally, in 1900, *When We Dead Awaken*, little more than an eccentric parody of an Ibsenian play, closed the great series. In 1901, Ibsen suffered a nervous collapse, from which he never recovered. On the 23rd of May 1906 he died. He was buried with national honours.

The fierce controversies once provoked by Ibsen's name have long subsided, even in England, where they survived longest. It is premature to determine the final rank of his work; but there can be no doubt that it will count among the most potent and original literary forces of the 19th century. One of the last descendants of the Revolution, near of kin to the poets of Young Germany, above all to Heine, he added to their ardent individualism and to their brilliant imagination artistic conscience, method, and will. Drama was for him from the first a means of expressing his own impassioned apprehension of the dissonances of modern society; but he fashioned the instrument to his purpose with deliberate and calculated precision. In mastery of dramatic resource, in knowledge of the stage, he has no superior; but his technique, without disdaining tradition, was shaped essentially by the need of presenting with the utmost cogency and clearness what he had to say. This meant, however, a wholesale rejection of stage conventions, stage situations, and stage

talk; a return to fearless realism, especially in dialogue. It meant also a re-discovery of some long disused but potent ways in drama—the concentrated or inverted tragic plot, as in *Oedipus Tyrannus*, and *Rosmersholm*, the stress of an irresistible fate, rooted in past events, as in the *Oresteia*, and *Ghosts*. His subject always concerned the forces which disturb or shatter social cohesion; but his normal sympathy with these forces was at no time unqualified; he exposed the corruption of a Catiline, the fanaticism of a Brand; he angered both political parties, and perplexed his warmest partisans by an ironical impartiality which spared the failings of neither side. To see the truth under many aspects, 'to see life thoroughly and see it whole,' in the great Sophoclean way, was less signally his gift; and the drift of his thinking is accordingly not towards any kind of harmony, but to the statement of fundamental problems about life which cannot be resolved and must not be escaped. With all this, Ibsen was fundamentally a poet. His few but enthralling lyrics, and his magnificent verse dramas, amaze the reader of his colourless prose by their splendour of imagination, their metrical brilliance, and the romantic intensity with which they render the passion of love. It was one of the secrets of his dramatic achievement that the white heat of poetry was in him united, as it has rarely been, with logical rigour and precision, and inflexible self-control. He gave the drama not merely an original technique, but immensely heightened intellectual and ethical significance. Since 1870 the influence of his work has told powerfully upon the scope and status of the drama throughout civilized Europe.

LITERATURE.—Collected editions of Ibsen's works, with introductions to the several plays, are now accessible (1) in the original, ed. Halfdan Koht, and others, Copenhagen, 1898; (2) in German, ed. G. Brandes, and others, Berlin, 1899 ff.; (3) in English, ed. W. Archer and C. H. Herford, London, 1906. The best study of his life and work, as yet untranslated, is R. Woerner, *Henrik Ibsen*, Munich, 1900. Halvorsen's bibliography, included in the Norwegian edition of the Works, is invaluable. The first drafts of the plays are collected in *Efterladte Skrifter*, 3 vols., Christiania, 1909. Ibsen's *Letters* were published in 1904, Eng. tr., Christiania, 1905. Many of the lyrics have been excellently translated by F. Garrett, London, 1912. Other studies are: Brandes, *Essays*, Copenhagen, 1868 ff.; E. Gosse, *Ibsen*, London, 1907; G. Bernard Shaw, *Quintessence of Ibsenism*, do. 1892; R. E. Roberts, *Ibsen*, do. 1912. The literature of Ibsenian commentary and exposition, esp. in German, is already immeasurable. Much of it is catalogued in the appendix to Woerner's *Life* mentioned above.

**ICELAND.**—See TEUTONS.

**ICONOCLASM.**—Iconoclasm is the name of a movement against the worship of holy pictures in the Eastern Church, in the 8th and 9th centuries, which was repeated on a smaller scale in the Frankish kingdom.

**1. Origin.**—The source of Iconoclasm is much discussed. Just before the Roman Emperors began to persecute image-worshippers, their rivals, the Khalifs at Damascus, had started a similar campaign among their Christian subjects (Yazīd I., 680–683; Yazīd II., 720–724). The Iconoclast movement in the Empire was warmly approved by the Muslims; yet it is unlikely that it should have been caused solely, or even chiefly, by the influence of the great enemy of the Christian Emperors. Undoubtedly in the 8th cent. the worship of images in the East had arrived at an extreme point. When we read of people who chose, not a living man but some special icon (εἰκών), to be the godfather of their child, and who ground an image to powder, mixed this with water, and drank it as a magic medicine,[1] it is not difficult to understand that a reaction would come. Moreover, long before the Iconoclast troubles began there were parties in the East which objected to the prevalent cult of holy images.[1] The Paulicians, thinking all matter bad, rejected material pictures. In the early 8th cent. several Orthodox bishops (Constantine of Nakolia, Theodosios of Ephesus, and Thomas of Klaudiopolis) had already preached against images and relics. A Jacobite bishop, Xenaias of Hierapolis, was a forerunner of the Iconoclasts; and, when this party succeeded in getting the ear of the Emperor, the Iconoclast persecution began.

[1] So the letter of Michael II. to Louis the Pious (Mansi, xiv. 417–422). On the cult of icons in the Byzantine Church just before Iconoclasm see E. Marin, *Les Moines de Constantinople*, Paris, 1897, ch. iv. pp. 312–325.

**2. The first Iconoclast persecution.**—Iconoclasm throughout was a government movement; the chief secondary issue all the time—indeed, from some points of view, the main issue—was the right of the Emperor to legislate for the Church. On the other hand, the monks were always defenders of images. The Isaurian dynasty of Emperors were the Iconoclasts of the first period, and the first of this dynasty, Leo III. (A.D. 716–741), began the campaign. As soon as he had made himself Emperor, he developed a policy of strengthening the Empire by enforcing uniformity and centralizing the power.[2] He persecuted Jews and Paulicians cruelly. Then he was persuaded by the party opposed to images that they were the main obstacle against the conversion of Jews and Muslims. There was also a certain rationalizing tendency in this dynasty which helps to explain his attitude. Constantine of Nakolia and his party persuaded the Emperor that the worship of images was the great hindrance to the unity of the Empire, that it caused superstition and divisions, and that it was forbidden by the first commandment (in the Byzantine numbering). Seeing the coming trouble, John of Synnada wrote to warn the Patriarch of Constantinople of Constantine's views; and the Patriarch, Germanos I. (A.D. 715–730), wrote a treatise in favour of images, addressed to Thomas of Klaudiopolis.[3] But the Emperor, having now made up his mind to forbid image-worship, began to enforce their destruction ruthlessly. In 725 he published an edict declaring that image-worship is idolatry, and commanding all icons in the churches to be destroyed. The soldiers began to carry out his order, and there were disturbances throughout the Empire.[4] Germanos protested against the edict and appealed to the Pope (Gregory II., A.D. 715–731) in 728,[5] whereupon the Emperor declared him a traitor, deposed him, and set up an Iconoclast, Anastasios, in his place (730). Leo had already written to the Pope, commanding him to accept the new edict, destroy his images, and summon a general council to forbid their use. In 727 Gregory answered by a long defence of images; he also blamed the Emperor's interference in Church matters, denied the need of a council, and demanded that Leo should cease his policy in this matter.[6] A correspondence between the Emperor and the Pope followed in which each maintained his position, Leo claiming the right to legislate for the Church, on the strength of being both βασιλεὺς καὶ ἱερεύς.[7] Meanwhile the persecution of image-worshippers raged in the East. The government was specially fierce against the monks, as being the chief defenders of images. Monasteries were destroyed, monks banished, tortured, and put to death. The Iconoclast movement took the further lines of rejecting

[1] One of the earliest forerunners of Iconoclasm was Serenus of Marseilles, to whom Pope Gregory I. (590–604) wrote a severe letter (*Ep.* ix. 105 [*PL* lxxvii. 1027]).

and destroying relics, and denying the intercession of saints. These two further points, though not necessarily involved by Iconoclasm, became generally identified with it. At this time St. John Damascene, safe from the Emperor's anger at the Khalif's court, wrote his famous defences of icons.[1] In the West, too, the people rose against the Emperor's Edict. In 727 there was a revolt in Greece against the Iconoclast Emperor, and a certain Kosmas was set up as anti-Emperor, ostensibly to protect the images. It was easily put down; then followed a second and severer law against image-worshippers. In 731 Pope Gregory II. was succeeded by Gregory III. (731–741), and the new Pope at once held a synod of 93 bishops at Rome, who excommunicated all who defiled or destroyed pictures of Christ or the saints.[2] The legate sent to Constantinople with a copy of this decree was stopped and imprisoned in Sicily. The Emperor then sent a fleet to Italy to punish the Pope; but it was wrecked by a storm on the way. He confiscated all the property of the Holy See on which he could lay his hands (in Sicily and Southern Italy), and affected to withdraw Illyricum from the Roman Patriarchate and to join it to that of Constantinople. To make the Byzantine Patriarchate coterminous with what was left of his Empire was part of his general centralizing policy. He continued an active persecution of all image-worshippers till his death in 741. His son, Constantine V. (Kopronymos, 741–775), was an even fiercer Iconoclast than his father. At Leo's death there had been another rebellion when Artabasdos, who had married Leo's daughter, set himself up as Emperor and restorer of the icons. The intruded Patriarch, Anastasios, veered round (in the usual Byzantine way) under Artabasdos, restored the images, and excommunicated Constantine. The rebellion was soon suppressed. Artabasdos was blinded and imprisoned; Anastasios was blinded, publicly flogged, forced to return to Iconoclasm, and then reinstated as Patriarch. In 753, Constantine summoned a great synod, which was to be ecumenical and to forbid image-worship for ever. Rome, Alexandria, Antioch, and Jerusalem refused to send legates. About 340 bishops attended. The see of Constantinople was vacant by the death of Anastasios (who did not long survive his mishandling), and Theodosios of Ephesus and Pastillas of Perge presided. This synod carried out the Emperor's wishes exactly, and declared all images idols forbidden by Ex $20^{4f.}$, Dt $5^8$, Ro $1^{23-25}$ etc. Pictures of Christ must be either Nestorian or Monophysite, since it is impossible to represent His Divinity; the only lawful representation of our Lord is the holy Eucharist. It is blasphemous to represent by dead matter those who live with Christ. Image-worshippers are idolaters; Leo and Constantine are the glory of the Orthodox faith, our rescuers from idolatry. With regard to three great defenders of images, already dead (Germanos of Constantinople, John Damascene, and a monk George of Cyprus), the synod declares that 'the Trinity has destroyed these three.' An Iconoclast, Constantine II. (754–766),[3] was elected to the vacant see of Constantinople, and the government at once published the decrees of this synod, demanding that all bishops in the Empire should sign the acts and destroy images in their dioceses. Instead of pictures of saints the churches were now decorated with those of flowers, fruit, and birds. The Paulicians were well treated, but the monks were tortured and put to death. A great number of the martyrs of the Iconoclast persecution come from

this time. Relics were thrown into the sea. Then the Emperor, seeing in monasticism the mainstay of image-worship, made a great effort to abolish it altogether. The monastic habit was forbidden, monasteries were turned into barracks, and the Patriarch was made to denounce his former state as a monk in his own Church. It is noticeable that the army especially became fiercely Iconoclast. Constantine died in 775. His son Leo IV. (775–780), though he did not repeal the laws, was milder in enforcing them. He tolerated monks and, at least in the first part of his reign, carried out a policy of conciliation. Towards the end of his life, however, he renewed the active persecution of his father. But his wife Irene was always a devoted image-worshipper, and kept icons secretly in her apartments.

**3. The first reaction.**—As soon as Leo IV. died (Sept. 780), a complete reaction set in. His son, Constantine VI. (780–797), was only nine years old, and the Empress Irene became regent for him. As soon as her fear of the army allowed, she set about to repeal the Iconoclast laws. All this time Iconoclasm had prevailed only within the territory over which the Emperor actually ruled. Outside the Empire, under the Muslims and in the West, image-worship went on as before; indeed, in the West especially, there was much angry feeling against the Iconoclast Emperors. Irene first deposed the Patriarch of Constantinople (Paul IV., 780–784, naturally a partisan of the late government), and a pronounced image-worshipper, Tarasios (784–806, an uncle or cousin of Photios),[1] was appointed to succeed him. Then the Empress renewed relations with Rome. She sent an embassy to the Pope (Adrian I., 772–795) begging him to come himself or to send legates to a synod which should undo the work of the former one.[2] Adrian in answer sent two letters, one for the Empress and one for the Patriarch.

He is not pleased with Tarasios' succession to the Patriarchate, but praises his orthodoxy about the images. He repeats arguments in favour of these, insists on his own authority, and demands the restitution of Illyricum to his Patriarchate.[3] As legates he sends an Archpriest Peter and Abbot Peter of St. Sabbas near Rome. The other Patriarchs were then too much harassed by the Muslims to be able to send legates. However, the monks of Egypt and Syria send deputies, who seem in some sort to have been accepted as representing their Patriarchs too.

So the synod was opened by Tarasios in the church of the Apostles at Constantinople in August 786, but it was at once dispersed by the soldiers. Irene then disbanded these and replaced them by others, and for greater safety the synod reassembled at Nicæa in Bithynia (where the first General Council had been held). Here it was opened in the summer of 787. This is the council counted by Orthodox and Catholics as the seventh General Council (Nicæa II.). About 300 bishops attended. The Roman legates signed first and were named first in all lists of members; but Tarasios conducted the proceedings, apparently because of the usual difficulty of language. The synod declared the lawful use of icons, and defended this by texts showing that there were images in the Temple (Ex $25^{18-22}$, Nu $7^{8f.}$, Ezk $41^{18f.}$, He $9^5$) and by quotations from the Fathers. In the 5th session an icon was set up in the hall of the synod. The former council (of 753) was declared to be not ecumenical, since neither the Pope nor any of the other Patriarchs was represented at it, and its arguments were refuted one by one. The 7th session drew up the symbol (*ὅρος*) of Nicæa II., in which, after the usual renewed condemnation of old heresies, it is declared that the holy icons are to receive veneration (or worship, *προσκύνησις*), not adoration (*λατρεία*). The honour paid to them is only relative (*σχετική*),

and is given for the sake of their prototypes. There is nothing new in this. It is what the defenders of image-worship had said throughout the controversy. The synod then anathematizes the chief Iconoclasts, and, in opposition to the phrase of the other council, declares that 'the Trinity has made these three (Germanos, John Damascene, and George of Cyprus) glorious.' Twenty-two Canons were drawn up, of which the third forbids the civil government to appoint bishops.[1] Copies of the acts were sent to the Pope, who approved them and had them translated into Latin. Then the images were restored in all the churches, and the first Iconoclast movement was at an end, although there remained a strong Iconoclast party, especially in the army.

4. **The second Iconoclast movement.**—Twenty-seven years later Iconoclasm broke out again. This time it is easily explicable, for the Iconoclast party, which had not ceased to exist, again got the power. After Nicæa II. the Empire was singularly unfortunate. The image-worshipping Emperors were defeated by the Muslims and Bulgars, and the soldiers looked back with regret to the glorious reign of Constantine V. Michael I. (811–813) was defeated by the Bulgars and forced to resign, while in his place the army set up Leo V. (the Armenian, 813–820), whom they persuaded that all the troubles of the Empire came from image-worship. The new Emperor invited the Patriarch of Constantinople, Nikephoros I. (806–815), to re-open the question of the icons; but he refused, saying that it was already settled by a general council. In spite of this the old laws against images were renewed, and the work of breaking images in the churches began again. In the year 815 Nikephoros[2] was deposed by a synod of bishops in obedience to the Emperor's orders, and an Iconoclast, Theodotos I. (815–821), was made Patriarch in his stead. Nikephoros was banished, and the new Patriarch immediately summoned a synod which undid the work of Nicæa II. and renewed the acts of 753.[3] The persecution of image-worshippers broke out again, more fiercely than ever. Bishops, monks, clergy, and laymen who would not accept the Iconoclast laws were banished, tortured, or killed. The great champion of the images at this time was St. Theodore, abbot of the Studion monastery,[4] who, with the image-worshippers generally, appealed to the Pope (Paschal I., 817–824). Paschal wrote to the Emperor, protesting against his renewal of the old heresy, but without effect.[5] He also welcomed the exiled monks at Rome, and gave them a monastery. In 820 Leo V. was murdered, and Michael II. (the Stammerer, 820–829) was made Emperor. He continued the same policy, and the persecution went on as before. In 842 Theophilos (829–842), who had succeeded Michael II., died. The story of the former Iconoclast movement is repeated in this one with curious exactness. Theophilos left a son three years old (Michael III. the Drunkard, 842–867), and again the Empress, Theodora, became regent for her son. At once she put an end to Iconoclasm. She deposed the Patriarch (John VII., 832–842) and put an image-worshipper (Methodios I., 842–846) in his place. She opened the prisons and let out the image-worshippers. In 842 a synod renewed the decrees of Nicæa II., approved John VII.'s deposition, and excommunicated all Iconoclasts. On the first Sunday of Lent (19th Feb. 842) the images were taken in triumph in a great procession, and were restored to the churches. That is the end of the story in the East. Iconoclasm disappeared; the holy icons have ever since been honoured by the Orthodox Church; the decrees of Nicæa II. have not again been disputed, and the memory of the restoration of the images is still kept every year (Feast of Orthodoxy, first Sunday of Lent).

5. **Iconoclasm in the West.**—At the end of the 8th cent. there was a slight echo of the great Iconoclast movement in the Frankish kingdom, caused by two misunderstandings. First, the Frankish bishops misunderstood what had been decreed at Nicæa II., and knew its acts only through a grossly inaccurate version.

For instance, in the 3rd session of the council a bishop had declared: 'I receive the holy and venerable images, but I give that worship which is real adoration (κατὰ λατρείαν) only to the consubstantial and life-giving Trinity.' This phrase had been translated: 'I receive the holy and venerable images with the adoration which I give to the consubstantial and life-giving Trinity.' The Franks misunderstood the word 'worship' (προσκύνησις) too. It is abundantly clear from the acts of the council, indeed from the whole controversy in the East, that this means reverence, a relative honour, for the sake only of the prototype (such is the explanation given by all the defenders of image-worship, St. John Damascene, St. Theodore, etc.). But in Latin προσκύνησις was translated *adoratio*, and the Franks thought it meant what we generally mean by 'adoration.'

Further, they were not used to, and did not understand, Byzantine etiquette. The Byzantines prostrated themselves before the Emperor, incensed him, and kissed his feet; they even gave these marks of respect to his portraits. So it was natural that they should do the same to portraits of the saints. Really all such forms have no absolute nor inherent meaning. They mean just what the custom of the time and place makes them mean. But the Franks, unused to such ceremonies, interpreted them according to their more reserved custom, and thought them idolatrous. Lastly, there was already the dislike of the Greeks and deep distrust of all that they did (the Franks were just about to break with the Eastern Empire altogether and to set up their own king as rival Emperor). Yet it should be noticed that these Frankish bishops never meant to take the side of the Eastern Iconoclasts. If they for a time condemned the second Council of Nicæa, they also condemned the Iconoclast Council of 753.

Already, in 767, Constantine V. had tried to gain the Frankish bishops for his views, but without success. A synod at Gentilly sent a declaration to the Pope (Paul I., 757–767) which quite satisfied him;[1] but, when Adrian I. (772–795) sent the acts of Nicæa II. (wrongly translated) to Gaul, the bishops sent back a refutation of them (790) in 85 chapters (790). This answer, expanded later, is the famous *Capitulare de imaginibus*, or *Libri carolini*.[2] In it the bishops admit that images and relics should be kept in churches and treated with due respect; but God only can receive adoration. The images are to have *opportuna ueneratio*, not *adoratio*. Except for the misunderstood use of the word *adoratio* (προσκύνησις), this is exactly what Nicæa II. had declared. In 794 they held a synod at Frankfurt in the presence of two papal legates, who seem to have done nothing to clear up the misunderstanding. This synod formally condemns Nicæa II., while showing plainly that the bishops do not understand what has there been decreed. They report it as a synod held by the Greeks at Constantinople (they do not even know where Nicæa II. sat), in which the 'Greeks' had declared that the same service and adoration are to be given to images as to the holy Trinity; and, accordingly, the Franks at Frankfurt, not sorry to

be able to condemn 'Greeks,' declare that they 'despise and condemn that synod.'[1] They sent their acts to Rome with a petition that the Pope would confirm them, which, of course, he refused to do. He had already written a long explanation of the acts of Nicæa II.; but this did not arrive in Gaul till after the synod of Frankfurt. There matters rested for a time. When the second Iconoclast persecution had broken out, Michael II. wrote to Louis the Pious demanding that the Greek image-worshipping monks who had fled to the West should be handed over to Byzantine justice, and also arguing at length against the images.[2] Louis then begged the Pope (Eugene II., 824–827) to receive from the Frankish bishops a collection of texts from the Fathers bearing on the subject, and to prepare this document they met in Paris in 825, where they again attempted a middle way, but leant decidedly towards Iconoclasm. The treatise was sent to Rome with every possible expression of respect, as useful material for consideration in the crisis. Nothing is known about the result of this document, except that it made no change in the attitude of the Holy See. Then gradually the Frankish misunderstanding was cleared up, and the movement in the West died out. Pope John VIII. (872–882) sent a more accurate translation of the acts of Nicæa II., which helped to allay the suspicion of the Franks.

There are a few later isolated cases of opposition to the veneration of images in the West. In 824 Claudius of Turin destroyed all pictures, crosses, and relics in his diocese; for which action he was reprimanded by a number of other bishops and by a Frankish abbot, Theodemir. He was condemned by a local synod. Agobard of Lyons at the same time shared Claudius's views; but Walafrid Strabo and Hincmar of Rheims defended the attitude of Nicæa II., and so explained it that we hear little more of Frankish Iconoclasm. Still, as late as the 11th cent., Joceline of Bordeaux was severely reprimanded by Pope Alexander II. for Iconoclastic ideas.

6. **The cult of images.**—Both the Catholic and the Orthodox Churches accept the decrees of Nicæa II., with their distinction between σχετικὴ προσκύνησις and λατρεία. But there is a practical difference in their application. The Orthodox have innumerable pictures, and even bas-reliefs, which they treat with great reverence. But they have no solid statues, and are very much disposed to regard these as idols. The Catholic Church, on the other hand, sees no difference in principle between a solid statue and a flat picture. Except the Nestorians, all the other Eastern Churches agree with the Orthodox in this matter. They, too, have pictures, but no statues, though some of them (notably the Armenians) are more reserved in their forms of reverence towards pictures, and sometimes blame the Orthodox in this matter. The Nestorians now have no pictures of any kind, only a plain cross, to which they pay the greatest reverence. They alone among the Eastern Churches make a principle of not venerating images, although there is evidence that formerly they had them, according to the usual Eastern custom.

LITERATURE.—C. J. Hefele, *Histoire des conciles*, French tr. by H. Leclercq, vols. iii.–iv. (Paris, 1909), contains a complete account of Iconoclasm with the acts of all the councils, and copious bibliography. The acts are in Mansi, xii. and xiii.; Natalis Alexander, 'de Iconoclastarum hæresi,' in F. Zaccaria, *Thesaurus Theologicus*, Venice, 1762, iv. 64–88; L. Maimbourg, *Histoire de l'hérésie des iconoclastes*, 2 vols., Paris, 1683; F. C. Schlosser, *Gesch. der bilderstürmenden Kaiser*, Frankfurt, 1812; J. Marx, *Der Bilderstreit der byzant. Kaiser*, Trier, 1839; K. Schwarzlose, *Der Bilderstreit, ein Kampf der griech. Kirche um ihre Eigenart und ihre Freiheit*, Gotha, 1890 (the best short history); L. Bréhier, *La Querelle des images*, Paris, 1905; J. B. Bury, *A History of the later Roman Empire*, London, 1889, ii. 428–438.

**IDEA.**—This word has been used by philosophers to denote (*a*) eternal natures or essences, the objects of true and abiding knowledge; (*b*) such natures considered as contents of a Divine mind, and archetypes of the things which we perceive with our senses; (*c*) the contents, or some of the contents, of the human mind or consciousness. The present article will be devoted to tracing the historical origin and connexion of these several usages.

1. **In Greek philosophy.**—The importance of the word in the vocabulary of philosophy is due to *Plato*, and its earlier history concerns us mainly as illustrating his usage. Both ἰδέα and the kindred term εἶδος, from whose history its own is, down to the time of Aristotle, inseparable, are derived from the root of ἰδεῖν, 'to see,' and originally had the sense of 'look,' 'looks,' 'outward appearance.' Already in Homer (*Od.* xvii. 454) εἶδος is used for 'beauty.' The primary sense of 'appearance' passes easily into that of 'form' or 'kind,' and in such passages as Thucydides, ii. 50 (τὸ εἶδος τῆς νόσου), the reference is plainly not so much to outward appearance as to true structure or essential nature; and this meaning seems to have established itself in scientific circles before the time of Plato. A. E. Taylor has recently contended (*Varia Socratica*, Oxford, 1911, p. 178 ff.) that it is independent of the meaning 'kind,' and is derived from a Pythagorean use of the word for geometrical figures, conceived as the ultimate elements of reality (cf. Plato, *Tim.* 53 C) and then extended to such elements (στοιχεῖα), however conceived. The evidence seems insufficient to support this conclusion (see C. M. Gillespie, in *Classical Quarterly*, July 1912).

We learn from the *Iatrica* of Meno (see J. Burnet, *Early Greek Philosophy*[2], London, 1908, p. 285 n.) that Plato's contemporary, Philistion, called Empedocles' four elements ἰδέαι; but this may only have meant 'kinds of body.' The fact that Democritus called his atoms ἰδέαι or εἴδη (Sext. Emp. *Math.* vii. 137; Plut. *adv. Colot.* 1111*a*; see Burnet, p. 388 n.) is explicable by his view that the atoms differed from each other only in shape (Aristotle, *Met.* A 4, $985^b$ 13, *de Gen. et Corr.* i. 2, $315^b$ 7). On the early history of the word see C. A. Brandis, *Gesch. der gr. und röm. Phil.*, Berlin, 1835, pp. 242, 299, 307; H. Diels, *Elementum*, Leipzig, 1899, p. 16; Burnet, *op. cit.*, p. 354, and the reff. under εἶδος, ἰδέα, in the index; Taylor, *Varia Socratica*, p. 178 ff.; Constantin Ritter, *Neue Untersuchungen über Platon*, Munich, 1910, p. 228 ff.

The full examination of Plato's doctrine of Ideas and of the questions how far it was original, how far the common inheritance of the Socratic circle (see Burnet, p. 354 ff.), and what changes it underwent at different periods of his life, lies beyond the scope of this article, which will confine itself to a general description of his usage, especially in relation to the later history of the word. Aristotle (*Met.* A 6, $987^a$ 29 ff.) tells that Plato, when young, learned from Cratylus the doctrine of Heraclitus, that everything sensible or corporeal (and to such things alone Heraclitus referred, according to Arist. *Met.* M 4, $1078^b$ 14) was involved in a process of perpetual flux or change; and that Plato, who perceived the deadly consequence of this doctrine for knowledge, sought a way of escape suggested to him by his intercourse with Socrates, who, in dealing with attempts to show the purely conventional nature of such notions as those of justice, courage, and the like, had attempted, by defining these terms, to reach fixed objects of moral approval. For the very statement that what was just under *these* circumstances is unjust under *those* becomes meaningless unless what is meant by 'just' is the same in both cases. Plato, by extending this principle beyond the ethical sphere, reached his doctrine of Ideas—permanent

realities or natures corresponding to general terms. Such permanent natures are not objects of *sense*; they are apprehended by *understanding*. Others, *e.g.* Democritus, had thought that such truly existent natures, εἴδη or ἰδέαι, must underlie the shows of the world; but it was definitely realized by Plato (and, it would seem, first by him) that they must be *incorporeal*.

*Aristotle*, by giving this account in close connexion with a treatment of the theory, usual with him, as a modification of the Pythagorean doctrine that Numbers are the ultimate realities, suggests that the Pythagorean influence on Plato was not independent of the Socratic; and there are other indications (collected and insisted upon, not without exaggeration, in Taylor's *Varia Socratica*) that Socrates stood in closer connexion with Pythagorean circles than has always, despite Plato's *Phædo*, been recognized.

Aristotle's account brings out clearly the fact that Plato's ideas are *objects of thought* (νοητά): they are not 'concepts' or 'thoughts in the mind' (νοήματα). The latter explanation is actually put by Plato (*Parm.* 132 B) into the mouth of the youthful Socrates, only to be dismissed by Parmenides with the pertinent inquiry whether there could be a thought which was a thought of nothing (νόημα οὐδενός). Plato must not be regarded as one who, at first a 'conceptualist,' went on to 'substantiate' or 'hypostatize' concepts. Such a gratuitous proceeding could not be regarded as an important contribution to philosophy (see Lotze, *Log.*, Leipzig, 1874, iii. 2, § 313 ff., Eng. tr., Oxford, 1888, ii. 200 ff.). We should rather approach his theory by considering that, while we should readily admit that we might be mistaken about the motive of an act we *thought* just, or the beauty of a face which affection predisposed us to love, or which had been injured since we last saw it, we could not claim even to have an opinion about them, did we not *know* what justice or beauty is. So, too, a judgment that two visible lines are equal to one another can never express more than an opinion; but, if we did not know what equality is, no such judgment could have any meaning at all. One could not doubt what was just in a hard case, or correct a wrong definition of justice on the production of a case not in accordance with it, except in virtue of a knowledge of the nature of justice. This nature or Idea is no corporeal being perceptible by the senses, but something more lasting, better known, and more properly to be called real than anything which is so perceptible. It is no notion in my mind; I have a notion or knowledge of it, but for that very reason it is distinct from the notion or knowledge which I have of it. We may legitimately ask how this Idea is related to particular instances of it, or to the sensible phenomena which exhibit it, or to the mind which apprehends it; but in all such questions we are talking and thinking of it as something real, permanent, known; and, whatever it be, it is certainly neither a body nor a mode of consciousness; if it is less plain that it is not a spirit, it is certainly not plain that it is so.

Aristotle held that Plato was wrong in asserting that this Idea was χωριστόν, separable and separate from the particulars which might be said to 'copy' it or 'partake of' it. The former metaphor Aristotle (*Met.* A 6, $987^{b}$ 11) ascribes to the Pythagoreans, the latter to Plato. The difficulties of both are exhibited by Plato himself (*Parm.* 130 E ff.). But Aristotle did not hold that it should have been described as a 'thought in our minds.' Such thoughts are not the individual substances of which we think; and 'conceptualism' is at least as open as Platonism to the charge of χωρισμός, the separation of the universal from the particulars. What Aristotle denied was the Platonic view that science required the assumption of 'separate' Ideas (*Post. Anal.* i. 11, $77^{a}$ 5 ff.), whereas it only required the possibility of universal predication. What Plato called an Idea Aristotle called a καθόλου, or universal, an expression not used by Plato (but see *Meno*, 77 A) and implying the Aristotelian criticism. The ἀρχὴ ἐπιστήμης is for Aristotle 'one beside the many' (ἓν παρὰ τὰ πολλά) like Plato's Idea (*Post. Anal.* ii. $100^{a}$ 7), but *as thus separated from the particulars* it is in the mind only. Any other separation is not necessary for science, and involves insuperable difficulties. Aristotle, then, did not take Plato for a conceptualist who 'substantiated concepts,' but for a realist who placed the essence of individual substances outside of them, and supposed that in predicating universally of them we were asserting another substance beside them, which possessed their common predicates without their distinct individualities. This had led to denial that the individual substances were substances at all, because they were not this additional substance. Hence Plato's εἴδη or ἰδέαι to which Aristotle said good-bye (τὰ εἴδη χαιρέτω [*Post. Anal.* i. $83^{a}$ 33]) were mere idle sounds (τερετίσματα); but Aristotle himself held to εἴδη otherwise conceived. For Aristotle every individual had its own εἶδος (*Met.* Λ 5, $1071^{a}$ 29); thus the soul of every animal is the εἶδος of its body (*Met.* Z 10, $1035^{b}$ 16). In perishable beings a perpetual succession of individuals of the same kind realizes as near an approach to immortality as is possible to them. Of all such individuals the same things which belong to the essence of each can be predicated in common; hence εἶδος may be used, not only of the individual's 'form,' but of that of the group of beings of whom the same essential predicates hold, the *infima species* (ἄτομον εἶδος). Where one individual is (like a planet) eternal, there is no multiplicity of individuals of that kind. Eventually 'form' has come to be the usual rendering of εἶδος in the sense of the essential or fundamental characteristics of a substance; 'species' in that of a group of substances, whose essential characteristics are not to be distinguished. But this differentiation has been only gradual. Cicero preferred *forma* as a rendering of εἶδος, because it could be declined throughout, while *species* must borrow the gen. and dat. pl. of *forma* (*Top.* vii. § 30); but he gives *species* as the Latin equivalent of ἰδέα (*Acad. Post.* i. 8, § 30, *Tusc. Disp.* i. 24, § 58).

We have so far not distinguished the use of ἰδέα from that of εἶδος; but a preference for ἰδέα in certain contexts may be noted even in Plato. See L. Campbell's note in Jowett and Campbell, *Republic*, Oxford, 1894, ii. 294 ff. Ἰδέα is the more picturesque term, and signifies 'form' rather than 'kind' or 'class.' Cf. P. Natorp, *Platos Ideenlehre*, Leipzig, 1903, p. 2 f.; Ritter, *Neue Untersuchungen*, p. 325 ff. In consequence of the fact that Aristotle rarely used ἰδέα in its philosophical sense except when referring to Plato, while εἶδος is used by him no less when expounding his own views, Idea has become the recognized name for the Platonic Form; and, even when it has come to be used in very un-Platonic fashion, its Platonic associations have constantly led either to a misinterpretation of Platonic Ideas, because so-called, or to such a modification of the word's non-Platonic meaning as will bring it into closer accordance with Platonic usage.

In the *Euthyphro* (the earliest Platonic dialogue in which the word occurs) the ἰδέα of holiness is to be used as a παράδειγμα (6 D, E). This is important in view both of the subsequent employment of this expression by Plato himself (*e.g. Rep.* v. 472 C, ix. 592 B, *Parm.* 132 D) and of the fact that it is as eternal patterns of phenomenal things that the Ideas were retained in the mediæval tradition of Platonism.

For passages illustrating the Platonic usage, see G. A. F. Ast's *Lexicon Platonicum*, Leipzig, 1835–38 (until superseded by Burnet's), Ritter's very full essay (vi.) in his *Neue Untersuchungen*, and Campbell's discussion of terminology in Jowett and Campbell, *Republic*, vol. ii. As Campbell shows, the transition to specially Platonic use is well marked in *Parm.* 131 E, 132 A, and the frequent combination μία ἰδέα is deserving of notice.

On the question whether to all or only to some general terms there correspond Ideas, see *Parm.* 130, where the young

Socrates' hesitation to allow Ideas of mean things is treated as a mark of philosophical immaturity. On the relation of the particulars to the Ideas see *Parm.* 131 ff. It cannot be explained in terms of a different relation, such as *μίμησις* or *μέθεξις*, yet the doctrine of Ideas must not be given up, else even so indispensable a notion as Unity, which also involves puzzles, must also be given up. The attempt to describe the relation as *μίμησις* is presupposed in the criticism embodied in the argument called *τρίτος ἄνθρωπος*, invented (see Alex. Aphrod. on Arist. *Met.* 990b 15) by the sophist Polyxenus, often referred to or used by Aristotle (*e.g.*, *Met.* A 9, 990b 17, where cf. Alex. *ad loc.*), and answered in principle by Plato, *Rep.* x. 597 C.

In *Rep.* vi. 508 A ff. the *ἰδέα τοῦ ἀγαθοῦ* is the supreme principle of the being of the other Ideas, and of the knowledge whose object these are, *οὐκ οὐσίας ὄντος τοῦ ἀγαθοῦ ἀλλ' ἔτι ἐπέκεινα τῆς οὐσίας πρεσβείᾳ καὶ δυνάμει ὑπερέχοντος*. This account greatly influenced later, especially Neo-Platonic, speculation. In Aristotle's *Met.* we learn of a doctrine of Ideas which are also numbers, which is not expounded in the *Dialogues*. See, for Aristotle's criticism of Plato's ideas, esp. *Met.* A 9; but it is to be found in all parts of his works.

The essential features of the Platonic Idea are that it is (1) an *object of thought*, not a *thought* (*νοητόν*, not *νόημα*); (2) an object of *thought* or knowledge, not of *sense* (*νοητόν*, not *αἰσθητόν*). Plato's philosophy is not Idealism in the sense of a doctrine which resolves the phenomenal world into facts of human consciousness. Lotze's explanation (*Log.* iii. 2) of the *οὐσία* of the Ideas as 'validity' (*Geltung*) or Natorp's description of them as 'laws' (*Gesetze*) may be useful, if not understood as making them mere attributes of something else, considered in abstraction from their substances; but J. A. Stewart's expression 'points of view' (*Plato's Doctrine of Ideas*, Oxford, 1909; see esp. p. 4) so plainly makes them ways of apprehending, not realities apprehended, that its use is fundamentally incompatible with the account given above.

Aristotle's abandonment of the word to Plato determined its subsequent history, although instances of its use which involve no reference to Plato's doctrine are to be found in many later writers, and even in the Middle Ages (see Du Cange, *s.v.*).

Among the problems about the Ideas bequeathed by Plato to his successors historically the most important was that of their relation to the Divine mind. A doctrine of a personal God in the Christian sense forming no part of Plato's theology, he himself freely varied his language to suit his context. God 'makes' Ideas (*Rep.* x. 597 B), 'contemplates' them (*Phædr.* 247 D, E), 'uses them as models' in creation (*Tim.* 39 E). Such expressions are mythical or imaginative. More philosophically important is the line of thought illustrated by *Soph.* 249 A, *Phileb.* 28 D. The Ideas cannot be of inferior nature to the soul which finds its chief good in knowing them; they must themselves possess life and thought. Again, as the material elements of our bodies are derived and replenished from the vaster masses of like nature in the great world, so must our souls be derived from the 'royal soul and royal reason' in the nature of Zeus, wherein dwells the wisdom to which the order in the world is due. The relation of the Ideas to this world-soul (for which see also *Phædr.* 245 ff., *Tim.* 34 ff., *Laws*, x. 892 ff.) is a genuine problem for Platonism, but there is nothing to suggest that in order to solve it Plato would have surrendered the objectivity of the Ideas. Rather they inform it and our souls, which are parts of it, 'as a light to enlighten and a guide to govern' (Berkeley, *Siris*, § 335 [*Works*, ed. Fraser, Oxford, 1871, ii. 496]). It was their indwelling of the soul as the *τόπος εἰδῶν* (Aristotle, *de An.* 429a 27) that proved to Platonists that it was immortal.

Though Aristotle rejected Plato's Ideas, his speculations influenced the development of thought respecting them, which led to the view of them as Divine thoughts. While no idealist in the later sense, he held that the Divine mind cannot be (like ours) in a position of dependence upon its object; still less can it exercise itself in knowledge of what is inferior to itself: thus its object must be what itself is, and its activity *νόησις νοήσεως* (*Met.* Λ 9, 1074b 34).

After an interval of five centuries *Plotinus* stands in the direct line of succession from Plato and Aristotle. While in sense-perception the perception conforms itself to an object other than itself, *νοῦς*, or understanding, can have no alien object external to itself. Its object must exist in it, but such an immanence in *νοῦς*, just because *νοῦς* is higher than anything but the One or the Good which transcends (like Plato's *ἰδέα τἀγαθοῦ*) the distinction between subject and object, is a higher kind of existence than the independence which the objects of inferior faculties enjoy over against the apprehending faculties. The intelligible natures of all things, which, of course, are no other than the Platonic Ideas, thus form the content of the eternal *νοῦς*, which is the 'second person' of Plotinus's Trinity (the One, the *νοῦς*, and the World-Soul); see *Enn.* v. ix. 8. Here we reach the interpretation of the Ideas as Divine thoughts which became traditional in the Middle Ages; but the *νοῦς* of Plotinus is not what we should call a 'personal' God.

**2. In mediæval philosophy.**—A further step is taken under the influence of Christianity, which seriously conceives God as 'personal.' A passage of *Augustine* (*de Div. qu. 83*, xlvi.) became in the Middle Ages the *locus classicus* on Ideas, and is quoted as such by Albertus Magnus (*Sum. Theol.* I. xiii. qu. 55. 2, § 2), Alexander of Hales (*Sum. Theol.* i. qu. 23. 2, § 4), Thomas Aquinas (*Sum. Theol.* i. qu. 15, art. 1; cf. *in I. Sent.* dis. 36. qu. 2. art. 1, *de Veritate*, art. 3, 'de Ideis'), Bonaventura (*in I. Sent.* dis. 35, *Comp. Theol.* i. 25, *Sum. Theol.* qu. 11, art. 1), and Duns Scotus (*Op. Oxon.*, *in I. Sent.* dis. 35, art. 1). Augustine could reconcile his earlier conviction that we must suppose Ideas as eternal and immutable patterns of phenomenal things with his Christian belief in one eternal Being, the Creator of all others, only by supposing the Ideas to be internal to God's essence and to participate in its eternity and unchangeableness. The world is in time, which (according to Plato, *Tim.* 38 B) began along with it; its existence is throughout dependent on the Divine will; but its eternal pattern, the world of Ideas, is an integral part of the Divine nature. Augustine assists himself by the analogy of the designs in an artist's mind. This illustration had already appeared in Philo (who as a Jew was also accustomed to regard God as personal). See *de Opificio Mundi*, §§ 16, 25, pp. 4, 5 (the Divine Logos, as one with the world of Ideas, the *κόσμος νοητός*, is called by Philo *ἰδέα τῶν ἰδεῶν*; the phrase, however—which occurs in Origen, *c. Cels.* vi. 64—is bracketed by Cohn). The same metaphor of an artist's designs had been used by Seneca (*Ep.* 58, § 19) in exposition of Plato; and we may compare with it a passage (in which, however, the word *ἰδέα* does not occur) in the *Introd. Arithm.* of the 1st cent. mathematician Nicomachus of Gerasa in Palestine (i. 6). The *Placita Philosophorum* (i. 882 D [Diels, *Dox. Gr.*, Berlin, 1879, p. 309]) already assert that Plato held the Ideas to exist *ἐν τοῖς νοήμασι καὶ ταῖς φαντασίαις τοῦ θεοῦ τουτέστι τοῦ νοῦ*. The use of such language was encouraged by the new stress which Christianity laid on the thought of Divine personality. Hence the importance of Augustine's adoption of the analogy with the artist's designs. In the earlier period of Western mediæval thought Augustine's influence was paramount, and to the same still powerful influence it was due that even after the triumph of Aristotelianism in the 12th and 13th centuries the Platonic Ideas, as interpreted by Augustine, retained their place in the

philosophical tradition beside the Aristotelian Forms.

In the 12th cent. we meet with an explicit *Platonism* which regards the Ideas as eternal patterns; *e.g.*, in Bernard of Chartres (John of Salisbury, *Metalogicon*, ii. 17, where the author traces the history of the doctrine of Ideas, and, it may be noted, speaks of *εἶδος* as standing to *ἰδέα* in the relation of *exemplum* to *exemplar*). We find other examples in the *Megacosmus et Microcosmus* of Bernard Silvester (sometimes identified with his probably older namesake of Chartres) and in the *Anticlaudianus* of Alan of Lille. This Platonism depends not only on Plato's *Timæus* (the only accessible dialogue) and Augustine, but on such writers as Boethius, Macrobius, and Marcianus Capella. After the triumph of Aristotle the acceptance of Ideas was still, as we have seen, general. It was a subject of controversy whether they were Ideas of individual things (Thomas Aquinas) or of universals only; whether they were practical or only speculative (Henry of Ghent); whether they were in God's essential nature as *rationes cognoscendi* or only in His intelligence as objects of His knowledge (Ockam). The answers given to such questions depended, of course, on the general philosophical and theological position of the thinker concerned.

**3. Transition from the mediæval to the modern use.**—We have now to trace the process by which a word hitherto associated with eternal natures and archetypal Divine designs came to be commonly employed for the thoughts and even imaginations of human beings. The Stoics (perhaps carrying on a Cynic tradition; see E. Zeller, *Socrates and the Socratic Schools*, Eng. tr., London, 1868, p. 254) interpreted the Platonic Ideas as mere concepts (*ἐννοήματα*) or even as images of sensible things (*Plac. Phil.* 882 E, Stob. i. 12, p. 332 H; Diels, *Dox. Gr.* pp. 309, 472). Great as in certain directions was the influence of Stoicism (esp. through Cicero, Seneca, and Boethius) on mediæval thought, it is doubtful whether this interpretation of the Ideas affected the fortunes of the word before the Renaissance, when a general revolt against Aristotelianism brought into favour a word free from Aristotelian associations, while at the same time attention was drawn to the Stoic logic as the chief ancient rival of the Aristotelian. Thus the habit gradually crept in of using *idea* where the originally equivalent *species* had been commonly employed in the sense of *νοητὸν εἶδος, αἰσθητὸν εἶδος* (*species intelligibilis, species sensibilis*) of Aristotle's *de Anima*. We find Pietro Pòmponazzi (1462–1525) passing from the Divine Idea to the *idea quæ est in mente nostra, quæ est species* (*de Incantationibus*, Basel, 1567, p. 36). *Melanchthon* identified *idea* with the *actus intelligendi*, which is best described as the formation of an image (*de Anima*, Lyons, 1555, p. 187), and characteristically attempted to reconcile Plato and Aristotle by interpreting Plato's Ideas as *imagines in mente* ('Erot. Dial.', in *Corp. Reform.* Halle, 1834–60, xiii. 520), or (in an exposition of the *Ethics*) as *communes notiones*. In the latter interpretation he was taken to task by J. C. Scaliger (*de Subtil.*, Frankfort, 1576, vi. 4) on the ground that *notiones* are accidents, whereas Plato held the Ideas to be substances, but was defended by Goclenius (*in Exercit. J. C. S. de Subtil.*, Marburg, 1599, p. 98), whose *Lexicon Philosophicum* (Frankfort, 1613), *s.v.* 'Idea,' is worth consulting.

The 16th cent. physician *Fracastorius* (*de Intellectione*, i. [*Opera*, Venice, 1574, p. 129 A, 130 A]) uses *idea* as equivalent to *universale*, and the so-called Spagyric school of medical writers affected the use of the word, from which their master Paracelsus formed a number of technical derivatives (see B. Castellus, *Lex. Med. Renov.*, Nüremberg, 1682, pp. 705, 706). The Paracelsian terminology was the source of *Jacob Boehme's*, to whom the word 'idea,' when he heard it from his friend and biographer von Frankenberg, 'proved vastly agreeable,' suggesting to him 'a beautiful, heavenly, chaste virgin' such as is Sophia or Wisdom in his theosophical system (*Memoirs of Life*, etc., tr. F. Okely, Northampton, 1780, p. 16).

Outside the Schools the tendency at this period to give the word a wide extension of meaning may be illustrated from *Shakespeare*. Here the general sense of 'pattern' or 'model,' itself directly descended from that current in mediæval philosophy (cf. Hooker, *Eccl. Pol.* i. 4, § 1, ed. Oxford, 1874, p. 212, of the Lord's Prayer: 'the perfect Idea of that which we are to pray for'), passes into that sense of the 'idealizing' memory in *Much Ado*, IV. i. 226 ('the Idea of her life'), and into that of a true copy of the pattern in *Rich. III.*, III. vii. 13 ('the right Idea of your father'), while 'ideas' appear in *Love's Labour's Lost*, IV. ii. 69, along with 'forms, figures, shapes, objects, apprehensions' among the furniture of 'a foolish, extravagant spirit.'

**4. In modern philosophy before Kant.**—In the technical language of philosophy the substitution of *idea* for *species* served to some extent to conceal the fact that the difficulties of the old theory of 'representative species' passed unsolved into a later psychology (cf. Reid, 'Human Mind,' ii. § 6, in *Works*, ed. Hamilton, ii. 140; H. W. B. Joseph, in *Mind*, Oct. 1910). These difficulties are traceable to Aristotle's statements in *de Anima*, ii. 12, iii. 2, about the reception by the perceiving soul of the form of the object without the matter, which easily lent themselves to a quasi-materialistic interpretation, and in any case tended to make the immediate object of perception and ultimately of conception also an image or representation within the mind of the real thing without. This substitution becomes generally current through its adoption by *Hobbes* and *Descartes*. In his *Hist. Animæ Humanæ* (Paris, 1636), David Buchanan frequently uses *idea* as the equivalent of *species* for the immediate objects (*objecta interna*) of human consciousness. There is no evidence that he enjoyed personal intercourse with Descartes, but the facts of his life do not exclude the possibility; his *clara et liquida idea* (p. 339) reminds us of the Frenchman's 'clear and distinct' perceptions. With Hobbes *idea* is synonymous with *phantasma* and signifies an 'appearance which remains in the brain from the impression of external bodies upon the organs of the senses.' Such appearances, if they represent external bodies where they are not, are properly 'idols,' false 'ideas.'[1] How the false idea or idol is to be distinguished from the true Hobbes leaves obscure; but it is clear that 'idea' and 'idol' alike are something in the brain or mind. Thus we have different 'ideas' of the same thing in succession when what we first saw at a distance to be some material object we see on coming nearer to be a living thing, and on coming yet nearer to be a human being.

An instructive controversy arose between Descartes and Hobbes over their use of the word 'idea.' Descartes had spoken freely in his *Meditations* of the 'idea' of God; Hobbes objected that he had no such 'idea.' He did not mean that there is nothing to suggest to us the existence of a God; but that we have no image in our minds of a being such as the admirable order of the world leads us to suppose exists. Descartes admitted this, but said that by 'ideas' he did not mean 'images of material things in the corporeal phantasy,' but always 'anything of which the mind is directly aware'; so that, when we perceive ourselves to be, *e.g.*, willing or afraid, he would call the volition or the fear 'ideas.' He adds: 'I have made use of this name because philosophers have long been accustomed to use it to signify the forms of the perceptions of the divine mind, although we do not suppose any *phantasia* (sensible imagination) in God.' Thus the historical associations of the word with the Divine thoughts recommended it to Des-

[1] Bacon had already contrasted *humanæ mentis idola* with *divinæ mentis ideæ* as *abstractiones ad placitum* with *vera signacula Creatoris* (*Nov. Org.* i. §§ 23, 124).

cartes as a very general expression for the immediate or direct object of consciousness, which would not commit him to a materialistic theory of the nature of consciousness. He was naturally, therefore, displeased by Hobbes's assumption that its proper meaning was that of an 'image in the corporeal phantasy.' Hobbes appealed to etymology; and so went back behind the associations which recommended the word to Descartes, who indeed had himself in *Med. II.*, before Hobbes's criticisms had raised the question, observed that, although volitions, fears, and judgments are all *cogitationes*, yet that kind of *cogitationes* to which alone the word 'idea' properly refers are those which are *tanquam rerum imagines*. This use of 'idea' it is difficult to distinguish from that found in Hobbes (see Hobbes, *Lev.* i. 11, iii. 34, iv. 45 f., *de Corp.* i. 1, § 3, 2, § 14, 5, § 9; Descartes, *Med.*, Obj. iii. 5. For Descartes's use see reff. collected in Veitch's note to his tr. of *Meth.*, *Med.*, etc., Edinburgh, 1880, p. 276 ff.).

Thus the word came into common philosophical use tainted with an ambiguity as carrying with it at once an association with a materialistic theory of experience and an association with one (the Cartesian) which insisted on the impossibility of any such theory. But in both Hobbes and Descartes it was associated with the view that the immediate object of knowledge is something in the mind—a view which admits of different developments according to the different views entertained of the nature of the mind. Notwithstanding the ambiguity, *Gassendi* (1592–1655), the friend of both Hobbes and Descartes, proposes to use it in the widest sense as less open to ambiguity than other equivalent words, such as *species*, *notio*, etc. (*Inst. Log.* pt. i. [*Opera*, Lyons, 1658, i. 92]). *Cudworth* (1617–83) speaks of 'sensible ideas' (*Int. Syst.*, London, 1678, i. §§ 5, 39), but does not limit the word to these; against Hobbes he recognizes an 'idea of God' (iv. § 1). *Huet* (1630–1721) regards Descartes as restoring the Stoic usage (*Cens. Phil. Cartes.*, ch. ii. § 7, ed. Paris, 1694, p. 48). *Malebranche* (1638–1715), like his contemporary Locke, uses *idée* for 'objet immédiat de notre esprit' (*Rech. de la vérité*, iii. 2, ch. i., ed. Paris, 1700, i. 386); but his doctrine (based on the Cartesian emphasis on the disparateness between mind and matter) that the immediate objects of our perception are not bodies, but rather the Divine archetypes of bodies, reverts in a way to the mediæval use of the word. *Fénelon* (1651–1715) follows Malebranche: the ideas which constitute the human reason are universal, necessary, eternal, immutable, in fact they are God revealed in our souls so far as the limitations of our nature allow (*De l'Exist. de Dieu*, ii. 4 [*Œuvres*, ed. Paris, 1787, ii. 228 ff.]). For the use (or uses) made of the word by *Spinoza* (1632–77) the reader must be referred to Spinoza himself (see esp. *Eth.* ii. def. 3, 4, prop. 48, 49) and his commentators (esp. H. Joachim, *Study of Spinoza*, Oxford, 1901). As the spiritual or psychical correlate of an extended thing or body, a man's mind is described as the 'idea' of his body.

*Locke* (1632–1704) and *Leibnis* (1646–1718) both make ideas 'the immediate objects of the understanding in the widest sense' (Locke, *Ess.* i. 1, § 8; Leibniz, *Nouv. Ess.* ii. 1, § 1 [ed. Erdmann, Berlin, 1840, p. 222]). Locke held, against Descartes, that they are never 'innate,' but always derived from experience or from reflexion upon experience. For Leibniz all ideas are innate; if distinct, they represent God; if obscure, the world. Thus for both Locke and Leibniz they *represent* objects from which they are themselves distinct. With *Berkeley* (1685–1753) ideas, though conceived, after Locke, as the immediate objects of conception, represent no objects beyond themselves. They are themselves the only objects; of everything, except spirits or minds (of which we are said to have not 'ideas' but 'notions'), the *esse* is *percipi*; thus the object of perception is called an idea rather than a thing, because things are 'generally supposed to denote somewhat existing without the mind' and also to include 'spirits' (*Princ. of Human Knowledge*, i. § 39 [*Works*, ed. Fraser, Oxford, 1871, i. 175]). Out of this very un-Platonic theory of ideas a more Platonic one is developed by Berkeley in the much later *Siris*. Among the 'ideas' of Locke and Berkeley, *Hume* (1711–76) distinguished direct perceptions as 'impressions,' while the name 'ideas' is confined to reproductions of these which are known as such by their inferior 'liveliness.' This has become, on the whole, the tradition of later English philosophy (see Spencer, *Princ. of Psychology*, London, 1872, pt. vii. ch. 16 [vol. ii. p. 454 ff.]; cf. Baldwin, *DPhP*, *s.v.* 'Idea'). Hume's contemporary *Johnson*, who in his *Dictionary* defines 'idea' as 'mental image,' branded (erroneously) as 'modern cant' the use of it for a notion or opinion of which there can be no such image (Boswell, *Life*, ed. Oxford, 1826, iii. 176).

5. **In modern philosophy since Kant.**—This use of 'idea' as primarily denoting a sensation reproduced in memory or imagination passed with the English empirical philosophy to which it belonged to the French free-thinkers of the 18th cent., among whom *Condillac* (1715–80) uses *idée* for a sensation remembered and related to an external object, except in the case of a sensation of touch, where the sensation by itself is an *idée* because directly relating itself to such an object (*Extr. rais. du traité des sensations* [*Œuvres*, Paris, 1798, iii. 39 ff.]); and, similarly, *Holbach* (1723–89) uses the term for the image of an object which causes a sensation or perception (*Syst. de la nature*, Paris, 1821, i. 133). Not altogether dissimilar is the account of 'idea' given by *Wolff* (1679–1754), in *Psych. Emp.*, Frankfort, 1732, § 48, as a mental representation in relation to the represented object. This use of 'idea,' however, was not to prevail in Germany. *Kant* (1724–1804) set himself (*Kritik der reinen Vernunft*, *Transc. Dial.* i. 1 [*Werke*, ed. Hartenstein, Leipzig, 1867, iii. 256 ff.]) to restore the word from a deplorable degradation, in which it could be used for 'the representation of the colour red' to its original Platonic use of a 'conception transcending the possibility of experience.' Of such conceptions, which Reason inevitably forms, but which cannot be verified in experience, he recognized three: the soul, the world, and God. To Kant, that we necessarily think a thing to be so and so by no means implies that it is so in itself; but to *Hegel* (1770–1831), who does not thus divorce thought from reality, such a conception, transcending but implied in our experience in space, in time, as Kant called an Idea is no mere speculative problem or at most a postulate of action; it is the ultimate unity, in the light of which alone whatever is real is seen as it truly is, and that because it is only what it is as a stage in the eternal process wherein the Idea unrolls, as it were, before itself the riches of its own nature (see *Log.* §§ 213, 236 [*Werke*, Berlin, 1843, vi. 385, 408]). As the Platonic Ideas constitute in Philo the content of the supreme Idea, the Divine mind or Logos, so in Hegel the one Idea breaks itself up into a system of definite Ideas; and similarly for *Schelling* (1775–1854) the Ideas are the living Universals in the Divine mind (*Vorles. über die Meth. der akad. Stud.* xi. [*Werke*, Stuttgart and Augsburg, 1856–61, v. 317]), or, as it is put elsewhere (*Syst. der Philos.* § 33 [*ib.* vi. 183]), the essences of things as grounded in God's eternity.

If divested of the theistic language, this use of Idea approximates to *Schopenhauer's* (1788–1860) (see *Welt als Wille und Vorstellung*, Leipzig, 1873, § 25). An Idea is a 'definite and fixed grade of the objectification of the Will so far as it is thing-in-itself and therefore has no multiplicity.' These grades are related to individual things as their eternal forms or prototypes. Such Ideas are the forces of Nature (gravity, electricity, etc.), life, the various organic species, the chief types of

humanity. This Schopenhauer holds to be in agreement with Plato's true meaning, while Kant's three Ideas of the Reason have nothing in common with Plato's except a transcendence of experience which they share with the merest chimeras. The Idea, thus conceived, Schopenhauer holds to be the object which the fine arts aim at representing (it is to be observed that Kant also recognized æsthetic Ideas, *Kritik der Urth.* i. §§ 17, 49, 57 [*Werke*, ed. Hartenstein, Leipzig, 1867, v. 238, 324, 353]). Such a view gives to art a higher rank in the scale of values than is assigned to it by Plato, who, although sometimes describing the apprehension of the Ideas in language suggestive of æsthetic contemplation, regards the productions of the artist as an imitation not of the Ideas, but only of the sensible copies thereof (*Rep.* x. 596).

Following Kant, who had taught that the Ideas, which were mere problems for the Speculative Reason, became postulates for the Practical, sufficient grounds for action though unverifiable in experience—thus we can, and indeed are bound to, act as though free, yet a speculative proof of freedom is impossible—*Herbart* (1776–1841) speaks of *practical* Ideas (Freedom, Perfection, etc.) springing from judgments of value (*Kurze Encyc. der Phil.* § 47 [*Werke*, Leipzig, 1850, ii. 79]). A similar usage is found in *Wundt*.

**6. Ambiguity of the word 'Idea.'**—Some of the ambiguities which have beset the word 'idea' are merely verbal, and may be removed by careful definition. Such is that arising from the application of the word at once to eternal principles which underlie appearances and are discovered by the exercise of reason, and also to varying modes or states of a finite consciousness. Less easily kept apart are the sense of 'mental image' and the sense of 'concept'; but the distinction between the words *Vorstellung* and *Begriff* (in recent philosophical English represented by 'concept') has to a large extent saved German writers from this equivocation. But less easily eradicable is the ambiguity which the word 'idea' inherited from the word 'species' when, in the 17th cent., it took its place in the philosophical vocabulary. Used now for an activity of the mind apprehending an object (cf. the phrase 'I have no idea' = 'I do not know,' or the occasional use for 'the faculty of apprehension,' as in the well-known line in Thomson's *Seasons*, 'to teach the young idea how to shoot' ['Spring,' 1152]), now for the object immediately apprehended (even where, as in Berkeley, this is not treated as representative of anything beyond itself), it inevitably comes to suggest a *tertium quid* internal to the mind as compared with the external object it is supposed to represent, yet not the mental process or activity of apprehending, but its immediate object. The assumption of such a *tertium quid* is rendered plausible by the difficulties due to a comparison between the experiences which different individuals, or the same individual at different times, claim to have of one and the same object. Even justice seems to be done to all of these if each be considered as an apprehension of a different 'idea' of the same thing, which is itself in no case the direct object of the experience. This may seem to be supported by the fact that we can seldom, if ever, think without imagery—a fact expressed by Aristotle in the saying, οὐδέποτε νοεῖ ἄνευ φαντάσματος ἡ ψυχή (*de Anima*, iii. 7, $431^a$ 17), 'the soul never thinks without an image'—even when, as in the instance of a chiliagon or of the Roman Empire, any image that may present itself is plainly not that of which we are thinking. In thinking, however, of a sensible thing not actually present to the senses, but remembered, it is easy to confuse the image with the object, to talk as though *it* were
the object of our thought, as though *it* were
we remembered (and yet, as it is here i
imagination *now*, it is clearly not *it*, but w
represents, that we remember); and, last
though, even in perceiving an object ac
present to the senses, it were such an imag
not the object, that is before us. This is a v
speaking which, when used of others, comes r
ally enough, because we do not share thei
ceptions, but picture to ourselves what we
them to be perceiving, forgetting that this i
what *they* perceive, but only a picture of it i
imagination.

The assumption of such a *tertium quid* bet
the apprehending mind and its object appea
be confirmed by the existence of hallucinat
and of dreams, where what seems, as presente
consciousness, to be indistinguishable from a
object is afterwards judged not to have been su
This suggests that, both when a real objec
present and when it is not, what we actually p
ceive is not this object, but a 'mental ima
which may or may not be representative of a r
original. But this assumption only transfers t
difficulty; it is no more easy to understand ho
on the hypothesis that our immediate object
always such an 'idea,' we can become aware
all of an external object represented by some
them and not by others (cf. Berkeley, *Princ.*
*Human Knowledge*, § 8), than how in any case w
sometimes come to think we perceive extern
bodies when we do not. These disadvantages o
so ambiguous a word as 'idea' (which are not r
moved by substituting, with J. Ward, 'presenta
tion'—a literal rendering of the *Vorstellung* o
Herbart and Wundt) make it a hindrance rathe
than a help in discussing the nature of our experi
ence prior to any such reflective discrimination
between the respective shares of subject and object
as must appear in any account which can be given of it. It is significant of the realization of this by English psychologists that W. McDougall avoids its use on the ground that most who have so named features distinguished in the stream of consciousness have tended to 'reify' them, preferring to use the word 'feelings,' which describes them as features of our behaviour rather than as objects of our apprehension (see *Psychology, a Study of Behaviour*, London, 1912, p. 50); and that in Loveday and Green's *Introd. to Psych.* (Oxford, 1912) the word 'idea' and its scarcely less misleading synonyms do not occur at all.

LITERATURE.—For further information as to the history of the word 'idea,' see W. Hamilton, *Discussions*, London, 1852, p. 70, *Works of Thomas Reid*, Edinburgh, 1872, p. 925 ff.; R. Eucken, *Geschichte der philos. Terminologie*, Leipzig, 1879, pp. 199–201; R. Eisler, *Wörterbuch der philos. Begriffe und Ausdrücke*, Berlin, 1899, *s.v.* 'Idee,' i., to all of which this article is much indebted.

C. C. J. WEBB.

**IDEAL.—I. Use of the term.**—The term 'ideal' is perhaps one of the vaguest in common use. In popular usage it signifies sometimes what is excellent of its kind, *e.g.* 'we had ideal weather'; sometimes what would be perfect if it could be attained, but as a matter of fact is utterly unattainable, as when we speak of the 'ideal' State; sometimes what is regarded as unworthy of serious attention as being purely fanciful and oblivious of the facts of the case. With the last two usages in mind, Hegel speaks of

'the popular fancy that ideals are nothing but chimeras, and the very different fancy that ideals are something far too excellent to possess reality, or something far too feeble to procure it for themselves' (W. Wallace, *Logic of Hegel*, Oxford, 1874, p. 8).

From philosophical language, too, there comes an ambiguity, for the adjective 'ideal' may correspond to either of the two nouns, 'idea' and 'ideal'; and in the former case, corresponding to 'idea,' in the

sense in which the English psychological philosophers from Locke to Hume made the term current, 'ideal' is apt to be interpreted as in contradistinction to what is actual. The 'ideal' and the 'real' are distinguished, and the distinction becomes an opposition, and the tendency is intensified to think of what is ideal in any sense as non-existent and permanently so—something that is 'all in the air.' Further, this notion of ideals derives strength from consideration of the ideals of the artist. His ideals, the types of beauty which he depicts, are commonly taken to be representations of a beauty which never and nowhere existed, nor can be found.

> 'The light that never was, on sea or land,
> The consecration, and the Poet's dream'
> (Wordsworth, *Peele Castle*).

Turning from popular usage to writers on psychology and ethics, one's impression that 'ideal' is a word of vague import is strengthened. Some have no use for the word at all. Some introduce it casually in the course of discussions without any explanation. Some use it as synonymous with 'end.' Some draw a careful distinction between ideal and end, and, having drawn it, seem to ignore it. Various writers deal with various aspects or characteristics of the ideal; few think it necessary to define the term or give a connected treatment of the topic. It is difficult to understand why 'ideal' should not be handled with something of the care which, *e.g.*, 'motive,' 'intention,' and 'desire' receive.

**2. Definition.**—An ideal in general may be defined as a conception of what, if attained, would fully satisfy; of what is perfect of its kind, and, in consequence, is the pattern to be copied, and the standard by which actual achievement is to be judged. The ideal is the standard of value, and the actual has worth in so far as it embodies the ideal. (For a general discussion of ideals and their significance, see EPISTEMOLOGY, § 20 f., in vol. v. p. 352 ff.).

The moral ideal is what we are now concerned with; and a moral ideal is a conception of what, if attained, would completely satisfy man as a moral being. It stands, as what *ought to be*, over against what *is* in character and conduct, and constitutes a standard by reference to which character and conduct are estimated. The ideal is not synonymous with the end. It is a product of constructive imagination in which the end is envisaged as attained, embodied, and expressed. Individuals who agree in their way of defining the end may differ widely enough in their ideals. The ideals of a hedonist, for instance, may be high or low. On the other hand, it seems quite erroneous to say, as has sometimes been said, that difference of conception of the ideal determines the difference between various schools of ethical speculation. For men who differ profoundly as moral philosophers do not necessarily differ widely as moral individuals. They may approve, condemn, seek after, and avoid the same things; their ideals, therefore, are not dissimilar. It will appear below that difference of ideal—the kind of difference in view in the statement which we are considering—marks, not school from school of ethical theory, but stage from stage of moral progress.

To entertain ideals is part of man's nature. It is given with his power of retrospect, forecast, and choice. All men have an ideal of some kind, for all rational beings distinguish what *is* and what *should be*. The moral ideal can be only formally defined as a conception of man with his powers at the best, using them for the best. It cannot be concretely defined. For man is a developing being, and does not know what his powers at the best may be. And conceptions of 'for the best' may differ, and do differ. Further, a particular individual may find that, in constructing his ideal, the peculiarity of his circumstances requires that there is a conflict of some kind between 'at the best' and 'for the best.' It is a serious question for some, *e.g.*, whether, in view of all their circumstances and obligations, they are justified or not in taking a University course, or entering a career for which they are fitted, but which requires an expensive training which will mean hard sacrifice for others. Hence it is that 'ideals are relative to the lives that entertain them' (W. James, *Talks to Teachers on Psychology*, London, 1899, p. 292). An ideal, however, is not conceived to be something purely or essentially individualistic. He who holds it is not impressed with the relativity of it, but with its universality. It is not something which he alone should seek after; it is what he conceives all should follow.

There is an infinite variety of ideals as held by different individuals. They may be low or high, sordid or sublime; they may be limited by the seen and temporal, or stretch forward to the unseen and eternal; they may be so worth striving after, and the individual so thwarted and baffled in pursuit of them, that an argument for immortality may be founded thereon. Whatever its nature, the ideal is that which inspires, directs, and gives coherence to the moral life. (For an excellent discussion of the meaning of ideals, see Leslie Stephen, *The Science of Ethics*, p. 74 ff.)

**3. The forming of ideals.**—As character is partly an endowment, partly an achievement, so ideals are partly imposed upon the individual, partly chosen by him. A child develops towards moral individuality by obeying authority which it did not itself constitute. When it awakens to moral consciousness, its standards of judgment are already so far fixed for it. It has been following an ideal chosen by others, set before it, and imposed upon it. And obviously the imposed ideal may determine in varying degree the deliberately chosen ideal. The ideal in many cases never differs appreciably from the ideal found in the home or the community. Many are never aware of any break or contrast between what they are ordered or expected to obey and what they freely choose to obey. Such freedom to choose, indeed, is only dimly, if at all, realized; or, if realized, may be regarded only as a temptation to be combated. In communities, however, where individual freedom is safeguarded and esteemed, and where there is a wide range of choice of life-work open, the necessary choice of some definite life-work, which brings a multitude of varied possibilities before the individual, contributes to his becoming keenly conscious of his power of choosing an ideal of what his life, character, and achievement are to be.

The psychology and the whole process of such choice, such 'setting up' of an ideal, are very obscure. Factors enter into it due to temperament, previous training, and all sorts of 'personal equation,' which make analysis in any particular case very difficult and generalization impossible. Our earliest ideals glow with colour and romance, and, literally enough, baffle description. There is something great and splendid that we wish to attain, but what more definitely it is we cannot say. We hear the wind rise 'roaring seaward' and feel we must go, but whither and wherefore we are not clear. We are inclined to think of our ideal as something absolutely new, unheard of till we discovered it (cf. W. James, *Talks*, p. 292; J. Royce, *Studies*, New York, 1898, p. 80). The truth in this exaggerated view of ourselves and our ideals is that there is an element of uniqueness in every personality. With the lapse of time the ideal

loses in colour but gains in clearness. It comes down from the skies to common earth. While it remains something personal, peculiarly our own, we lay more stress on its universal character. (On the contrast between the 'idealism' of youth and the 'realism' of maturer years, see H. Lotze, *Microcosmos*, Eng. tr.[4], Edinburgh, 1899, ii. 305 ff.)

**4. Is the ideal realized?**—To this question the answer is Yes and No. (*a*) On the one hand, we must hold that the ideal is attainable and is realized. An ideal which is absolutely and inherently unattainable cannot be an ideal; for, as we have said, the ideal is our conception of what should be, and, as Kant says, 'an ought implies a can.' If a thing cannot be, there is no sense in saying it should be. And, unless we are prepared to deny that men ever act rightly, or that there is such a thing as moral progress, we must hold that the ideal is realized. 'The moral ideal may be said to be realized every time we truly act' (J. S. Mackenzie, *Manual of Ethics*[4], p. 29). We know, too, that multitudes find their ideal realized in some individual; their effort is to try to be like him. What would *he* think of this? is their standard of judging. (*b*) On the other hand, most men are constrained to admit that the ideal is never attained by them. Strive as they like, it remains ahead of their accomplishment. The fact is that man is a developing moral being, and that moral progress means, not only that in achievement the individual is ever coming nearer an ideal, but that the ideal itself is progressing. Like character, the ideal is only relatively fixed and permanent. If, as we have said, the ideal gives coherence to the moral life, it must obviously have stability of a kind. But we have to think of a stability in progress—a mobile equilibrium. As we progress in the moral life, the ideal unfolds and expands.

'Every achievement of good deepens and quickens our sense of the inexhaustible value contained in every right act. With achievement, our conception of the possible goods of life increases, and we find ourselves called to live upon a still deeper and more thoughtful plane. An ideal is not some remote all-exhaustive goal, a fixed *summum bonum*' (Dewey-Tufts, *Ethics*, p. 421 f.).

Hence it is that what at any moment in the moral life we picture to ourselves as the *best* turns out to be only a *better*. As in achievement we approach what we regarded as the best, we gain a conception of something still more excellent.

Hence the statement 'ideals are realizable' is true; it means that moral progress is possible. The statement 'the ideal is not realizable' is also true, as meaning that we can assign no limit to moral progress. To say that there is an absolute ideal, an absolute best, is to say that such limit can be fixed, that there will come a time when no further moral progress can take place. (For full discussion of the points dealt with briefly in this paragraph, and of the problems which emerge, see T. H. Green, *Prolegomena to Ethics*, bk. iii.; S. Alexander, *Moral Order and Progress*, bk. iii.)

**5. Change of ideal.**—Apart, however, from the change of ideal which proceeds in every life gradually and imperceptibly, probably the majority are familiar with a change of another kind, when the cleavage between old and new is distinctly marked, and the connexion seems to be only one of sharpest contrast. There are times when one can say, 'The old things are passed away; behold, they are become new' (2 Co 5[17]), when one feels oneself to be a new creature looking out upon a new world. This may come about under a manifold variety of circumstances in which little, if any, general rule may be discerned. It may happen that needs of our nature of which we were not previously conscious suddenly make themselves felt, so that what formerly satisfied is no longer adequate. Needs which were weak or suppressed may become
relatively stronger. Or we may find t
we thought would satisfy proves in e
unable to do so. It may happen that ou
and assumption of, fresh responsibilitie
new vision of what life and character oug
We see that the old ways are unworthy,
old habits must be broken, that our standa
be raised, and our whole scheme and vie
revised, as Henry v. found when he assu
dignity of kingship. A new bond of frien
love may mean a similar new vision. Or th
may be, and often is, concomitant with a
experience; 'if any man is in Christ, he
creature' (2 Co 5[17]).

In some cases the phenomenon admit
planation; in others, especially when
elements enter, it is too recondite; obscure
are involved of which the individual him
give no clear account, and the case defies
logical analysis. We cannot explain our
our likes, and aversions; it is a cold-blooc
of love if one can explain why he prefers one
before others. And of that change of idea
means a revolution in the moral life, and co
seems to come, suddenly, an adequate expl
is seldom possible. 'The wind bloweth w
listeth, and thou hearest the sound there
knowest not whence it cometh, and whi
goeth; so is every one that is born of the
(Jn 3[8]).

When a new vision of the ideal comes to
may affect us in a variety of ways. We m
at once a peace and satisfaction like that
merchant who has long been searching f
goodly pearl, and, having found it, sells al
he has and buys it; we may yield to its attr
and inspiration. More often, especially wh
not merely get a new conception of the idea
see the ideal realized or approximated in an
life or deed, we may experience a sort of de
we may feel overpowered with a sense of th
trast between what we are and what we no
we ought to be (on this topic generally, an
value of self-abasement, see Iverach, *The*
*Side of Greatness*, serm. i.). Or we may for a
be involved in a conflict of ideals, undecided
how the moral life is to be directed, and, like
'kick against the pricks' (Ac 9[5]).

While moral progress is often marked by
positive appearance of a new ideal, it is also
quently marked mainly or entirely, *negatively*
the failure of the old ideal any longer to satisf
Sometimes we see more or less clearly what
new 'better' is, sometimes we have nothing b
sense that what we used to regard as best is
good, and that a 'better' there must be, tho
we cannot yet say what it is. We have to g
our way, 'moving about in worlds not reali
(Wordsworth, *Intimations of Immortality*).

**6. The teaching of ideals.**—It may be said to
the duty of every moral being to unfold and co
mend an ideal to those who are morally un
veloped, or are searching for an ideal, and
propose something better to those who are plai
following a low ideal. In various aspects of
this is the special task of preachers, teachers, a
parents (see art. EDUCATION, MORAL, vol. v.
216 ff.). We may note some of the most importa
principles which must be kept in mind in this co
nexion. Regarding the kind of ideal that shou
be commended for imitation, some remarks
L. T. Hobhouse are worth noting:

'It is just worth noticing, as we pass, that ideals are intere
ing or vapid according as the element of construction
abstraction preponderates in them. Types in which differenc
are left out, in which you try to get down to the pure thin
free from all incrustation of other elements, are nauseating
proportion as their delineation is successful. This kind
"idealism" gives us the heroes and heroines who live to utt

moral platitudes, and spoil whole chapters of good writing. It inspires the morality which tries to make all life a study of what you ought not to do. The constructive idealism, on the other hand, finds dissatisfaction always in incompleteness, and finds completeness only in the many-sided character and the varied life' (*The Theory of Knowledge*, p. 211).

It is very important that the ideal exhibited should be positive, and not negative. Otherwise a boy will get the impression that a good boy is one who does none of the things that an average boy wants to do, and at any age one will conceive of virtue as an anæmic thing, and goodness as essentially some form of abstinence. Further, the aim must be to make the ideal concrete, not abstract, to show flesh and blood examples, not merely to lay down precepts, to point to lives or deeds in which the ideal has been approximately embodied, to show that, as actual occurrences prove, virtue is not incapable of attainment. (On this topic see S. M. Bligh, *The Direction of Desire*.)

7. **The unrealized ideal.**—We have seen that the ideal is unrealized and unrealizable in the sense that it is a mobile thing which constantly keeps ahead of us in our moral progress. It ever appears as 'a better beyond the best.' But, apart from this, every one who is in earnest in moral endeavour knows that the ideal is not realized in another sense—in the sense, namely, that in his conduct he comes short more or less, and usually more rather than less, of what he purposed. Taking the moral life at any moment, and the ideal as it is then presented to us, and striven after, there is often a wide gulf between what *was to be* and what *is*. This may be due to our fault or to our misfortune. We may find, like Paul, that the good we would we do not; and the evil that we would not, that we do (Ro 7[19]). Or in ignorance we may adopt a wrong means of realizing our ideal. Or we may find that circumstances are in conspiracy against us, and forbid the realization of our purposes, that we are handicapped, thwarted, baulked by the *force majeure* of practical facts which we cannot circumvent or surmount. Besides, we must take account of our general inability to give adequate or appropriate expression to the deepest things of the spirit. Take the case of emotion. We can only stammer brokenly, and to an unsympathetic or uninterested ear ludicrously, about our love. We search in vain for an adequate mode of expressing contempt or hate. In an excess of joy we are moved to tears, and a smile may be all the expression we can give to heart-breaking disappointment or despair. So with the ideal which in our highest moments may be revealed to us. Unutterable thoughts, inexpressible aspirations may come to us; we feel, we know, that they are the most valuable of our possessions, though neither in word nor in deed can we fully reveal them. They are among the truest riches of our nature though we cannot exhibit them:

'Thoughts hardly to be packed
Into a narrow act,
Fancies that broke through language and escaped;
All I could never be,
All, men ignored in me,
This, I was worth to God'

(Browning, *Rabbi Ben Ezra*).

The familiar words of Kant respecting the good will may be applied to the ideal:

'Even if it should happen that, owing to special disfavour of fortune, or the niggardly provision of a stepmotherly nature, it should wholly lack power to accomplish its purpose, . . . then, like a jewel, it would still shine by its own light, . . . its usefulness or fruitlessness can neither add nor take away anything from its value' (T. K. Abbott, *Kant's Theory of Ethics*[3], London, 1883, p. 10).

A lover of paradox might well say that a man's real worth depends on what he fails in. 'Thou didst well that it was in thine heart' (2 Ch 6[8]). The ideal in some cases is doubly ideal; it is a conception not of what *would* but of what *should* satisfy. The individual does not feel the needs which it would meet, but in some sense he acknowledges that he ought to feel them, or at least that they ought to be felt generally. An audience the individuals of which are immoral, or even criminal, will hiss the villain of melodrama, and applaud the triumph of long-suffering virtue. One who makes no attempt to realize high ideals in his own conduct may be very exacting in demanding them of others, or very earnest in commending them to others. Ideals which are not realized in conduct may thus still be determinant of character; though ineffective to shape conduct, they do have a share in making the individual what he is. Further, ideals which he never seeks to realize as a private individual may none the less mould his conduct in various ways as a member of society. They may determine his contribution to public opinion, his attitude on public questions, his vote at elections, his discharge of public duty. If he be a parent, they may prescribe the rules he lays down for his children. The moral standard of his home may be very different from that of his office, and both very different from the standard he acts up to when he feels himself free for the time from his usual social obligations. We may regard such a man as we please, but we cannot say that the ideals he never seeks to realize are altogether valueless, either for himself or for society. Conduct is at the best but an imperfect expression and revelation of an individual's ideals, and, similarly, institutions and customs are imperfect embodiments of the ideals, the moral worth, and the moral standpoint of a community (see art. GOOD AND EVIL, vol. vi. p. 318 ff.). This has been so well said by Julia Wedgwood that we may close the subject with a quotation from her work:

'That which gives life its keynote is, not what men think good, but what they think best. True, this is not the part of belief which is embodied in conduct: the ordinary man tries to avoid only what is obviously wrong; the best of men does not always make us aware that he is striving after what is right. We do not see people growing into the resemblance of what they admire; it is much if we can see them growing into the unlikeness of that which they condemn. But the dominant influence of life lies ever in the unrealized. While all that we discern is the negative aspect of a man's ideal, that ideal itself lives by admiration which never clothes itself in word or deed. In seeing what he avoids we judge only the least important part of his standard; it is that which he never strives to realize in his own person which makes him what he is. The average secular man of to-day is a different being because Christendom has hallowed the precept to give the cloak to him who asks the coat; it would be easier to argue that this claim for what most would regard as an impossible virtue has been injurious than that it has been impotent. Christianity has moulded character, where we should vainly seek to discern that it had influenced conduct. Not the criminal code, but the counsel of perfection shows us what a nation is becoming; and he who casts on any set of duties the shadow of the second best, so far as he is successful, does more to influence the moral ideal than he who succeeds in passing a new law' (*The Moral Ideal*, p. 373 f.).

W. D. NIVEN.

**IDEALISM.**—I. **The term.**—'Idealism' is a term of very varied application. As 'personal idealism' it may denote a view of human life in which all utilitarian and eudæmonistic considerations are subordinated to duty or to objective ideals of culture, and in which the mind asserts its superiority in the face of all determinism and materialism. This is the type of idealism the attainment and vindication of which find imposing and even classical expression in Carlyle's *Sartor Resartus*.

Again, the term may be applied generally to philosophical and religious systems, to views of the universe and poetic creations, in which the world is represented as being dominated by spiritual ends of a moral, religious, or æsthetic character. An idealism of this kind is found in all the great national religions, in the most diverse philosophical systems, and in poems such as Dante's *Divina Commedia* and Goethe's *Faust*; its antitheses are sceptical relativism and hopeless pessimism. But these rather general applications of the word have no place in a scientific terminology, and have not much significance even in the inexact speech of everyday life, as everything turns upon the particular ethical, religious, or æsthetic sense in which the nature of the ideal and its authority over personality are conceived. As a technical term, idealism concerns us only as denoting a distinct type of metaphysical thought, and in that sense alone will it be dealt with here.

**2. The fundamental position of idealism.**—In order to determine the philosophical import of the term 'idealism,' it will be necessary to fix the place which the corresponding theory occupies among the various fundamental philosophical positions. These fundamental positions may be combined in the several systems of philosophy, but they always remain separate and distinct as regards their starting-points. No one single or solely possible point of origin can be ascribed to philosophical reflexion. On the contrary, the data of experience form from the outset the subject of various problems, the very variety of which renders anything like a real monism impossible. Thus we have, first of all, the question as to the ultimate reality given in experience; secondly, the question as to what the thinker expects to attain by a logical elaboration of the given; and, finally, the question regarding the attitude to be assumed to the facts of becoming and change, and therefore also to the existence of ends and values, in the data of experience. These three questions, even if the answers to them can be harmonized and combined, cannot, as has been said, be reduced to one another. To begin with the last: we note that from this question arise the systems of pantheistic changelessness on the one hand, and of pluralistic change on the other, the two sides of the antithesis being exemplified by the Eleatics and Heraclitus respectively. In the second question originate, on the one hand, the systems which by logical elaboration of the given find a more specific and certain reality behind or above the manifold of experience—as, indeed, the basis and explanation of it; and, on the other hand, the systems which seek merely to explain psychologically the formation of the concepts actually applied in experience, and thus to regulate such application. These systems are respectively the dogmatic *a priori* theories of which Platonism is the type, and the empirical pragmatic theories represented by the Sophists. The first question, again, gives rise, on the one hand, to the systems which regard material reality as the primary element of experience, and find in it the explanation of consciousness; and, on the other, to the systems which begin with the individnal consciousness, and pass thence to the trans-subjective reality: they are respectively the realistic systems represented by materialism and by a naturalistic pantheism of the Spinozistic type, and the idealistic systems framed by Descartes, Malebranche, Berkeley, and Hume.

Now the place of 'idealism' among philosophical conceptions lies within the confines of the last of these antitheses. It denotes the metaphysical theory which, as regards the primary and most certain datum of experience, takes its stand upon consciousness and its contents. In its most uncompromising and self-consistent form ideali solipsism, and finds its initial and most dif problem in the question regarding the trans jective reality of knowledge, or the separ of the merely subjective element from elen which are super-subjective and universally v This problem, which had been touched upon b Greek Sophists and Sceptics, by Augustine the mediæval Nominalists, became the real cr Descartes and Malebranche, of Locke and Berk and it is impressively expounded by Fichte i *Bestimmung des Menschen*. This idealism is c called 'Phenomenalism'—a designation w implies that consciousness and its content of nomena must form the starting-point of all p sophical reflexion, that the entire range of phy and psychical reality is given as a mere phenom to a consciousness which carries the whole wi itself. Whether the phenomena thus imma in consciousness have correlatives of an objec character, and what such correlatives may be, questions left entirely unanswered. Of late it become common to speak of this view as 'Im nence'—a term signifying that all reality is c prised in consciousness as sensation, percept and idea. All these, however, are neither m nor less than metaphysical idealism in the o technical sense that we can ascribe to the te Hence, to put the matter shortly, idealism imp that the relation of subject and object is one of essential starting-points of philosophy, and in view of that relation it lays down the decis principle that objects can exist only for a subj and that the subject which carries the obje within itself is the higher category, and as s must determine the process of philosophi thought.

**3. Various developments of the idealistic pr ciple.**—As thus understood, idealism is simply c of the essential starting-points of philosophi thought. But in its further development as system it may assume a vast variety of forn It really implies a method, not a school of opinic and beliefs with a definitely fixed result, or, most, it involves such a result only in so far as it opposed to materialism, according to which cons ousness has its source in material reality, a arises from it in certain conditions, as was mai tained by the ancient materialists and their su cessors, as well as by the naturalistic monists a agnostics, who often approximate very closely them; and, of course, it similarly opposes eve kind of objectivism which would derive person consciousness and its contents from some such su posed primordial datum as God, nature, the A or cosmic law, as was done by Neo-Platonism a the ecclesiastical philosophy, by Spinoza and h modern followers. So far, it is true, idealis means something more than a mere method; signifies a mode of thought whose subject-matt is fixed and defined from the standpoint of consc ousness and the ego. Even so, however, the mo varied lines of systematic development lie ope to it.

(*a*) *Various attempts to reach trans-subjecti reality from the idealistic standpoint.*—Thus w may, with Descartes and Malebranche, begin wit the idea of God as a fact of consciousness, pas thence to the objective world, and then from tha position explain consciousness, or the ego. O we may, with Locke, assert merely the probabl existence of objective correlatives to the content of consciousness, and upon that probability con struct a system that differs but little from objec tivism. With Berkeley, we may attribute ou experience of phenomena to the divine will, an thus attain to a theological theism, or, with Hume, Comte, and the Pragmatists, we may hold th

relation of subject and object to be inexplicable and inscrutable, and so content ourselves with what can be based upon the laws of phenomena. Some, with Schelling and Hegel, deduce from experience the identity of subject and object, and with this identity as a basis elucidate the being and evolution of all things. Others, again, with Leibniz, Herbart, and Lotze, derive from the facts of consciousness a pluralistic reality corresponding thereto; while some, finally, with Schopenhauer, deduce from the individual consciousness the theory that it subsists in the unconscious, from which subject and object severally arise, only to fall back again into the unconscious. There is thus an extraordinary variety in the systems evolved from the fundamental position of idealism. Some of these approximate to materialism, or else to objectivism; some do not pass beyond the subject; while some propound an objective reality corresponding to it. But in virtue of their common starting-point they are all rigidly opposed to pure materialism or pure objectivism.

(*b*) *Idealism combined with epistemological theories.*—Further specialized forms of the idealistic theory present themselves, however, when this metaphysical starting-point is combined with conclusions developed from the epistemological starting-point. Here we meet with the great main divisions of idealism related to the second source of philosophical reflexion (as noted in § 2 above), viz. empirical-nominalistic and *a priori* realistic idealism—a distinction which, as represented by the Greek Sophists and Sceptics on the one hand, and by Plato on the other, differentiates idealistic systems to the present day.

i. Nominalistic idealism culminates in Berkeley's Phenomenalism, in Hume, in Pragmatism, in James's Voluntarism, and in the entire psychological philosophy of modern times. It emphatically affirms that not only the facts of mind but also the facts of nature are phenomena of consciousness. Here consciousness becomes simply the stage on which the facts exhibit their movements. The associations and dissociations which take place according to the laws of nature and the psychological laws of social life are the material of which our so-called knowledge—and, therefore, also our philosophy—is built. Here philosophy explains the genesis of the conceptual world as a process of moulding the contents of experience, or consciousness, and distinguishes between the elements that pertain to a trans-subjective world and those that pertain to the ego, and it ascribes to both groups of conceptions a power of continuous self-direction and of progressive self-adaptation to the ends of practical life. What these ends really are is a question that cannot be decided from the standpoint under consideration; it belongs to the ethico-teleological series of problems (see (*c*) below). But, if we bring the modern doctrine of biological evolution within the epistemological circle of problems, then the theory of empirical idealism resolves itself into the doctrine of the continuous adjustments, inheritances, and selections according to which the contents of consciousness group themselves conceptually with reference to the ideal ends realizing themselves therein. We have here, in fact, a psychological relativism having the idealistic method as its pre-condition, but it entirely avoids the metaphysical endeavour to reach absolute reality, and abstains even from a metaphysical interpretation of its own starting-point. At the same time, however, it lends to the systems which it embraces an anti-materialistic bent that does justice to the mystery of existence and of spirit. The idea of the great mystery which Comte recognizes in his 'Idée de l'humanité,' Spencer in his 'Unknowable,' and Simmel in his hypothesis of a 'relativistischer Pantheismus' emanates from the idealistic starting-point.

ii. The idealism directed by an *a priori* and realistic epistemology, *i.e.* Platonism in its various forms, proceeds in a directly opposite way. From the psychical data of consciousness and the psychologically explicable laws of association it distinguishes a specific inner capacity of forming concepts. This function cannot be explained by, or derived from, anything else, but, on the contrary, is itself the necessary condition of all explanation and derivation. It is a spontaneous and creative faculty of spirit or reason, and is independent of the soul as such, of its contents and their interaction under the operation of psychological laws. This independence finds expression in the attributes 'a priori' and 'autonomous,' which imply that the faculty does not originate in experience, but that, on the other hand, experience is spiritually permeated and so rendered intelligible by it. Thus *a priori* idealism does not merely differentiate between the bare elements of consciousness and their associative combinations, but also distinguishes from the latter the conceptual faculty, which follows its own logical laws. As valid, self-consistent, and necessary knowledge results only from an elaboration of the data of consciousness in conformity with these laws, it is the conceptual faculty that transforms the chaos of mental phenomena into a reality systematized and apprehended by means of concepts. True reality is generated only by a process of thought governed by autonomous *a priori* principles. Hence this type of idealism is also designated realism—the knowledge of the veritably real by means of concepts. Such an idealism, by reason of its epistemology, stands at the opposite pole from nominalist-empirical idealism. But in this very circumstance lie the peculiar difficulties of the position, viz. (1) the dependence of all conceptual activity upon experience, and the observed variability of the views advanced—facts ever in conflict with the apriority and autonomy maintained by the theory; (2) the very idea of a reality which is attained by means of concepts—an idea which led Plato to hypostatize the concepts as absolute entities, and has led others to regard them as the laws by which the divine mind acts; (3) the question as to how far the entire manifold of consciousness can be rationalized by concepts, and whether the process does not leave a residuum of non-rational elements—a doubt which has re-asserted itself in fresh forms from Plato to Schelling and Schopenhauer; and, finally, (4) the difference between the purely theoretical general concepts, on the one hand, and, on the other, the practical ideals or values whose inherent *a priori* necessity coincided, in Plato's view, with the cognate necessity of theoretical knowledge, but whose genuinely practical and theoretically inexplicable character could not permanently remain unrecognized. Thus, while the subsuming of idealism under the *a priori* epistemology corresponds to the true import of knowledge and of the conception of truth—since, of course, every sceptical and relativistic theory must likewise find its warrant in autonomous and logical evidence—yet this idealism, in setting up a reality which is apprehended only through concepts, and stands higher than the reality of immediate experience, involves all the difficulties of rationalism. The idealism which is interpreted on nominalistic-empirical principles lies closer to reality, and does more justice to the changes that occur in the separate sciences and their presuppositions, but precisely on that account it surrenders the idea of truth, and falls into scepticism and sophistic relativism.

(*c*) *Idealism combined with teleological theories.*—

Idealism assumes definite forms of yet another type, and encounters fresh problems, when it is brought into relation with the third main philosophical position (cf. § 2 above), *i.e.* that from which arises the antithesis of pluralism and monism, of change and immutability. In itself idealism is not exclusively bound up with either of the alternatives, but may take both directions. It contains elements which may lead to the one as well as to the other. But, once it becomes involved in the two antitheses, it manifests a very different character in each.

i. Thus, when it proceeds from the individual consciousness, it encounters at the very outset the fact of a variety of consciousnesses. The joint action of these and the dialectic of their common discovery of the concepts are here held to be the necessary conditions of a kingdom of knowledge. From this point, then, idealism becomes pluralistic; and, moreover, when the question is raised as to the possibility and probability of an extra-human consciousness, idealism must, on the higher plane, admit the existence of a plurality of intellectual realms, and, on the lower, must regard it as probable that the sub-human, and perhaps even the inorganic, world is endowed with a spiritual life. Now, as such pluralism involves the idea of movement and reciprocal influence, consciousness—conceived as a subjective activity seeking to reduce its contents to clearness and order—contains also the impulse to strive and advance towards self-comprehension and self-organization. Then, as ethical and practical values are at length recognized in this striving and developing subjective principle, there arises the ideal of personality and of a kingdom of individual minds. This form of idealism finds typical representatives in Augustine, Nicolas Cusanus, and Leibniz. Further, this multitude of spirits must, of course, remain united in their common starting-point—in consciousness in general. But this in turn brings us naturally to an absolute relativism, as in Heraclitus; or to a pan-psychism, as in Averroes; or to that unreconciled opposition between the cosmic consciousness and finite personal spirits which is characteristic, above all, of European idealistic thought.

ii. At this point, however, we touch upon the other factor of the antithesis—that which presses towards monism and changelessness. The consciousness that forms the starting-point here is not the casual finite consciousness at all, the latter being indeed simply its representative. The individual consciousness represents consciousness in general, inasmuch as it is a quintessence of the simplest metaphysical conditions. Here 'being' means being for a consciousness: *esse est percipi*. Then, as consciousness in its individual aspect cannot perform this function except on the absurd supposition of solipsism, and as, moreover, the individual consciousness has its genesis and its decay, its own 'being' can exist only for and in an *absolute* consciousness. In this way the individual person, like all else, becomes an element in the divine mind. Here then we find ourselves within the sphere of monism—the monism of consciousness. If, however, we begin with the absolute consciousness, it is difficult to find a place for becoming and movement, as these can be predicated only of particular, finitive, and relative things. Hence, either the absolute consciousness is interpreted anthropomorphically, *i.e.* as a being who creates, imparts, and directs the movement of things, or else movement is altogether denied, and the finite consciousness becomes a mere illusory appearance of the absolute consciousness. With the surrender of plurality and movement, in fact, the ego and consciousness themselves disappear, and become the unconscious. victions by a practical postulate on the basis of the moral reason; and, finally, the reconciliation of the metaphysical postulate of moral freedom with the theoretical-rational system of an ordered totality of experience by the doctrine of the purely phenomenal character of the latter—these are the leading features of the Kantian idealism. It is, accordingly, a philosophical fabric *sui generis*, and, in fact, could not come into existence at all until the several starting-points of philosophy had been adequately developed, and until, in particular, the idealistic principle had been fully wrought out. Still, it is essentially idealism—idealism within the sphere of consciousness as embracing all experience, and in it the individual consciousness represents consciousness in general. But it does not sanction any advance beyond the idea of representation, or any reaching forth towards what is represented. The rational articulation and valuation of the contents of consciousness—that and that alone is its aim. How consciousness itself comes into being, how it is related to what transcends it, how the theory comes to embrace a plurality of consciousnesses and the possibility of their mutual intercourse—these are for it unanswerable questions. The metaphysical range of Kant's idealism does not pass beyond the fundamental thesis of a system within the limits of conscious experience.

The nature and deduction of the principles by means of which the contents of consciousness are reduced to order and valued need not concern us here. But it is necessary to point out that the Kantian system is also a form of *personal* idealism, *i.e.* that in its recognition of ethical ends and imperatives, and its corresponding conception of the All, it rests upon practical judgments and postulates which lie wholly outside its metaphysical idealism as such, and are admittedly drawn from interests of a non-logical character. Hence it is possible, by divesting the system of its practical aspect, to interpret it in a decidedly naturalistic way. In point of fact, however, Kant himself, by thus expanding his system, has burdened it with a dualism which brings in its train all the old antinomies and perplexities of philosophical thought.

Whatever significance is to be ascribed to the Kantian idealism, it at all events broke away from the practice—inherited from Greek philosophy—of simply identifying theoretical and metaphysical with personal and ethical idealism, and of extending the consistency of the former to the latter. Theoretical procedure and practical procedure, logical articulation and ethical judgment, natural law and moral imperative, though both members of each pair have a common idealistic foundation, are rigorously differentiated by Kant. While necessity and validity are predicated of either side, yet they are not of the same type in both, and are in each case demonstrated on different grounds. The personal idealism of the ethical, religious, and æsthetic sphere must, accordingly, be clearly distinguished from the metaphysical idealism that ranks consciousness above all its phenomena, nor is it to be identified with the logical and theoretical articulation of these phenomena. Thus a fresh source of philosophical principles is recognized and set apart, while at the same time further perplexities are added to philosophical reflexion. The manner in which Kant ultimately at once distinguished and combined the antagonistic elements by his dual conception of the world, viz. a phenomenal, empirical, and logical, on the one hand, and a noumenal, intelligible, and personal, on the other, is obviously unsatisfactory, as human experience exhibits, and, for a true interpretation, demands, not the mere juxtaposition, but the actual fusion, of the two aspects. This explains why Kant's subjective idealism of logically ordered experience and moral freedom soon fell back again into an objective idealism, *i.e.* a theory which derives reality from the absolute or divine consciousness.

**5. German idealism.**—The objective idealism evolved from the Kantian system is usually called 'German Idealism'—a term covering the movement of speculation from Fichte, Schelling, and Hegel to Schopenhauer and Herbart, of the last of whom, again, such thinkers as Lotze, Fechner, and Wundt, notwithstanding the independent character of their contributions, may be regarded as the legitimate successors. But this type of idealism has spread far beyond the confines of Germany. In France it is more or less independently represented by Cousin, Renouvier, and Maine de Biran; in Britain by Coleridge, T. H. Green, Hutchison Stirling, the Cairds, and the Seths. It thus forms one of the outstanding phases of modern philosophy. It is impossible to deal here with the movement in detail. Suffice it to emphasize its most vital feature, viz. that in all cases its starting-point is the individual consciousness, and that, as this is treated as representing consciousness in general, it forms the bridge by which thought advances to the conception of the divine universal consciousness or the divine universal will—the internally organized process of the former, or the active movements of the latter, being then the source of the world of subjective consciousness, which, in turn, will merge in the universal consciousness or universal will. Of the utmost importance in this connexion, accordingly, are the several interpretations of the idea of God which is disengaged by analysis from the subjective consciousness—as being, in fact, its necessary foundation and pre-condition. Thus we have theistic, pantheistic, or pessimistic interpretations, corresponding to the various leading conceptions of the subjective consciousness. This form of idealism is, in reality, a revived Platonism or Neo-Platonism, except in so far as, on the lines of Descartes and Kant, the idealistic factor depends upon the principle of a philosophy of consciousness, and all laws and values are regarded as respectively but the processes and ends of the absolute consciousness which is deduced from that principle, whereas in the older systems named their idealistic character rests, not upon any central element abstracted by analysis from consciousness, but upon the hypostatization of the general concepts readily evolved from it. This expansion of the central idea of Kant—a position which was of set purpose narrowly circumscribed—brings back, of course, all the antinomies and perplexities which in his conscious and studied agnosticism he had so ingeniously got rid of.

**6. 19th cent. development.**—The remarkable advance of physical science and the concrete study of sociological development which mark the 19th cent. brought about the collapse of this idealistic metaphysics in the grand style, and thus gave materialism once more an open field and a position of far-reaching influence. But a part of still greater moment was played at this juncture by semi-materialism or positivism, which declared the problem of subject and object to be insoluble and of no consequence, and recognized the phenomenal order of nature as of no less decisive import for the mind than an order metaphysically deduced. Our whole task, it was held, is to adjust ourselves to the laws actually operative in the world, in life, and in society as a means of the fullest possible self-expression and of the utilitarian organization of society. The determinative factor is in all circumstances the law of physical and psychical phenomena; the mind has no creative power of its own, but has only a capacity of adaptation by means of which, in its differentiations and integra-

tions, it may maintain and further the existence of human beings. To that existence itself no independent spiritual content is ascribed; there is nothing beyond the adaptation of an empty capacity for existence. Here the mind is not derived from matter,—and so far an idealistic element is retained,—but it is divested of all specific and spontaneous content, and receives everything from the surrounding world. Hence the relation between subject and object, and thus also the problem of idealism itself, together with all the fundamental views which serve to determine its development, may, as being insoluble and of no practical utility, be relegated to the sphere of the unknowable. This positivism, it is true, was challenged by a revival of the Kantian idealism——in the form of Neo-Kantianism, in which, however, Kant's ethics, his doctrine of freedom, and his philosophy of religion were for the most part set aside. Strong opposition came also from the nominalist-empirical idealism which, in the hands of G. Simmel, produced a type of thought as definitely idealistic as it was relativistic.

But the modern or German idealism, as a philosophy based on consciousness, met with a very severe and powerful criticism from the side of modern psychology, with its experimental investigation of consciousness. This psychology demolished the conception of the ego, the soul, and the unity of consciousness, and thus made it difficult to deal with and make use of the individual consciousness as the representative of consciousness in general. Still more effective were the investigations regarding the relation of supraliminal consciousness to subliminal consciousness (or the unconscious). Consciousness now became a mere series of isolated movements associated by contiguity—a mere fortuitous intensification of the subconscious. It is in the latter that the real continuity of consciousness lies, and in it likewise subsist the most important movements and forms, of which only a few ever come into the light of clear consciousness. This being so, supraliminal consciousness cannot be regarded as the primordial metaphysical datum, or as representative of the universe, or of reality in general. It should be remarked, however, that the subconscious, in which Schopenhauer and E. v. Hartmann find the principle of the cosmos, is itself no immediate datum of thought—no ultimate reality of experience.

But, as a matter of fact, these psychological theories of consciousness merely shift, and do not subvert, the foundation of idealism. Even the Kantian idealism—like the earlier Leibnizian theory of *petites perceptions*—took as its basis an unconscious or pre-conscious activity of reason, and his entire system was based upon the development of the occurrences due to that activity into the consciousness of principles, and upon the self-reflexion of reason which it rendered possible. Hence we should probably distinguish between a critico-transcendental conception and the psychological conception of consciousness. The latter alone need be taken into account by the idealistic philosophy, and for that conception the distinction between the psychologically subconscious and the psychologically conscious fusion of subject and object does not really matter; in fact, that fusion and the preponderance of the subject over its contents are thought of here as only relative, as more or less complete. But, even if the foundation of the philosophy of consciousness is thus maintained and recognized, its development therefrom is confronted with new problems. Account must be taken from the outset of the distinction between the two grades of consciousness, and consciousness in the ordinary sense must be regarded as in itself

inadequate, and as capable of being supp
by elements and ideas which emanate
subconscious. Above all, the higher
which embraces both ordinary conscious
subconsciousness, becomes something w
beyond the possibility of experience, and
conception of reality is detached from ex
and thought in quite a different way fron
method in the doctrine of the antinom
enable us to grasp that conception, in
must fall back upon an imaginative an
intuition of the feeling of life and reality—
the object of which cannot be demonstr
experience or grounded in thought. Ideali
becomes intuitive, as in the most recent
viz. that of Bergson—a school whose influ
steadily increasing—and the conclusions
from that fundamental position conform l
less to the idea of a homogeneous and co
system.

7. **The significance of idealism for reli**
Having thus surveyed the development
idealistic conception of things, we are no
position to determine its significance for th
fication and valuation of the constitutive i
the Christian religion. Here, however, w
always bear in mind that idealism is con
with only one of the fundamental proble
philosophy, and that, whatever its contrib
to religious thought may be, it does not th
solve the problems associated with the other
starting-points of philosophical reflexion. T
in no way furnishes a solution of the que
arising from the antithesis of an empirical-re
*versus* a rational-absolute epistemology, or
that of pluralism *versus* monism, for these
tions lie outside its range. Nor, again, d
decide anything with reference to practica
personal idealism, inasmuch as the questio
garding the import of ideas and values is not s
simply by ranking consciousness above all its
tents. What is of importance in personal ide
is rather the question as to the practical
which we must recognize in the mind—ends
always have a spontaneous character and ar
to be established by formal reasoning; her
point of fact, the decisive factor is the pers
individual will.

Still, even with due recognition of all t
reservations, idealism is of immense signific
for religion. It invalidates all materialism
semi-materialism. It maintains that conscious
cannot be derived from matter, but that, on
contrary, matter exists only for consciousne
that its *esse* is *percipi*. Nor does this imply t
matter is simply given in consciousness, for in t
case it would be of no consequence whether
started from the one or from the other. But
the fundamental relation between the two, acc
ing to idealism, consciousness is the formative
regulative principle—that which contains in it
meaning and life, and is, therefore, pre-emine
and intelligible to itself. Idealism asserts
mind's supremacy over the real. But the conv
tion that mind cannot be explained by matt
and that it is the formative principle of the real,
a fundamental scientific postulate of religious l
and thought, and is recognized as such where
religious thought is consciously directed upon
possibility and its rights. It is true that t
idealistic theory cannot in itself determine t
direction in which the mind's supremacy will ass
itself, or the ends and values which that suprema
involves. Idealism regards the mind merely a
formal principle, the materials of which are give
and the ends of which are revealed to the will
the process of spiritual development. What pa
ticular ends the mind will choose are determine

in part by the solutions of the other two groups of philosophical problems, and, above all, are drawn from the supreme convictions of the mind *itself*. No more than any other form of philosophy can idealism by itself develop into religion; it must ever be supplemented by independent elements of religious life, and from these receive a concrete determination. But in so far as mind and the supremacy of mind form the metaphysical pre-condition of religious belief, idealism is to that extent of the utmost significance for religious life and thought.

E. TROELTSCH.

**IDENTITY.—I. General** (logical Law of Identity).—Any discussion of the problems connected with Identity must necessarily start from a clear understanding of what is meant by Identity as a concept of pure logic, and what is the precise sense of the so-called logical Law of Identity. This is the more needful since Hegel at least professes to reject the Law of Identity, and since some of the most eminent of our modern philosophers have, in consequence, been led to minimize the significance of the formula, though they have usually stopped short of actually denying it.

There are several ways of defining sameness or identity as a notion in pure logic, but all of them are logically equivalent (on the meaning of 'equivalence' a few words will have to be said further on). Thus, in a logic which, like that of Boole and Peano, is founded on the notions of class, member of a class, and the relations of inclusion in and exclusion from a class, we may conceivably begin by defining the identity of individuals, and proceed to consider identity between classes as derivative, or we may first define the identity of class with class and then deduce an expression for individual identity. Taking the first course, we may say that, if $x$ and $y$ are *terms* (*i.e.* determinate individual objects of thought represented in language by singular names or denoting phrases), $x$ and $y$ are the *same* term when *every* assertion which is true of $x$ is also true of $y$, and every assertion which is false if made of $x$ is also false when made of $y$; or, to put it in other language, if $x$ and $y$ are *not* to be the same, there must always be at least one assertion which is true of the one but false of the other. Now, this definition of identity will also hold good if $x$ and $y$ are not individuals but classes. For classes are identical only when they comprise precisely the same members, and in that case it is clear that whatever can be truly asserted of class $x$, and nothing else, may be truly asserted of class $y$.[1]

Or, again, we may reach an equivalent result by first defining identity as a relation between classes; thus, the class $x$ is identical with the class $y$ when, and only when, every member of $x$ is a member of $y$ and every member of $y$ a member of $x$. Bearing in mind that for every individual term there is always at least one class of which the term in question is the *only* member (as, *e.g.*, Thomas Hobbes is the only member of the class 'author of *Leviathan*,' 2 the only member of the class 'even prime number,' and so on), we get the result that, if $x$ and $y$ are both classes of one member, *the* one member of $x$ is the same term as *the* one member of $y$. This obviously reduces to our previous formula for the identity of individuals. For, if $a$ be 'the $x$,' and there is a proposition which is true of 'the $x$' but not of 'the $y$,' such as 'the $x$ is a $w$,' it must be true that '$a$ is a $w$,' but false that 'the $y$ is a $w$,' contrary to our previous deduction from the definition of identity between classes.

When we say of anything that it is 'the same' or is 'identical,' our statement is manifestly incomplete, and, as it stands, without significance, unless we say what it is the same *with*. Identity is thus clearly a relation of some kind. Further, it is a symmetrical relation, *i.e.* it is its own converse, since, if $a$ is the same as $b$, $b$ is always the same as $a$. Also, the relation is transitive, *i.e.* it is always true that, if $a$ is the same as $b$ and $b$ the same as $c$, $a$ is the same as $c$.[1] Again, identity, like self-love, self-support, suicide, is a self-relative, since everything is always 'the same as' itself, or, to put it more technically, the same term which is antecedent, or first term, in the relation may always be sequent, or last term. It is this that is expressed in the abstract formula known as the Law of Identity, $a=a$ (for some remarks on the meaning of the symbol = in this formula, see immediately below). It should be noted that the formula of itself does *not* state that the asserted identity excludes the co-existence of difference or variety, and that the attacks which have been directed against it on this ground thus arise from misapprehension of its precise purport. Thus, if for $a$ we substitute 'the crosser of the Rubicon,' the formula in no way denies that the person who crossed the Rubicon is the same person who was killed by Brutus and Cassius; all that it denies is that the person who crossed the Rubicon can be identical with a person who never crossed the Rubicon, or who did not cross it in the circumstances described in the proposition. This consideration of itself largely invalidates the Hegelian attack on the principle. There is, however, a further peculiarity about the relation of identity which is not taken into account by the formula, but has now to be mentioned, and does afford more plausible grounds for raising metaphysical difficulties. Self-relatives in general are relations which may subsist between a term and itself, but may also subsist between one term and another. Thus, a suicide is one who kills himself, but the relation of killer to killed may, and most often does, hold between distinct persons; a man may govern or love himself, but he may also love or govern other persons. But absolute self-sameness, or identity, can subsist only between a term and itself. If $a$ and $b$ are numerically distinct terms, then it is never absolutely true that $a$ and $b$ are identical—a point which is perhaps most clearly brought out when we consider such relations as those studied in pure mathematics, where, *e.g.*, it is fundamental that a point or an integer is *never* identical with any point or integer which is not itself. And, as we shall see directly, the same consideration that a thing is never identical with anything but itself is really of no less moment in the study of human moral and social relations.

Summing up, then, we may say that identity is a relation which is symmetrical, transitive, and self-relative, and that in its strictest logical sense it is the *only* relation which can exist only between a term and itself. We have now to consider some of the objections which have been urged against admitting the reality of such a relation. But per-

[1] If, *e.g.*, there is a certain term $m$ which belongs to $x$ but not to $y$, there is a proposition, viz. '$x$ contains $m$,' which, as it stands, is true, but would be false if $y$ were substituted for $x$.

[1] In the case where $a$, $b$, $c$ are geometrical magnitudes, this formula becomes the familiar 'first axiom' of Euclid, 'things which are equal to (*i.e.* have the same magnitude with) the same thing are equal to one another.'

haps it will be well first to say a word about one or two possible misapprehensions which arise from the ambiguity of the commonly adopted symbol = to express this relation.

It must be remembered that the symbols which represent relations and operations are, in the first instance, arbitrary. Such signs as =, +, ×, + of themselves tell us nothing of the relations or operations for which they stand. The person who first introduces them is at liberty to put what sense he pleases upon them, provided only that the sense intended is made perfectly clear and that the same symbol retains, so long as no notice to the contrary is given, the same precise sense. It follows, further, that there is no objection to the employment of an already familiar symbol in an extended or otherwise modified sense, provided two conditions are observed: the relation or operation for which the symbol is henceforth to stand must have certain formal logical characteristics in common with that for which it had been formerly used; the same symbol must not be used for relations and operations which bear no analogy at all with one another. And it ought to be clearly indicated exactly how far the analogy between the old sense and the new extends, what formal characteristics are common to the two cases. Thus, in arithmetic, if the symbol × has first been 'defined' for the domain of natural integers, and 'multiplication' of one natural integer by another has thus received an unambiguous sense, we have no right to use the same symbol × or the word 'multiplication' to denote an operation with rational fractions, or with 'algebraic' or 'real' numbers in general, without first fixing its sense by re-defining the word or the symbol for the new domain in which it is henceforth to be employed. It follows that, taken apart from its definition for a given domain, a symbol of relation or operation is usually ambiguous, and some at least of the criticisms which have been passed on the formal expression of the Law of Identity seem to be mere consequences of the ambiguity of the symbol =. It has been said, in support of the view that the relation = has no meaning unless it relates two distinct terms, that the whole point of such expressions as $x+7=10$, or $(a+b)^2=a^2+2ab+b^2$, would be destroyed if the sides of the 'equation' were not different expressions. It must be replied that in the first case, where we are dealing with a genuine 'equation,' the symbol = does not denote logical identity at all, but *equality*, *i.e.* identity of magnitude. The symbol $x$ here stands for a number, as yet supposed to be unknown, but such that, when it is discovered, the sum of it and 7 is equal to 10. If we replace $x$ by the only value which satisfies the equation, viz. 3, the statement $3+7=10$ becomes a strict identity. Its meaning is that *the* self-same number which results from the operation of adding 7 to 3 is *the* number which results from adding 1 to 9. The two operations are distinct; but, since each integer occurs only once in the series of natural numbers, the result of the operation is identical in the strictest sense, and it is of the result that we mean to speak. There is only one 10 in the whole universe of thought, and it is this unique object 10 about which we are making an assertion. If there could be two different numbers 10, one of which resulted from the addition of 1 to 9 and the other from the addition of 7 to 3, arithmetic would be impossible. Thus, if we take $3+7=9+1$ as a statement about the *results* of two different operations, we are asserting the identity of a term—10—with itself; if we take it, as we are also at liberty to do, as a statement about two *operations* of addition, the symbol = no longer denotes identity but equivalence (*i.e.* the operations of adding 1 to 9 and of adding 7 to 3 are not identical, but they yield a result which is identical). So in an algebraical formula, like that given above, which contains no 'variable,' though it is often convenient to speak of the formula as an 'identity,' or to say that the two sides of the expression are 'identically equal,' what is really stated is an equivalence. The meaning is not that the operation of multiplying $(a+b)$ by itself is the same as that of multiplying $a$ by itself, $b$ by itself, and 2, $a$, $b$ by one another, and then adding the results, but that the two processes yield a final *result* which is identical.

It may still be urged that, at any rate when we make significant judgments of identity, there is always an assertion of difference included in our statements. (For an able statement of the view, here criticized, that *two terms* are required for the relation of identity, see particularly Varisco, *Conosci te Stesso*, p. 147, note.) Thus, it may be said that, even in the 'identities' of which we have just been speaking, by our own admission what we assert is that different operations determine one and the same result, and that, apart from the difference of the operations, it would not be worth while to assert the identity of the result. Who, for instance, would be the wiser for knowing that $10=10$, or, to take Hegel's example, that 'a plant is—a plant'? And it may even be urged, as by Bradley, that the so-called Law of Identity $a=a$ is not a judgment or proposition at all, since every significant proposition is a synthesis of different elements. Yet neither criticism seems to go to the root of the matter. It is not true to say that

$10=10$ (the symbol = being here taken as m
'is identical with') is an unmeaning or
assertion. For it means that the numbe
unique in the series of natural integers, s
*e.g.*, in counting, when one has once passe
will never come back to it, or, to use other
that the series of integers is non-recurrent.
do not usually think it necessary to mentio
peculiarity of the series of integers, that is
because of its familiarity; in a logical study
properties of number the peculiarity is a
important one, and the proof of it a highly
rate affair. Hence it is not strictly true
that, whenever we assert identity, we
taneously assert or, at any rate, imply diff
as well, though this is, no doubt, most com
the case. And reflexion will show that, whe
assert 'identity in difference,' there is alwa
assertion of absolute self-sameness involved.
if we say 'the wall-paper in Mr. X's stud
exactly the same shade as that in Mr. Y's di
room,' we do state a difference; the papers ar
the same papers, and the walls which they
are not the same walls. But the shade of c
of the one paper is numerically one and the
with that of the other. There are not two co
shades, but one. Or, if an actor in a stage r
nition-scene exclaims, 'That person is my long
son,' it is implied, of course, that the long-lost
has changed in many ways, but there is somet
of which absolute identity is asserted; h
numerically one and the same person. If pers
identity were the fiction that Hume asserted
be, such a statement as 'This is my long-lost
would always be false. Hence, wherever a st
ment of identity in diversity is made, it will
found to include as part of its meaning an assert
of the form $a=a$. This is not to deny that phys
things change or that organisms grow; it is me
to state that, unless the change or growth is a
cess within something permanently self-identi
the very statements '*This* changes,' '*This* grow
cannot be true.

With respect to the statement that an express
of the form $a=a$, if it means what it says, is
genuine judgment, one may say that the matte
partly one of arbitrary definition. If, in Bradle
fashion, a judgment is defined in such a way as
make the presence of distinct terms part of t
definition, then, of course, with such a definitio
no affirmation in which there is only one term w
be a judgment *according to this definition*. B
this obvious consideration does not dispose of t
question whether there may not be true and si
nificant statements which fall outside the limits
this definition. Thus $10=10$, according to wh
has just been maintained, is significant and tru
since it disposes of the conceivably possible vie
that the number-series may be recurrent; but
would not be a judgment according to Bradley
definition. And certainly the abstract schema
all such propositions, the formula $a=a$, cannot b
an actual judgment, for the simple reason that
has here no determinate signification, but is merel
a blank form standing equally well for any actua
term, but not itself a term at all. And, wher
there is not even one term, there clearly can be n
judgment. But this criticism has of itself no mor
direct bearing on the Law of Identity than upo
any other pure logical schema of possible judg
ments, such as, *e.g.*, 'All $x$'s are $y$'s.' As the presen
writer understands it, none of the so-called forma
laws of thought claims to be more than a rule o
formula according to which true propositions can
be made, and in violation of which no true proposition can be made. The real function of the Law of Identity is thus simply to assert that every object of thought has a definite character. Simi-

larly the Law of Contradiction (which, it may be incidentally observed, is not the Law of Identity disguised in a negative form, but a wholly independent law) adds that no object of thought can at once have and not have a given determinate character, while the Law of Excluded Middle further adds that, if the given character is fully determinate, any given object of thought must either have it or not have it. The effect of the three taken together as postulates of thought is to ensure that the logical universe of discourse shall contain only determinate and distinct objects of thought, or, in other words, that its members, whatever they may be, shall possess a definite and recognizable individuality. Since each of the three 'laws' is required to guarantee this result, it seems impossible either to deny the logical value of the Law of Identity, or, in Hegelian fashion, to maintain that an actual thing is only identical with itself *because* it is also different from itself, and *vice versa*. Indeed, we have seen that, in the case of such objects as the natural numbers, there seems to be a self-identity which excludes all difference whatsoever. To revert to our example, $9+1=10=3+7$, there is undoubtedly a difference between $9+1$ and $3+7$, but it is a difference not in the result of the operations, the number 10, but merely in the methods by which it is obtained. What is identical here, the result, has no element of difference within it; and what is different, the two operations, is not identical, but merely equivalent. So, when we say that two different men, *A* and *B*, see the same sun, the whole situation exhibits identity in difference; but the identity belongs to one thing, the object seen, and is absolute down to the utmost particular; the difference to something else, the processes by which the perception of the object is effected in the case of *A* and of *B* respectively. So more generally, if it is said of *A* and *B* that they are 'the same and not the same,' meaning, *e.g.*, that their formal structure is the same but their material different, it is clear that identity is asserted about one constituent element of *A* and *B*, and difference about quite other constituent elements. The common formal structure, *e.g.*, in respect of which *A* and *B* are pronounced the same, is strictly and numerically one and the same with itself, and it is precisely this that is expressed in the affirmative part of the statement.

2. **Application.**—It is no part of the business of logic to formulate criteria of identity, or to say when any particular assertion of identity is correct. Still it may well fall within the logician's province to utter a warning against one or two popular fallacies, which might, if unnoticed, prevent the recognition of identity where it exists. The chief of these prejudices is perhaps the inveterate tendency to assume that identity, wherever it is asserted, means the presence of an identical material constituent or constituents in a complex. This, of course, need not be the case; the point of identity in a given case may lie entirely in the formal structure of the complex, as when a melody is said to be the same, though it has been transposed into a different key. Or we may mean to assert identity of formal structure together with identity of some, but not all, of the material constituents. In such cases it may be impossible to say with certainty how many of the material constituents of a complex must remain the same in order that our assertion may be regarded as true. This is illustrated by the old question whether the pair of stockings which had been darned so often that no part of the original silk remained were still the same or a new pair. The point is that, in a case like this, we mean in ordinary life to assert something more than the formal or structural identity of the pair of stockings; we feel that the identity of the stockings is not preserved unless at least some part of the material has remained all through the processes of mending; but we have no fixed standard by which to determine how much of the material must be preserved, and thus the question admits of no determinate answer. What we may learn from it is that in any concrete case the question of identity cannot be answered unless the exact respect is specified in which identity is sought. It is possible to have, for instance, absolute identity of material constituents without identity of formal structure, or, again, complete identity of formal structure without any identity whatsoever of material constituents. This shows us that the Law of Identity is in no way affected by the fact that change is real, since either the material constituents of a complex or its formal element may change without affecting the other element. Hence, if a person is, in any given context, specially interested in the one aspect, he may correctly assert identity, though there may have been considerable change in the other. We also see that the identity which co-exists with change is not well described as a permanent substratum. Where what we mean to assert is identity of form or structure, the use of a word like substratum, which inevitably suggests a material factor in a complex, is wholly misleading. In general we may say that, owing to the fact that in concrete cases we usually mean to assert an identity which is neither wholly formal nor wholly material, the question whether something is still 'what it was' or has become 'something different' cannot be satisfactorily answered except with reference to the end we have in view in raising it. To take a trivial instance—the fact that every material constituent of one's body may be different from any of what were its material constituents ten years ago is irrelevant to an 'identification' in the police-court.

So far we have been in the main considering the case of complexes which on their material side have been treated as mere aggregates capable of receiving a structural determination from without; and we have seen that, with respect to them, there appears to be always a certain degree of arbitrariness involved in deciding the question how far they can be modified without losing their identity. (For some general remarks applicable to the case in hand, see Varisco's observations on the arbitrary element in scientific formulæ [*Conosci te Stesso*, pp. 118–120].) The case of wholes which are not mere aggregates, and whose formal character consists not in a structure imposed from without, but in internal development along definite lines and towards a definite end, requires some further consideration. In what does the identity of a living organism or, again, of a personal self consist? In the case of the organism, which is constantly renewing itself by getting rid of superfluous material constituents and building up fresh elements to take their place, it is plain that identity does not depend on the retention of any material constituent throughout the whole of the organism's life. If we interpreted rigidly the Aristotelian formula, 'presence of the *same* form in the *same* matter,' it would clearly not be a correct account of the identity of any living organism. What seems to be of primary importance is formal identity as shown not in unchanging retention of one and the same structure, but in the continuous development of structure through successive phases according to a definite law of growth. We do not mean by this merely a law of growth common to all the members of a class or species, but a law or principle of structural development which in its full determinateness is unique and peculiar to this one organism. (It is true that, *e.g.*, one oak grows on lines which are much the same for all oaks; but there are

always individual differences: no one oak is a mere replica of any other, and no mere general formula applicable to all oaks alike is an exhaustive statement of the living law of development or 'form' of this special oak.) From the continuity of development presupposed in such a formal identity, it seems to follow at once that identity would be destroyed if there could be an instantaneous change of all the material constituents of the organism. There would be no sense in speaking of a structure in which all the material constituents were simultaneously replaced as a growth or development. It would be in the strictest sense a new creation. Finally, a word or two may be said about personal identity. Does it reside solely in the soul or mind, or does it involve identity of the physical organism? In actual practice, of course, life does not present us with cases in which personal identity is found apart from such an identity of the organism as has just been spoken of. But we can at least imagine such a possibility.

Suppose, for example, that the Pythagorean doctrines were true, and that the soul of a man could become associated with the body of a parrot. If it were possible for the supposed parrot to convince us that it retained the psychical character which we had previously known as that of a friend, it is difficult to see how we could refuse to believe that we were dealing, not indeed with the same *man*, but with the same *person*. We should, *e.g.*, be morally bound to treat the parrot, not as a mere parrot, but as having the same moral claims and rights as our friend. And we should hardly regard the belief in personal immortality as capable of refutation by the mere consideration that there can be no identity of organism between an embodied and a disembodied spirit.

And, again, though many theologians would maintain that complete immortality involves a 'resurrection of the body,' it is hard to see in what sense they can maintain that the 'glorified' body is the same organism as the 'corruptible' body. Personal identity would thus seem to be essentially psychical and, in its concept (whatever the full concrete facts may be), independent of bodily identity. Once more, as in the case of the organism, it is important to understand that personal identity is, primarily, identity of form. It does not require the permanent and unchanged persistence of any special material content, such as a group of sensations or thoughts or feelings, throughout the course of personal existence. It is no more required, in order that a man may be the same person as he was twenty years ago, that some mental 'contents' should have persisted unchanged during the twenty years, than the sameness of his body requires that some of its particles should still be the same as twenty years ago. What is required is that the succession of changes in mental and moral character should be linked together as a continuous development according to a law of growth which in its concrete fullness is characteristic of the person in question and of no other being in the universe. A man's present experience is *his* experience, because it fits on to *his* past experiences as it does not fit on to any other series of individual experiences. It is thus an abuse of language, which may easily lead to the gravest confusion of thought, to speak of personal identity as involving anything in the nature of an unchanging psychical 'substratum.'

The confusion appears in the crudest form in the difficulties raised by Hume about personal identity. His difficulty is real only if we assume that personal identity means the permanent persistence of some identifiable mental 'state' or group of states. If this is conceded, it is, of course, easy to show that we have no evidence for the existence of any such permanent 'impressions' or 'ideas.' Even Bradley's suggested minimum of a persisting core of cœnæsthesia is something in which it is very hard to believe. The difficulty vanishes when it is seen that personal identity is primarily identity of form,
not of content or matter. The same mistal
mand for identity of content as a basis of p
identity seems to lie at the bottom of the c
porary tendency to exalt the 'subliminal' s
a principle for the explanation of all psycho
difficulties. It is, of course, a fact capa
establishment by careful observation, eve
were not already presupposed in the conc
of the mind as a thing that grows and dev
that mental 'states' do not arise and vani
stantaneously; they have a period of 'mar
existence which may exist both before and
their occupation of the 'centre' of attentiv
sciousness. But the doctrine of the 'sublin
self extends this conception of the 'margin
rounding the 'focus' of consciousness beyon
limits within which its validity can be subn
to experimental tests. The 'subliminal' is th
of as a region in which mental contents of all
still persist as actual, though unconscious,
they have disappeared from even the 'marg
consciousness, and from which they can be ev
again in the processes of recall. As a symb
the truth that the actual condition of consc
ness may be largely determined by experi
which are no longer present to consciousness, t
can be no objection to the use of such a no
but when the attempt is made to regard the sy
as an explanation—for instance, to explain r
lection by the supposed persistence of a perce
idea 'below the threshold,' or to convert a me
tendency into an actual conjunction of 'sublimi
states—and, most of all, when personal identi
supposed to rest upon such an actually unchan
body of 'subliminal' mental contents, it shoul
clear that we are dealing with the Humian fal
in a new dress. An identity which is really on
form and law is being illegitimately converted i
one of material constituents. If we are righ
holding that personal identity requires no notio
an unchanging 'substrate,' the theories which n
be formed of the character of the supposed 's
liminal' self will have no bearing upon the probl
of identity. In fact, the very problem to be solv
in what the identity of a person consists, obviou
breaks out again when we ask what is meant
the unity and self-identity of the supposed 's
liminal' personality itself.

Without introducing any reference to the 'su
liminal,' we may simply state the facts of wh
it appears to give a mythological account th
Since personal identity would appear to depend
the unique linking up of past with present men
states in virtue of a formal law or principle
mental development, it seems to involve as a co
sequence at least the possibility of a recall
memory of whatever experiences have belong
to a self. That we in all probability forget mo
of our experiences so completely that they a
never recalled, at least in the life that we kno
is no objection to such a view. For it may we
be that they are not recalled simply becau
further experience does not provide us with th
appropriate cues. From abnormal cases, such a
those of persons who have survived the very ne
approach of death and have recorded their exper
ences, it would seem unsafe to assert of any ex
perience that it has certainly passed beyond a
possibility of recollection. On the other hand, i
is hard to see how the kind of continuity in menta
development without which there would be n
meaning in speaking of certain past experience
as mine, and not those of another person, could b
preserved if all possibility of their actual recover
were precluded. Such totally lost experience
would not be 'linked up' with any personality a
all, and, if they could be supposed to exist, would
seem to have become ownerless. But an owner

less experience is surely a contradiction in terms. On the contrary, if there is such a continuity in personal development that there is always a real dependence of the later phases of a personality upon the earlier—a dependence which is different in kind from the dependence of one man's personality on that of another—this would seem to be of itself enough to guarantee the possibility that any experience which has been that of a given individual may be, when the cue for it arrives, reinstated in the form of memory. Hence it seems, to the present writer at least, that memory is essential to personal identity, and that there is ultimately no sense, *e.g.*, in speculations which represent the same person as passing through a succession of lives in each of which he is absolutely precluded from all possible memory of the events of those which have gone before. If all links of memory are destroyed at death (or at re-birth), on what ground do we pronounce a given man *A* to be a reincarnation of another man *B* rather than an entirely new creation?

A. E. TAYLOR.

**IDENTITY (Buddhist).**—**1.** We find the notion of identity principally in material objects which preserve the same aspect for a long time, and which may be moved in space without change of form. The Buddhists have carried the doctrine of non-identity so far that they have come to deny movement. According to them, when a body seems to move, it is really being continually renewed, and is, so to speak, re-born of itself—re-born each moment in a different spot. Such is the opinion of the orthodox (Skr. *Abhidharmas*). The Vātsīputrīyas, who are heretics, believe that a gesture is a movement, whereas, according to the orthodox opinion, gesture is but a new disposition of a body, which is no longer the same body as it was before. Yet, like all Buddhists, the Vātsīputrīyas admit—basing their faith on Scripture and experience—that a flame is always being renewed, and that it never remains for one moment identical with itself. The flame of the lamp in the third watch of the night is the continuation of the flame in the first watch; these two flames form a series (*santati*): the first is the cause (*hetu*) of the second, for they have both the same nature; the wick and the oil are not causes, but only coefficients (*pratyaya*). This series may be developed in space while it lasts: when there is a prairie fire, the flame of the Northern extremity of the prairie stands in the same relation to the flame of the Southern extremity as the bird arriving in the South to the bird which has come from the North. But we may follow the problem still more closely. It may quite well be the case that flame, sound, and thought are essentially 'momentary,' 'perishing from moment to moment,' and yet that certain objects and the atoms originally constituting all objects remain identical. Certain things remain in existence as long as there is no cause to destroy them.[1]

If things (*saṁskṛta*)[2] are momentary, then they perish of themselves, without any cause. It is denied that the flame dies because it is blown out, or that sound dies because a hand is laid on the bell. The cause which is in opposition to the existence of the flame does not destroy the flame; for how can we destroy what exists, or how can we destroy what does not exist? This cause prevents the new flame from springing up to replace the present one; it interrupts the series of the flame by paralyzing the forces which made it last. From all evidence, it is the same with wood.

'Are we to think that wood perishes by contact with flame?—Yes, for we no longer see the wood when it is burnt, and no reasoning is worth the evidence of our senses.—No. It is a matter of reasoning; for, even if we no longer see the wood, that may be the outcome of the fact that it perishes of itself and ceases to be renewed. The non-existence of the wood, which, you say, is caused by the fire, is a pure nothingness, a non-entity: and non-entity cannot be an effect and cannot be caused. Besides, if destruction, the non-existence which succeeds existence, had sometimes a cause, it would always, like birth, have a cause. And you willingly admit that flame, sound, and thought are momentary by nature' (*Abhidharmakośa-bhāṣya*, iv. 2).

If things perish without cause, from their very nature—as objects thrown into the air fall—they must perish in the very moment of birth, and they cannot exist beyond the moment in which they actually receive being; they perish in the spot where they are born, and they cannot pass from one place to another.

'If destruction, being without cause, does not take place at the very birth of the thing, it will not take place later, for the thing remains what it is.' But, one may say, the thing changes, it ripens, it grows older. What grows older and what changes is a 'series,' for the notion of change is by its very terms contradictory: 'That the same thing should become other than it is, is absurd; that the thing should remain the same, and its characters become different, is absurd.'[3]

There is much discussion over the example of water which disappears by ebullition. The fire prevents the atoms of water, which disappear every moment, from procreating new atoms of water: 'thus the mass of water is reduced more and more, until it entirely disappears, and finally does not exist in its series, or in its being.'[4]

**2.** The point of view of the Dignāga school (5th cent. [?]) is too well known to require more than brief mention here.[5] By existence is meant the capacity for producing an effect (*arthakriyākāritva*). Now, a permanent thing is inactive. Does it possess, at the moment when it is accomplishing its present act, the power to accomplish its past and future acts? If so, then it will certainly accomplish them at once, for it is not usual that anything capable of an act should postpone it. If

[1] The old school believes that things are *anitya*, 'non-eternal,' 'fragile'; but it does not say that they are all *kṣaṇika*, 'momentary,' 'instantaneous.' Buddha says: 'It is evident that this body lasts one year . . . a hundred years, and even more. But that which is called mind, intellect, consciousness, keeps up an incessant round by day and by night of perishing as one thing and springing up as another' (*Saṁyutta*, ii. 96).

[2] *Saṁskṛta* = 'what is composed, caused.' The *saṁskṛta* alone exists. The 'non-caused,' be it 'space' or *nirvāṇa*, is but a name.

[3] Vasubandhu (3rd–4th cent. A.D. [?]) in *Abhidharmakośa-bhāṣya*, iv. 2, fol. 180 of *Tanjur*, *Mdo*, vol. lxiii. (India Office Library copy).

[4] *Ib.*

[5] See *Sarvadarśanasaṁgraha*, Calcutta, 1858, tr. A. E. Gough, London, 1882, p. 16; tr. L. de la Vallée Poussin, in *Muséon*, new ser., i. [1902] 64.

not, it will never accomplish them, just as a stone, which is at the present moment incapable of producing a bud, will never produce one. It may be said that the permanent thing produces such and such an effect by reason of the co-operation of additional factors. If these factors remain exterior, then it is they that are active. If they give some new capacity to the permanent thing, then our point is proved: the primitive being, who lacked this capacity, has perished; a new being has been born who possesses this capacity. It is very difficult to attribute to a non-momentary thing, to a thing which is permanent and identical with itself, a successive activity. That which produces no effect—space or *nirvāna*—is not a thing, since it is incapable of action or reaction, and incapable of being caused.

3. If we consider in a series (*santati*) two moments which are very close, the one 'cause' and the other 'effect,' we shall have no difficulty in persuading ourselves that they are neither identical nor different. The philosophy of Nāgārjuna (1st cent. A.D. [?]), arguing from the fact that the relations of cause and effect are 'inexpressible,' gives its opinion in favour of the relative character of the idea of causality; there is, in absolute truth, no cause and effect. A more moderate or less critical philosophy admits a certain identity in the series. Every atom of water, according to it, is fluidity; every atom of fire, heat.

With regard to the most interesting of all series, the mental or intellectual series which constitutes our pseudo-individuality, our substantial and permanent pseudo-ego,[1] the *Milindapañha* remarks that the murderer deserves to be punished, although he is, at the time of punishment, no longer the same being who committed the crime; just as the marriageable woman belongs to the man to whom she has been promised as a little girl.[2] Thus the series which constitutes our soul is divided into an infinite number of existences (*nikāyasabhāga*, *janman*), each one of which is prepared to make retribution for a certain lot of actions (see art. DEATH AND DISPOSAL OF THE DEAD [Buddhist]). In each of these existences the soul really remains identical with itself: its acts, with the exception of the very gravest, will not be requited till a future existence. There is no reason for surprise over the fact that it makes retribution (*vipāka*) for its past acts, or that it is disposed either to good or to evil by reason of the 'issuing' (*niṣyanda*) of its past acts, although there is nothing permanent in itself. It is a parallel with the flower which receives the counter-blow from the substances on which the seed has fed.

The Sautrāntikas believe that acts bring about a certain modification in the series, *i.e.* in the soul—a spiritual modification, if we may call it so, from which retribution springs. The school of Abhidharma believes that the act creates a subtle matter (*avijñapti*), which develops in an uninterrupted series, forming part of the series of the human being, just as the series of thoughts or the series of gross elements does. So the past is perpetuated in the future; and the being, although developing, yet remains to a certain extent similar to itself.

[1] H. Taine (*De l'Intelligence*[3], Paris, 1879, pref. p. 9): 'There is nothing real in the ego, except the train of its events.'

[2] *Milinda*, II. ii. 1, ed. V. Trenckner, Lond. and Edinb., 1880, p. 40; Rhys Davids, 'Questions of King Milinda,' in *SBE* xxxv. [1890] 63: 'The king said: "He who is born, Nāgasena, does he remain the same or become another?" "Neither the same nor another." "Give me an illustration." "Now what do you think, O king? You were once a baby, a tender thing, and small in size, lying flat on your back. Was that the same as you who are now grown up?" "No. That child was one, I am another." "If you are not that child, it will follow that you have had neither mother nor father, no! nor teacher . . ."' (cf. H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1900, pp. 148-152).

L. DE LA VALLÉE PO

IDLENESS.—The essential idea of t
'idle' seems to be *empty* or *unoccupied*.
may be applied vaguely to what is void of
tent, unsubstantial, trivial, useless, fruitles
definitely it may refer to time that is
with *occupations*. In English the latte
more prominent meaning; in the German
former. Probably the German usage keep
to the original meaning of the word, and
minent English meaning is derivative;
this meaning that gives definite import to
as descriptive of a condition in the mora
men.

In this sense idleness presents an aspect
not necessarily unfavourable, but is at tim
favourable, to morality and happiness. It
agreeable relief from the irksomeness w
occasionally attendant on nearly all the
tions of life. This *dolce far niente* has f
delightful expression in Thomson's *Castle
dolence*, and Tennyson's *Lotos-Eaters*. It is
spirit of these poems that W. Morris sp
himself in *The Earthly Paradise* as 'the *idl*
of an empty day,' and Johnson entitled one
well-known series of papers *The Idler*. But
higher purport idleness is commonly deno
'leisure'; it means such relief from the
tions that are necessary for physical existe
leaves time and energy for the higher inter
life. In a practical shape this idea of idlene
found embodiment in the holidays or festival
races. Of these the highest type is the H
Sabbath. But the Greek mind embodied th
of the Sabbath in its own way. The name
institution designed to cultivate the higher
the name from which our 'school' is deriv
the common Greek word for 'leisure,' σχολ
his blunter fashion the Roman called a
*ludus*, 'play' or 'sport.' Both of the great
of the ancient pagan world thus saw, lik
Hebrews, that the culture of a higher life be
possible only when men have secured a ce
relaxation from the serious labour for ph
existence—such relaxation as appears com
tively like playful exercise. As Gray puts it
must 'leave us leisure to be good' (*Hymn to A
sity*, 20).

But this is not the most prominent feature i
moral aspect of idleness. The truth is that in
higher aspect idleness is conceived as idleness
in a relative sense of the term. The idle ma
joys relief from one class of occupations only
he may be free to occupy himself with others.

> 'How various his employments whom the world
> Calls idle, and who justly, in return,
> Esteems that busy world an idler too!'
> (Cowper, *Task*, iii. 352-3

Accordingly idleness, as such, is never viewe
the moralist in a favourable light. Even Thom
though the praise of industry in his second can
a very palpable failure to neutralize the dro
spell of the first, has yet to describe indolence a
most enchanting wizard, . . . than whom a f
more fell is nowhere found' (canto i. 2).
ethical literature of the world is therefore ful
warnings against the evils to which moral chara
is exposed by a life of idleness. These evils cor
both spheres of the moral life, that of perso
character and that of social relations.

1. *Personal character is injured in various way
an idle life.*—(1) Even if morality be interpreted
the spirit of a narrow egoistic hedonism, recogni
no worth or aim beyond personal pleasure, it is c
that that aim itself is defeated by idleness. Wh

ever theory of pleasure and pain may be adopted, it is self-evident that they are but emotional products of the activities that make up life. Pleasure, therefore, can be obtained only by a sufficient degree of occupation to create an interest in life. The pleasure of ease itself is enjoyable only as a relief from the fatigue of work. If the interest of life is not sustained by adequate employment, there is apt to grow up an emotional condition of life-weariness—tedium or *ennui*—which may become so intolerable as to drive its victim, if not to suicide, at least into some escape from idleness by means of laborious sports or feverish excitements like gambling.

(2) But not only is activity necessary to enjoyment; it is necessary also to maintain our energies in vigour. Bodily organs become atrophied from lack of exercise, and all the powers of life become enervated if not constantly employed. Consequently a general enfeeblement of character is the inevitable result of idleness.

(3) Probably, however, the malign aspect of idleness, which is mainly emphasized by the moralists, is that vacuity which leaves the unoccupied mind open to any seductive influences of evil. We have seen that sheer idleness becomes intolerable by eliminating all interest from life, leaving nothing to make life worth living. The craving for relief in some direction becomes irresistible; and, if it is not found in useful occupations, it will be sought in occupations that are frivolous, if not positively pernicious. This is such an obvious teaching of common experience that it has found embodiment in many a familiar proverb, as well as in the homely lessons of popular moral and religious literature.

2. But the larger aspect of idleness, as of ethical problems in general, is that which bears upon *social relations*. By its very nature idleness connects itself with the economics of society, and it draws its significance for social morality from a familiar commonplace of economical science with regard to the production of wealth. All those commodities —the necessaries and comforts and luxuries of life —which constitute wealth are producible only by labour expended on raw material furnished by nature. Every human being, therefore, who lives in unproductive idleness, who is merely a consumer without being a producer of wealth, requires others to labour not only for their own subsistence, but also for his. This fact forms the foundation of that sturdy moral sentiment to which St. Paul gives expression, that, if a man will not work, he has no right to the means of subsistence (2 Th $3^{10}$). In this sentiment St. Paul represents a peculiar feature in the moral ideal of the Hebrews. For they stand almost alone among the nations of the ancient world in their appreciation of the moral value of industrial labour. On this subject there is nothing in all literature more noble than the utterances of some of their Rabbis (some are quoted in E. Deutsch's essay on the Talmud, published in the volume of his *Literary Remains*, London, 1874, p. 5).

Among other races social sentiment with regard to industrial labour took a very different course. The ideal of uncivilized tribes is well known. It is often illustrated by Herodotus's description of the Thracians (v. 6): 'To be idle is accounted the most honourable thing, and to be a tiller of the ground the most dishonourable. To live by war and plunder is of all things the most glorious.' This ideal was undoubtedly confirmed by slavery. The origin of this institution is generally regarded as indicating an advance upon a more savage practice, by which captives in war were ruthlessly slaughtered, if not also eaten, to gratify hunger, or revenge, or some horrid superstition. Instead of this, captives came to be adopted by their victors, and forced to undertake those peaceful, steady labours which are out of harmony with the bodily and mental habits of a warlike race. The result was that such labours came to be viewed as appropriate occupations only for persons of an inferior rank in society; and, as slavery was perpetuated in all the later and higher civilizations, the prejudice against industrial labour became deeply engrained in the moral sentiment of the ruling classes everywhere (see W. E. H. Lecky, *Hist. of Rationalism*[3], London, 1877, ch. vi. *ad init.*; see also his *Hist. of European Morals*[3], do. 1869, i. 277; the fullest exposition of the varied influence of slavery upon the free classes will be found in H. Wallon, *Hist. de l'esclavage dans l'antiquité*[2], Paris, 1879, especially bk. i. ch. xii., and bk. ii. ch. ix.).

The great pagan races of the ancient world in general regarded most forms of industrial labour as incompatible with the highest morality, and more particularly with the moral character of a free citizen. It is not indeed to be understood that the great States encouraged idleness. On the contrary, in some the law required every citizen to show that he had some honest means of living, and failure to do so was punishable by death (Herod. ii. 177). According to Herodotus, this law was imposed upon Athens by Solon's legislation; but, though Grote (*Hist. of Greece*, London, 1846–56, ch. xi.) rightly judges this to be improbable, it may be taken as implying that the great reformer did provide some measure to protect the State against idle vagrants. Herodotus, however, himself indicates the sweeping qualifications by which such condemnations of idleness are to be interpreted. For he takes care to inform us that, among the nations with whom his researches had made him acquainted, barbarian as well as Greek, the prejudice against trades (τέχνας) was almost universal, those persons being held in highest rank (γενναίους) who kept themselves aloof from such occupations, and especially those who devoted themselves entirely to war (ii. 166, 167). The truth is that the ancient States were in their whole sentiment military, not industrial, societies. The strength of their prejudice against trade, as Herodotus observes (*loc. cit.*), went at times so far as to prohibit their citizens from engaging in trade; *i.e.* tradesmen were not allowed the full rank and rights of freemen. This remarkable prohibition is taken by Montesquieu (*L'Esprit des lois*, Geneva, 1748, iv. 7) to illustrate the prevalent conviction of ancient legislators, that the trading spirit is incompatible with the moral character necessary for civil freedom. It was for this reason that ancient thinkers sometimes justified the institution of slavery as being the only means by which industrial labour could be carried on in a free State. It is, moreover, significant that the moral treatises of ancient paganism, being designed to expound the moral life of freemen, not only ignore the industrial virtues, but, when they do touch upon trade, are in general opposed to the recognition of it as a legitimate sphere of life for the virtuous man. The only great teacher among the Greeks who had surmounted this prejudice was Socrates (Xenophon, *Memorabilia*, i. 2, ii. 7. 8, iii. 9); and his wholesome teaching on the subject throws a light, which has seldom been appreciated, on his personal character and influence. We seem to catch an echo of his teaching in that of his great disciple. For Plato recognizes the fact that trade cannot be harmful in its essential nature, as it is indispensable to society. He admits, therefore, that, if it were conducted in accordance with reason, it would be an honourable employment. But, as he holds this to be impossible for human nature, he would exclude the trader from the rank of freemen (*Laws*, xi. 918). Aristotle is unwilling to go even so far as his master in his concession to trade.

While holding that the best democracy is that of an agricultural country, and next that of a pastoral, he declares democratic government by a town population to be far inferior, because 'there is no room for moral excellence in any of their employments, whether they be mechanics, or traders, or labourers' (*Politics*, vi. 4. 12, vii. 9. 3–4). The latest utterances of Greek philosophy carry the same sentiment to an extreme. Two extraordinary illustrations are furnished in Plutarch's *Pericles* and Lucian's *Somnium*. Both of these authors speak with contempt of sculpture, even in the hands of Phidias and Praxiteles, as merely a manual occupation. In such employments, says Plutarch, *op. cit.*, *ad init.*, 'though we are charmed with the work, we often despise the workman, as we are pleased with perfumes and purple, while dyers and perfumers appear to us in the light of mean mechanics.'

It thus appears that the prejudice against manual labour continued down to the beginning of the Roman Empire. Cicero, in fact, during the last days of the Republic, had struck the keynote of Roman sentiment on the subject. After dismissing nearly every kind of productive industry, except agriculture, as 'sordid,' he turns to commerce; and the utmost length he is willing to go is a grudging admission that, if it is conducted on a large scale—if it is 'magna et copiosa, multa undique apportans, multisque sine vanitate (cheating) impartiens'—then it is not to be severely condemned—'non est admodum vituperanda' (*de Officiis*, i. 42 [151]). Such a state of sentiment accounts for the vast number of Roman citizens who were content to live the parasitic life of clients, or even to accept a daily dole of bread from the Government rather than take up any industrial occupation. Even the learned professions, with the exception of law, suffered social degradation from the same cause, and were left to men of lower rank, mostly slaves or freedmen (Cicero, *loc. cit.*). Apparently it was this cause also that prevented a freeman or any of his family from cultivating music professionally. In this connexion Aristotle's discussion on the place of music in education is curious. While recommending that the young should be trained in music, he insists that the practice of it should be abandoned in maturer years, and must never be undertaken for gain. 'Professional performers,' he says, 'we call vulgar (βαναύσους), and no freeman would play or sing unless he were intoxicated or making fun' (*Politics*, viii. 5. 8). It is evidently owing to the same sentiment that Juvenal is shocked at a man of consular rank driving his own chariot. The satirist finds in the incident a proof of the degrading innovations that were invading society, and he cannot palliate the degradation even on the ground of its having occurred by night, for still 'the moon and the stars were witnesses'—'sed luna videt, sed sidera testes | Intendunt oculos' (*Sat.* viii. 144–152).

It is evident, therefore, that, when Christianity began to spread over the pagan Empire, it had to encounter a deeply-rooted prejudice that encouraged idleness so far as most forms of industrial labour are concerned. It is true that Christianity brought with it the more wholesome sentiment of the Hebrews. It is also true that in the young Christian community industrial labour was elevated to the loftiest dignity by the example of the Master (Mk $6^3$). And it is true still further that it would be difficult to overestimate the far-reaching influence on industrial life of the fact that the slave took equal rank with his owner in relation to their common Master (1 Co $12^{13}$, Col $3^{11}$). But the conversion of the Empire did not mean that pagan sentiment died out altogether. On the contrary, new tendencies growing up in Christendom itself created some additional forces hostile to the industrial life of the world. One of these happy prominence given in the Christian the gentler virtues, and especially to There is evidence, indeed, that at first car cautions were taken to avoid the abuse expansion of moral and religious life. proof of this is the fact that some of th titles in the Church seem to have been originally to designate those officers who pointed to administer the Church's charitab (G. Uhlhorn, *Chr. Charity in the Anc.* Eng. tr., Edinburgh, 1883, bk. ii. ch. iv.; E. *The Organization of the Early Chr. Ch* London, 1881, especially Lect. ii.). But, n standing all precautions, there is ample e to show that unfortunately the charity Church was often misdirected to the enc ment of idle beggary (Uhlhorn, *op. cit.* bk. ii. a glimpse of this abuse is afforded by Luci *Morte Pereg.*, even if it be but a fictitious s contemporary life). This unfortunate effe aggravated by the development of the simp ception of almsgiving as a sacrifice into the th cal dogma of its efficacy as an atonement f and still more by that strange perversion of sentiment which elevated mendicancy i peculiar grace of religious life. Under the fluences it is no wonder that the aristo prejudice of the ancient pagans against labou carried over into the aristocracies of med Europe. In fact, it was apparently intensifi the transmission. In many countries a nobl or gentleman lost all the privileges of his ran engaging in trade (H. Hallam, *Middle A* London, 1846–48, i. 191).

It will thus be seen that practically throug the ages and nearly all the races of men there been an ideal of social rank strongly hostile t dustrial activity, strongly favourable to indus idleness. This inheritance has come down to modern world, and infects even its most adva industrial communities. It is still an objec ambition among many of the most energetic dustrial workers to attain rank in the leisure c of their community; and all the usages of suc class are based on the principle of avoiding eve thing that has the appearance of industrial lab —the principle of flaunting conspicuously the f that they are living in unproductive idleness B. Veblen, *The Theory of the Leisure Class*, N York, 1898; cf., by way of antithesis, his *Theory of Business Enterprise*, do. 1904). There obviously but one cure for this condition of thing and that is a revolution in the ideal of social ra such as was foreshadowed in the memorable a dress: 'Ye know that in other communities t rulers are those who lord it over them, and t nobles those who exercise authority. Not so sh it be among you; but whoever will become a nob among you shall be a servant, and whoever will your prince shall be the slave of all. For the So of Man also came not to be served, but to ser and to give his life a ransom for many' (Mk $10^{42-4}$

In the love of idleness extremes meet. Beside the idle rich who live upon accumulated wealth there is in every community a vast horde of idler who have no such wealth, but whose habits rende steady labour so irksome that they prefer sub sistence by beggary or theft. Not only is thi class an object of serious concern to moral an religious reformers, but its maintenance and it control impose such a burden upon the industrial labourers of the world as to form a perplexing problem for the statesman.

LITERATURE.—This is sufficiently indicated in the works referred to above.

J. CLARK MURRAY.

**IDOLATRY.**—See IMAGES AND IDOLS.

**IGNORANCE.**—Ignorance has a bearing on the ultimate problems of philosophy (see art. AGNOIOLOGY); but it has an important significance in moral and religious life as well. This significance, as might be anticipated, has been but gradually evolved. In the moral and jural condition of primitive society there are many facts which prove that ignorance regarding the nature or injurious tendencies of an action is not recognized, at least not unequivocally recognized, as freeing the agent from responsibility for the injury done. This early confusion of the moral consciousness was evidently connected with the peculiar jural organization of primitive tribes. It is now a commonplace of historical science that society did not originate by previously isolated individuals combining. On the contrary, society is historically prior to the individual. Its primitive unit is not the individual, but some community—a family or clan—in which the individual is born and brought up. The moral life, therefore, is at first associated with the community rather than with the individual. The moral responsibilities of the individual are absorbed in those of his family or clan. The whole family or clan is held responsible for the misdeed of any member, nor is the misdeed fastened specially on the offender personally even when he is well known. In such a condition of society any individual may find himself involved in responsibility for an action of which he was entirely ignorant; and consequently ignorance is not felt to be of essential importance in determining whether or how far any one can be called to account for an action. All this is abundantly illustrated in societies at the tribal stage of development. It was a striking feature of the aboriginal tribes of North America at the time of their discovery, and it may be traced still in the conduct of the surviving tribes with which the Governments of Canada and the United States are called to deal. An elaborate and interesting illustration of this phase of moral consciousness is given by F. Parkman in his *Jesuits in N. America*[10], Boston, 1876, pp. 354-360. More familiar illustrations are furnished by the clans of the Scottish Highlands prior to the collapse of the clan-system after the disaster of Culloden. It is but a logical corollary from this moral and jural condition that criminal jurisprudence in its primitive crudeness often involves the whole family or kindred of the offender in the punishment of his offence. A well-known example of this, bringing it down even into a later civilization, is the story of Haman in the Book of Esther. War has continued this barbarous confusion of moral ideas to a much later period. Even in the wars of Christendom down to a very recent date it remained the custom to plunder and even butcher indiscriminately not only the combatants, but also the unoffending civilian population of a conquered town or an invaded country.

The tribal organization, with its limited moral ideas and sentiments, has not always vanished at once on the welding of tribes into a nation. Among the ancient Hebrews tribal distinctions remain clearly marked long after the attainment of a larger nationality. Among the Hellenes the old tribal alliances and tribal feuds continued to the very last to complicate and fetter all nobler political aspirations, so that they never succeeded in establishing any unity of national life. In actual history, therefore, the morality of the great nation is still narrowed and hampered by the moral ideas of tribal life. In the States of the ancient world generally the individual finds his chief, if not his sole, moral value in being a citizen. Man exists for the State, not the State for man. It is true that with the loss of political freedom individuals in the ancient States took to personal culture as the supreme object of life; and this explains the vigorous vitality which for generations was imparted to the ancient schools of philosophy, to the Academics and Peripatetics, the Stoics and Epicureans, and even the Sceptics. But the absolute worth of the individual finds distinct recognition for the first time in the teaching of Christianity that it can profit a man nothing, though he gain a whole world, if he himself be lost (Mt $16^{26}$ ‖). Still, the significance of this teaching did not make itself felt at once in the reorganization of society after the conversion of the Roman Empire. The old ideas of social organization continued to dominate the minds of men and modified the whole mediæval interpretation of Christianity itself. Under that interpretation the individual lost his direct religious responsibility and entered into relation with God only as a member of the religious community, the Church. The great revolution of the 16th cent. was a new assertion of the independent worth of the individual, and that not in his religious life alone, but in all his relations, social, economical, and political as well (this is illustrated by many interesting facts in the monograph by E. Belfort Bax on *German Society at the Close of the Middle Ages*, London, 1894).

But, if the narrow ideas of a tribal society continue to cramp the larger life of nations, on the other hand the ideas of a more spiritual morality begin to purify the moral life even of rude communities. Then the import of ignorance for moral responsibility comes to receive more or less explicit recognition. Thus among the Hebrews, while the tribal custom of blood-revenge is still recognized in law, there is an explicit distinction drawn between the deliberate murderer and the man who happens to slay another 'ignorantly' (Dt $19^{4}$), 'unawares and unwittingly' (Jos $20^{3}$; cf. Nu 35). For the latter, the law makes the equitable provision of cities of refuge where he can find protection from the avenging kinsmen of the person slain. Moreover, Deuteronomy ($24^{16}$) explicitly abolishes the custom of punishing a whole family for the misdeed of a single member, limiting the penalty to the actual transgressor. This enactment is given as the ground in law why the children of the murderers of king Joash were not put to death (2 K $14^{5.6}$). On this point, of course, the prophets represented the higher morality, and it finds eloquent expression in a singularly noble passage of Ezekiel ($18^{19-32}$; cf. the more brief but pithy expression in Jer $31^{29.30}$).

Athenian law had followed a similar course to that of the Hebrews. At an early period it had drawn a distinction between *φόνος ἑκούσιος* and *φόνος ἀκούσιος* (Smith's *Dict. of Gr. and Rom. Ant.*, *s.v.* 'Phonos'), recognizing the fact that actions done in ignorance do not belong to the same moral category as those done in full knowledge. It is true that some of the old Hellenic myths, like that of Oedipus, point to a state of moral confusion which does not discriminate between an unwitting transgression of law and an intentional wrong; yet the handling of these myths by the great dramatists of the 5th cent. B.C. indicates in general a complete emancipation from the perplexed morality of the myths themselves. In fact, the two great tragedies of Sophocles on the Oedipean myth, especially the *Oedipus in Colonus*, might be interpreted as taking for their leading motive the vindication of an unfortunate transgressor on the plea of ignorance (see esp. lines 262-270, 546-547, 957-988).

While the import of ignorance in relation to moral responsibility was being brought into clearer light by the great dramatists of Greece, it received at the same time a more explicit recognition by the philosophic teachers. This was specially the case with Socrates. The one definite doctrine which can with certainty be ascribed to him seems

to give an exaggerated value to knowledge and ignorance in the moral life. This is the doctrine that in its essence virtue *is* knowledge, and vice ignorance (Xen. *Mem.* iii. 9, iv. 2; cf. Plato's *Laches*, *Protagoras*, *Meno*, and numerous references in other dialogues). In later ethical systems of the Stoical type there has been generally and logically a tendency to the same view. The view is criticized by Aristotle on the ground that virtue is not a single act of knowledge or of any other kind, but a habit (*q.v.*) trained by repeated action. The Socratic doctrine undoubtedly fails to recognize sufficiently the fact that virtue implies something to be *done*, not merely something to be *known*. But, as Aristotle himself points out (*Eth. Nic.* vi. 13. 3), though all virtue is not knowledge, there can be no virtue without knowledge (φρόνησις). That is to say, in order to do what is right a man must know what is right; and therefore knowledge is an indispensable factor of virtue. A very fair plea may also be made for the contention that at the critical moment in a vicious action the agent is so blinded by passion that he does not really know what he is doing. To this extent also Aristotle recognizes a certain truth in the Socratic doctrine (*Eth. Nic.* vii. 3. 14).

But the truth implied in the doctrine is not the whole truth. The doctrine overlooks at least two other truths: (1) that knowledge does not necessarily involve will to do what is known; (2) that ignorance is not always or wholly involuntary.

(1) Socrates assumed that, as virtue is knowledge, and vice ignorance, a man needs only to have his ignorance removed—to learn what virtue requires—in order to become virtuous. That would imply that the doing follows with certainty the knowing of what is right. Now it may be admitted that a scientific psychology does not allow us to regard knowledge and feeling and will as absolutely dissociated in actual life. Not only is there an element of will in all knowledge, but without knowledge will becomes merely the blind impulse of emotion. The power of will is thus so intimately dependent on knowledge that to common thought they appear at times identical. We say, in Bacon's phrase, that 'knowledge is power'; in many a popular phrase in different languages the knowledge how to do a thing is spoken of as equivalent to being able to do it; and etymology seems to identify in origin *ken* and *can*, *kennen* and *können*. Yet, while every allowance may be made for these significant facts, a scientific psychology also obliges us to admit that at times one of the aspects of mental life—knowledge or feeling or will—may so predominate as to make the others practically negligible quantities. There is often a cool inert contemplation of bare fact without any response from the emotions or the will. There are even morbid conditions of mind, in which the patient has a perfectly clear idea of what it would be wise for him to do or not to do, while his will is so enfeebled that he has no power of constraint in the one case or restraint in the other. The pathology of mind furnishes strange illustrations of this practical dissociation of intelligence and will. (T. Ribot, in his *Les Maladies de la volonté*, Paris, 1883, gives a detailed exposition of the subject; H. Maudsley also treats it in *Body and Will*, London, 1883, pt. iii., 'Will in its Pathological Relations.')

These morbid phenomena exhibit in an exaggerated form that disintegration of mental unity which in less injurious forms is a common characteristic of imperfect mental action in general. For the healthiest mental life is that in which intellect and emotion and will harmoniously cooperate. Moral and religious teachers therefore have found it necessary to distinguish that mental state which represents merely an intellec tivity from that knowledge or faith which the whole mental nature with it, involv assent of the affections and the will as we the intellect. But all this implies that cannot be identified with knowledge, nor vi ignorance, in the ordinary sense of these ter

(2) But there is another invalid assump the doctrine of Socrates. It is not true *that* may not be willingly ignorant. Knowledge a state of passive reception; it always i active effort, even if it be only the effort *of* tion. Consequently, as a man cannot do hi if he does not know what his duty is, he is to put forth the voluntary effort required *to* a knowledge of his duty. If he does not mal necessary effort, then he is to be blamed not r for having done wrong, but for the *ignorance* led to his wrong-doing. Such ignorance relate either to particular facts or to general ciples.

(*a*) To discern what is right in particular the facts must be known. But the agent ma to learn the facts because he makes no *effo* know them, possibly even because he makes effort *not* to know them. In such cases his is perly said to be *wilful ignorance*; and, *if* pleaded as an excuse, the plea must be met the reply that he ought to have known better.

(*b*) Often moral ignorance extends *to gen* principles. In the moral life of men there i fact more familiar than the experience that science is kept clear by a consistent *course* virtuous conduct, while it is darkened by persist indulgence in vice. Men may come to prefer m darkness to moral enlightenment *because th* deeds are evil (cf. Jn 3[19]). As this darkening moral intelligence is a natural penalty result from habitual disregard of its teaching, *the con* tion has been described in old religious language *judicial blindness*. Such moral ignorance, so from being an excuse for sin, may be *its m* heinous aggravation. In an extreme form it m become that fixed habit of resisting the enlight ment of the Divine Spirit—that 'sin *against* t Holy Ghost' (Mt 12[31f.] ||)—which by its very natu cannot be forgiven.

But ignorance is often involuntary. *Not on* individuals, but whole races and classes of men a placed at times in such circumstances that it practically impossible for them even to conceiv any lofty ideal of morality. In particular case also, the most cultured moral intelligence may b unavoidably ignorant of facts necessary to a correc judgment; and consequently it is not an infrequen reflexion of good men that they would have acte differently if at the time of action they had know better. Under such conditions ignorance is, in th technical language of the old moralists, spoken o as *invincible*; and it forms a valid apology fo faulty conduct. The same principle of justice demands further that all moral judgments on the conduct of men must be modified by a regard for the opportunities of enlightenment which they have enjoyed. This principle is made peculiarly explicit in the teaching of Christ (see esp. Lk 12[47.48], Mt 11[20-24]). Cf. INVINCIBLE IGNORANCE.

The problem of the moral import of ignorance is thus seen to be by no means simple. The external circumstances and the internal motives of moral action are so complicated that human judgment practically breaks down in attempting to determine how far in individual cases ignorance is a just plea. It remains, of course, one of the sustaining assurances of religious faith that in the final account all the complications of every man's life will be truly and justly appreciated by an Omniscient Intelligence. But the perplexity arising from these com-

plications has naturally opened a wide field for casuistical ingenuity. Unfortunately the science of casuistry, which might be made a valuable discipline for the enlightenment of moral intelligence, has commonly shown a tendency not to err on the side of moral safety, but rather to try to find how near action may go to the brink of the precipice of sin without actually slipping over into the abyss. But, fortunately, jurisprudence takes a healthier attitude; and in the problems connected with the moral import of ignorance probably the jurists will be found more helpful even to the moralist than any of the casuists. It is true that the juridical point of view differs from the moral. Still it is based upon it; and, as jurisprudence demands specific statement of the conditions under which an action is done, it can hardly fail to impart some of its own definiteness to the moral aspect of the action as well. In regard to our present problem, jurisprudence is in general governed by the maxim that 'ignorantia facti excusat, ignorantia juris, quod quisque scire tenetur, neminem excusat.' It is specially in medical jurisprudence that the problems of moral ignorance take their most interesting and important shape. For the largest section of this science is that which deals with insanity in its relation to responsibility, and the old legal definitions of insanity generally made moral ignorance its test. It was a common judicial decision that, unless a person was at the time ignorant of the moral quality of the action for which he was called to account, he should be held legally responsible (Maudsley, *Responsibility in Mental Disease*, pp. 88–98). Obviously this involves the assumption, which has been shown to be involved also in the Socratic doctrine of virtue, that the knowledge of what is right implies will-power to do it, and that the knowledge of what is wrong implies will-power to refrain from doing it. But this assumption has been shown to be upset by psychology, especially in its analysis of morbid phenomena. It is now, therefore, acknowledged that mere ignorance of wrong-doing is not a sufficient criterion of insanity. Nervous or cerebral disease may generate an impulse which the patient knows to be wrong, but which is so irresistible that he cannot in justice be held responsible for yielding to its power.

There is another class of actions arising from ignorance, on which the moralist may receive some guidance from the more specific definitions of the jurist. These are the actions coming under the general category of *mala praxis*—the malpractice of men in their professions or trades. In all the occupations of life, injury may be inflicted by the ignorance of practitioners or by that *negligence* which, as etymology indicates, is a peculiar form of ignorance, a temporary lapse of intelligence. In cases of this kind, while allowance must be made for a certain amount of ignorance or negligence as 'invincible,' yet justice also demands that every man shall show reasonable diligence in mastering and applying the knowledge which he professes in his occupation. But the complications of modern professional and industrial life run this general principle of justice into an infinitude of details, for which the legislation of all countries has been obliged to make elaborately minute provisions.

It may be added that a peculiar modern phase of semi-professional life raises a curious question of moral ignorance. There seems to be good ground for believing that in their abnormal condition 'mediums' indulge at times in trickery or deceit, although in their normal consciousness they are not aware of what they have done. It is therefore a valid question, how far such persons are justified in allowing themselves to lapse into a condition in which they lose intelligent self-control, and become capable of doing unwittingly actions which in their normal state they know to be wrong.

LITERATURE.—On the doctrine of Socrates, the original sources of information in the works of Xenophon and Plato have been given above. Reference has also been made to Aristotle's critique, and it may be added that the whole of the first three chapters in the seventh book of the *Nicomachean Ethics* are of interest in this connexion. The casuistry of moral ignorance is discussed at length in J. P. Gury, *Compendium Theologiæ Moralis*, Paris, 1850, which is illustrated by its companion volume of *Casus Conscientiæ*, do. 1868. In this work Tractatus i., *de Actibus Humanis*, has a section (cap. ii. art. iii. § 1) *de Ignorantia*, and Tractatus ii., *de Conscientia*, also bears on the subject. These passages should, of course, be read in the light of the illustrative cases of conscience. On the relation of ignorance to legal responsibility the maxim quoted above finds a discussion of some interest to the moralist in *A Selection of Legal Maxims, Classified and Illustrated*, by H. Broom (pp. 205–227, 7th ed., London, 1900). On the connexion of insanity with responsibility, moral as well as legal, valuable aid will be found in any of the great works on medical jurisprudence. H. Maudsley's *Responsibility in Mental Disease*, London, 1874, has been already referred to, and with it may be mentioned his *Pathology of Mind*[3], do. 1895, which devotes nine out of its eleven chapters to insanity. It must always be remembered, however, that Maudsley's psychological and ethical views are deeply moulded by an extreme determinism. In *The Juridical Review* for March, June, and September, 1904, the present aspect of the problem of insanity is discussed from both the medical and the legal points of view in a series of articles, by J. B. Tuke and C. R. A. Howden, conjointly, on 'The Relation of the Insanities to Criminal Responsibility and Civil Capacity.' On the moral aspect of malpractice there is a discussion in W. Whewell's *Elements of Morality*[4], Cambridge, 1864, art. 114. Responsibility for negligence is the subject of a vast juridical literature, but it is mostly an exposition of special provisions in local legislation. In T. Beven's elaborate work, *Negligence in Law*[2] (1st ed. *Principles of Negligence*), London, 1895, bk. i. may be referred to as dealing with the 'constitutive principles of the law. F. Pollock's *The Law of Torts*[7], London, 1904, devotes two chapters to negligence. Browning's *Sludge the Medium* is an attempt at psychological and ethical analysis of a peculiarly subtle condition of mind, but it cannot be accepted as based on a fair study of facts. Of real psychological and ethical value, however, is the discussion of the same mental condition in F. Podmore's *Modern Spiritualism*, London, 1902, ii. 315–328.

J. CLARK MURRAY.

**ILLEGITIMACY.**—The subject of illegitimacy, in general, presents a number of complex problems which demand the close attention of the sociologist. No single explanation can account for isolated cases, still less can it be used as a reason for the wide variations in the rates of illegitimacy in civilized communities. Differences of religion, of mental range, of social conditions and aptitudes, of race, and of the marriage laws of the different countries, must all be taken into consideration. The importance of the subject, so far as it concerns Great Britain, is shown in the fact that 48,517 illegitimate births were registered in the British Isles during the year 1910. As the most recent statistics available are those for Great Britain and Ireland, a detailed examination of the prevalence of illegitimacy in the several parts of the United Kingdom will throw light on some of the problems before mentioned. Taking the countries in the order of an ascending scale of frequency of illegitimacy, and estimating the percentage of illegitimate births to the total number of births, unless where otherwise stated, the percentage for Ireland is 2·8, for England 4·3, for Wales 5·4, and for Scotland 7·29.

The percentage of illegitimacy in Ireland varies in the four provinces from 0·7 in Connaught to 3·7 in Ulster. The latter province is the only one which has been above the mean for Ireland (2·8) during the quinquennium period 1906 to 1910. Of the counties of Ulster, the two with the highest percentages are Antrim (5·6) and Down (4·6), the two with the lowest percentages are Donegal (2·0) and Cavan (1·1). In Antrim, the district of Ballymoney had 7·7 per cent of illegitimacy, and that of Ballymena 7·3 per cent; in Down the district of Newtownards had 5·5 per cent of illegitimacy, and Banbridge 5·2 per cent. The percentages of illegitimacy in the cities of Dublin and Belfast were 2·5

and 3·3 respectively. An analysis of those varying ratios in the different parts and districts of Ireland points to the prevalence of illegitimacy in large market towns subserving agricultural districts, and the populous rural and maritime districts of North East Ulster—a condition of affairs quite different from that obtaining in England, Wales, and Scotland, where illegitimacy is most common in thinly populated rural districts. At first sight racial differences may appear to account for the distinction referred to. In the eastern half of Ulster the majority of the inhabitants are of Scottish descent, while in Connaught the race is almost wholly Celtic. Illegitimacy is, however, as common, if not more so, among the Celtic population of Scotland as among the Teutonic, and commoner in Celtic Wales than in Teutonic England. Probably the explanation, so far as Ireland is concerned, is to be found in the influence of the Roman Catholic Church, which has a wholesome effect in preventing illegitimacy.

Of the ten districts into which England is divided, those which are under the mean rate of illegitimacy (4·3 per cent) are the South Midland (3·7 per cent) and West Midland (3·9 per cent), and those which are over it are the North Midland (4·9 per cent), North Western (4·5 per cent), Yorkshire (4·5 per cent), and Northern (5·5 per cent). Eight counties form the South Midland district, and in four of these (Middlesex, Hertfordshire, Buckinghamshire, and Northamptonshire) illegitimacy is on a relatively low scale; in the remaining four the percentages are: Bedfordshire 4·4, Cambridge 5·1, Huntingdon 5·6, and Oxford 5·7. In the Thame district of Oxfordshire, which comprises Lewknor and Thame, the high percentage of 8·2 is attained. This rate is higher than that obtaining in the highest of all the districts, the Northern, and exceeds by 2·9 per cent that of the County of Westmorland, which is the county with the largest amount of illegitimacy in the Northern district. In London there is 4·0 per cent of illegitimacy. It will be noted that illegitimacy is more prevalent in the rural and agricultural districts of England, and especially where those districts are not thickly populated. The relatively low rates in London and large towns are undoubtedly helped by the steady influx of well-doing and enterprising young people from country districts; the same cause adversely affects the country districts. In this connexion, however, it may be pointed out that illegitimacy and immorality are not synonymous terms. In large cities, sexual immorality is prevalent, and opportunities for its practice are more abundant and less exposed to the force of public opinion than in the country. In large cities, moreover, illegal means to prevent the fulfilment of pregnancy are not uncommonly used, and can be resorted to with less risk of detection, injury, and punishment. On the other hand, the system of cohabitation, especially in the poorer districts of large cities, is a source of illegitimacy; and such a mode of life is not necessarily associated with continuous immorality.

Wales affords, in contrast to Ireland, the example of a Celtic race with the presence of a large amount of illegitimacy in its midst. The average percentage for the whole of Wales is 5·4, or 1·3 per cent higher than that of England and 2·6 per cent above that of Ireland. In the country districts of Wales, the highest levels are reached in Anglesey (8·7 per cent), Radnor (7·5 per cent) and Montgomery (7·5 per cent). The most thickly peopled county, Glamorgan, has the low percentage of 2·8. When subdivisions of counties are taken into consideration, Bala, an inland rural district of Merioneth, gives the high rate of 13·1; and Anglesey, a maritime-rural district, has 11 per cent of illegitimacy. The same remarks which were m
England with respect to the prevalence of
rate of illegitimacy in a rural and thinly sc
populace apply to Wales, and, as the sequ
show, to Scotland, with this proviso regard
last two countries, that the proximity of a
time population to such rural districts tend
increase of illegitimacy. In Wales, as in Sc
peculiar social customs, concurred in by tra
are not uncommon in country districts
courtship, and these exercise an influence
amount of illegitimacy.

Of the four countries, Scotland has the h
percentage of illegitimacy, namely 7·29.
percentage varies from 14·51 in Banffshire t
in Dumbarton. All the Scottish counties, t
and cities have an average illegitimacy rate
the English mean of 4·3 per cent. In the pri
towns, there is a variation from a maximum o
in Edinburgh to a minimum of 3·96—the perce
found in Govan and Coatbridge. It is wort
notice in passing that Govan and Coatbridge ar
large industrial centres, whose population consi
the working classes. The average percentage fo
principal towns in Scotland is 7·35. Large t
have 5·74 per cent of illegitimacy; small t
6·63 per cent; mainland rural districts 7·2
cent; and insular rural 6·14. The Eastern dist
with a more fertile soil and better adapte
agricultural purposes than the Western, sh
greater prevalence of illegitimacy than the West
The Northern and Southern districts have the
rates of 8·7 and 11·85 per cent respectively. W
a comparison of county districts is made, t
have an unusually high percentage of illegitin
—Banff 14·51, Elgin 14·27, and Wigtown 1
These three counties are mainly agricultural, v
a large admixture of seafaring population. M
than one-fourth (5951) of the male populatio
Banffshire are engaged in agricultural pursu
and more than one-fifth (4183) are fishermen
seafaring men. Almost similar conditions to th
prevailing in Banff with respect to the occupat
of the population are to be found in Elgin a
Wigtown. On the other hand, in counties w
the lowest number of illegitimate children, su
as Dumbarton (4·49 per cent), the populace is t
large extent occupied in shipbuilding, foundri
engineering, and calico-printing works. The housi
of farm servants of both sexes in bothies—a cust
peculiar to Scotland—is regarded as a fruit
source of illegitimacy, especially in those distri
where the rate is high.

The decline in the birth rate of the majority
civilized countries throughout the world has be
very marked. If the quinquennium 1901–1905
compared with that twenty years earlier, the fa
in the birth rates in Switzerland, in Ireland, an
in Spain has been about 3 per cent; it reached
per cent in France and Italy; 16 per cent in Servi
England, Wales, and Hungary; 25 per cent in th
Australian Commonwealth; and 27 per cent i
New Zealand. Except in the cases of the Germa
Empire, Sweden, France, Belgium, and the Au
tralian Commonwealth, the decrease in the numbe
of illegitimate births is greater than the correspond
ing fall in the general birth rate. This marke
decrease in the majority of European and othe
civilized countries has been almost continuou
during 20 years. With the exception of Swede
and France, where there has been an increase o
7·5 and 8·5 per cent respectively, it has varied
within wide limits. Thus it has been 3·1 per cent
in Spain, 39·7 per cent in England, 37·4 per cent in
Scotland, and 13·6 per cent in Ireland. The
proportion of illegitimate births per 1000 unmarried
and widowed women between the ages of 15 and 45
years of age and for the years 1900–1902 reached

its highest points in Austria and the German Empire; the numbers in those two countries were 40·1 and 27·4 respectively. Calculated on the same basis, the smallest number of illegitimate births took place in the Netherlands and Ireland, where the numbers were 6·8 and 3·8 respectively.

| Countries (arranged in order of rates in 1900–1902). | Proportion of illegitimate births per 1000 unmarried and widowed women aged 15 to 45 years. |
|---|---|
| Austria | 40·1 |
| German Empire | 27·4 |
| Sweden | 24·3 |
| Denmark | 24·2 |
| Prussia | 23·7 |
| Italy | 19·4 |
| France | 19·1 |
| Belgium | 17·8 |
| Norway | 17·2 |
| Spain | 15·5 |
| Scotland | 13·4 |
| Australian Commonwealth | 13·2 |
| Switzerland | 9·8 |
| New Zealand | 8·9 |
| England and Wales | 8·5 |
| The Netherlands | 6·8 |
| Ireland | 3·8 |

The causes underlying the almost universal decline in the amount of illegitimacy are difficult to determine. Beneficent legislation, social activities, a more elevated moral tone, and extended practice of the Christian religion are undoubtedly at their root. In the discussion of illegitimacy throughout the British Isles, reference has already been made to the influence of race, religion, and some social surroundings and conditions. It now remains to refer to these more fully and add other factors which exert a modifying power.

There are differences in laws relating to illegitimacy which have a restraining influence or the reverse on its prevalence. By the law of Scotland and in accordance with the laws of most of the Continental countries, an illegitimate child is fully legitimated by the subsequent marriage of the parents. Such laws were intended to benefit the child by removing its dishonour and disgrace; but a subsequent marriage does not always take place, and a woman is often led into immoral courses by the promise of marriage, which the man either refuses or never intended to fulfil. In Scotland at any rate, this state of the law, combined with a common custom among the lower classes in country districts and fishing villages, whereby marriage does not take place until the woman is with child, is mainly responsible for the high position it takes with respect to illegitimacy. This conclusion is justified when the effect of the existing state of the law in other portions of the British Isles is considered. By English common law, an illegitimate child cannot be legitimated, though the civil and canon laws legitimate children whose parents subsequently marry.

A factor that cannot be disregarded in the production of illegitimacy is the state of the law towards the fathers and mothers of such children. In Scotland, the mother has legal custody of the child until the age of 10 years, and the father is legally bound to contribute from 2s. 6d. to 3s. weekly towards the aliment of the child; in England, the putative father may be summoned and compelled to make a proper allowance not exceeding 5s. per week. Here also the maintenance of the child devolves on the mother, who is bound to maintain the child as part of her family so long as she remains unmarried, or until the child is 16 years of age or gains a settlement in its own right, or, being a female, is married. Thus a man is penalized for having an illegitimate child to the extent of, at most, a meagre pittance of 5s. per week, and is often allowed to go scot free, either from fear on the part of the mother to sue for aliment, lest such action might spoil the prospects of a future marriage, or by the facilities afforded of escaping his obligations by emigration to another country. Even when all the legal obligations are undertaken by the parents, an illegitimate child is expected to earn its own living and take care of itself at the early age of 16. Social legislation tending to guard child life from immorality, and providing for the better care and training of such children, ought to embrace more suitable provision for the illegitimate child as well as sounder measures for combating illegitimacy. Already the Children's Act in this country has had a beneficent effect in these directions, and it is much needed when the mortality of illegitimate children is compared with that of legitimate. It cannot be doubted that the illegitimate starts life less fitted physically for the battle than the legitimate. The deaths from all varieties of disease are greater among illegitimate children under one year than among legitimate children of the same age. With reference to statistics applicable to England and Wales for 1910, the proportion of deaths among illegitimate infants to 1000 illegitimate births, and among legitimate infants to 1000 legitimate births is seen in the following table to be greater for the illegitimate in all varieties of disease, and with respect to diarrhœal and tubercular diseases more than double the deaths from similar causes among legitimate infants.

Mortality of illegitimate as compared with legitimate for England and Wales under one year of age, 1910.

| Cause of death. | Both sexes. Illegitimate. | Legitimate. |
|---|---|---|
| 1. Common infectious diseases | 8·92 | 7·16 |
| 2. Diarrhœal diseases | 26·34 | 12·05 |
| 3. Wasting diseases | 75·29 | 39·02 |
| 4. Tubercular diseases | 7·36 | 3·74 |
| 5. Miscellaneous diseases | 76·43 | 39·67 |

As in Great Britain, so it is elsewhere. In several European countries, new legislative measures have been adopted or are in the course of being promulgated which will have a material effect on the existing amount of illegitimacy. In Germany, where the illegitimacy rate ranks next to the highest amount, that shown by Austria (see Table i.), the laws which allow the father of an illegitimate child to be freed from his responsibilities by a small monetary payment have been widened in their scope so that such a father, in addition to monetary aliment, is now required to provide training for his child such as will fit it to earn its own living in after life. Further, if the child should be physically or mentally unfit to earn its own livelihood after the statutory age limit of 16 years, the father must then support it all his life. The governing principles of recent legislation, both in Germany and in Austria, are for the betterment of the illegitimate child. It is generally recognized that neither the mother nor the father is the most suitable guardian for an illegitimate child: such parents make the interests of the child subservient to their own, and in general they have not the moral strength to retrieve the honourable position which they have lost by giving the same attention and care to the child which it would receive had it been born in lawful wedlock. On these grounds an official guardian—the *Vormund*—is appointed to enforce the laws. In Germany the mother may be—though she seldom is—appointed guardian. In Austria, it is illegal for the mother to be appointed to this position. The reasons given for forbidding the mother to be *Vormund* are those already mentioned, in addition to the fear that she might not like to displease the father by putting into force the laws protecting the child, and this might lead to the child's being neglected. Again, the *Vormund* must be some person other than the father of the illegitimate child, or the father's relatives, or any one who may have an

interest in saving expense to the father. In the performance of his or her duties, the guardian is assisted by voluntary agencies—such agencies as the Vigilance Societies of Britain. The guardian appointed by law is usually the president of one of these societies, and among the duties which are required to be performed are the proper direction of aliment so as to educate and train the child to be self-supporting, and the legitimation of the child by inducing the father to marry the mother. In Austria about one-half, 45·4 per cent, of the illegitimate children have become legitimated in this way through the influence of the *Vormund* and his voluntary helpers.

In France, where the lot of the illegitimate has been made extremely hard by the existence of article 340 of the civil code containing the well-known clause, 'La recherche de la paternité est interdite,' an Act to remove the hardships and amend the existing law has been announced. There are many points in this Act which find general acceptance throughout France; and, should it become law, it will tend to diminish illegitimacy and confer benefit on such as are illegitimate. By a process at law a mother may establish legal responsibility on the father for his child if the action is brought within two years of its birth. Such an action may also be brought by the Court which, according to the Law of July 1907, acts in the capacity of the *conseil de famille*.

One source of illegitimacy has not been referred to, but is worthy of special prominence—that which occurs as the result of the seduction of feeble- or defective-minded women. Legislative action is at present under consideration in Great Britain, which, if successful, will prevent or at least minimize such occurrences in the future, either by placing the feeble-minded woman under strict guardianship or by visiting with severe punishment those who thus take advantage of her. The clauses referred to have the following purposes: (1) feeble-minded persons who are in receipt of poor relief at the time of giving birth to an illegitimate child, or who are with child, may be dealt with and placed under special care; (2) any person having carnal knowledge of a feeble-minded person who is under the provisions of the Mental Deficiency Act is guilty of a misdemeanour. Legislation such as has been described is being undertaken in many countries other than those referred to, but on similar lines to those to which reference has already been made. There is good reason to believe from experience that it will not only reduce still further the general prevalence of illegitimacy, but also, where the latter occurs, will remove or alleviate the disgrace that clings to the illegitimate throughout life.

LITERATURE.—The statistical information and the tables for Great Britain and Ireland are taken from the Annual Reports for 1910 of the Registrars-General of the several countries. The Report of the Registrar-General of England and Wales for 1910 contains much valuable information relating to foreign countries. See also Reports by the Presidents of Statistical Departments or Bureaus of European countries, Reports of the Registrars-General of the British Colonies, and Reports of the Chief Statistician for Vital Statistics, Bureau of the Census U.S.A. Reicher, *Die Fürsorge für uneheliche Kinder*, Vienna, 1909; F. Janisch, *Die öffentliche Schutzfürsorge für die unehelichen Kinder*, do. 1906; Memoranda on 'A Social Evil in Glasgow,' by J. R. Motion and J. Lindsay, Glasgow, 1911; Acts of Parliament and Bills before Parliament such as 'The Children Act' (1908), 'Criminal Law Amendment Act' (1912), and 'Mental Deficiency Bill' (1912-13).

HAMILTON MARR.

**ILLUMINATION.**—See ENCYCLOPÆDISTS, ENLIGHTENMENT.

**ILLUSION.**—By the common usage of psychology the name 'illusion' is now reserved for
certain special anomalies of sense, which
necessarily involve any process of cognition
strict sense of the term.

For the most part our senses provide us
well ordered and steadily integrated system.
is most probably based upon the various se
differences that are known as the attribu
sensation. States also occur that are dep
upon variations in these attributes, and tha
sumably are founded upon them or consist of
These are known as 'forms' (*Gestalten*) or n
and usually constitute variable series. Exa
are found in the series of distances of incre
length in any of the three dimensions—in th
of sight, or vertically or horizontally perpend
thereto—in the series of motions of incre
speed, in the series of surfaces of increasing
in the series of positions 'round the hea
auditory space, and so on. These series be
correlated with one another in the sensory ex
ence of ourselves, and presumably of all
creatures in proportion to their complexity
development. In these higher development
least the order of the system is manifest. No
fails to respond coherently, by action or by thou
to the integration of apparent size with dist
from the point of observation. To uniocular vi
the apparent surface of an object varies inver
with the square of the distance. In normal
ocular vision this rule holds good without modi
tion only from beyond a certain distance from
eye. For nearer distances, within which dif
ences of optical position (convergence, diverge
are effectively distinct, the apparent surface te
to retain one and the same size. We do
notice differences in the apparent size of *equa*
tall persons seated around a drawing-room or m
ing about in it. But a photograph shows us h
their projections on our retinæ must differ. *A*
if we seat them in a row and look along it, we c
easily see these differences. For we then destr
the integrative process which usually *guides*
at near distances, and base our perception sole
upon such differences as are conveyed by the si
of the retinal impressions, which alone *guide*
at great distances. Thus in various circumstanc
various integrative processes, based upon a man
fold of simpler sensory data, guide us, or *rath*
our cognition. From their own point of view
however, our sensory processes are simply ha
monious and systematic. If I am *startled* b
the sound of a motor horn, I can usually locat
it in a position in the horizontal plane round m
head with considerable accuracy. If my *head* an
eyes are impelled to turn towards this point, it
source, they will turn rapidly and accurately. I
the motor horn is a familiar one, I shall *also* hav
some 'idea' (I shall experience some mode) of th
distance of the motor from me, even before I se
it. And, when I see it, this auditory distance will
be confirmed by the visual distance at which it
will appear, and that again by its apparent size.
In a sense there is, of course, no confirmatory process here at all, for that strikes beyond the senses into cognition, anticipatory belief, and judgment of coherence. It is rather merely the fact that all the more complex and usual sensory processes are adjusted to one another, integrated and correlated in a systematic way. It is also true that, if sense is stripped of cognition, it can never be illusory, in so far as illusory is taken to include a reference to the realities of the external world. For, stripped of cognition and the memory which it involves, sense can refer only to sense, both being actually present and given, linked to one another by integrative processes. A reference to a permanent object means at least a reference to the contents and implications of experiences that

are not actually present. Nevertheless, every cognition of the outer world implies and involves such an integration of sense as will make it possible. And sense must be systematic for systematic knowledge to be possible by means of it.

In the major part of the complex integrations of sense, then, the combining factors and their references and attachments to one another are patent and manifest. An illusion, on the contrary, is a 'departure' from these generally prevailing schemes of sense by reason of the operation of 'hidden' factors—factors which do not themselves fall within any of the main integrative schemes of sense. As their effects, however, appear in sense and within a common integration, they get wrongly attributed to the operation of that process which in the course of ordinary integration would bring them about. Thus arises a primitive kind of error, which has much interest for epistemology, just because it is so primitive. It provides a case of natural or unavoidable error, which is, none the less, erroneous and misleading. This peculiarity gives special importance to the study of illusions, and raises them far above the triviality which any practical considerations would attach to their study.

Thus in the case of retinal irradiation whereby a bright surface looks larger than a dark surface of the same real size, the untutored mind will act and think as if the bright surface were really larger. Such a mind is guided by the habitual integration of distance from the eye and apparent size of surface, according to which two surfaces of the same apparent size and at the same apparent distance should be of the same real size, *i.e.* should give the same results by the method of visual superposition through the medium of, say, a footrule. The hidden cause of this illusion is sought on the retina, where its presence is hardly verifiable, because there is no psychical difference between the two cases which might account for the effect. Similarly the red letters of a coloured lamp sign appear farther away than the green or blue ones, because the cause—a mere matter of the difference of refraction of coloured lights, and hence of retinal 'disparity'—is hidden (cf. the red and blue patterns on many rugs). We soon discover the illusion in this case when we see that the frame of the sign or the glass upon which the letters stand is flat. Still it is to be noted that we discover this only in virtue of the correlations of sense with which it disagrees.

In the illusions of reversible perspective there is no retinal distortion. The cube that appears solid, though merely drawn upon a flat surface, makes identical impressions upon both eyes. This is proved by the fact that the paper upon which the cube is drawn still appears flat, that the illusion holds also for uniocular observation, and that the illusory solid changes its aspect from moment to moment, all the then far points now appearing to be near and *vice versa.* If there is thus no change in the outer or in the retinal impressions to account for the apparent solidity and its reversal, the cause of these will lie in some more central physiological factor or in a purely psychical factor. Thus fatigue is said to determine at which moment the reversal shall happen, when the psychical determinations given by change of fixation and by thinking of one or other form of the solid have been excluded. Under certain circumstances, *e.g.* momentary exposure, supporting indices, suppression of background, etc., the illusion can be greatly increased. The cube will appear to be 'really' solid. Here, of course, we have succeeded in excluding only the integrations of sense which in ordinary circumstances make the illusion obvious, viz. that we see the object looked at—paper and drawing of cube upon it—as if it were at once flat and solid. The hidden cause of this illusion probably lies in the nature of stereoscopy as a purely psychical process. Possibly a primitive form of integrative recall operates here. It is not surprising that the cause of the illusions of reversible perspective, whether it be found in the process of redintegrative memory or not, should be hidden; for the fusion that characterizes stereoscopy almost entirely obscures any psychical integrative factors it may contain. We are not usually aware of the double images that all vision involves, but only of their integrative result.

The other illusions of sense still await definite classification. Much research has been done on them, but the discovery of their causes is perplexingly difficult. A familiar example and one of the most pronounced is the Müller-Lyer illusion, in which the lengths of two equal horizontal lines are distorted by the addition to their ends of two arrow-heads, pointing, in the one outwards (<——>), in the other inwards (>——<). The former line seems much shorter. The amount of the illusion has been measured under various circumstances. Anything that tends to let the compared horizontal lines become prominent reduces, or destroys, the illusion. Certain primitive people are not subject to the illusion; their synthetic visual capacity is probably low. If an analytic habit of vision is practised, the illusion can likewise be suppressed. But the synthetic attitude is the usual one in ourselves; for the illusion appears even when the exposure is momentary. If a regular series of Müller-Lyer figures is prepared in which the arrow-head lines revolve harmoniously about the two end points of the horizontal line, and if this series is shown in the stroboscope (projection by the cinematograph would be the equivalent of this), the illusion will show its presence most emphatically, for the horizontal line will appear to shorten and lengthen, and the end points will appear to move up and down. Many theories of this and other similar illusions have been given, but most of these—especially such as involve a reference to the physiology of the retina or of the optical muscles—have been shown to be untenable. The final explanation, however, is not even yet quite clear. Though we are told to compare the lengths of the horizontal lines, we seem to be compelled by the hidden cause of the illusion to compare the spaces enclosed by the two figures instead, and to refer the result of this comparison to the comparison which we were instructed and endeavoured to make. Of course, it is easy to learn that it is the end lines which are ultimately responsible for the illusion; but it requires very little insight into psychological science to discern that this most patent factor is insufficient to account for the illusion. There is nothing in the side lines which should alter lengths or spaces. The cause must lie hidden in psychical processes, built upon the skeleton of lines given in the figure, but not patent in it; for the illusion just consists in the difference between the size of the line as a mere line and the size of the line as an element in a complex of lines and spaces.

Much remains to be discovered before we can fully explain the illusions. Apart from the discovery of special facts, the greatest contribution towards their solution will probably be made by the progress of general psychological theory regarding the interconnexions of sensory states of different complexity.

In the illusions of perception proper, we have to deal with the redintegrative completion of a sensory presentation that forms a part of two or more of the perceptual complexes of an individual.

Thus a shadowy form seen at the roadside on a dark night might be the outline of a bush, a brigand, or a beast. One would suffer from illusion if one took it for anything but the harmless shrub. But the mistakes one makes have clear though hidden motives. What is seen and heard and felt and known all suggest the ordinary wayside objects, but the fears that more or less assail us all in the dark help us to see what we dread. To children, who instinctively dread the darkness, the terrors of the way to bed up the dark stair through the unlit halls are very real indeed. We need not appeal to special 'traumata' for an explanation of the origin of these fears. Children naturally fear darkness, strangers, and animals separately; and these fears are sufficiently similar to be able to induce one another where that is possible. Of course, many a child knows that there is really nothing to fear in the unlit home, but revived images combine so readily with the data of perception of the same sense which evokes them that they are at once referred to the usual cause of the latter. Their own cause thus becomes hidden. In the illusions of suggestion we also see the operation of hidden causes which, of course, may be either emotional or merely associative ar cognitive, or both.

In general, then, true illusions all owe the being to the fact that incidental integrative ar fusional coherences of (broadly) simultaneous ex periences may obscure or usurp to themselves tl references which parts of these experiences po sess and would otherwise plainly reveal. Tru illusions are, therefore, all of psychical origi There is no sense or purpose in speaking of th disparity between the psychical and the materi as being illusory. For the same reason, illusion caused by the anomalous distortion of impression by the sense-organ hardly deserve the name. The enjoy it only in virtue of the fact that the anomal which they represent exists both on the materi and on the psychical side.

LITERATURE.—For a very broad treatment of illusion a equivalent to error, see James Sully, *Illusions*, London, 1881 For an introduction to the experimental investigation of th illusions, see any good text-book of experimental psycholog *e.g.* C. S. Myers, *A Text-book of Experimental Psychology*[2] Cambridge, 1911, ch. xxii., or E. B. Titchener, *Experimenta Psychology*, New York, 1905, i. 151–170, and ii. 303–328, wher numerous references to the experimental literature will b found.

HENRY J. WATT.

# IMAGES AND IDOLS.

**IMAGES AND IDOLS** (General and Primitive).—There is a theory that certain species of animals have the instinct of proportion and even a feeling for art, as shown by the habitations which they make for themselves, the way in which they ornament them, the influence of the plumage or the song of the male on the female, etc.; but it must be admitted that man alone possesses the gift of making images, *i.e.* of creating figured representations of beings and objects for a utilitarian or sentimental purpose. This kind of representation implies not only that man reasons about his ocular impressions, but also that he claims the power of exteriorizing them accurately and even of reproducing them after they have disappeared from his vision.

I. *CLASSIFICATION.*—Images having a religious value may be divided into three classes: (1) purely representative images, (2) magical images, and (3) idols.

1. **Purely representative images.**—This class includes drawn, carved, sculptured, or painted images of a purely commemorative, instructive, or edifying nature, *i.e.* whose only aim is to reproduce the features of a real or ideal person, the shape of a well-known object, an episode taken from history or legend, the appearance of a sacred spot, or the celebration of a rite. Every one likes to have near him whatever reminds him of the beings whom he loves or worships—especially their image; this feeling alone would suffice to explain the frequency of figures representing either persons who have played an important part in worship, such as priests, reformers, miracle-workers, scholars, theologians, and martyrs, or the superhuman beings to whom the worship is rendered. J. B. de Rossi,[1] analyzing the different kinds of images found in the catacombs of Rome, makes a classification which might be applied to the figured representations of religions in general: (1) hieratic portraits, (2) ideographical symbols, (3) allegorical paintings illustrating parables, (4) historical scenes drawn from OT and NT, (5) scenes taken from the history of the Church, and (6) reproductions of ritualistic ceremonies.

[1] *Aperçu général sur les catacombes*, Paris, 1867, p. 17.

The maker of an image may either content himself with imitating an accepted type or seek inspiration for the treatment of his subject in the character and rôle ascribed to his model by tradition. As a matter of fact, the resemblance to the original person and the accuracy with which scenes are represented are secondary points; all that is necessary is that people should believe in their accuracy or convention sanction them. It is a short step from this to purely allegorical images—representations of abstractions or ideal beings, such as Faith, Hope, Charity, Virtue and Vice, Religion, in forms borrowed from life. Even God Himself has been treated in this way. A. N. Didron, a famous 19th cent. archæologist, wrote a volume on the iconographical history of God.[1] As an antithesis to this we might mention the copious iconography of the Devil published by Paul Carus.[2]

The image may be realistic, but interpreted in such a way that it becomes a pure symbol—*e.g.*, among Christian images, the lamb and the dove; in Buddhism, the wheel and the lotus-flower; among the Egyptians, the *crux ansata*, the winged globe, etc. Some of these symbols are so clear as to require no comment: the representation of the moon by a crescent, of the sun by a disk or a rayed face, the scales of Justice, the bandage over the eyes of Love, the aureoled hand coming forth from

[1] *Iconographie chrétienne, histoire de Dieu*, Paris, 1844.
[2] *History of the Devil from the earliest Times*, Chicago, 1900.

a cloud and brandishing a weapon; others are so complex that they become rebuses or hieroglyphs, the origin of which it is not always easy to trace—*e.g.*, the fish, which in Greek (ἰχθύς) gives the anagram of Christ.

These remarks are still more applicable to the representation of religious groups and scenes. Every great historical religion except Judaism and Islām has attempted to express its legends and myths in images. These representations may have only a commemorative or explanatory intention; but we must remember that certain religions use them especially for the purpose of education and edification.

'All the pictures that we see in the Church tell us as plainly as if the image spoke the story of Christ's coming down among us, the miracles of His Mother, or the struggles and exploits of the saints, so that we may imitate their wonderful and ineffable actions.'[1]

No religion can rival Christianity in the multiplicity of its images. In some large churches, such as the French cathedrals of Paris, Chartres, Reims, and Amiens, there are as many as two, three, or four thousand statues; and in the cathedrals of Chartres, Bourges, and Le Mans, three, four, or five thousand figures on stained-glass.[2] Although quite a number of these are merely figures of unimportant personages, nevertheless we have here what has been called a whole Bible for the use of the unlettered. Next to Christianity comes Buddhism, which has covered India, Ceylon, and the Malay Archipelago with its bas-reliefs, and flooded Tibet, China, and Japan with its painted images; in this it has been imitated by the other religions of the Far East, including Hinduism. It is superfluous to mention here the service rendered to art by the mythological compositions of Græco-Roman sculpture. Of less importance from an æsthetic point of view, but none the less interesting, are the bas-reliefs and paintings of Egypt, and the sculptures of Mesopotamia and Asia Minor. It may be said that the region where religious images are found forms a belt on the surface of the globe which includes the Northern hemisphere from Japan to Mexico, while in the Southern hemisphere there are only some rudiments of art.

The desire to be permanently in touch with venerated objects led man to set up his own image in places where everything evoked the memory of his Divine patrons; hence the effigies of private persons which were so frequent in the sanctuaries of pagan antiquity. In the Oriental monarchies, the right to a place in the sanctuary was almost entirely confined to the images of the Pharaohs, the Patesi, and the Great kings; even the most favoured citizens never aspired beyond having their features reproduced on a stele or in a statue placed near their tomb. In Greece, the privilege of figuring in the temples was accorded to the images of the most illustrious citizens or of private individuals who were rich enough to present a generous donation along with their effigy. The sanctuary chosen for this purpose was generally the one belonging to the god who had watched over the professional occupation of the donor, or to the god whom he specially worshipped.[3] The two aims of having the gods near oneself and being near them were frequently combined by placing religious images on objects of everyday use—jewels, pendants, whorls, clothing, weapons and tools, vases, lamps, seals, and coins, the discovery and interpretation of which have contributed so much to our knowledge of the principal ancient religions. For a still closer combination the faithful engraved the portrait or the symbol of the god on their very bodies. Tatuing has enabled man to assume this Divine uniform, and examples are found all over the world, from the Australian savage who paints on his breast the image of his totem to the Breton or Italian sailor who has the image of the Madonna or of the Sacred Heart figured on his arm. It is now admitted that everywhere the tatuing of the uncivilized has a religious or magical significance.

[3] E. Courbaud, in Daremberg-Saglio, *s.v.* 'Image.'

**2. Magical images, *i.e.* images having magical properties.**—Recent ethnology has thrown light on the close connexion which primitive intelligences establish between a being or object and its figured reproductions. This is an application of the laws of similarity and contiguity, in which J. G. Frazer has found two of the chief sources of magic belief. Primitive man believed that, by tracing an image, he was producing the reality, and that, when he acted on the image, he was also acting on the thing itself. From the quaternary age onwards we find, on fragments of stone and bone, and also on the walls of caves, sculptured, carved, or painted images, representing animals of the period. Salomon Reinach[1] reproduces more than 1200 of these figures, and points out that they nearly all represent species of animals which formed the food of the people of the time, and therefore the people would naturally desire to favour their multiplication—mammoths, reindeer, horses, goats, etc.

As a result of observations made in our own day among the savages of Australia, it has been proved that among the magical proceedings for promoting the development of species which provide clans with their totem and their food there is a certain worship of the *churingas*, *i.e.* blocks of stone or pieces of wood on which there has previously been traced the schematic image of the totem and which are placed underground in sacred places. In other places, these same figures are painted on rocks, and become the centre of ceremonies for furthering the multiplication of the totem.[2] Another hunting people, the Bushmen of S. Africa, painted on the walls of their caves very good likenesses of the animals that they hunted or carried off from their neighbours, the Kafirs.[3] Finally, similar paintings have been observed on the rocks of California and North Africa.[4]

Even among the figured representations of prehistoric times, however, we find some images of harmful and undesirable animals; but these exceptions may also have a magical import. Thus the negro of West Africa cuts out figurines representing crocodiles, tigers, or serpents. Attempts have been made to explain these images by totemism, but it is simpler to account for them thus: the negro thinks that, possessing the copy, he will be able to compel the original to go away or even destroy it altogether.

The Kaitish of Australia believe that the rainbow prevents the rain from falling or makes it stop prematurely. They therefore draw a rainbow on a shield, which they hide far from the encampment, thinking that they will prevent the phenomenon by making its image invisible.[5] The natives of Malaysia use as preservatives bamboo stalks carved with representations of the scorpions and centipedes which infest the country; but they set the remedy and the scourge side by side by also carving on the bamboo the image of the pheasant which devours this vermin. Among the Burmese, the natives of the Shan States use the capsule of a plant called *martinya* as a snake-charm because it roughly resembles the head of a venomous snake with its two fangs.[6] All these are applications of the principle that like acts on like, evokes it, or produces it. Emile

Durkheim has even extended this formula thus: 'Anything that affects an object affects also whatever has any relation of proximity or solidarity to that object.'[1]

As a general rule, the portrait of an object is supposed to give its possessor control over the original. This is the belief of savages, who usually refuse to be photographed or sketched, and who in nearly all countries make use of this kind of spell to work evil on their enemies. The oldest cases of such sorcery which have come down to us are perhaps the figured representations discovered on the walls of the grotto of Niaux (Ariège), where we find bisons riddled with barbed arrows. We have here, combined with the solidarity of the image, the idea that the realization of an event may be brought about by simply sketching it. According to the practice of the Middle Ages, when one wanted to wound, paralyze, or kill an enemy, it was sufficient to make a figurine more or less like him, have it blessed by a priest on some pretext or other, and then prick it with a needle in the heart or wherever it was desired to harm the original. Similar spells were in use among the Chaldæans, Egyptians, Hindus, Greeks, and Romans. They are also found among most uncivilized peoples who employ the arts of black magic.

The same idea of artificial solidarity is found in *ex-votos*, where imitations of legs, arms, other organs, and even of whole bodies are placed near sacred images by believers who have been granted, or are praying for, the cure of certain ills: in the one case the donor hopes that, on account of this proximity, the gods will act on the injured member through the medium of its image; in the other, the desired effect having been obtained, he expresses his thanks to the deity by offering up the organ, of which the deity has already in a sense taken possession by expelling the malady. These same images, which abounded in the temples of Æsculapius and other gods of healing,[2] are found on the continent of Europe, without any modification of material or form, even in the smallest chapels of Roman Catholic rural districts. Often the possession of the image is sufficient to ward off illness and all kinds of calamities. Each image has its special charm: some guard against fever, others against plague, others against lightning, the perils of the sea, the enemy's shot, and so on; there are even some which show where lost objects may be found, as, *e.g.*, certain of the Congo fetishes. Some have still wider scope, as talismans for appeasing fate and mastering destiny.

Central Africa is the promised land of fetishism (*q.v.*); yet the negro, according to a statement made by Albert Réville, which seems to be well founded,[3] distinguishes clearly between fetishes, which he believes to be inhabited by a spirit, and amulets, which he wears about his person, but does not worship, even when they reproduce the form of a living being. Schoolcraft also speaks of domestic idols in human or animal form found in the huts of the American Indians, but they were more of the nature of talismans, for they were not worshipped in any way.[4] We may place in the same category the *zemis* of the Antilles, *i.e.* figurines made of wood, stone, or bone, representing fish, turtles, lizards, serpents, and even men.[5] These were so numerous at the time of the discovery of the Antilles that the Benedictine monks who came in the train of Columbus boasted of having destroyed single-handed more than 170,000 of them at Hayti. To the same class perhaps belonged the *teraphim* of Laban, which Rachel

concealed in the camel's furniture (Gn 31[19-] the statuettes which abound in ancient tom Ægean times to the end of paganism.

Large statues are as highly prized b munities for their magical services as sm are by individuals and families. The d possess them frequently gave rise to arm tests, which took place as often between th of antiquity as between the towns of the Ages; the desire was not so much to ha monopoly of paying homage to the divinity saint as to gain possession of a talisman of This is proved by the bad usage which the sometimes received, either to punish the o for having refused a demand, or to compel fulfil it. It is not only in the Congo that na hammered into the sacred image to comma attention.

In a church in Louvain there was until quite recentl statue of Christ, the red velvet robe of which used to with pins. Now worshippers stick their pins into two c placed at the feet of the image, over which is the insc in French and in Flemish: 'Please do not stick pins i robe.' This practice, however, may be explained in s way; it may be a case of getting rid of an illness by it into the image, or sometimes of passing it on by hang the image linen which has been in contact with the i member. Fraser, following Mannhardt, gives sufficie dence in his *Golden Bough* of cases of folk-lore, where a tural populations, having manufactured an image or a ma representing the spirit of the last harvest and sometim spirit of death, destroy, burn, or drown it, after having it with the sins or calamities which they desire to get periodically.

Just as the copy procures the services of original, it may replace it on every occasion offering of the image instead of the reality thu comes both an attenuation and an extension of s fice. Thus the Chinese offer to the divinity clot houses, furniture, sumptuous repasts, and considerable sums, without growing any poo for these offerings are simply paper images. Egyptians painted on the walls of the to offerings intended to maintain indefinitely posthumous existence of the deceased, or depi experiences that they would like him to be to continue or repeat; they even added figuri representing his wife, slaves, and workmen, so t in the life beyond the grave he might have all co-operation that he enjoyed on earth. It se now to be admitted that this was also in m cases the aim of the bas-reliefs and painti decorating the tombs of Etruria and anci Greece.

**3. Idols, *i.e.* conscious and animated images** The talisman, the fetish, and the idol form ascending scale. The talisman is a material obj endowed with marvellous properties, either beca of its nature or of some magical operation it h gone through, or because it is invested with sup natural properties by some external Power. T fetish is a talisman in which resides the spirit th gives it its power. The idol is a fetish represen ing the supposed form of the spirit dwelling insi it.

Idols are formed in various ways. (1) *By t natural association of natural objects with t human features which they resemble*, *e.g.* the roc resembling human beings worshipped by Negroe Fijians, Chippewas, Lapps, and, indeed, by a peoples inhabiting hilly countries—not to spea of other similar *ludi naturæ*. (2) *By forgetfulnes or ignorance of the significance originally attache to an image.* This, however, is an exceptional oc currence. In most cases, it is only a question o the transfer of an image from one cult to another Sometimes an attempt is made to explain the imag by creating personages and even inventing myth for the occasion. Clermont Ganneau has called thi by the apt name of 'ocular or optic mythology,'[1]

[1] *Mythologie iconographique*, Paris, 1878.

and he gives several examples of it: the child Horus, who becomes among the Greeks the god of silence, because he holds his finger to his lips; a Pharaoh sacrificing three barbarians, which forms the prototype of Cacus slaying the three-bodied Geryon, etc. Examples of legends which originated in misunderstood images are no less frequent in mediæval Christianity. It has often been asserted that the stories of cephalophorous saints (i.e. saints who are pictured with their heads in their hands) had their origin in the figured representation of their decapitation. The martyrs and saints recognized by naive and perhaps interested parties in the bas-reliefs of pagan sarcophagi are too numerous to be quoted.[1] (3) *By simply manufacturing an image representing a superhuman being.* The artist, choosing his subject either according to his own taste or in obedience to orders, may conform to tradition; but it is the popular voice alone that ratifies and sanctions his work. Sometimes the idol is an ancient fetish of wood or stone which has been carved so as to give it the appearance of a human being; at other times it is a statue whose reputation for supernatural power is due to the fetish enclosed in it, as, e.g., the statue of the *Magna Mater Idæa* in Rome. (4) *By the supposed command of the divinity whom the image represents.* In the Antilles, the tree in which a spirit dwelt revealed to the sorcerer how to set about manufacturing a statue with its wood. In the public square of Corinth there were two statues of Dionysus which were held in great veneration; according to Pausanias (II. ii. 7), they were cut out of the wood of a tree which the Corinthians, in compliance with the command of an oracle, had worshipped under the name of Dionysus. In France, Italy, Spain, and the East there are frequent examples of images of the Virgin which are said not to have been made by the hand of man. We might mention in passing the Buddhist legend that the portrait of Maitreya, the future Buddha, was drawn by an artist temporarily transported into the special division of Paradise where Maitreya was awaiting the moment to descend on earth.[2] Among the Greeks the same reputation was enjoyed by many of the most venerated statues, including the palladium in the Acropolis at Athens, representing the protective goddess of the city. (5) *By means of some magical operation.* Among the Negroes of the West Coast there are regular shops for fetishes and idols, kept by sorcerers. The purchaser makes his choice, and it is only then that the sorcerer causes the spirit to descend into the idol. Among the New Zealanders, the priest makes the souls of the dead pass into statues which he shakes up and down as if he were rousing a sleeping man; if the operation is unsuccessful, the soul may pass into the body of the officiating priest, who then falls into convulsions. In Finland a kind of doll, or *para*, made out of a stick and some rags, is carried nine times round a church to the words, 'Live, Para'; the *para* then begins to live, or, rather, a spirit comes and dwells in it.[3] Towards the end of classic paganism, the operation was more complex, but its nature remained the same. According to Augustine (*de Civ. Dei*, viii. 23), Hermes Trismegistus speaks of it in the following terms:

> 'To unite, therefore, by a certain art those invisible spirits to visible and material things, so as to make, as it were, animated bodies, dedicated and given up to those spirits who inhabit them—this, he says, is to make gods, adding that men have received this great and wonderful power.'

The last upholders of paganism met the taunts of the Christians with the reply that they did not worship the bronze, gold, or silver of the statues, but the divinities that had passed into them on consecration (Arnobius, *adv. Gent.* v. 17, 19).

Nevertheless, an explanation is needed as to how this unlimited multiplication of the person of the divinity, and the belief in his actual presence in each of these images, could be reconciled with the unity of his personality. Here, we must remember, we are in the domain of things sacred, where a lack of logic is overlooked, or, rather, a particular logic is admitted which applies the principle of contradiction in a different way from that of ordinary logic. According to a rudimentary idea, a superhuman individuality may be doubled or multiplied *ad infinitum*, and yet remain an unbroken whole in its original type and in each of its manifestations.

II. *HISTORY.*—A favourite theory among 18th century theologians and philosophers was that idolatry was a degeneration. Man was supposed to have begun with a very high and pure idea of the divinity. Then, desiring to have a material picture of his deity, he represented him by the noblest and most elevated thing that he knew—his own image. Gradually he came to regard these symbolical images as real portraits, and ended by treating them as divine individualities. As early as the time of the author of Wisdom ($14^{12-20}$) it was held that idols were originally the images of deceased ancestors; and Herbert Spencer has revived this idea.[1] It is not difficult to show, however, that history, pre-historic archæology, and ethnology are agreed in giving an entirely different explanation of the origin and evolution of idolatry. Undoubtedly there may be found in more than one religion periods of decadence in which idols, which had been more or less outgrown, re-appear in the worship. Thus, Buddhism, which had shaken the very foundations of idolatry, judging from the quasi-philosophical doctrine of its founder, re-installed the ancient idols of Hinduism and even of Tantrism, merely surrounding them with a new mythology created specially for them. But these are cases of infiltration or retrogression, not of logical and spontaneous development.

Strictly speaking, idolatry is neither a general nor a primitive fact. It was entirely unknown in India in Vedic times. We have to come far down in the history of China and Japan to find any traces of its development. It was not practised by the nomadic tribes of the Semites. Among the Jews it appeared only in exceptional cases (*e.g.*, the Golden Calf and the Brazen Serpent). Cæsar (*de Bell. Gall.* vi. 21) and Tacitus (*Germ.* ix.–x.) assert that there were neither temples nor images among the Teutons. In Rome, according to Varro (Augustine, *de Civ. Dei*, iv. 31) the Romans lived 170 years without representing their gods by images. Even among the Greeks we find scarcely any traces of idolatry in the time of the Pelasgi. The question is whether this absence of idols is due to the fact that these peoples had too spiritualized a conception of their gods to give them material forms. It will be sufficient answer to note that idolatry is equally unknown to most of the peoples who are to-day still on the lowest rungs of the social ladder—Bushmen, Hottentots, Fuegians, Eskimos, Akkas, etc., who are at the first stages of intellectual and religious development. This seems to have been the mental condition of the future civilized races at the period of which we have just spoken.[2] Even

among the nations where idolatry has been pushed to the furthest extreme, *e.g.* the Egyptians, Chaldæans, Greeks, and Hindus, it came into being only with their progress in the arts of civilization. In the case of the aborigines of the New World, while idolatry flourished in the civilized States of Mexico, Peru, and Central America, it was encountered but rarely among the savages of the two American continents. Lafitau recognized this fact as early as the 17th cent.: 'We may say in general that the majority of savage peoples have no idols.'[1] In Japan, idolatry was equally unknown before the spread of Buddhism. Even to-day, 'broadly speaking, Shinto has no idols.' With a few exceptions, 'the pictures of the gods sold at Shinto shrines in the present day are owing to Chinese or Buddhist influence.' But, as the same author shows, this is simply due to the arrest of development which made itself felt, more than a thousand years ago, in the ritual as well as in the theology of the old national religion of Japan.

'This absence of idols from Shinto is not owing, as in Judaism and Islam, to a reaction against the evils caused by the use of anthropomorphic pictures and images, but to the low artistic development of the Japanese nation before the awakening impulse was received from China. It indicated weakness rather than strength.'[2]

We may conclude, then, that idolatry is but a step in religious evolution, and that it even represents a comparative advance. From the time of its first appearance onwards, man appeals to art—however rudimentary the attempt may be—to aid him in giving material shape to his religious ideal. Several authors maintain, with every appearance of reason, that the plastic arts originated in the service of religious or magical ideas (see ART, vol. i. pp. 817–827). The oldest images that have been discovered are the sculptures and paintings mentioned above, which go back to the reindeer period, in the second half of the quaternary age. For a long time before that, man had probably imitated the attitudes and movements of the animals he wished to capture or cause to multiply. Then it suddenly dawned upon him that approximate images of them existed in certain fragments of stone, bone, or wood, or in some seed or shell. In his magical operations he may already have used objects which to his infantile imagination seemed like living beings, and for this purpose he naturally employed the natural or chance products most favourable to his illusion. He would then try to increase the resemblance by clumsily touching up the object. Examples of this have been found in the primitive sculpture of various entirely different peoples. The next step would be to carve, or directly manufacture with the help of suitable materials, the image which he wished to possess and utilize. The fig. represents an object, now in the Oxford Museum, which was used as a charm by seal-hunters in the Queen Charlotte Islands. It is simply a pebble roughly resembling a seal, but sufficiently like it for the natives to have tried to increase the resemblance by scratching in the eye, mouth, and nostrils.[3]

It was probably a similar idea that inspired the first figured representations of the superhuman personalities whom man desired to have within reach so as to make them more accessible to his evocations and sorceries as well as to his prayers and homage. Whatever opinion one may have of the origins of religion, it must be admitted that at a certain period man began to experience the need for representing in concrete and personal form the

the Chinese, A. Réville, *La Religion chinoise*, Paris, 1889, p. 183; (*f*) among the Japanese, W. G. Aston, *Shinto, the Way of the Gods*, London, 1905, p. 71 ff.

[3] Given in H. Balfour's *Evolution of Decorative Art*, fig. 31.

mysterious forces which he conceived of as on the one hand, embodied in certain nat artificial objects, and, on the other, situated very source of the phenomena of nature. The first images which seem to have been the object of real worship occur long after the quaternary age. These are the rudely sculptured female figures in the caves of Marne, in France, found side by side with the representation of an axe, just as in the pre-Mycenæan pictures discovered in Crete.[1] As a matter of fact, statues of women have been found belonging to the reindeer age, with the abdomen, breast, and hips exaggerated out of all proportion; but these very probably represent pregnant women—a magical means of ensuring the increase of a tribe. At any rate, it is certain that man began at a given moment to make his fetishes in the form of the spirit which he believed to dwell inside each one.

Seal-hunters' charm.

Examples of the transition from fetish to idol may be found among the most widely differing peoples. The first step seems to have been the worship of upright stakes or more or less conical stones, found among the aborigines of India, the tribes of the Upper Nile, the Ostı Siberia, and some small tribes of Oceania and North and America—not to speak of the ancient populations of W Europe. Elsewhere the natives set themselves to manufa a kind of doll. The idols of some of the Siberian tribes c of skins stuffed with grass. The Crees of the United S worship bundles of sticks topped with a head made of The Brazilian sorcerers make idols out of calabashes which set on a stick and bore with a hole to represent the mouth the Society Islands, fragments of columns dressed in n costume are worshipped. In the Fiji Islands, the na decorate conical stones with a girdle and assign a sex to t In the Deccan, the head at the top of the cippus is repres by a round mark painted red. Among the Indians of Virg a head was carved at the top of the stave, as is seen in a cu illustration in Lafitau's work. The head once formed, the must have followed rapidly. Arms and legs still joined t body were sketched, and then finally these were separate to give them the necessary appearance of life and action.

These facts are nearly all given in Lord Avebu *The Origin of Civilization*, so it is not a little prising to find, even in the seventh and last edit (London, 1912, p. 284), the following assertion:

'Fetichism is an attack on Deity, Idolatry is an act of mission to Him, rude, no doubt, yet humble. Hence Fetic and Idolatry are not only different, but opposite; so that one cannot be directly developed out of the other.'

As a matter of fact, fetishism is a direct an cedent of idolatry, and is everywhere co-exist with it. The fetish and the idol are both c ceived of as the body of a spirit; they are u for the same purposes and employed under t same conditions, except that idolatry lays m stress on the anthropomorphic, or rather z morphic, conception of the divinity, and so len itself to a more accentuated development of t cult. There exist, on the one hand, domes idols, and, on the other, tribal or village fetish There are even fetishes that fill a still higher rô *e.g.* the black stone of Pessinus, which represe the Mother of the Gods in the Palatine templ No occurrence is found of an intermediary sta between fetishism and idolatry; on the contrar the history of art makes it clear that idolatry the direct and immediate outcome of fetishis Nowhere is this continuity more evident than Greece, from the thirty stones of Pharæ, which

[1] Déchelette, *Archéologie préhistorique*, i. 585 ff.

the time of Pausanias (VII. xxii. 3) were regarded as the most ancient images of gods, down to the masterpieces of Phidias and Praxiteles.[1]

Among the first idols, representations of animals or monsters predominate, as is still the case with the uncivilized peoples of to-day. All that can be maintained with certainty is that the tendency to invest supernatural beings with human shape increases with the growing conception of their personality as a type of ennobled manhood. At the same time the animals which originally represented these beings did not entirely disappear from iconography; they became the companions or slaves of the divinities whom they used to embody, as, *e.g.*, the owl of Athene, the eagle of Zeus, the hind of Artemis, the dolphin of Poseidon, and the dove of Aphrodite. In other cases, the bestial or repugnant forms have been left to evil spirits, the enemies of gods and men; examples of this are too numerous to be mentioned here. A third combination has perhaps helped to give rise to composite figures, sometimes with a human head on an animal's body, sometimes with an animal's head on a human body. The Egyptian pantheon is formed almost entirely of these curious figures, and they are found in nearly all ancient and modern forms of polytheism. Peoples such as the Egyptians, Assyrians, and Chinese, who had left barbarism far behind, undoubtedly believed in the actual existence of such monsters. Their written traditions testify to this belief, and traces of it are found even among French authors of the Middle Ages.

We must remember, however, that, when the sculptor in ancient times represented Janus as a god with three faces, to mark his faculty for seeing the present, the past, and the future all at one time, he was probably as fully conscious of making a pure allegory as the sculptor who in Christian times symbolized the Trinity by a three-headed being. It is questionable whether the Greeks, or before them the Phœnicians, when reproducing the image of a spirit with two pairs of wings, the one raised and the other lowered, really aimed at representing perpetual movement and not at simply reproducing superhuman beings who for the Assyrians had an actual existence. Again, it is a moot point whether, when the Buddhists assigned to their future Buddha, Avalokiteśvara (*q.v.*), an infinite number of arms, it was really, as they say, so that he might the better save all his creatures, or whether it is not rather an express imitation of the numerous pairs of arms attributed to the Hindu Śiva.

We must, however, take into consideration another factor, viz. the possibility of the fusion of two types. There is a law in symbolism which holds good for all kinds of images. When two signs or two plastic types in any given neighbourhood express the same or similar beliefs, they are inclined to amalgamate, if not to unite, and form an intermediary type. An attempt has been made by the present writer[2] to show how symbolic images differing as much as the wheel, the winged globe, the rose or the lotus, the conical stone, the *crux ansata*, or 'key of life,' the cuneiform star, the sacred plant, and even the human outline, have changed their forms and passed into each other, making composite types, in the different features of which the various originals may be recognized. These phenomena of plastic hybridization are rarer in the case of the representation of living creatures, but even here some examples are found. Bancroft, referring to the totems in use among the Indians of North-West America, says:

[1] Cf. M. Collignon, *Mythologie figurée de la Grèce antique*, Paris, n.d., pp. 11-17.

[2] In *The Migration of Symbols*, London, 1894, chs. v. and vi.

'When the descendant of the "hawk" carries off a wife from the "salmon" tribe, a totem representing a fish with a hawk's head for a time keeps alive the occurrence, and finally becomes the deity.'[1]

This emblem is just as odd as the hawk-man who represented Horus among the Egyptians.

We have also to reckon with religious types which continue to exist after the disappearance of the worship to which they originally belonged. In present-day iconography, we may still find representations of subjects which originated among the sculptures of ancient Chaldæa, five or six thousand years ago, and which have come down to us through two or three intermediary religions and still retain at least a symbolic value. Such, *e.g.*, is the sacred tree between two monsters facing each other, which has passed, on the one hand, to India, Persia, China, and Japan, and, on the other, to Greece, Rome, and the Christian countries of the West, where sculptors used it in cathedrals to represent the tree of the Garden of Eden. The transmission of images does not necessarily imply the transmission of the beliefs to which they were originally attached. When in a new religion it is desired to represent personages or traditions which have not yet been expressed in plastic art, the artists naturally treat the subject on the principles of the only art within their reach. In the catacombs, Christians did not scruple to use the image of Orpheus taming the wild animals with his lyre, to symbolize Christ teaching men. Psyche being teased by Cupid came to represent the soul guarded by an angel. The ram-bearing Hermes, who originally figured in the sculptures of Asia Minor as a priest bearing the sacrificial lamb, furnished the essentially Christian type of the Good Shepherd, and we know from the sculptures of Gandhāra that this subject passed into Buddhist India about the same time.[2] The first representations of the Heavenly Father as an old man seated in a *cathedra* were inspired by certain statues of Juppiter; it is even possible that their prototype may be found among the Assyrian images of seated divinities which occur among the rock sculptures of Malthai.

Again, we have to reckon with the deformations which in the long run always appear in the reproduction of images. It is somewhat difficult to recognize in the classic type of the thunderbolt two tridents soldered together at the base. Joachim Menant[3] has shown that the Greek Sagittarius has its prototype in the winged bull of Assyrian palaces, which became among the Persians the image of the mythical bull Gāyōmarṭ, half transformed into an archer; and, by a series of easily discernible modifications, the bust of Apollo has become the simple *epsilon* found on coins. Among the paddle carvings exhibited in 1872 at the British Association for the Advancement of Science, there was a crouching human figure and next to it a crescent placed on the point of an arrow. No one who did not possess the whole series of intermediary figures could possibly have imagined that the latter was the outcome of the former.[4] Inversely, there are examples of the transformation of a linear image into a human figure. The sacred *bætyl* which figures on the coins of Byblos reappears, modified in form through contact with the Egyptian *crux ansata*, in certain representations of Astarte and Tanit which depict these goddesses in a conical form with their elbows close to their sides and their forearms outstretched.[5]

It must be borne in mind that a religion, more

especially when it has just superseded another, has often to tolerate the worship of images and even of sanctuaries belonging to former cults. When it is unable to destroy them, it finds that it is more advantageous to appropriate them. By adopting the *labarum*, Constantine wittingly chose an emblem which could be accepted both by the worshippers of Christ and by the worshippers of the Sun. Even to-day, Leroy-Beaulieu[1] speaks of an old Buriat idol, preserved in the Monastery of Posolsk on Lake Baikal, which has been transformed by the monks into a statue of Saint Nicholas, and is worshipped by pagans and Christians alike. The Buddhists are still less scrupulous about appropriating the images of the religions which they have succeeded in suppressing by their propaganda: the solar wheel becomes the wheel of the Law; the feet of Viṣṇu are transformed into the feet of Buddha. When the Buddhists gained possession of the sanctuary erected at Bhārhut by tree- and serpent-worshippers, they simply appropriated the bas-reliefs for their own religion by attaching to each scene an inscription giving it a Buddhist interpretation.[2] The followers of Hinduism acted in the same way when they had succeeded in expelling Buddhism from India.

It is sometimes rather difficult to judge whether the image of a superhuman being should be classed as an idol or as a magical or purely commemorative representation. Even the people who use them are not always clear on this point. When the priests of Hierapolis explained to Lucian (*de Dea Syria*, 34) that they had not placed the Sun and the Moon among the images of the gods in their temple, because men could see and worship them directly, it is possible that, at least to the priests, divine images were merely representational signs. But, when the Tyrians, besieged by Alexander, chained up the statue of Baal Melkart to keep the god from escaping to the enemy's side (Curtius, IV. iii. 21 f.), it is evident that they considered and treated it as an idol. The same idea recurs in Sparta, where, according to Pausanias (III. xv. 5), the statue of Ares was chained up to prevent its escaping.[3]

Speaking generally, we may include in the category of idols all images that open or close their eyes, gesticulate, utter oracles, move of their own free will, or converse with their worshippers. On the other hand, it would be an exaggeration to maintain that every image worshipped or even venerated is necessarily an idol. Nothing is more natural than to set up in a conspicuous place the images of the beings loved or esteemed, and to take as a personal insult outrages perpetrated on them. Later, the image is regarded as an intermediary in all dealings with its original, and it is invested with the supernatural faculties attributed to the original. This tendency is co-existent with the mental state, mentioned above, which confuses the copy with the original and leads to investing the images with a personality of their own. In the time of Pericles, Stilpo was banished from Athens for having maintained that Phidias's statue of Pallas Athene was not the goddess herself (Diog. Laert. II. xii. 5). In Buddhist iconography, Gautama's entry into Nirvāṇa was represented at first only by an empty throne or by footprints. Gradually his image was introduced, and it finally ended by working innumerable miracles and becoming a regular object of worship. In order to escape from these superstitions certain monotheistic religions, such as Judaism and Islām, have entirely forbidden representations of the human figure or even of any animate being.

GOBLET D'ALV

**IMAGES AND IDOLS (Ægean).** —
thought a few years ago that Ægean reli
aniconic, that the Mycenæans envisage
deities in no form, human or other, and t
a sublime simplicity they confined their
to trees or stone monoliths in which th
spirit was supposed to take its residence, o
in sacred spots a single stone seat, an
throne, for the god to sit on, unseen by
shippers. This view, however, always
rather improbable to some observers, wh
convinced that, the phenomena of religio
pretty much the same in every country
over the world, the Ægeans would eventu
proved to have been by no means so lofty i
ideas as the 'aniconic' view would imply.
has come to pass, and we now know th
Ægeans made idols and venerated them
every other people of their time. Whether
Hogarth is right or not in claiming (*ERE* i
147ᵃ, *EBr*[11] i. 247ᵃ) that the Ægeans wors
only two deities, the Mother Rhea and t
Zeus, or whether we should rather say that
were the two primary objects of worship, it
least probable that the 'Dual Monotheism'
he postulates was accompanied by the vene
of spirits of wood and water, sky, sea, and
as in every other country of the world. In
Greek religion there is many a trace of these
Hellenic worships; and, though we may say
Artemis, Diktynna, or Britomartis of Crete i
another form of Rhea, yet we may doubt wh
the worshippers themselves thought so.
surely would have considered that they were
rating different goddesses. And in the represe
tions of deities which we have on seal-rings,
we no doubt see different forms of the god
We have representations, too, of demons, like
Thueris-headed water-carriers, no doubt deiti
streams, who must be regarded as, if not god
any rate supernatural beings worthy of wor
and distinct from the two primary deities.[1]

We have not, however, many representation
other gods than Rhea and Zeus, although we
yet find them. The few images of the gods
have been found in the Cretan and other exc
tions are almost exclusively female, and repre
different forms of the great goddess, who is usu
associated with the snake, no doubt to mark
chthonic character. The faience images of her
of various different forms of her (or of differ
but closely-related goddesses), found at Kno
(*ERE* i. 143ᵃ) are well known. One figure has
its head a spotted cat curled up. This is a curi
attribute of the goddess, and may perhaps conn
with Egypt (are we to see by connexion also
panther of later Greek iconography?).

The ruder figures of the goddess found at Knos
and Gournia, with their accompaniment of voti
clay trumpets, are well known. They are conte
porary with the equally rude 'owl-headed' figu
from Mycenæ, also representing a goddess.

1 Primary Rhea and Zeus certainly were; one only doubts
they were the sole objects of worship. Such monotheism
after all, an artificial development of human religion: the natu
man is polytheistic and idol-making. Monotheism is a prod
of high spirituality. We have no proof that the Ægeans we
at all a spiritual people: it is highly probable that they we
nothing of the sort; and, if Egyptians and Hittites worshipp
gods, it is probable that Ægeans did so too.

The young god, Zeus-Velchanos, has not yet been found represented in the round, but we have hints of his appearance. On a fresco at Tiryns he stands, a warrior, upright, holding spear in hand, and guarded by a great 8-shaped shield. On a ring from Mycenæ and on a sarcophagus from Palaikastro he descends to earth with long hair flying behind him in the wind. He is a true Minoan in appearance.

Some of the demons look like strange dog-headed insects, perhaps locusts. Certainly they are modelled after the Egyptian hippopotamus-goddess Thueris.

One cannot say more as yet of Minoan iconography; but more light will doubtless reach us with the further progress of study, and we may be able to distinguish between different forms of different deities. For, though one may consider that Hogarth's fundamental characterization of Ægean religion, its special worship of Rhea and Zeus, is no doubt correct, yet one may doubt whether their 'Dual Monotheism' excluded all other worship. It certainly did not exclude the veneration, if not worship, of the genii already mentioned, who resemble sometimes Egyptian deities, sometimes certain queer Anatolian demons whom we see on the rocks of Yasili Kayā.

An odd feature was the veneration as idols of natural concretions of stone, which bore some fortuitous resemblance to the human figure: such crude objects of adoration have been found in the Western Palace at Knossos.

It is perhaps strange that the Minoans, with their love of art, should not have cared to represent their deities more often and more grandiosely than they did. But neither did they represent mankind in the grandiose style of Egypt, and we do not yet know how many of the representations of the human form which we have in fresco and other materials are really meant to portray men, and how many are intended to shadow forth the godhead. One would expect, as one obtains in the case of Rhea and Zeus, complete anthropomorphism.

The theriomorphic demons look exotic. The likeness to Thueris may have some special reason of which we are ignorant. Can it be referred to the most ancient days, when the Ægeans first came from the Nile-delta (as they probably did) to Crete? They might have brought with them a memory of the great hippopotamus, a beast associated in their minds with water. This is but a suggestion. The cat on the head of the Knossian goddess points, as we have seen, to Egyptian influence. This may have acted occasionally, but we have no further trace of it. The goddess and her male companion have nothing Egyptian about them; and there is nothing Egyptian about the Thueris-headed demons but their heads. Thueris never carries water-pitchers in Egyptian iconography. We must regard this as a chance bit of foreign influence, like the cat, which is, by the way, treated in quite un-Egyptian fashion.

The demons themselves, however, cannot be exotic. They are emphatically racy of the soil of Greece, the land of naiads and hamadryads. The two great gods are, of course, closely related to the Anatolian Kybele and Atys, and this Anatolian relation of the Minoan religion is not contradicted by the Greek naiads and hamadryads, since we know from the treaty of Rameses II. with king Khattusil of Khatti (1279 B.C.) that the Hittites worshipped innumerable spirits and divinities of mountain, wood, and stream, as well as the great gods.

H. R. HALL.

IMAGES AND IDOLS (Babylonian).—Idolatry and image-worship form a very striking feature of the Babylonian religious system, and already meet us in an advanced stage of development in the earliest cultural period of which material remains have been preserved. In Babylonia we have no means of tracing the gradual evolution of image-worship out of the fetish and the stock-and-stone worship which necessarily preceded it. The earliest inhabitants of the country, of whose existence we have obtained evidence by excavation, were the Sumerians, and they were immigrants who brought with them an extraneous civilization from some mountainous region of Central Asia. Their gods were already anthropomorphic, and their cult-images undoubtedly combined the character of portrait with that of fetish. It is a remarkable fact that even the earliest representations of Sumerian deities that we possess are not of the Sumerian racial type: they exhibit characteristic features of the Semite, the other racial element in the country which gradually displaced the Sumerians after absorbing their culture. The most probable explanation that has been suggested is that the Sumerians found a Semitic population in possession of Babylonia, and that the representation of their own deities was subsequently influenced by the Semitic cult-images in the ancient centres of worship which they took over.[1] But the question is one of externals only, and, though of interest in another connexion, does not affect the essential character of the divine image itself. Fashioned in the god's human form, it was believed to enshrine his presence, and for the Babylonians of all periods it never lost this animistic character. It never became a mere portrait or memento of the deity, but was believed to have a life and spirit dwelling within it and acting through it.

Originally, no doubt, a Sumerian tribal or city-god was wholly identified with his cult-image. No more than one image of each deity was worshipped, and the idea of the god's existence apart from this visible form must have been of gradual growth. It is possible to conjecture circumstances which would tend to encourage speculation in that direction. The capture and deportation of a god, followed by the substitution of another figure in its place and the subsequent recovery of the original image, would have led to the incorporation of two figures within one shrine. A king's ambition to rebuild or beautify a temple might have been extended to the image itself, if the latter had suffered damage or decay. The misfortunes of the material image, especially if unaccompanied by national disaster, would in any case foster a belief in the god's existence apart from his visible body of wood or stone. And such a belief undoubtedly developed at a comparatively early period into the Babylonian conception of a heavenly division of the universe in which the great gods had their dwelling, making their presence manifest to men in the stars and planets which moved across the sky.

This was a great stage in advance of pure image-worship, and the development undoubtedly followed the growth of a pantheon out of a collection of separate and detached city-gods. The identification of the more powerful of these deities with the great forces of nature emphasized the distinction between the god and his image. The sun-god could not be confined within his shrine, if he was seen to pass daily overhead from one gate of heaven to the other; and the moon-god's continual activity

[1] See Eduard Meyer, 'Sumerier und Semiten in Babylonien (*Abh. der königl. preuss. Akad. der Wissenschaften*, 1906, Phil.-histor. Classe, iii.), and L. W. King, *History of Sumer and Akkad*, London, 1910, p. 47 ff.

and changing phases precluded the possibility of such a limitation in his case. The god of lightning must surely leave his temple, since he is seen riding upon the storm-cloud, while the true dwelling of the god of the abyss must obviously have been the abyss of waters below the earth until he was translated to the Southern heaven. We have no means of dating this association of some of the greater gods with natural forces. It is possible that the Sumerians had passed this stage of thought before their arrival in Babylonia, and also that they found some of the ancient religious centres of the country already associated with sun- and moon-cults and with other divisions of nature-worship. However that may be, it is quite certain that during all subsequent stages of Babylonian history the divine images never degenerated into mere symbols of divinity. They continued to enjoy a very real, though mystical, connexion with the gods they represented. Without consciously postulating a theory in explanation of his belief, the Babylonian never lost his faith in his god's actual presence within the image, and he found no difficulty in reconciling such a localization of the divine person with his presence at other cult-centres and with a separate life in the heavenly sphere. That this was actually the case will be at once evident if we refer to a few historical examples of image-worship taken from different periods.

Of the Sumerian epoch it is unnecessary to speak at any length, as Gudea's cylinder-inscriptions prove the sacrosanct character of a city-god's image even in the latter half of the period. The elaborate ritual and purification of both people and city, preceding the removal of Ningirsu's image from the old shrine at Lagash to the new,[1] are a sufficient indication that the god and his image were still identified. With the rise of Babylon we note the important part which the actual image of Marduk played in each king's coronation-ceremony and in the renewal of his oath at every subsequent Feast of the New Year; the hands of no other image than that in Esagila at Babylon would serve for the king to grasp. In the reign of Ḫammurabi, the real founder of Babylon's greatness, we see the Babylonian's conception of his visible gods reflected in his treatment of foreign images. It was not merely as booty, but in order to gain their favour, that Sin-idinnam and his army carried off to their own land the images of certain Elamite goddesses. And, when misfortunes followed, it was simply because these foreign goddesses resented their enforced banishment from their own country. On the careful restoration of the images to Elam, the goddesses themselves returned thither.[2] Later, in the 15th cent. B.C., we know that an image of the goddess Ishtar was carried with great pomp and ceremony from Mesopotamia to Egypt, and in one of the letters found at Tell el-Amarna the statue and the goddess herself are absolutely identified. The land of Mitanni and Egypt were on friendly terms at the time, and the city of Nineveh was under the former's control. So, when Amenophis III. requested Tushratta, king of Mitanni, to send Ishtar of Nineveh to Egypt, he consented, and with the image sent a letter which throws light on the relation which the goddess was believed to bear to her image.[3]

[2] Cf. King, *Letters of Hammurabi*, London, 1898–1900, i. p. xxxvii ff.

[3] H. Winckler, *Die Thontafeln von Tell-el-Amarna* (Schrader's *Keilinschriftliche Bibliothek*, v. [Berlin, 1896]) 48 f., no. 20; and J. A. Knudtzon, *Die El-Amarna Tafeln*, Leipzig, 1907, etc., p. 178 ff., no. 23.

In the letter the goddess Ishtar herself is ma
intention of going to Egypt: 'Thus saith Ish
the lady of all lands, "Unto Egypt, into the la
will I go."' Tushratta exhorts Amenophis
honour and to send her back, saying: 'Verily
(her) and she is gone. Indeed, in the time of
lady Ishtar went into that land; and, just as s
formerly and they honoured her, so now m
honour her ten times more than before. M
honour her, may he allow her to return with
here no question of the image being a mere
goddess: the image is the goddess herself.

It is clear from Tushratta's letter t
not the first occasion on which Ishtar
friendly visit to Egypt. Indeed, we ma
at any rate at this period, the custo
uncommon for the image of a deity—in
the deity himself—to be sent on a cerem
to a foreign country, where, if properly
would, no doubt, exert his influence i
the land in which he was staying. An
clusion explains the great value that
set on the capture of another race's
captured images were not valued simply
of victory; they constituted the conquer
chief weapon of offence. Not only wer
quered deprived henceforth of their go
ance, but there was a very great probab
if the captured image was pleased wit
surroundings and the deference paid to it
transfer its influence to the side of its new
pers. This explains the care with which
images were preserved both by the Bal
and by their more civilized neighbours, an
which marked any subsequent recovery of

It is needless to cite instances: the most striking
banipal's recovery of the goddess Nanâ's image fro
650 B.C., which an Elamite king had carried off f
sixteen hundred and thirty-five years before.[1] *Durin*
period the Elamites had doubtless carefully ministe
image, for their civilization and their religious cults
in common with those of Babylonia. It is probable
when a barbarous mountain tribe was conquered *and i*
sacked, its divine images were never destroyed, but c
and preserved in the same spirit. This close connexio
the god and his image endured into the Neo-Babyloni
and Nabonidus's offence in the eyes of the *priesthoo*
rendered Cyrus's conquest of Babylonia so much mo
was simply the fact that he ignored this feeling.
natural instincts blunted by archæological study, and
in furtherance of some ill-advised idea of *centralizing*
the king collected all the old images throughout the
into his capital, little recking that he was tearing the go
selves from their ancient habitations. The gods had
their real abode in the heavens, but this had in no way w
their mystical infusion of their images on earth.

Far less close was the connexion betw
Babylonian deity and his sculptured sym
emblem, by means of which his authority o
ence could in certain circumstances be insu
indicated. The origin of such emblems w
astrological, nor is it to be sought in liver-au
the emblems were not derived from fancied r
blances to animals or objects, presented eith
constellations in heaven or by markings o
liver of a victim. They clearly arose in th
instance from the characters or attributes as
by the gods in the mythology; their transfe
to constellations was a secondary process, and
detection in liver-markings resulted not in
own origin, but in that of the omen. The s
head of Marduk is a fit emblem enough for
slayer of the demon of chaos; the stylus or w
of Nabu suits the god of writing and architect
the lightning-fork was the natural emblem of
weather-god, and the lunar and solar disks for
moon-god and the sun-god. Some divine embl
were purely animal, such as the dog of Gula,
walking bird of Bau, the scorpion of Ishkhara.
these cases there is nothing to indicate a totemi
origin, and the analogy of the goat-fish of Ea,
god of the Deep or the Abyss, suggests that t

[1] H. C. Rawlinson, *Cun. Inscr. West. Asia*, London, 186
iii. [1870] pl. 38, no. 1.

[2] O. E. Hagen and F. Delitzsch, *Beitr. zur Assyr.*, Leip
1890 ff., ii. [1894] 205 ff.

are not to be traced beyond the mythological stage. In the earliest period the emblem of the city-god was the same as that of his city, and might sometimes symbolize the city's power, as in that of Ningirsu of Lagash, represented by a lion-headed eagle grasping lions. Images of divine emblems, when sculptured upon a stone monument, ensured that the monument was under the protection of the deities to whom the sculptured emblems belonged. Legal documents concerning ownership of land were protected in this way from the Kassite period onwards,[1] and it was with a similar object that the later Assyrian kings carved at the head of their stelæ the emblems of the chief gods of their pantheon. Divine emblems, in addition to the figures of patron deities, were also engraved upon cylinder-seals,[2] and both were, no doubt, intended to ensure the owner's protection.

Another class of animal images entered very largely into the Babylonian religious scheme, and, though not the emblems of gods themselves nor the objects of direct worship, are entitled to be referred to in this connexion. The colossal lions and winged bulls which flanked the doorways of Assyrian palaces and were borrowed for the Persian palaces at Persepolis, the enamelled lions of Sargon's palace at Khorsabad and of the Sacred Way at Babylon, and the brick bulls and dragons of Ishtar's Gate were not purely decorative, but symbolized protective influences under animal forms. Texts of earlier periods also describe the lion, the bull, the raging hound, the serpent, the dragon, and other mythological monsters as characteristic of religious decoration. In two instances at least, the lions of the Gates of the Sun on whose backs their pivots rest, we may undoubtedly trace their origin to the noise of the creaking gate;[3] and it is probable that sound, rather than sight, was the more important factor in determining the outward form of many mythological creations, whose protective qualities were portrayed in images which were often strange and ferocious.[4] Other Babylonian images of repulsive form represented evil and not beneficent beings, and spells engraved upon them were intended to ensure the employment of their powers in the owner's favour or, in any case, not to his detriment.[5] Clay images of gods, along with those of doves, were also buried near the gateways of palaces and temples to ensure their protection; but these, again, were not objects of worship, but merely foundation-figures.[6] For the use of images by the Babylonians in sympathetic magic, see MAGIC (Babylonian).

LITERATURE.—In addition to the references given in the footnotes, the general works dealing with Babylonian religion and cult may be consulted, such as M. Jastrow, *Religion Babyloniens und Assyriens*, Giessen, 1902 ff., with *Bildermappe* (1912); R. W. Rogers, *The Religion of Babylonia and Assyria*, New York, 1908; or L. W. King, *Babylonian Religion and Mythology*, London, 1899. For a convenient survey of the religious literature (which has a close bearing on the subject), see O. Weber, *Die Literatur der Babylonier und Assyrer*, Leipzig, 1907.

LEONARD W. KING.

**IMAGES AND IDOLS** (Buddhist).—It would naturally seem as though, of the great religions of the world, Buddhism were the least likely to have developed a system of idol-worship and veneration for images. The founder consistently deprecated the rendering of any special honour or reverence to himself, made no claim to divine prerogative or rights, and ignored, if he did not distinctly repudiate and deny, the presence and influence of the supernatural in human affairs. What he had done in the way of the attainment of perfect knowledge and of achieved deliverance or salvation, every man might do by the force of his own will and perseverance. The office of the Buddha was but to show the way. Each man must tread the road and win the goal for himself, none helping or hindering him in the supreme task. In a system of philosophy controlled by such principles there would appear to be no room for adoration or worship, and no authority to whom such worship might be addressed. Ultimately, however, and after no great interval of time, the tendency to create or conceive supernatural beings to whom homage might be rendered and from whom assistance might be hoped for re-asserted itself. Apparently the conception of the deification of the Buddha himself began to find a place in the thought of his immediate disciples even during his lifetime, and thus a system in intent and purpose non-theistic, neither postulating nor requiring the divine, became endowed with as extensive and varied a pantheon as the most frankly polytheistic religion ever conceived. In the monasteries and temples expression was given in plastic form, in image and sculpture, to these deities, the recipients of a true worship, which in concrete and visible presentation embodied and satisfied the desire of the worshipper for a substantial object of his adoration and regard.

**1. Deification of Gautama himself.**—It was upon the person of the Buddha that this reverence and worship concentrated itself; and throughout the entire history of Buddhism the figure of the founder remained central for all art and imagery. The degree of prominence assigned to him, however, varied greatly in the different countries in which Buddhism found a home. In some instances the influence of pre-existing faiths, with their popular divinities, proved too strong for the doctrines and principles of the imported creed; and the figure of the historic Buddha was in effect superseded by forms of gods or goddesses, to whom a more sympathetic and helpful rôle was assigned. Theoretically, for the present age, Gautama Buddha is supreme; and in general it is his image that occupies the place of honour in the temples, and is indefinitely multiplied in the halls of the monasteries, and in all places where an opportunity offered itself for a work of merit in erecting an image designed to embody in actual concrete form the gentle spirit and teaching of the founder of the faith.

The tendency, therefore, to regard Gautama as more than human, and to endow him with some at least of the attributes of divinity, began to develop itself during his lifetime, and therewith the tendency also to represent him in imagery and sculpture as an object of adoration. The earliest sculptures, however, do not yet venture apparently to depict him as a man, but his presence is symbolically indicated by the sacred wheel (*dharmachakra*), the Bo-tree, the footprint (*pada*), or a *dāgaba*, etc. In the older representations also, the more important figures of the Hindu pantheon retained a place, especially Sakka (Sakra, Indra) with his thunderbolt, who was later identified with one of the celestial Buddhas, Vajrapāni, and to the end occupied a considerable place in Buddhist legend and tradition.

It is not possible to determine at how early a period this desire for concrete and visible por-

[6] Cf., *e.g.*, R. Koldewey, *Die Tempel von Babylon und Borsippa*, Leipzig, 1911, pp. 19, 26, 29.

traiture of the Buddha himself did in fact find expression in art. Images of him were certainly known before the time of the Chinese pilgrims Fā-Hian and Hiuen Tsiang. Their narratives suggest, if they do not assert, that such images were neither rare nor a novelty. A more or less conventional and idealized type also was adopted, alike of choice and from the necessities of the case, which then imposed itself upon all representations of the Buddha in every country and for all future time. The type was Hellenic, not native Indian; and was derived from the Græco-Buddhist art of Gandhāra and the North-West. Its artistic development, however, was checked and limited by the historical conditions of Gautama's life and character, and the need to preserve a general identity of aspect and feature throughout the wide area to which the Buddhist faith had gained access. The type, therefore, became stereotyped, the conventional and recognized form under which the Buddha was depicted. Almost the only variety permitted to the artist was in the pose of the hands (*mudrā*), and, to a less extent, the arrangement of the feet. The Hellenic character also was consistently maintained throughout, and is noticeable especially in the expression of the face and the disposal of the folds of the robe. In the earliest and oldest representations this is most apparent; in the later there is a distinct approximation to Hindu forms and ideals. The figure thus delineated is that of a young Indian in the garb of a monk, with gentle and thoughtful countenance. In frescoes and paintings the head is often surrounded with a nimbus or halo, the symbol of deity and of the claim to adoration, a feature which is derived from Greek model and precedent. The type adopted was severely simple, and afforded comparatively little opportunity for the development of artistic taste or the display of artistic skill. These found a limited opportunity for expression in the figures of the Buddha's disciples, and more widely in the extensive pantheon of divinities, Bodhisattvas and others, of the Mahāyāna school.

The character of the type was thus determined, and is easily recognizable. From whatever part of the Buddhist world the figure may be derived, the general features are the same, and convey the same impression of calm dignity and untroubled repose. The painter or sculptor had, as it were, the main outline and framework of his subject already laid down, and comparatively little latitude was admissible in the filling in of details. Three attitudes or poses of the figure are represented — sitting, standing, and lying or recumbent. Within each of these there are varieties of type, which are usually associated with events of the Buddha's life or offices which he performed. The ascetic ideal was maintained in all, and in all the dress and outward appearance were plain and decorous, contrasting strikingly, on the one hand, with the richly ornamented figures of the Bodhisattvas and other divinities, and on the other with the nude statues of the Jaina saints. Images, however, in each of the three attitudes are by no means equally common on the sculptures or in the temples. The sitting posture is most frequently represented in all Buddhist countries. The recumbent figure, on the contrary, is hardly met with in the monasteries of the north.

**2. Types of sculptures.**—There are three main types or varieties of the seated Buddha.

In all of them the Buddha was represented sitting cross-legged, the right foot resting on the left, the soles usually upturned and bearing one or more of the auspicious marks which indicated his character as a 'perfected' being. The body is clad in the conventional robe of the monk, which leaves the right shoulder bare, and in some examples is very lightly indicated by a mere line across the chest. Less commonly is drawn over both shoulders. The latter arrangemen dress is found at all periods and in all the three attitu is perhaps more characteristic of the early Græco-Budd The head is shaven, but is never entirely bare, a few hair being left to represent the stumps of the locks w mained when Gautama cut off his own hair with his s the occasion of his flight from home.[1] On the top of t also is the swelling or protuberance known as *uṣṇīṣa*, of the sacred character of the wearer, but perhaps or representing merely the coil of hair on the head.[2] A circlet of hair (*ūrṇā*) also appears in the centre of the fo for which a pearl is frequently substituted both in early late examples. The ears and arms are long, the forn pendent as far as the shoulders. In Indian sculpture lon are conventionally recognized as a sign of high birth. figure is seated upon a lotus flower or throne (*padmāsa* upon the coils of the cobra which then raises its crest ab Buddha's head to protect him from the heat of the sun. Indian sculpture the face is always clean-shaven, but in from China and Japan, or from Korea, a light mousta beard is sometimes found. Others also of the *lakṣaṇa* marks of physical beauty or perfection, may be represente most common perhaps being the *chakra*, the wheel of th figured on the upturned soles of the feet.[3] Moreover, i southern school the entire treatment is more stiff and f and seems to lack the freedom and spontaneity of the e northern types.

The three fundamental types are distingui by the position of the hands (*mudrā*), whic always symbolical, designed to express the thou or office of the Buddha in some great crisis or e of his life. There are numerous less import varieties, devised by the artists to correspon the biographical details contained in the tradit

(1) The 'witness' attitude. The left hand lies flat upon lap, while the right is stretched downwards, the palm tow the body, and touches the ground. The scene commemor is the conflict with Māra before the attainment of Buddhah when Gautama called upon the earth to testify to the ev of his previous existences, and it responded with a roar thunder.[4]

(2) The 'meditative' attitude, representing the Buddh profound thought upon the mysteries of existence. The cros hands lie flat in the lap with the palms upturned, the ri resting upon the left.

(3) The 'teaching' attitude. The right arm is half *raised* bring the hand on a level with the breast, with the palm o wards, while the left hand hangs down by the side or gra and supports the robe. As the name indicates, Gautama is gaged in preaching or teaching his disciples, as in the *Isipata* Park at Benares.

In the standing figures the hands are represented as in t teaching *mudrā*. The robe is more frequently drawn over b shoulders, and falls to the ground, covering the entire bod The feet are held close together. A rare variety of the uprig pose represents the Buddha moving forward, the right f raised and slightly advanced beyond the other.

The 'lying' or 'recumbent' attitude represents the Budd at the moment of death, when he passed into *parinirvāṇa*. T figure lies at full length on the right side, the right hand su porting the head, the left arm and hand extended and resti upon the body. The face, turned towards the spectator, r tains its thoughtful and placid aspect. The attitude an features convey no impression of old age, although, accordin to the tradition, Gautama had reached the age of fourscor years at death.

The earliest figures of the Buddha that have bee preserved are from the North-West of India an the border-land of Afghānistān, the ancient Gandhāra. They all exhibit the same Grecian type of features and pose, a type which changes slowly, approximating more and more to a Hindu ideal in the later centuries and more particularly in the southern school. Many of the later statues and images are rough and rude in comparison with the delicacy and refinement of the early Indian examples. The difference, however, consists entirely in the execution. No innovation was made upon the normal and established Buddha type, and no departure therefrom was admissible. The general lines of the workmanship of the figure were determined by precedent, and it was only within narrow limits that the genius or capacity of the artist found opportunity to express itself. It is unlikely that any tradition of the real appearance of

[2] Hackmann, *Buddhism as a Religion*, p. 105.
[3] There are 112 *lakṣaṇas*, of which 32 are primary and 80 smaller or secondary. They are enumerated, *e.g.*, in Grünwedel, *Buddhist Art in India*, p. 161 f.
[4] *Jāt.* i. 74.

Gautama Buddha himself should have been preserved. The presentation of face and figure is entirely ideal, and is that of a young Indian prince of noble birth, embodying the conception of a gentle, thoughtful, deeply mystical and religious character, which tradition associates with the name of Gautama.

3. **Ancient images.**—The Chinese Buddhist pilgrims in their writings make reference to existing images, which were believed to be authentic and, in some instances, contemporary portraits of Gautama himself. The earliest of which mention is made by Fā-Hian was a sandal-wood image which Prasenajit, king of Kosala, had caused to be carved and placed in the Jetavana *vihāra* in Srāvastī in the seat usually occupied by the Buddha, but now vacant during his absence in the Trayastriṁśa heaven. On his return Gautama is said to have recognized the image as a faithful copy of himself. Not long after, the monastery was accidentally set on fire and consumed. The image, however, was preserved unscathed, and later was restored to its place.[1] A second and even more famous sandal-wood image about 20 ft. high is described by Hiuen Tsiang, erected by Udāyana, king of Kauśāmbī, a replica of which the Chinese monk carried with him on his return home from India. The royal city was in ruins at the time of Hiuen Tsiang's visit, but the statue stood within an ancient *vihāra*, a stone canopy above its head, having resisted, as it was said, every attempt to remove it. This image also had been carved in the Buddha's lifetime, the work of an artist who had been transported to the Trayastriṁśa heaven that he might there observe the appearance of the Buddha and take note of the sacred marks on his body. A miraculous and bright light shone forth from it intermittently.[2] Mention is made of other images, and, in addition to sacred relics and books, Hiuen Tsiang took with him on his return a considerable number of statues of the Buddha in silver and gold as well as in sandal-wood.

4. **Hīnayāna school.**—With the exception of the figures of the Buddha thus stereotyped in normal and regular form there is no uniformity in the number, character, or disposition of the images worshipped in the different Buddhist countries. No general or comprehensive description which would be of universal application is practicable. It will be most convenient, therefore, to give a brief account of each of these separately, in regard to the nature and variety of the images recognized, following as far as possible the geographical order. The pantheon of the Hīnayāna is usually simpler, of a more severe and restricted character, than that of the Mahāyāna.

(1) *Ceylon.*—In Ceylon, and in the southern school generally, no representation is found of the earlier Buddhas, or of the Bodhisattvas whose images fill so large a place in northern Buddhist lands; except of Maitreya, the Buddha of the future. The images are exceedingly numerous, but the effect of the constant repetition of the same features and pose is to a certain extent monotonous. They are of all sizes, huge figures being sometimes seen carved in the living rock. The materials used are various, but for the most part the ordinary images in the temples are made of clay, overlaid with chunam highly polished, and are usually gilded and ornamented with real or imitation precious stones. The mouth and eyes are frequently painted, to render them more distinct. Stone figures are also numerous, and more rarely cast images of metal are found, copper or bronze, and also statues of ivory and wood. Formerly in all Buddhist countries and for many centuries the manufacture of the images was almost entirely in the hands of the monks, who were able to bless and consecrate their handiwork. It is now for the most part a specialized occupation or trade, and the work is done by skilled artisans. Some of the more ancient and famous idols were traditionally said to have been self-produced. The temples also contain frequently a specimen of the sacred footprint (*śrīpada*), to which adoration is paid. Of these footprints the most renowned is the hollow upon Adam's Peak, held sacred by Hindus, Muhammadans, and Christians alike, as well as by Buddhists, and explained in accordance with the creed of each as the footprint of Gautama or Śiva, of Adam, Muhammad, or St. Thomas.

By the side of the principal image in the *vihāras* are frequently represented one or more of the Buddha's chief disciples, especially Moggallāna and Sāriputta, or, with the recumbent Buddha in the *nirvāṇa* scene, Ānanda. They stand on either side or at his feet in attitudes of worship. Figures also of the ancient Hindu deities, especially Brahmā and Viṣṇu, are found, usually in buildings (*dewāla*) attached to the *vihāra* itself, and representations of demons, etc., to which homage is paid by Buddhists equally with Hindus. The members of the stricter sect of the Rāmanya, however, refuse to associate themselves with this worship of strange gods, which they denounce as heretical. In an ancient temple, *e.g.*, at Kelani near Colombo, said to be on the site of an older shrine built at the close of the 4th cent. B.C., there is a recumbent figure of the Buddha, 36 ft. long, by the side of which stand huge images of the guardian deity of the temple, and of the Hindu gods Viṣṇu, Śiva, and Ganeśa. In the temple of the sacred Tooth also, at Kandy, either side of the central shrine is occupied by images. In the country *vihāras*, where the worshippers are few in number and poor, the images often suffer from neglect, and little heed is paid to them even by the priests or monks themselves. Not far from the same temple at Kandy there is an ancient shrine of Viṣṇu with a silver-gilt image about 6 in. high, wearing a rosary. Shrines also are found in Ceylon dedicated to Skanda, the brother of Ganeśa. The only prominent Hindu divinity, indeed, whom the Buddhists appear never to have adopted is Kṛṣṇa.

The sites of ruined cities which have been excavated in Ceylon have supplied many ancient and remarkable figures. It is evident that in former times the concrete representations of the Buddha for purposes of worship were no less numerous than at the present day.

One of the oldest is a dark granite statue of the seated Buddha, 8 ft. high, carved from a single block of stone, believed to be more than 1000 years old, now deserted and lonely in the jungle not far from Anurādhapura. In the rock temple at Polannaruwa also are three colossal images, that of the Buddha lying at full length, 46 ft. long, the head resting on the right hand on a bolster, and the details of the robe carefully and skilfully rendered; the erect image by the Buddha's side on a pedestal ornamented with lotus leaves, 23 ft. high, probably represents Ānanda, the favourite disciple. Within the temple is a large seated Buddha, carved in high relief out of the rock; and at the further end behind the altar a similar figure, 15 ft. high, on a pedestal with lion ornamentation, in front of a carved and decorated screen. At Anurādhapura itself all the great temples and monasteries were possessed of countless images; and numbers of monolithic statues still exist there, prostrate on the ground, or standing amidst the ruins. On the circular platform of the Ruanweli *dāgaba*, for example, together with royal statues are three of the standing Buddha more than life-size. The larger statue by their side, 10 ft. high, represents king Duṭṭhagāmaṇi, of whom the Ceylonese chronicles report that he caused a golden image of the Buddha to be made, and set up near the sacred Bo-tree of Anurādhapura.

(2) *Burma.*—In the monasteries of Burma the principal hall or room set apart for the reception of the images contains usually a large central figure of the Buddha against the further end,

[1] *Fā-Hian's Travels in India and Ceylon*, tr. J. Legge, Oxford, 1886, ch. xx.; cf. Beal, *Buddhist Records of the Western World*, London, 1906, ii. 4.

[2] Beal, *op. cit.* i. 235 f.

while others stand on either side or are ranged round the walls. Smaller figures are placed on brackets or shelves. The material employed is brick, wood, or alabaster, or, for more costly images, brass, silver, or gold. The process of casting an image is accompanied by religious ceremonies, and the occasion is made a public holiday. Formerly, and perhaps in some places at the present day also, offerings of silver, gold, and jewellery were thrown into the melting-pot by pious donors—to whom much merit accrued, as their gifts were thus incorporated in the body of the image. Similar offerings are said to have been made at the casting of bells for the temples.

The same three positions of the figure are found as in Ceylon, but the seated Buddha is more usually in the 'witness' attitude. Kneeling in front of the figure of the Buddha, the two disciples, Sāriputta and Moggallāna, are frequently represented, worshipping or listening to his words. Gautama's three predecessors also, the earlier Buddhas of the present age, Kakusandha, Koṇāgamana, and Kassapa, sometimes find a place, and Dīpaṅkara, the first of the 24 great Buddhas, his forerunners. In the larger temples and *vihāras* other buildings beside the central hall are filled with images. Great and important temples like the Shwe Dagon at Rangoon contain numerous shrines with many hundreds of images of different sizes. These are, for the most part, the gifts of Buddhist laymen, presented as an act of merit. It is prescribed also that the offering of the images must be made in a definite order, first the standing figure, then the seated, and, finally, in the recumbent attitude. In the courtyard of the temple will often be found, as in Ceylon, a delineation of the sacred footprint. The steps that lead up to the temple or shrine are ornamented with fantastic figures, in plaster or stone, of lions, dragons, and other monsters.

Offerings of incense, flowers, and plain or coloured candles are made before the images, with prostrations and prayers. The more enlightened Burmese declare that worship is not thereby intended, but that the image serves as a reminder of Gautama himself, and excites in their minds similar feelings of reverence and devotion. It is only in the temples of Lower Burma that considerable numbers of images are seen. In Upper Burma few except the more important images are to be found. Of these the standing figures in the attitude of preaching are often of great size, some of the Pagan images reaching a height of over 40 feet. A Buddha in marble at the foot of the hill at Mandalay is 25 ft. high; and around the dimly-lit building in which it stands are smaller shrines, the gilt images in which direct their gaze towards the central figure. In Burma, as elsewhere, the recumbent attitude is the least common; but very large figures exist, usually constructed of brick, as at Pegu and Ava. These are often surrounded by the figures of the disciples, or of mythological rulers of the heavens or other deities.

It is comparatively seldom that the images are found in the open air. There exists, however, a large seated statue at the ancient capital, Amarapura, which is judged to be 90 ft. high; smaller figures are grouped around. At a few riverside places on the Irawadi, rock-cut statues may be seen, facing Ava, and a few miles below Prome, some of which are of great size. Opposite Pegu and elsewhere, with the aid of bricks, the rocks themselves have been moulded and shaped into the form of enormous Buddhas. These, for the most part, are now crumbling to ruins, and are overgrown with jungle.

(3) *Siam.*—The images and worship of Siam are entirely similar to those of Ceylon and Burma, and further description of them is therefc necessary.

5. **Mahāyāna school.**—In the pantheo imagery of the Mahāyāna school new de ments of the most rich and ornate characte been introduced. In some forms of the fait doctrine, Gautama Buddha himself has cea occupy the central and most important pos and the sculpture and temple furniture refle views of the worshipper, who addresses his pı to one or another favourite divinity, and in tice ignores the personality and claims o founder of the faith. In the result, the Budd of some of the northern countries has becom dowed with perhaps the largest pantheon in world. The imagery and cult, however, va the different lands, in each of which the introd worship of the Buddha has blended with the n religion, and more or less completely taken the native gods to form a composite whole, characteristic features of which are clearly see the figures and images with which the temples provided. The restrained and ascetic type of image of the Buddha himself is preserved changed. The artistic sense of the worship however, finds its opportunity in the variety lavish adornment of the figures of the deities t surround him, whose popularity and influence ceed that of Gautama himself to a very marl extent. The source and home of all these devel ments and varied types, as of the legends and t ditions on which they were based, was North India, and especially the districts of the Nort West and the border-land of Afghānistān, wh the Græco-Buddhist art of Gandhāra was resp sible for more or less rigidly determining the co ventional forms under which the principal go should be delineated. These chief types or class of images, therefore, which are more or less com mon to all the northern Buddhist countries, it possible summarily to describe. In greater deta account may then be given of the features in whic the imagery and worship of the different countri vary from that which may be supposed to be th original form, the modifications which have bee introduced, or the actual additions that have bee made to the accepted figures of the pantheon.

Reference has already been made to the adoptio by Buddhism of the principal Hindu gods. Thes retain their distinctive attributes and appearanc in the carved representations and idols. The most ancient images found in India are Buddhist. In the older Buddhist sculpture, however, at Sāñchi, and on the Bhārhut *stūpa* of the 2nd cent. B.C., the Buddha himself is not depicted, although the figures of other gods appear. Only in the early centuries of our era do images of the Buddha become common. Their existence at a previous date cannot, however, be disproved; and it would appear most probable that as the attractive centre of worship the Buddha early dispossessed the ancient Hindu deities. Later carvings at Ellora and elsewhere exhibit numerous figures of the Buddha, among which are some of great size. Occasionally a triad is found, in which Brahmā and Indra are represented on either side of the Buddha, as if guarding him, or in an attitude of reverence. The lesser deities or semi-deities also of Hinduism, as the Nāgas, etc., sometimes find a place.

The sacred triad of the Buddha, the Law or Religion, and the Order (*Buddha, Dharma, Saṅgha*) found early and frequent representation, and, although Gautama usually occupied the central place, the relative order seems not to have been invariable. It has been suggested indeed, perhaps without adequate justification, that in this triad Buddhist thought first gave concrete expression to its feeling of reverence to the person of its founder,

and the personified doctrine and order in which he embodied and perpetuated his teaching. Ancient examples have been found at Bodh Gayā and elsewhere.

The Saṅgha is usually depicted as a male figure with the right hand resting on the knee, and holding a lotus flower in the left. The images of the Dharma have four arms and hands, two of which are raised and touch one another in front of the breast; the others grasp respectively a book or lotus and a rosary of beads (*mālā*). In Nepāl and Sikhim the Dharma is always represented as female, the personification of *prajñā pāramitā*, 'supreme wisdom.' The worship of Dharma still maintains itself in India (in Orissa and Western Bengal), a solitary survival and witness to a faith once so wide-spread and influential throughout the peninsula. In some of these districts images of the Dharma are common, before which animal and other sacrifices are offered by the lower classes of the people, and in parts of Bengal a Dharma temple stands in nearly every village. A figure of Dharma, recently discovered at Badsai in Orissa, exhibits an arrangement of the arms and hands which seems designed to be a compromise between that described above and one or more of the *mudrās* of the Buddha. Two of the hands are laid on the knees, the right pointing downwards; the others, uplifted to the level of the head, bear a rosary and an open lotus. At a village in the Bānkurā District an actual image of the Buddha is, or was, worshipped as Dharma.

In the elaborate and extensive pantheon of the Mahāyāna the favourite figures are those of the Bodhisattvas (*q.v.*) and the Dhyānibuddhas, none of which find a place in the south. The general type is that of a young Indian prince, with turban or crown on the head; and the richness of the dress and ornamentation forms a striking contrast to the severe plainness of the monk's robe in the statues of the Buddha. The principal Bodhisattvas appear in the ancient Indian sculptures; and in the Buddhist caves at Ellora Avalokiteśvara and Vajrapāṇi are represented in attendance on Gautama. These two with Mañjuśrī form a kind of second Buddhist triad, the members of which are sufficiently distinct to be identified for the most part, without much difficulty, in the sculptures. For others a general character or type is made to serve, and it is often impossible to determine which particular Bodhisattva is intended. It is worthy of note also that, in scenes before the attainment of *bodhi*, the figure of Gautama where it appears is always depicted after the Bodhisattva model, not according to that of the Buddha.

The most usual emblem in the hands of the Bodhisattva images is the full-blown lotus, or sometimes a bunch of blossoms. The presence of the flower is due not only to the fact that it is the emblem of purity, but also to its constant association with offerings and worship. Figures of Padmapāṇi or Avalokiteśvara are the most common, and are frequently mentioned by the Chinese pilgrims, who state that the images were found on the summits of the high hills.

The portraiture of this Bodhisattva seems to have been borrowed from that of the ancient Indian deities, especially Viṣṇu. He appears usually with several faces, with two or four pairs of arms, and bears on the front of his crown a small figure of a Buddha. Two of the hands are raised in the attitude of adoration; the others carry emblems, as the lotus or the *chakra*. Figures of Avalokiteśvara, therefore, resemble those of Viṣṇu, but may readily be distinguished by the position of the hands, which in the case of the Hindu god are never in the attitude of worship. A special form or representation of Avalokiteśvara is known as the eleven-headed; this is especially common in Tibet and Nepāl, but is met with already in early Buddhist cave temples. The heads are arranged in pyramidal form, in three tiers of three each, with two single heads one above the other at the top. The uppermost head represents Amitābha, the spiritual father of the Bodhisattva. The rows or tiers of heads sometimes exhibit each its appropriate colouring in the order upwards of white, yellow, red, blue, red. Other figures have a larger number of arms, and the god is then described as 'thousand-handed.'

Vajrapāṇi carries a *chaitya* or *dāgaba* on his forehead, and a *vajra* in his hand. Mañjuśrī is represented as a seated figure, holding a sword and a book, the latter either grasped directly by the hand or supported on a flower which the hand holds. The two other principal Bodhisattvas have each their appropriate emblem or emblems by which they may be recognized. Mahāsthānaprāpta has the *vajra* and *chaitya*, like Vajrapāṇi; Viśvapāṇi carries a sword resting on a flower.

Of the Dhyānibuddhas only Amitābha, judging from the frequency of the representations, established a claim to popular approval and worship. He is depicted seated in the 'meditative' pose, the hands laid one upon another, in the *dhyāna-mudrā*. According to a well-known form of the legend, he was born from a lotus flower, and is sometimes so represented in the sculpture.

Kāśyapa, the Buddha who immediately preceded Gautama, may be recognised by his close-fitting robe, which hides the right hand in its folds at the level of the breast, while the left, resting on the knee, supports the garment.

Of the series of Buddhas besides Gautama himself, only Maitreya, the Buddha of the future, finds a place in all the schools, and is worshipped by all Buddhists. His image was apparently common in North India at the time of the visits of the Chinese pilgrims. Both Fā-Hian and Hiuen Tsiang report having seen a wooden image of Maitreya, 80 cubits in height, from which a bright light proceeded. A second figure of sandal-wood was possessed of the same light-giving virtue; a third at Bodh Gayā was made entirely of silver. Since he has not yet become a Buddha, Maitreya is not usually represented in the conventional Buddha pose, but appears in the dress and equipments of a young Indian prince. Both standing and seated figures are found, the former being more common; in the latter case, the feet are not crossed, but the legs hang down, as though seated in Western fashion on a chair. In standing figures the robe is often drawn up, to leave the left leg bare. His emblems are the water-flask and rosary, both of which are sometimes depicted resting upon lotus blossoms, which the hands hold. The latter usually assume the attitude known as the *dharmachakramudrā*, in which the hands are raised to the breast with the fingers touching. The hair is abundant, and often curls. His image is also found in the conventional Buddha form; but it retains in all cases the characteristic position of the hands.

(1) *Tibet.*—A marked feature of the imagery and worship of the Lāmaistic type of Buddhism is the prominent place assigned to deities of Hindu origin, and to gods and demons derived from the native mythology. 'The pantheon is perhaps the largest in the world. It is peopled by a bizarre crowd of aboriginal gods and hydra-headed demons, who are almost jostled off the stage by their still more numerous Buddhist rivals and counterfeits.'[1] The number of images and statues is correspondingly great; and these are not confined, as for the most part in other Buddhist lands, to the temples, but are found everywhere in the open air and in private houses; and in the form of charms, talismans, etc., they are carried on the person. Local and tutelary divinities are also very numerous; and a place is given to deified saints, to present and past incarnations of Buddhas or Bodhisattvas, and to mythological conceptions of every kind, the offspring of an unrestrained fancy and speculation.

The largest images are usually those of Maitreya, the Buddha of the future. The material employed is clay moulded into shape and painted or gilded. Wooden images are not common, and, except in the rock-cut figures and bas-reliefs, stone is rare. Others are of metal, ordinarily copper or, less frequently, bronze. The more costly are gilded, and often inlaid with real or imitation precious stones. In the temples and halls of the monasteries (*lha klang*, 'hall of the gods'), the arrangement of the images is the same as is usually found in other Buddhist countries, but no uniform rule is observed. The image of Gautama is placed in the centre behind the great altar, and on either side are the figures of Maitreya and Avalokiteśvara. The latter is usually present, as would naturally be expected, seeing he is incarnate in the Dalai Lāma; but Amitābha not seldom takes the place of Gautama, and instead of Maitreya there stands the founder of the sect to which the monastery belongs. The triad of the 'three holy ones'—Buddha, Dharma, Saṅgha—is said to be rare.

[1] L. A. Waddell, *Buddhism of Tibet*, London, 1895, p. 325.

Waddell apparently does not cite a single instance; in comparison with other countries, therefore, it is little if at all known or held in regard.

The normal attitude and pose of the Buddha images are determined, as elsewhere, by convention and precedent. The seated 'witness' attitude is the most common, few figures are represented standing, and the recumbent position is seldom found. The Buddha is usually seated upon a lotus, and wears the *uṣṇīṣa*; behind and overshadowing him is the sacred *pipal* tree, beneath the shade of which Gautama attained supreme wisdom. Accompanying the larger figures the two disciples frequently appear, Śāriputra on the right of the Buddha, and Maudgalyāyana on his left.

The same general type was employed to represent the earlier Buddhas, the predecessors of Gautama. The more distant and mythical of these were not as a rule depicted, except Dīpaṅkara, whose image is often found, with small holes or sockets in which lighted lamps are placed at the festivals. Of the more recent Buddhas a frequent arrangement is in groups of seven or five. The former consists of Gautama together with his six immediate predecessors; the latter, of the three latest Buddhas, Krakuchchhanda, Kanakamuni, and Kāśyapa, with Gautama himself and Maitreya. The five corresponding celestial Buddhas, or Jinas, are depicted in general in the same attitude, but they never carry a begging-bowl such as is often seen in the figure of the earthly Buddha. Each, moreover, has his appropriate *mudrā*, or pose of the hands, and a different colour. Amitābha is the only one of the five who receives a popular worship, as is attested by the frequency with which his image meets the eye. He is seated in the 'meditative' attitude, without begging-bowl, and is coloured red. Healing or medical Buddhas so-called are also present and are held in high honour, being resorted to in times of sickness; their pictures or images are believed to be possessed of magical healing virtue. Images of these Buddhas, however, are not common in Tibetan temples. A superior or primeval Buddha is also worshipped. He is represented seated in the 'meditative' attitude, as Amitābha, but with the body of a blue colour, and often unrobed.

The most distinctive feature, however, of the Mahāyāna, or Northern, school of Buddhism in art and sculpture, as in doctrine and cosmology, was associated with the Bodhisattvas. In Tibet their images are to be found everywhere, and their cult far surpasses in popularity that of the Buddha himself. The figure of Avalokiteśvara, the Bodhisattva who becomes incarnate in the Dalai Lāma, is most frequently encountered; but the others—Mañjuśrī, Vajrapāṇi, and especially Maitreya—are to be seen in very considerable numbers. The original type is that of the youthful Indian prince as on the Gandhāra sculptures, in rich embroidered robes, crowned and wearing earrings, and carrying in the hands distinctive emblems. The typical form, however, has been modified and transformed almost beyond recognition under the influence on the one hand of the ancient Indian deities, and on the other of the native gods, tutelary divinities, demons, and others, of the early religion of Tibet. The result is that the pictures and images are presented under various 'aspects,' which are distinguished not only by appearance and mien, but usually also by colouring.

The mild or Indian type is coloured white or yellow, and a halo surrounds the head, and not infrequently the entire body. A red or black shade is characteristic of the fiercer forms, designed to excite terror and remorse. These last forms belong more especially to the Tāntrik type of Buddhism, which has close affinities with the Śāktism of the Hindu faith. The figures are both male and female, the latter differing only in the absence of the beard and by the prominent breasts. The head is large, with a third eye in the centre of the forehead, and the whole expression is uncouth and terrifying. They stand or are seated upon a 'vehicle,' in the form of some animal. In other in they are represented trampling upon the bodies of their v brandishing weapons, and wearing necklaces of skulls.

Mañjuśrī, as the personification of wisdom, carries a bo sword. With the latter he dispels the clouds of ign Almost alone of the Bodhisattvas he has no female count He is usually represented seated in the 'mild' aspect.

Vajrapāṇi bears a *vajra* or bolt in his right hand, and or other emblem in the left. His aspect is fierce, and his is correspondingly coloured dark blue or black.

Maitreya's figure usually appears seated in the 'tea attitude with the legs hanging down. Colossal figures c Bodhisattva are to be seen, carved in the rock.

Avalokiteśvara is said to have twenty-two fo In all he is represented with features or mem beyond those appropriate to ordinary men. eleven-headed figure is the most usual, but a almost as commonly depicted is four-handed, the ornaments and dress of a prince. Two of hands carry respectively a lotus and a rosary; others are joined in the attitude of worship. Vajrapāṇi has borrowed the manner and weap of Indra, so the figure of Avalokiteśvara is mode on that of Brahmā.

In Tibetan Buddhism not only Avalokiteśv but the other Bodhisattvas also frequently bear the head a small figure of one or other of the Dhyā buddhas, who is the spiritual father of the Bod sattva represented. Exceptionally, however, M treya is found with the figure of his predeces Gautama. Instead of the actual figure the symb or emblem alone of the Jina sometimes appea placed on the head or seated among the locks the Bodhisattva's hair.

Moreover, each of the female powers who a worshipped has its characteristic figure or deline tion, and appears under a 'mild' or 'fierce' typ The most common and popular is Tārā, wife consort of Avalokiteśvara, who corresponds to th Chinese Kwanyin. Her forms are 'green' an 'white' respectively; and the two foreign wives king Sron Tsan Gampo, who introduced Buddhism into Tibet in the 7th cent., are believed to hav been incarnations of Tārā, the Chinese princess c the white form, the Nepalese of the green. Th latter is depicted as an Indian lady seated, with lotus in her hand and the left leg pendent; th face is green. The 'white' form of Tārā, with a white face, is seven-eyed, the palms of the hands and the soles of the feet being each provided with an eye, while another is placed in the centre of the forehead; her worship is said to be confined mainly to the Mongol peoples. Like the Mahāmātris of India, the number of Tārās was multiplied almost indefinitely.

Marīchī, the queen of heaven, is represented with three faces and eight hands, carrying weapons. She is seated on a lotus throne, drawn by swine, and one of her faces is that of a sow. The abbess of the Samding monastery near Lhasa, who bears a high character for sanctity, is an incarnation of a sow-goddess who is perhaps to be identified with Marīchī. At Lhasa there are shrines of Kālī, where the figure of the goddess is black, ornamented with skulls, masks, etc., and others of a mild type of handsome aspect, wearing robes of silk and adorned with pearls and precious stones.

The four Guardians of the four quarters appear frequently in the temples. Yama also, the god of the under world, has numerous shrines. His consort, Lhamo, is the tutelary divinity of Lhasa. The images of local and tutelary deities are to be found everywhere; and the demoniacal powers of evil are not less numerously represented. Deified saints and the founders and patrons of local monasteries obtain considerable worship, and are frequently represented with unnatural features or members in excess of the normal, to emphasize their superhuman character. Of these the Dalai Lāma is the most popular. Padma Sambhava also, the founder of Lāmaism, takes a high place.

Of the disciples of Gautama Buddha, besides Sāriputra and Maudgalyāyana, a group of sixteen is commonly found. These are the early *arhats*, or saints; and the same group reappears in the other countries of Mahāyāna Buddhism, enlarged to eighteen in China, and there known as the Lohan.

Few of the images are of skilful or attractive workmanship. In the more important monasteries at Lhasa and elsewhere may be seen statues of Buddha or of other deities, of much value, either from the material employed or the costly precious stones and ornaments with which they are adorned. In the private chapel of the Dalai Lāma at the Potala palace in Lhasa there stands an image of Avalokiteśvara of solid gold. The great temple in the same city contains, among many other images, a celebrated gilt figure of Gautama, said to have been brought from Peking by the Chinese wife of Sron Tsan Gampo. Another representation is that of Gautama as a young prince, crowned and robed, at the time when he left his home. The workmanship of the latter figure is said to be poor and inartistic, but the crown and shrine are thickly set with precious stones. In a third temple in the same city, the 'Temple of Medicine,' is a renowned figure of the 'healing' Buddha, with a bowl of blue lapis-lazuli stone, surrounded by other statues, which are supposed to represent physicians whose skill and fame have won for them deification after death. Cf. Images and Idols (Tibetan).

(2) *China*.—The Buddhist images of China are similar in character, but not so numerous as those of Tibet, and they are almost entirely confined to the monasteries and temples.[1] In addition to the Buddhas and Bodhisattvas, tutelary deities and demoniacal powers, together with patriarchs and saints of olden time who have been raised to the position of gods and receive homage, occupy a large place. In the monasteries there are usually two halls set apart for the service of the gods. A central and more important hall contains the effigies of the Buddhas, with their disciples, and of the Bodhisattvas, placed at the further end of the hall and ranged round the sides. Large monasteries have, in addition, more than one entrance hall, where the figures of the guardian spirits stand, and of the protecting genii of the place, the images of founders or patrons, and of the native popular gods adopted by Buddhism into its pantheon.

Of the Buddhas, Gautama is the chief.

His image is most frequently found in the 'meditative' posture, seated on a lotus, with *ūrṇā*, and pendent ears. The robe is usually drawn over both shoulders so that the arms also are covered, the neck and chest being exposed. Frequently a halo surrounds the head, or an ornamental screen behind the image represents the leaf of the sacred Bo-tree, and serves the purpose of a bright and gilded background. Two standing postures are not uncommon: the one as a child, with the arms extended and pointing upwards and downwards, in reference probably to the shout of victory and conquest uttered immediately after birth; the other as an ascetic, with begging bowl, rough and unkempt, in ragged monastic dress. Recumbent figures are rare. They are represented fully clothed, lying in the usual attitude upon the right side, sometimes even upon an ordinary Chinese bed.

Of the celestial Buddhas, Amitābha (in Chinese, *O-mi-to-fo*) is the most reverenced and popular. The normal Buddha type of figure is adopted for all, but each has his characteristic *mudrā*. Amitābha is usually depicted in a standing position, with long arms hanging at his sides. Among the Buddhas of the past, Dīpaṅkara alone is generally recognized. His image is often found with the niches and lamps. The number of these last varies; but usually there are 108, a number said to correspond to that of the sacred books.

With the exception of Gautama himself, certain of the Bodhisattvas are more widely reverenced and receive more constant worship than the Buddhas. The image of Kwanyin, the 'goddess of mercy,' the female form of Avalokiteśvara, is universally honoured. There is evidence that in the early centuries this Bodhisattva was worshipped in his proper male form; and the circumstances under which the transition to a female deity took place are altogether obscure. There seems to be no definite or accepted type for the figure of Kwanyin. The goddess is represented under very varied forms. Universally, however, she is beloved, and perpetual offerings are brought to her shrine. Of the other well-known Bodhisattvas of Indian origin, Mañjuśrī (Chin. *Wen-shu*) and Samantabhadra (*Pu-hsien*) are perhaps the most widely known and most frequently delineated in painting and sculpture. Each is depicted riding upon his 'vehicle,' Wen-shu on a lion, Pu-hsien on an elephant. They often appear as members of a triad in which Kwanyin takes the middle place. A frequent triad also is that of the 'three holy ones of the western region,' *i.e.* the paradise of Amitābha. In this triad Amitābha himself is in the centre, Kwanyin on his left in the place of honour, and the Bodhisattva Mahāsthānaprāpta (Chin. *To-shih-chi*) on the right. The Chinese Yama, *Ti-tsang*, the ruler of Hades, with his twelve subordinates, who execute punishment and torture upon the wicked, is a familiar effigy in the idol temples and halls.

An altogether strange and anomalous figure is that of the Bodhisattva Maitreya (*Mi-le-fo*), the Buddha of the future age. He does not occupy so prominent a position as in Tibet and elsewhere, and seems to have become identified with a native genius or tutelary deity.

He is usually represented in a crouching attitude, the robe thrown back so as to expose the breast, with long pendent ears and shaven head, and the left leg drawn up in front of the body. In the right hand is a lotus flower or a rosary, in the left a purse or bag, described as containing the 'five lucky gifts.' The expression of the face is lively and even merry, and the whole figure is reminiscent of a comfortable, well-living friar of the Middle Ages.

Other tutelary deities are the four Guardians of the four quarters, whose images stand in a defensive or protecting attitude on either side of the entrance to the temple or hall of the monastery.

Their figures are usually of more than life-size, and each has his own appropriate colour, and emblem or device which he carries in his hand. The Guardian of the North (*To-wen*) is black, and bears a snake and a pearl; the Guardian of the East (*Chih-kwo*) is blue, with an instrument of music; the Guardian of the South (*Tseng-chang*) is red, with an umbrella; the Guardian of the West (*Kwang-mu*) is white, and holds in his hand a sword. In the same hall, in addition to the Guardians, two figures are generally placed in the centre, facing in opposite directions, towards and away from the entrance. Moreover, a special deity presides over the culinary department, and his figure is said to be found in the kitchens of most monasteries. The well-known and popular god of war, Kwangti, is a deified hero of early Chinese history; and the images of other gods, saints, or demons, of native origin or derived from Indian sources, are very numerous, and are more or less closely associated with Buddhist worship.

Of the disciples of the Buddha, the most commonly figured are Ānanda and Kāśyapa. They stand or kneel on either side of Gautama, in reverential attitude, with upraised hands, Ānanda having the appearance and mien of a young man. The group of the 18 Lohan frequently finds a place in the temples, where their statues are ranged along the sides of the buildings. In the older monasteries the original group of 16 disciples is sometimes found, as elsewhere in the Northern school. Comparatively rarely a larger group of 500 Lohan is met with, consisting for the most part of deified emperors or other notable heroes and men of former times. Of deified saints, the most prominent and popular are the six patriarchs of Chinese Buddhism. The first of these, Bodhidharma (*Ta-mo*), who established the patriarchate

[1] The alienation within recent years of many Buddhist temples and halls to educational purposes, and the neglect and destruction of the images, make it difficult to determine how far the changed conditions of the country have affected either the number or the cult of the idols.

in China in the 6th cent., is universally known and honoured. His appearance lends support to the tradition of his foreign origin, the face being bearded and possessing none of the characteristic Chinese features. His image usually stands near the principal altar, at the further end of the great hall.

In the principal hall a trio of images is often found behind the principal altar. The members of the trio vary. Frequently Gautama is accompanied by Amitābha and Yo-shih-fo, the Buddha of healing; sometimes by other Buddhas or Bodhisattvas. Maitreya seems never to be represented. If the figure of Gautama is unaccompanied by others of his own rank, then the two disciples, Ānanda and Kāśyapa, stand before him. In front of the altar are smaller images of Bodhisattvas and others. The 18 Lohan, occasionally with other gods, occupy the sides of the room.

The material employed for the images is generally wood or clay. Bronze images are rare and costly; a few are of marble. They are painted or gilded, and a curious ceremony is observed, by virtue of which the deity is supposed to take possession of his habitation. Through a hole at the back of the statue a living animal—a frog, snake, or other small creature—is introduced into the hollow interior. The hole is then sealed up, and the soul of the animal passes into and gives life to the image of the god. The last act is the painting in of the eye, that the deity may have complete vision. This is known as *kai-kwang*, the giving of light.

(3) *Korea*.—There is little that is distinctive of the temple images and statues of Korea as compared with China or Japan. The most remarkable feature is the presence of pictures on the walls of the rooms of the monastery. These are never so found in the two countries named, with which the Buddhist thought and practice of Korea have otherwise been in the closest relation. The images themselves are few in number, and with little or no decoration; they are usually also of comparatively small size, gilded as in China, the material used being wood or clay. The five chief Buddhas are represented, and the corresponding Bodhisattvas, Kwanyin taking the place of Avalokiteśvara. Amitābha maintains a popular worship, which rivals, if it does not surpass, that of Gautama himself. Of the celestial beings and deified saints, Indra and other gods recur, and the 16 Lohan; the larger group also of the 500 disciples is met with in some of the temples. Tutelary deities are common, and personifications of the forces of nature. The mountain god, whose emblem is the tiger, and the 'kitchen' god are well known, and are worshipped with offerings and prayer. Perhaps the most feared divinity, whose wrath is most to be deprecated, and whose image is most frequently set up, is Ti-tsang, the ruler of the lower world. There are traces also of a solar cult, adopted by Buddhism, in the reverence paid to the sun and moon, the Great Bear, etc. For the last a special hall or chapel is sometimes provided within the monastery.

(4) *Japan*.—The most striking feature of Japanese Buddhism is the extent to which it has asserted its independence of Chinese influence. The independence of thought is reflected in its images and worship. There is similarity in the external form, in the architecture and arrangement of the temples, and the general disposition of the figures of the deities therein, but in the spirit and in detail the differences are very considerable. In the principal hall of the temple the chief images are placed, as in China, on the altar at the further end. In front a partition is sometimes erected, and the remainder of the hall remains free and
unoccupied for the purpose of worship.
usually also a chapel dedicated to the

size.

In Japan as in China Avalokiteśvara has be
a female deity, Kwannon, the Chinese Kwa
the goddess of mercy.

She is depicted under various forms, sometimes with
heads and many arms. The hands grasp objects typi
Buddhist doctrine or practice, as the wheel, a pagoda, a
or an axe, etc. A begging bowl is sometimes held i
lap. The Sanjusangendo temple at Kyoto contains
images of Kwannon. A thousand larger figures, each 5 ft.
and gilded, represent the goddess in her 'thousand-han
form. On the hands, foreheads, etc., of these there
executed smaller figures, the arrangement of which is sa
be different in every instance. Besides Kwannon, the Bo
sattvas most commonly represented are Mañjuśrī (
*Monju*) and Samantabhadra (*Fugen*). They often ap
seated on the left and right hands respectively of the Bud
The only other Bodhisattva who commands wide revere
and worship is Daiseishi, joint ruler with Amida and Kwan
of the western paradise. The figure of Maitreya (*Miroku*)
is sometimes seen rock-carved, of great size; but it is not fou
in the temples.

The temple entrance is usually guarded by t
ancient Hindu deities Brahmā (*Bonten*) and Ind
(*Taishaku*), who stand in threatening attitudes
the left and right sides respectively. The popul
divinity *Fudo* is by some authorities identifie
with Śiva, but others regard him as representin
Vairochana. His appearance is fierce and grin
with black face, and he bears in his hand th
sword of justice. Other Indian gods are found, a
Vaiśravaṇa (*Bishamon*), the god of wealth, wh
has become one of the seven deities of goo
fortune, and Ganeśa. The real god of wealth i
Daikoku, who carries with him bales of rice. The ruler of Hades, Emma-O, is frequently depicted. He is seated with a judge's cap on his head and a staff in his hand, and is usually accompanied by attendants who bear writing materials. The name is probably a corruption of the Sanskrit Yamarāja. Ti-tsang, the Chinese ruler of the world below, is represented by the Japanese *Jizo*, whose stone image is perhaps the most common and popular object of worship throughout the country. He is the patron of travellers, the guide and helper of all who are in trouble, and is represented in the attitude of a monk sitting cross-legged, with

closely shaven head, holding in his hands a jewel and a staff.

Of the disciples of the Buddha, Ānanda and Kāśyapa (Jap. *Anan* and *Kasho*) are most usually found with Gautama. The 16 Lohan (Jap. *Rakan*) are often represented, and the larger group of 500, the latter sometimes in a special hall or chapel. Of the Rakan by far the most popular is *Binzuru*, the healer of disease, whose image in the forepart of the temples is frequently defaced and has its features almost obliterated by the constant rubbing to which it is subjected, the practically universal belief among the lower classes being that relief from pain may certainly be secured by rubbing in succession the corresponding part of Binzuru's image and the affected limb or other portion of their own bodies. The Chinese patriarch Bodhidharma (*Daruma*) is also present in many instances; and the founders or patrons of the various sects are deified and their images erected in the temples.

Of Shinto deities that have been adopted by Buddhism the most popular is Hachiman, the god of war, to whom many temples are dedicated. He is said to represent a deified Emperor of the 3rd or 4th century.

**IMAGES AND IDOLS** (Celtic).—**1. Terminology.**—A specific Celtic terminology for idols is found only in Irish, Ir. *ídal*, 'idol,' being borrowed from Gr. through Lat., while Ir. *arracht* is a native term meaning 'shape, likeness, spectre, or idol.' A more common word is *lám-dia* or *lám-deo*, 'hand-god,' a small, portable idol, a kind of household god somewhat similar to the *penates* of the Romans (*ZCP* ii. [1895] 448). In Cormac's *Glossary* (tr. J. O'Donovan, ed. W. Stokes, Calcutta, 1868, p. 163), O'Donovan cites the word *tromdhe* from an old Irish glossary as meaning 'tutelary gods, i.e. floor-gods, or gods of protection.'

**2. Gauls.**—For lack of evidence to the contrary, it has been hitherto an accepted fact that the pre-Roman Gauls had no images or idols of their gods. The reasons advanced in support of this belief are that the Druids, who were pre-Celtic in origin, but who became eventually the priests of the Celts, were opposed to image-worship, which they prohibited in Gaul as early as the end of the palæolithic age (S. Reinach, 'L'Art plastique en Gaule et le druidisme,' in *RCel* xiii. [1892] 189 ff. = *Cultes, mythes, et religions*[2], Paris, 1908, i. 146 ff.). No direct evidence, however, has been found of the existence of such a prohibition, save that various classical authors postulated a connexion between the Pythagoreans and the Druids, and that the analogy which they saw between these doctrines was obviously hostile to anthropomorphism. More recent authorities, who refuse to accept this explanation, claim that the similarity between the two sects is to be found in the common belief in metempsychosis or the immortality of the soul. Since no evidence of the existence of a prohibition against image-worship has been found in the doctrines taught by the Druids, or in the observations of Latin and Greek historians, who would, no doubt, have been quick to notice it, it is maintained that the reason why no pre-Roman images have been discovered, while those of Gallo-Roman times have been unearthed in rather large numbers, is that the Gauls made their idols, like their houses, of wood only (J. A. MacCulloch, *Rel. of the Anc. Celts*, Edinburgh, 1911, p. 288).[1] Yet it remains to be explained why the primitive Gauls were able to carve on stone various animals, which may or may not have been objects of worship, but did not make use of the same material to represent their gods—unless one or two figures among those that have been recently discovered belong to the period antedating the invasions of the Romans.

Most authorities seem to hold that, though anthropomorphism was an accepted belief among the primitive Gauls, their gods did not figure in visible form at the rites performed in their honour because they were considered to be invisible (C. Jullian, *Hist. de Gaule*, Paris, 1908, i. 359). This was especially true of those tribes who dwelt in other countries than ancient Gaul. Only after the gods had for a long time assumed a more or less clearly defined human shape in the belief of the people did poets and artists attempt to relate their lives and deeds and give to them an individuality like that of man (Jullian, *Recherches sur la rel. gaul.*, Bordeaux, 1903, p. 48).

According to Diodorus (*Bibl.* xxii. 9), the Celtic chief Brennos, having entered a Greek temple and found there images of wood and stone, laughed loudly at the Greeks who made their gods in their own likeness. This chief was obviously not acquainted with deified images of the anthropomorphic kind; although that fact does not preclude the possibility that he as well as his soldiers worshipped the crude figures of animals painted or scratched by man in the neolithic age on the walls of grottos or on stones—a cult that persisted in most of the tribes (H. d'Arbois de Jubainville, *Les Druides et les dieux celt. à forme d'animaux*, Paris, 1906, p. 150). But in primitive times in Ireland, even these divinities were invisible. Among the many that could be mentioned, the most interesting is probably Badb, the goddess of war and murder, who only on important occasions—usually the death of a great warrior—appeared to the human eye, always in the form of a raven (J. Strachan, *Stories from the Táin*, Dublin, 1908, p. 6; W. M. Hennessy, *RCel* i. [1870–72] 34).

Anthropomorphism arose among the Celts from the cult of trees and stones, principally of those set up over the graves of the dead. The stone associated with the dead man's spirit became an image of himself, and was perhaps later on rudely fashioned in his own likeness (MacCulloch, 284). This is probably the point of departure of the neolithic idol whose artistic history has been so aptly traced by J. Déchelette (cf. 'Les Origines de l'idole neolithique,' in his *Manuel d'archéol. préhist. celt. et gallo-romaine*, Paris, 1908–10, i. 594 ff.). Lucan describes trunks of trees in a sacred wood roughly carved to represent gods—*simulacra maesta deorum* (*Phars.* iii. 412 f.), and this rude likeness became an image of the spirit or god of trees. When Cæsar states (*de Bell. Gall.* VI. xvii. 1) that there were *plurima simulacra*, especially of the god Teutates in his time, he does not mean carved

[1] St. Maurilius is said to have burned several idols at Prisciacus in Gaul (*AS*, Sept. iv. [1868] 73), and Clovis, on his conversion, burned his idols (*AS*, Oct. i. [1866] 146). St. Firminus of Amiens destroyed idols wherever he could find them (*AS*, Sept. i. [1868] 179), and St. Mello routed the fiend Seragon, who apparently dwelt in a brazen, gilded idol of Roth, near a 'fons qui Meretricum dicitur' at Rouen (*AS*, Oct. ix. [1869] 572). Whether the idols destroyed by St. Columban and St. Gall on the continent, especially in Germany, and by St. Augustine in England (*AS*, Oct. vii. [1869] 886; Mai. vi. [1866] 382), were Celtic is uncertain.

images, but probably boundary stones, like those of the Greeks and Romans, or shapeless pillars that symbolized the god but did not show him. On seeing them objects of a special cult, he concluded that they were really *simulacra* of a god (MacCulloch, *op. cit.*). Some authorities even maintain that these *simulacra* were nothing else than accumulations of stones, menhirs, etc., found all over ancient Gaul (Reinach, *loc. cit.*); and Jullian maintains that there is only one statue found thus far that really belongs to the pre-Roman period—a stone inscribed with geometrical figures, swastikas, and the like (*Bull. archéol.*, 1898, pp. 339–401). If this be true, then it forms the sole exception, for not another one has been found anywhere in Gaul belonging to a period previous to the Roman epoch (G. Dottin, *Rel. des Celtes*, Paris, 1903, p. 32 f.).

The adoration of boundary stones and pillars, or menhirs, continued until well into Christian times. In the life of St. Samson of Dol, written at the beginning of the 7th cent., there is mention of a standing stone—*simulacrum abominabile*—worshipped by the ancient Bretons (J. Mabillon, *Acta sanctorum ordinis S. Benedicti*, Paris, 1668–1701, i. 177 f.; *AS*, Jul. vi. [1866] 584[b]). For the purpose of stopping these heretical practices, the saint carved a cross upon this stone. The fact that many menhirs have been found in France containing this mark is an indication that this was the usual method adopted by the Church to oppose such worship (Reinach, *RA* xxi. [1893] 335 = *Cultes*, iii. 402 f.).

Later on a terrestrial abode was assigned to the gods, usually an oak-wood, for the oak and the mistletoe were especially sacred, according to the doctrines of the Druids (G. Callegari, *Il Druidismo nell' antica Gallia*, Padua, 1904, p. 58 ff.). Then, when the tribes had more fully developed the custom of apotheosizing their dead chiefs, the divine and the human were brought into still closer relations with one another, which tended to strengthen the belief in anthropomorphism. Thereafter, such gods as Teutates, Esus, Taran, and Belenos not only assumed human form, but, under the influence of other nations, were clothed and armed like the Gauls (Jullian, *Hist.* ii. 152).

The Gauls at Ephesus and Marseilles were the first to take up the practice of idol-worship, due, without doubt, to their contact with the Greeks and Romans. Justin (xliii. 5. 7) informs us that the Celto-Ligurians in the environs of Marseilles worshipped the image of Minerva. Other classical authorities state that the Galatian Celts had images of their native Jupiter and Artemis, while the conquerors who entered Rome bowed to the senators as to the gods (Strabo, XII. v. 2; Plutarch, *de Virt. Mul.* xx.; Livy, v. 41). What was the attitude of the Druids towards the spread of idolatry among the people? Reinach maintains that they discouraged it as far as they could, because they realized that the moment a man gives to his god a figure and lodges him in his home he has less need of the intervention of priests (*RCel* xiii. 189 ff. = *Cultes*, i. 146 ff.). Whatever may be our opinion of this ingenious explanation, it is possible that the Druids did not encourage the spread of this worship; for, according to Lucan (i. 452, iii. 416 f.), much of their prestige was due to the fact that they claimed to have sole knowledge of the divinity. This might lead us also to the belief that they had such a high idea of their gods that they disliked to clothe them with the human form.

While in remote parts of Gaul the statues of the gods reveal attributes approaching closely those of the early Germanic tribes (G. Grupp, *Kultur der alten Kelten und Germanen*, M p. 153 ff.), the gods of those Celts wh the yoke of the Romans assumed many of the attributes of the divinit conquerors that complete identificati result.

The images of the Gallo-Roman period are u into two categories. First, we have the native c as Tarvos Trigaranos, Cernunnos, Smertullos, cephalous gods, the crouching gods, the horned of which belong to the pre-Roman period (Jullian To this period belong also the statues of water Epona, and of the Matres, usually in the form of figures with baskets of fruit or flowers, or with infants (MacCulloch, 289). The second category co images bearing the name of a Roman god, but Celtic name added thereto. Of these images that the most common. Finally, we must include also the small figures of white clay, representing pr kind of *ex-voto*, which have been found in large q the archæological history of these images see De *cit.*).

3. **Irish.**—That the Irish were give worship of idols or images in pre-Christ is obvious from the explanation of the *delba* in Cormac's *Glossary*. Accordin authority, the name *hindelba* was given altars or those idols from the thing wh used to make (?) on them, namely, the images of everything which they used to or of the beings which they used to ad for instance, the form or figure of the su altar.' Again, the word *hidoss* is explained derived from 'the Greek εἶδος which is f Latin, from which the word *idolum*, name shapes or images [*arrachta*] of the idols [or ele the Pagans used formerly to make.'

To these idols or images sacrifices were usually for the purpose of securing ab harvests. Whether the Druids had privat for their own worship cannot be definitely tained, though some authorities affirm that had (D. Hyde, *Literary Hist. of Ireland*[4], Lo 1906, p. 84), this supposition being based o evidence given in a passage of Cormac's *Gl* which describes the incantation called *imba osnai*, or 'knowledge that enlightens.'

'This describes to the poet or druid,' says the glossator, ' soever thing he wishes to discover, and this is the man which it is performed. The poet chews a bit of the r flesh of a pig, a dog, or a cat, and then retires *with it* own bed behind the door [or, according to Stokes, 'he p then on the flagstone behind the door'], where he pronoun oration over it and offers it to his *idol gods*. He then *in the idols*, and if he has not received the illumination befor next day, he pronounces incantations upon his two palms takes his idol gods unto him [into his bed] in order that he not be interrupted in his sleep. He then places his two h upon his two cheeks and falls asleep. He is then watche that he be not stirred nor interrupted by any one until ev thing that he seeks be revealed to him at the end of a *no* [*i.e.* a day] or two or three, or as long as he continues at offering, and hence it is that this ceremony is called *imbas*, is, the two hands upon him crosswise, that is, a hand over a hand hither upon his cheeks. And St. Patrick prohibited ceremony, because it is a species of *teinm laeghdha* [another k of incantation mentioned in the *Glossary*], that is, he decla that any one who performed it should have no place in heav or on earth' (Stokes, *loc. cit.*; Hyde, *loc. cit.* 84). It is rela also in the *Book of Leinster* that Dathi, who succeeded *Niall* the Nine Hostages as King of Ireland in A.D. 405, consulted t Druids on the eve of the great festival of Samhain in the seve teenth year of his reign, or A.D. 422, regarding his desti during the next year, for he was then contemplating an i vasion of the continent. Dathi and nine of his chiefs we taken to the plain of Rath Archaill, where the Druids ha their idols and altars, and there the prediction was mad (E. O'Curry, *Lectures on the MS Materials of Anc. Ir. Hist* Dublin, 1878, p. 284). As stated above, these passages seem t indicate that the Druids had private images at that time whic they alone were permitted to consult. They show also that whatever may have been the attitude of the Druids on the continent towards idol-worship, those in Ireland had no hesitation in accepting it and adapting it to their own ends.

As for public idols, there is sufficient evidence that they were very numerous throughout the country. To these sacrifices were offered up by the people, or rather by the Druids on behalf of the

people, for the purpose of securing good weather for the crops and an abundance of cattle. St. Patrick states in his *Confession* (xviii.) that previous to his arrival in Ireland the people 'worshipped only idols and abominations' (*PL* liii. 810; N. J. D. White, 'The Latin Writings of St. Patrick,' in *Proc. Roy. Ir. Acad.* xxv. [1905] 270, § 41). According to the *Tripartite Life*, during a certain year Patrick found no more fitting place to celebrate Easter than Mag Breg, 'in the place wherein was the chief (abode) of the idolatry and wizardry—*baili imbai cend ídlachta ocus drúidechta*—of Ireland, to wit, in Tara' (W. Stokes, *Tripartite Life of Patrick*, London, 1887, p. 41). Again, when Patrick visited Oengus, the son of Natfraich, in Munster, the morning after his arrival 'all the idols were on their faces—*inna arrachta huili inna ligib*' (lit. 'in their beds'; *ib.* p. 195). Furthermore, Jocelinus, in his biography of Patrick, remarks that 'idola corruunt ad adventum S. Patricii in Momoniam' (*AS* Mart. ii. [1865] 553). That the chief purpose of Patrick's sojourn in Ireland would be the destruction of 'all the images of the idols' was, in fact, foretold by the wizards and enchanters at the court of King Laegaire, son of Niall (*ib.* pp. 32-35); and when, at the end of the *Tripartite Life*, we are told that, 'after destroying idols and images, and the knowledge of wizardry, the time of holy Patrick's death drew nigh,' the prophecies were fulfilled (*ib.* p. 259). So strong a hold had idolatry upon the people that two maidens, converted to Christianity, were persecuted and drowned by a petty king named Echaid for having refused to engage in the pagan form of worship (*ib.* p. 225).

These idols were generally very rudely carved, most of them, in fact, being mere pillar-stones (J. B. Bury, *Life of St. Patrick*, London, 1905, p. 74). There was, however, in the plain of Magh Slecht one great idol which apparently was of much finer workmanship. The image, ornamented with gold and silver, was called, according to the *Dinnsenchus* in the *Book of Leinster* (p. 213$^b$), Cromm Crúach ('Bloody Crescent'), but in the *Tripartite Life of Patrick* the name given to it is Cenn Crúaich ('Bloody Head'; Stokes, 91). This gold-covered idol, surrounded by twelve lesser ones ornamented with brass, was the special tutelary deity of certain Irish tribes, representing, in all probability, the sun-god ruling over the twelve seasons. According to the *Dinnsenchus* mentioned above, this great idol exacted a terrible tribute from its worshippers. In return for the beautiful weather they desired for their crops, they offered up to it their first-born children 'with many cries and heart-rending moans for their death, assembled about Cromm Crúach' (d'Arbois de Jubainville, *Le Cycle mythologique irlandais*, Paris, 1884, p. 107).

The Rennes MS of this poem tells us that Cromm Crúach was, before the arrival of Patrick, the *rig-ídal h-Erenn*, or 'king idol of Ireland.' 'Around him [were] twelve idols made of stones: but he was of gold. Until Patrick's advent he was the god of every folk that colonised Ireland. To him they used to offer the firstlings of every issue and the chief scions of every clan. . . . And they all prostrated themselves before him, so that the tops of their foreheads and the gristle of their noses, and the caps of their knees and the ends of their elbows broke, and three-fourths of the men of Erin perished at these prostrations' (K. Meyer and A. Nutt, *Voyage of Bran*, London, 1895-97, ii. 149 f.; for the versified form, see *ib.* p. 301 ff.). Many were the legends grouped about this idol. The *Dinnsenchus* in the *Book of Leinster* informs us that, several centuries before the Christian era, King Tigernmas and crowds of his people were destroyed in some inexplicable manner while they were worshipping it on the eve of the first of November, or Samhain Eve (P. Joyce, *Soc. Hist. of Anc. Ireland*, London, 1903, i. 275). According to the *Tripartite Life* (pp. 91-93), this idol, which was worshipped by King Laegaire and many others, was overthrown by St. Patrick, who cast his curse upon it. The ground opened up and swallowed the twelve lesser idols as far as their heads, which may be interpreted that, when the life of the Saint was written, the pagan sanctuary had so fallen into decay that only the heads of the twelve lesser idols remained above ground (J. Rhys, *Celtic Heathendom* [*HL*, 1886]$^3$, London, 1892, p. 201).

Another famous idol in western Connaught was Cromm Dubh, or 'Black Crescent,' whose name, according to O'Curry, is still connected in Munster and Connaught with the first Sunday of August (*MS Materials*, 632). This Sunday, the anniversary of its destruction, is still called 'Cromm Dubh's Sunday' (*Domnach Cruimm Duibh*). There was also an idol called Kermand Kelstach, which, it appears, was the special tutelary god of the province of Ulster (Joyce, *loc. cit.*). Cormac's *Glossary* (p. 23) mentions the idol *Bial*, which is called elsewhere *Bél* (G. Petrie, *On the Hist. and Antiq. of Tara Hill*, London, 1839, p. 84). At the festival of *Bron-Trogin*, *i.e.* the beginning of autumn, the young of every sort of animal was assigned as an offering to this god (*RCel* xi. [1890] 443). According to another legend, 'a fire was always kindled in Bial's name at the beginning of summer, and cattle were driven between the two fires' (Stokes, *Cormac's Glossary*, p. 23).

According to the passage quoted above from Cormac's *Glossary*, St. Patrick abolished the *imbas forosnai* and the *teinm laegda*, because the performance of these incantations needed an offering of some kind to idols or demons. These probably include the *lám-dia*, or 'hand-gods,' which were small images used for divination. When Cormac mac Art refused to worship idols and was punished therefor by the Druids, it is probable that the *lám-dia* are referred to (*RCel* xii. [1891] 427; MacCulloch, 286); and, before the lady Cessair decided to make a trip to Ireland, she consulted her hand-gods to see if the omens were favourable (*ib.*). In the account of the Battle of Moytura, mention is made of a speaking sword, which had that power, because at that time 'men worshipped arms, and they were a magic safeguard' (d'Arbois de Jubainville, *Epopée celt. en Irlande*, Paris, 1892, i. 444).

Notwithstanding St. Patrick's prohibition, idol-worship in certain forms continued in many places in Ireland far down into Christian times; and traces of these rites exist even to-day in some of the more remote districts of the country.

**4. Welsh.**—The lives of the early Saints of Britain inveigh frequently against idolatry or image-worship, to which the British Celts were addicted (MacCulloch, 286 f.). Gildas tells us that in his time there were images 'mouldering away within and without the deserted temples, with stiff and deformed features' (*de Excid. Brit.* ii.). Like the Irish, the Welsh had also their speaking stone, called *lech-lawar*, or 'stone of speech.' Giraldus Cambrensis relates (*Hib. expug.* i. 38) that, when Henry II., king of England, landed at St. David's on his return from Ireland, a Welsh woman threw herself at his feet and made a complaint against the bishop of the diocese. Receiving no redress, she clapped her hands loudly and shouted: 'Avenge us this day, Lechlawar, avenge our race and nation on this man.' According to the same authority, this was a stone 'which was placed across the stream, dividing the cemetery of St. David's from the north side of the church, to form a bridge.' The surface of the stone, which was of beautiful marble, was worn smooth by the feet of pedestrians. Once, when a corpse was carried over it, the stone spoke, but in the effort it cracked in the middle. Giraldus also mentions (*Itin. Camb.* ii. 7) a stone in the island of Mona which always returned to the same place, no matter where it was transported.

**5. Scots.**—M. Martin relates that the inhabitants of the Scottish islands worshipped an image of a god called Bel, without doubt the same as the Irish god of that name (*Descrip. of the Western Islands of Scotland*$^2$, London, 1716, p. 105).

**6. Bretons.**—The ecclesiastical canons of Brittany mention stones, fountains, and trees as being

worshipped even as late as the 10th cent. (J. Fergusson, *Rude Stone Monuments in all Countries*, London, 1872, p. 24 f.). Processions of images were quite common in Brittany up to a recent date. St. Martin stopped one of these processions, because he considered them a form of pagan worship (Sulp. Severus, *Vita S. Martini*, xii.). These processions were forbidden by the edicts of various councils, and often, finding this method of inveighing against them to be of no avail, they Christianized them. Thus the rogation processions with the crucifix and the Madonna, as well as the pilgrimage of St. John's image, at the Midsummer festivals, were but a continuation of these ancient forms of worship. The *Groah-goard*, or 'Venus of Quinipily,' which may date back to pre-Roman times, was for many centuries an object of important rites in Brittany (D. Monnier, *Trad. pop. comparées*, Paris, 1854, p. 362).

LITERATURE.—This has been sufficiently indicated in the article. JOHN LAWRENCE GERIG.

**IMAGES AND IDOLS** (Chinese).—China is full of images. Buddhism, Taoism, and Confucianism have all fostered the use of them, and they are to be found in Buddhist and Taoist temples in the greatest abundance, in private houses, in boats, in streets, and almost everywhere.

The Emperor Wu Yik (1198–1194 B.C.) is credited with having made the first images or idols. The objects of worship then were heaven and earth, the spirits of mountains and streams, etc. The Emperor looked upon them as mythical; and, to show his disbelief in, and contempt for, them, he had images of clay and wood made to represent them, and ordered men to fight with them. As a result, he said that men were stronger than the gods, and it was folly to worship them.[1]

The art of sculpture and the making of images of stone do not reach back in China to the high antiquity that they attained in Egypt and some other ancient lands, though the germ was present before the Christian era, and revealed itself in sculpturing in bas-relief on the surface of stone. The earliest known specimens were executed in the 2nd cent. B.C. They display a primitive character in their composition, and convey the impression that the art was in its infancy and could not have been in existence more than one or two centuries, though the development of art in China was nearly as old as Egyptian and Chaldæan civilization.[2] The mural decorations of buildings were apparently the precursors of the isolated image which later on came out, as it were, from the stone stelæ of which it had previously formed a part, and on the surface of which it was carved. Chinese art is also greatly indebted to Buddhism in the treatment of animal and human life as we see it revealed at a later period; for it, again, developed the germ of the idea in the Chinese mind, and gave a great extension to it. It inspired the statue which hitherto had only half emerged from the stone, and, copying the examples introduced by the Chinese Buddhist pilgrims on their return with the idols which they brought from India, the first Chinese statues were of Buddhist deities.

1. Buddhist.—The majestic forms of some of the gigantic images—one is 100 ft. in height—bear a certain grandeur in their mien; a serenity and calmness appears in their faces in keeping with the control which a Buddha should have over the passions. The Indian inspiration is distinctly to

feet, one placed on a tortoise, while his banner has a sombre ground on which appear the seven stars of the plough, or Charles's Wain. There are also the Ten Judges of Hades, and in their courts are images of men and women undergoing the punishments of Hell. Besides these, there are the State-gods, such as the God of War, the Patron Saint of the late Manchu dynasty, and a number of others.

3. **Confucian.**—Statues of Confucius came into vogue during the T'ang dynasty (A.D. 618–905). It may be noted here that there is not much scope in China for images or statues except for religious purposes, since the form which monuments take is not that of statues, but of ornamental arches over roads or streets in town or country. These images of Confucius, however, seem to approach nearer to our idea of a statue than any others; for the tablets to the Sage are retained as well. At one time these images were prayed to for the granting of posterity; but this was stopped. The adoration offered to him is adulatory and not supplicatory in its nature. For some time the images were of wood, but in A.D. 960 clay images were used.

In A.D. 1457 a copper statue of the Sage was placed in the Imperial Palace and saluted by ministers before admission on State business. The *literati* did not approve, and it was done away with. In A.D. 1530 the images were removed from Confucian temples.[1] There are still, however, images of Confucius and his disciples to be found here and there throughout the country. No image of the Sage is allowed in Buddhist or Taoist temples; but there are some temples styled 'Three Religion Halls,' in which Buddha, Lao-tse, and Confucius are enthroned as a triad.[2]

4. **Images of ancestors.**—Images have not been used in ancestor-worship, tablets for one of the souls of the deceased being considered the proper mode of providing an object of worship. But a notable instance of a contrary practice is recorded: one of the Twenty-four Paragons of Filial Piety carved wooden images of his parents, and served them as if alive. His jealous wife pricked the fingers of the images, and they wept.[3]

5. **Aboriginal images.**—In the south-east of the empire there is a large boat population who are descended from aborigines. They have customs of their own, and one is that of having wooden images made of their dead children, which they worship. As the space on the boats is limited, the shrines, which every boat has, are small, and consequently the images are likewise of small dimensions, ranging from about 4½ to 8 or 9 inches in height. Most of these images represent what are evidently older persons than mere children. There is quite a variety in the positions and attitudes: some, like many of the gods, are seated on thrones and are clothed in official attire; others are represented as standing, perhaps even on dragons, and clad in warlike robes; and many of them carry swords or daggers and halberds in their hands. One in the writer's collection has English clothes on—a blue jacket, light green trousers, and a low-crowned hat. One curious feature of these images is that some of the girls, or women, are represented as riding on storks—that bird being supposed to carry the soul to heaven—and some of the boys, or men, on small ponies. In others, not content with one, the image is astride two ponies or two tigers, and has its feet resting on two of these wild beasts as well.

6. The spirit of the being worshipped is supposed by the Chinese to be present in the image when a ceremony has been performed invoking its presence. At a temple near the writer's home in Canton, where extensive repairs were to be effected, the spirits were asked to vacate their abode in the images; and, when the repairs were finished, another ceremony was held in which the spirits of the gods were invited to return.

Some images are made hollow, and models of the internal organs are placed inside them. At times a live creature, such as a lizard, is placed inside, and the idol is then apparently considered to be vivified.

There is a niche or shrine or loft in a Chinese house or shop for images, or a red-painted board, or red paper, with the names of one or more gods, in addition to ancestral tablets, unless the clan has an Ancestral Hall; but in Central China this general rule does not hold good, for 'a considerable proportion of the houses . . . are devoid of idols or even Ancestral Tablets.'[1] The changes now taking place in China are causing a movement towards disbelief in idols and a discarding of them.

LITERATURE.—This has been sufficiently indicated in the footnotes.

**IMAGES AND IDOLS (Egyptian).—1. Early methods of representing deity.**—In the earliest stages of the Egyptian religion, the images of the gods were of the rudest and simplest description—mere fetish emblems such as pillars of stone or wood, trees, or cairns. Thus the god of the highways, Min of Koptos, revealed himself either in a rough stake, or in a heap of stones by the wayside; the goddess Hathor dwelt in a sycamore tree; and Osiris was represented by a curious pillar apparently composed of the capitals of several pillars superimposed. An alternative method of representing divinity, which co-existed in early times with the crude fetish emblem, was that in which the god was presented in the form of an animal. Sebek, the water-god of the Fayum, manifested himself as a crocodile; Khnum, the god of the cataract district, as a he-goat; Upuat of Siut as a jackal; while Sekhmet, the goddess of Memphis, appeared as a lioness, and Hathor of Denderah as a cow. These rude early methods of representing deity maintained their influence in a modified form down to a very late period, and, even when the original emblems had been superseded by more elaborate images, traces of the original emblem are still to be perceived in the form of the image. Thus down to the very latest stages of the worship of Osiris, the original pillar, which was supposed to represent the backbone of the god, was still an object of worship, and its setting up, which typified the restoration of Osiris after his murder by Set, was the occasion of great festivals in particular localities, while the later images of Min of Koptos, though adorned with a human head and rudely shaped to human form, are merely the original stake wrapped in swathings of linen. The animal form of representation was also perpetuated, in the case of many of the gods, by the curious combination of an animal's head with a human body. In the case of the Sun-god, Ra, the exploration of the Sun-temples at Abusir has made it evident that, as late as the period of the Vth dynasty, this god was worshipped under the guise of his original emblem. The central object of adoration in these temples was, not an image of Ra, but a huge truncated obelisk, standing on a pedestal in the midst of an open court. The earliest divine images known to us are the three colossal figures of the god Min, found at Koptos by Flinders Petrie. These belong to a very early dynastic period, are of very rude work-

manship, and, among other reliefs sculptured upon them, have representations of the fetish emblem of the god—a tall pole, adorned with a garland.

**2. Images of deity in human form.**—Somewhere about the time of the IInd dynasty the Egyptians began systematically to represent their gods by images of a human form. The god appears as a man wearing the ordinary clothing of an Egyptian, a tunic, adorned, as in the case of a king, with the tail of an animal. On his head he wore a helmet, a crown, or a head-dress of tall plumes, while in his hand he carried a sceptre or leading staff, the goddesses carrying, as their distinctive emblem, papyrus stalks. From this time onwards throughout the historic period, the use of images, either human in form or human with an animal's head, to represent the gods to the senses of the faithful was constant, save for one short interval, when, in the reign of the reforming King Akhenaten (*c.* 1385-63 B.C.), all such representations of deity were forbidden, and the only image tolerated was the figure of the solar disk with outspreading rays ending in human hands.

Of the images of the gods used for purposes of worship, the most important type was that of which, unfortunately, we have no surviving example—the small cultus image which was kept in a costly shrine in the Holy of Holies of each Egyptian temple, duly tended day by day by the priests, and exposed to the view of the general public only on great ceremonial occasions. While no identifiable specimen of this most sacred object of Egyptian worship has survived, we can form a fair idea of its style and material from the literary references which have come down to us. The sacred image was in curious contrast to the gorgeous and gigantic temple which existed for its sake. It was generally neither of large size nor of costly materials. Thus in the temple of Hathor at Denderah, there were, among others, the following sacred statues: Hathor, painted wood, copper, inlaid eyes, height 3 ells, 4 spans, and 2 fingers; Isis, painted acacia wood, eyes inlaid, height 1 ell; Horus, painted wood, inlaid eyes, height 1 ell and 1 finger. The largest, therefore, was scarcely of life size, the smallest only about 16 inches in height. The reason for this insignificance in size was that for certain acts of worship the images had to be easily portable.

The paltry size and material of these little wooden dolls were, however, atoned for by the splendour of their abode, and the reverence with which they were served. The shrine of the god was in the innermost chamber of the temple, which was in total darkness save on the entry of the officiating priest bearing artificial light. It consisted generally of a single block of stone, often, especially in the later periods, of enormous size, hewn into a house which surrounded with impenetrable walls the image of the god. The doorway in front was closed with bronze doors, or doors of wood overlaid with bronze or gold-silver alloy; and each day, after the daily ritual had been gone through, these doors were closed, fastened with a bolt, and then tied with a cord bearing a clay seal. On either side of the sanctuary of the principal god of the temple were subsidiary sanctuaries, containing images of the other two members of his triad. Thus in the temple of Amen at Thebes, Amen would occupy the central sanctuary, while his consort, Mut, would be on one side, and the Moon-god, Khonsu, on the other. Within the shrine, the image of the god reposed in a little ark, or portable inner shrine, which could be lifted out and placed upon the barque in which the deity made his journeys abroad on stated occasions.

The daily ritual of service to the image was in
its main outlines the same in all the
though there were many minor variation

began to perform the daily toilet of the god. He
water on the image twice from four jugs, clothed it w
wrappings of white, green, red, and brown, and painte
green and black paint. Finally he fed the image, b
before it bread, beef, geese, wine, and water, and deco
table with flowers.

This was the regular daily service; b
addition there were great festival occasions
enormous quantities of food and drink were
to the god. After their ceremonial appropri
the greater part of these provisions, no doub
came the perquisite of the priests; but a c
portion was reserved for the use of the d
guished dead who had adorned the temple b
dedication of votive statues. 'The dead desi
share in the food from the altar of the god,
that the god had satisfied himself therewith.
addition the wrappings of the divine image
taken off, and given as bandages for wrap
the mummies of those who had been benefact
the temple—thereby, no doubt, securing
blessedness in the other world.

On great festival occasions, there was
special addition to the ordinary ritual, besides
multiplication of offerings. The chief event
such a day was that the people should 'behold
beauty of their Lord.' The little image was, th
fore, taken out of its chapel in its portable shri
which, carefully swathed in veils, was placed
barque carried by poles on the shoulders of sev
priests. This barque was carried through the o
court of the temple, and thereafter through
town. At intervals it was set down upon a st
pedestal, and, when one of these stations of
god was reached, incense was burned and pray
were offered, and at last the hangings which clo
in the sides of the ark were withdrawn, and t
image of the god was revealed for a moment to t
eyes of the faithful. Besides these journe
through his own town for the benefit of his faithf
people, the image was in the habit of maki
occasional ceremonial visits to the gods of neig
bouring towns — voyaging, on these occasion
in one of the ships which were attached to t
temple. The visit, which doubtless had its origi
in some traditionary intercourse of the two god
was duly returned by the image which had bee
visited.

These little cultus images were supposed to b
endowed with the power of giving oracles. For
discussion of the consultation of images, see art. DIVINATION (Egyptian), vol. iv. p. 793 ff.

One other attribute of these images remains to
be noticed. They were endowed with magica
powers of healing, and, on sufficiently great occa-
sions, these powers were brought into requisition.
A late legend, composed for the glory of the Moon-
god, Khonsu, relates how Bent-resht, princess of
Bekhten, and sister of Neferu-ra, the wife of
Ramses II., was possessed by an evil spirit which
could not be driven out. In answer to a request

made to Ramses by the prince of Bekhten, the image of Khonsu was sent to the rescue, healed the distressed damsel, and was detained in the land of Bekhten for more than three years. The prince of Bekhten would fain have kept the wonder-working image altogether, but was induced to send the god back to Egypt by a vision in which he saw Khonsu coming out of his shrine in the form of a golden hawk, and flying back to his native land (cf. art. DISEASE AND MEDICINE [Egyptian], vol. iv. p. 753).

These little images were the chief objects of Egyptian worship, so far as the temples were concerned; but, in addition, the temples of the various deities were provided with innumerable other images of the gods. These were mainly votive offerings contributed by pious people who believed themselves to have been the recipients of favours from some particular god, or who desired to receive favours. Thus the little temple of Mut at Thebes became, for some reason, a perfect storehouse of votive images of the goddess Sekhmet; and the bronze and stone images of the gods found in most museums are largely of this votive class. Further, images of the gods were extensively used in connexion with the family religion of the Egyptians. The remains of several houses give evidence of the existence of a recess in the wall of the central hall, whose adornment of religious scenes points to it having been the focus for family worship, and the multitude of little statuettes of the gods in pottery, bronze, silver, and even gold, shows how wide-spread was the custom of having a tutelary image of the favourite god to watch over the house. In the later stages of the Egyptian religion the image of Horus subduing the powers of evil seems to have been the standard protective figure for the house; but under the Empire the favourite domestic divinities were not any of the great gods, but minor deities. Chief among these were the grotesque little bandy-legged god Bes, and his wife, the hippopotamus-shaped Taurt. Images of these very humble gods had an unbounded vogue, and were supposed to protect against evil spirits. They were found in every household, and were often wrought into the handles of mirrors and other toilet articles, while they were frequently worn, especially by children, as amulets. The curious little images of deformed children, called *pataikoi* by Herodotus (iii. 37) and regarded as the sons of Ptah, shared in the popularity of Bes and Taurt.

3. **Animals as living images of deity.**—It must not be forgotten that, in addition to all their graven and molten images, the Egyptians possessed living images of certain of their gods, and that in the later historical period the worship of these developed to an extraordinary extent, so much so as to have impressed upon other nations the idea, totally erroneous at least as regards the greater part of Egyptian religious history, that the Egyptians were a race of animal-worshippers. Originally, as we have seen, certain deities were conceived of under the guise of animals, and through the whole historic period certain animals were held to be living images, incarnations of divinity. Chief among these, of course, were the Apis-bull of Memphis, the incarnation of Ptah, and the Mnevis-bull of Heliopolis, the incarnation of Ra. But, while this is so, the development of animal-worship which excited the attention of Herodotus and the derision of Juvenal belongs only to the decadence of the religion. 'It was a remarkable adjunct to the Egyptian religion, but it did not belong to its original structure. In later times veneration for the sacred cat, monkey, sheep, and serpent increased greatly . . . but the ancient faith of the people knew nothing of this craze' (A. Erman, *Handbook*, p. 24). Of one Egyptian divinity alone no image was ever made for purposes of worship. This is Maat, the goddess of truth, who appears in the scenes of judgment before Osiris, and whose little figure, crowned with a single feather, is continually presented by the king as an offering to the god whom he is worshipping.

4. **Images of human beings used in a religious connexion.**—There remains to be noticed the extensive use made by the Egyptians of images of human beings in a religious connexion, especially in connexion with their belief in the life after death. The necessity of securing that the *ka* of the deceased person should have a recognizable habitation to which to return resulted in steps of a very elaborate kind being taken to secure so important an end. First of these was, of course, the mummification of the body, ensuring its continuance for a long period. But the mummy might perish or be destroyed, so there grew up, from a very early period, the custom of placing in the tomb of the deceased an image, or many images, of him in stone or wood. The first requisite of these images was that they should be absolutely faithful likenesses of the person whom they were meant to represent; and the result is a series of statues which aim, not at beauty, but at life-like resemblance—physical deformities being reproduced with as much care as beauties. No other nation offers anything in the least corresponding to the series of portrait-statues which has been preserved to us in the tombs of Egypt.

Besides the portrait image or images, the tomb of an Egyptian was furnished with a number of other images, of tiny size, representing the servants who were supposed to discharge for their master any work which he might be called upon to do in the Sekhet-Aaru, or 'Fields of the Blessed.' These *ushabtis*, or 'answerers,' probably represent the survival from a time when the slaves of the Egyptian grandee were slain at his tomb to accompany and serve him in the other world (cf., further, art. DEATH, etc. [Egyptian], vol. iv. p. 460).

In common with many other nations, the Egyptians believed in the magical power of images of gods and men. These images, made of wax, and smuggled into the house of the person to be injured, were believed to 'cripple the hand of man.' The standard instance occurs in the trial of certain conspirators against Ramses III., where it was proved that the 'superintendent of the cows' had taken a magical book from the Pharaoh's own library, and, in accordance with its directions, had made waxen images, and introduced them into the palace for the purpose of injuring Ramses. This belief plainly comes down from a very early period, as a waxen crocodile is used to punish a criminal in the earliest of Egyptian folk-tales, whose action is supposed to take place in the time of the IIIrd dynasty.

## IMAGES AND IDOLS (Greek and Roman).

—I. **Greek.**—The cult of images belongs to a later stage of religious development than mere fetishism, or the holding sacred of any object which has acquired supernatural power (*mana*). It is devel-

oped out of such fetishism by growing anthropomorphism, as the gods become humanized and come into closer relations with the human spirit. Among primitive peoples there is a belief in a near connexion between an image and the person or thing portrayed; so that what affects the image must also affect the original of the image. Connected with beliefs of this kind were some of the customs of early Greek religion. The temple was the abode of the deity, his image being his surrogate, and taking his place. The deity in a measure resided in the image; petitions to him were laid on its knees, incense was burned before it, and the treasures given to the god were heaped about it. Among the most pleasing gifts to the god were other images, whether of himself or of votaries. The notion appears to be that, as the image of a votary stands in the presence of the image of the god, so the god will be near the votary's person to aid and direct him. The tomb rivalled the temple as a place for images, and with the dead were buried a great quantity of terra-cotta figures.

The religious objection to the use of images in the worship of gods and heroes, which was strongly developed among the Jews, and has been adopted by the Muhammadans and some branches of the Christian Church, can scarcely be said to have existed in Greece. We have learned from the brilliant discoveries of Schliemann and Evans that idols were known in the country many centuries before the arrival there of the Greek race. The chief deity at Knossos in Crete seems to have been a great goddess of nature, of the same class as Mylitta and Cybele, who is represented on gems as flanked by lions, and in a remarkable statuette of enamel as holding snakes in her hands. With her was associated a male deity of less importance, who is sometimes depicted on gems, but who was usually worshipped in the symbol of a double axe, which is of frequent use in Crete (see, further, 'Ægean' section above, and art. AXE).

After the decay of the Minoan and Mycenæan civilizations, and the entry of the Greeks upon the scene, still in a barbarous condition, the art of image-making, like all other products of civilization, seems to begin again at the lowest level, and gradually to rise. When a site of an ancient city in Greece or on the coast of Asia is excavated, there is usually found on the lower levels a multitude of rude terra-cottas. The same is true, in some districts, of graves.

It is a noteworthy fact that the great mass of these images represent the female figure. This may be the result of religious conservatism, as the Greeks probably adopted from their predecessors in the country the cultus of goddesses of growth and procreation, the varieties of the great Mother-goddess whose cultus was spread over the whole East, from Babylon to the Ægean. Figures of the characteristic deities of Greece—Zeus, Apollo, Poseidon, and others—do not appear. Figures of men on horseback and in chariots do, however, occur (fig. 1),[1] most commonly in Cyprus, but also in Greece Proper. Whether these images represent ordinary mortals or the heroized dead is a question not easy to answer.

Before the 7th cent. B.C. these works are of a very primitive character, and their date is not easy to determine. If of stone, they represent the naked female body in rudest form, the arms and legs being roughly indicated, and the head a mere flat protuberance. These figures are especially characteristic of the Islands of the Ægean. Commoner on all the coasts of that sea are figures of terra-cotta of conical form. Sometimes they are naked, more often draped, the legs hidden by the garments,

[1] Figures 1 to 6 are from F. Winter's *Typen der figürlichen Terrakotten*, Stuttgart, 1903.

the arms mere stumps, the head forn pinches of finger and thumb in the soft points, such as the breasts, are rough There is the standing type (fig. 2, 3) a type but slightly distinguished from

Such images have been found in abun the great religious sites of the Greek Ephesus, Argos, Naucratis, and elsewhere

FIG. 2.

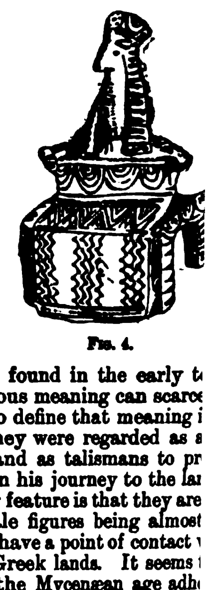

FIG. 4.

bers of them are also found in the early t That they had a religious meaning can scarce doubted; but clearly to define that meaning i easy. In some way they were regarded as s pleasing to the gods, and as talismans to pr the spirit of the dead in his journey to the la souls. The outstanding feature is that they are dominantly female, male figures being almost tirely absent; here we have a point of contact pre-Greek religion in Greek lands. It seems the worship which in the Mycenæan age adh to certain sites, and dedicated them to the wor of the ancient goddess of nature, still survived many ages. It has, in fact, survived in th regions to the present day, when the Moth goddess of Christianity takes in the beliefs of people the place of her heathen prototype.

In the 6th cent. B.C. the old generalized type goddess becomes differentiated in various localiti She merges in the goddesses of the Greek pantheo and carries their symbols. As Aphrodite s carries the dove, as Artemis the stag (fig. 5), Persephone the sacrificial pig; as Athene she wea the helmet or the ægis. Excavations, *e.g.*, o the Athenian Acropolis have brought to light multitude of seated and standing figures which ca represent only Athene herself, and are sometime armed (fig. 6). In Corfu there is a series extendin over a long period, in which Artemis may clearl be recognized. Many such local series may b studied in our museums; and at this time mak

deities as well as female become common. The terra-cotta figures are now swept from the vague and merely traditional use of the pre-historic age into the full current of Greek Olympian religion.

FIG. 5.

FIG. 6.

In the 4th cent. B.C., if not earlier, we may trace a further change of usage. The great mass of terra-cottas from temples and from graves at sites like Myrina in Æolis and Tanagra in Bœotia are clearly not religious in character. They represent youths and girls of pleasing type, either simply or as engaged in conversation or in games. Sacred figures are rare among them. When such figures were thrown into a grave, they seem to have been purposely broken, as if to unfit them for any but sepulchral use. The meaning of these images has been much discussed. Some archæologists would see in them survivals of the primitive custom of slaying wife or slave to accompany the dead to the world of shades; others would see an intention to furnish the tomb with pleasing copies from the world without. Probably the true explanation is a very simple one. Figures of terra-cotta were used as playthings by children, and they were part of household decoration. When representing the gods they served as images for domestic worship, and were placed in niches or on pedestals. The Greeks were so devoted to the representation of the human form that they applied it everywhere, even to common household utensils. So they naturally regarded little images as gifts grateful alike to the gods and to the dead, fitted to people alike the temple and the tomb. And they had one very great advantage as offerings—they were extremely cheap.[1]

Meantime, for the larger cultus-images of the gods and goddesses who were brought in by the Greek invaders we may trace another origin. The primitive Greeks have no scruple in attaching divine virtues to stocks and stones; but they must be stocks and stones of a special character, such as the divine powers themselves had marked out and chosen. Trees which for some reason were regarded as full of divine energy, and meteoric stones which had fallen, or were supposed to have fallen, from the sky, easily acquired a sacred character. That mere obelisks, called ἀργοὶ λίθοι, were even in later Greece regarded as sacred we learn from Pausanias,[2] who saw ranged in the agora of Pharæ thirty conical stones, each of which received the name of a particular deity. The testimony of Pausanias has been confirmed by the recent discovery in Arcadia of a number of square pilasters, each surmounted by a conical stone, and inscribed with the name of a god—Zeus, Artemis, the Hero, and so on.[3]

As the spirit of anthropomorphism in religion grew strong in Greece and Asia Minor, it was very natural to add something of human appearance to a conical stone or the trunk of a dead tree. The coins struck in the Roman age in cities of Asia preserve for us the outlines of *simulacra* which can scarcely be said to be of human form, yet are by no means shapeless blocks. Of such a kind were the images at Perga of Anassa or Artemis (fig. 7),[1]

FIG. 7.

at Ephesus of the local goddess (fig. 8), at Euromus in Caria of the Carian god of the double axe (fig. 9). A head, wearing a tall crown, emerges from the stone; arms are inserted; the wooden cylinder is covered with bronze or gold wrought by an artist. The process is well described in Is 40[19f.]. Some-

FIG. 8.

FIG. 9.

times rude images excavated from the ground, or brought from foreign lands, were accepted as a kind of revelation of a deity. Their uncouthness was no obstacle; for there is truth in the well-known saying of Goethe: 'Wonder-working images are usually but ugly pictures.'

The origin of idols is similar in most countries. But what is most interesting in the present connexion is the way in which Greek artistic taste and the love of human beauty formed out of such unpromising beginnings a pantheon of exquisite forms. In this the Greeks are almost unique; for, although mediæval Europe ran riot in the production of images of angels, apostles, and saints, there was not then in existence the appreciation of beautiful bodies which is shown in Greek sculpture.

In the religion or religions of historic Greece there were several strata or tendencies; and the tendency to religious sculptural idealism does not belong to all of them. To the philosophers the representation of the gods in human form did not appeal; and the writings of Plato and other great thinkers show a steady contempt for plastic art. At the other end of the scale, the uncultured husbandmen and slaves were ready to venerate figures of the gods in proportion to their wonder-working power rather than in proportion to their beauty. The Dionysiac and other mysteries afforded to their religious feelings a more suitable field of exercise than did the staid worship of the great temples. But between the intellectuals on the one hand and the superstitious on the other came the mass of intelligent and art-loving citizens. To them the State-religions, belonging to the cities and great shrines of Greece, centring in the worship of the deities of Olympus, and the heroized ancestors of the clans, afforded full satisfaction. For them

[1] An excellent general account of Greek figurines will be found in E. Pottier's *Statuettes de terre cuite*, Paris, 1890.

[1] Figures 7 to 18 are from coins in the British Museum.

the poets and dramatists worked into beautiful poems the tales of mythology; and for them the artists incorporated in bronze or marble or ivory and gold the ideas of the race as to the higher powers. As to the great city festivals, they were of mixed character. The conservative tradition, which is so marked a feature of all religious cult, retained in them much that had belonged to prehistoric and even to non-Hellenic days, scraps of savage religion preserved as flies are preserved in amber. But as a whole the festivals were remoulded by the Olympian religion and filled with Hellenic sweetness and light.

Maximus of Tyre, a rhetorician of the Antonine age, has left us a pleasing, if somewhat verbose, defence of Greek image-worship.[1] Men, he says, who can raise their spirits directly into communion with the divine perhaps need no images. But this kind of man is rare; and it would be impossible to find any whole race conscious of the divine and needing no such aid. The Persians worship fire, and solemnly feed it with logs; the Egyptians regard the animals of the Nile as sacred, poor things though they be; the Celts venerate the oak, the Pæonians a sun-disk set up on a pillar; the Paphians worship Aphrodite in the form of a white pyramid. But the Greek custom is to represent the gods by the most beautiful things on earth, pure material, the human form, consummate art. The idea of those who make divine images in human shape is quite reasonable, since the spirit of man is the nearest of all things to God and most god-like. If the Greeks are lifted to the contemplation of God by the skill of a Pheidias, and the Egyptians by honour given to animals, while others honour a river and others fire, the variations do not vex Maximus: only let men know God, love him, think of him.

There is a well-known saying of Herodotus,[2] that it was Homer and Hesiod who first distinguished the functions of the gods and assigned their forms. Of course, in the time when the Homeric poems were written, there could be no question of statues of the gods; there can have been none but the rudest images. But it is doubtless true that Homeric incidents and descriptions may have dwelt in the minds of great sculptors of subsequent ages, and inspired them. It is expressly told us[3] that, when Pheidias made the great statue of Zeus at Olympia, he had in his mind the lines of Homer which describe how the nod of Zeus shook Olympus, and how his hair floated out, although in fact the Homeric lines would far better suit a Zeus of the Hellenistic age than the stately and self-contained colossus of Pheidias. Homer did much to settle the order and personalities of the Hellenic pantheon; but, as a matter of fact, he has not a statuesque imagination. We should be mistaken if we took back to Greek times that predominance of literature over art which has been, though of late years less markedly, a feature of modern times.

The great difference between the religious art of the Greeks on the one hand, and that of Babylon, Egypt, and India on the other, is that, whereas the Oriental nations were content with merely symbolic representations of the divine powers, the Greeks were ever struggling to merge mere symbolism in anthropomorphism.

The gods of Egypt differ one from the other not in shape but in the attributes which they hold, or in the animal heads which are placed on their shoulders. Isis has the head of a cow, Horus of a hawk, and so on. The deities of the Babylonians are often furnished with wings to indicate swiftness, but they are only ceremonial wings, and not meant for real flight. Sometimes they hold a pair of animals or birds in their hands to indicate their power over animal nature; but the arrange-

[1] *Dissert.* viii.

[2] ii. 53.

[3] Strabo, VIII. xxx. [p. 354].

ment is merely a conventional one; the creatur
carried suitably. In India the symbolic turn given
riot: the varied powers of the gods are indicate
them many heads, and many hands full of instr
various purposes.

In the earliest distinctive Greek art, de
those of Egypt and Babylon sometimes ma
appearance. On the chest of Cypselus, p
at Olympia, Pausanias saw represented
figure which puzzled him. It was inscrib
the name of Artemis, but it had wings
shoulders, and carried in the two hands a
a panther.[1] As it became adult, Greek t
aside this crude symbolism, and preferred
present the swiftness of Artemis not by
but by the litheness and vigour of her fran
her power over nature by giving her as an
ant and friend a dog or a stag. In the art
6th cent. the Greek deities almost always
an attribute by which they may be ident
Zeus an eagle or a thunder-bolt, Hermes a h
staff, Apollo a bow or a lyre, and the like
these become less necessary later, when the
can be identified by bodily type. There is n
of hesitation whether a 5th cent. image repr
Apollo or Herakles, Athene or Aphrodite, si
each case the qualities of the deity are thoro
incorporated and revealed in the bodily form
mature Greek art external symbolism is no
tirely absent. Eros (Love) and Nike (Vic
still retain their wings, though they use the
fly with, and do not merely carry them. He
has small wings on his cap or on his heels,
river-gods are still bull-headed. These, how
are little more than survivals.

If we bring together Pliny's *Natural Hi*
(bks. xxxiv.–xxxvi.) and the descriptions of P
anias, we are able to discern the historic origi
religious sculpture. Just as Homer stands *at*
source of Greek poetry, so at the source of Gr
sculpture we have the figure of Dædalus, wh
himself merely mythical, and who was set *d*
as the maker of most figures the actual origi
which was lost in the mists of antiquity. Bu
number of artists classed by the ancient *writ*
as pupils of Dædalus (Dædalidæ) really exist
for we find their signatures on existing bases
statues. Beginning about 600 B.C., we can *tr*
lines of descent in a variety of materials. O
school in Peloponnesus began with work in woo
and so, by inlaying the wood with gold, *ivor*
and ebony, or clothing wooden statues with met
worked their way towards that technique in go
and ivory which was used in the 5th cent. *for t*
most magnificent of the statues of the god
Another school, of which Rhœcus and Theodor
of Samos were the most noted members, *discovere*
or improved the art of casting statues in bronz
and so made antiquated the earlier fashion o
beating out plates of bronze into the *require*
shape, and fastening them with nails. Othe
schools, belonging mostly to the Greek islands
such as Chios, Paros, and Naxos, used their *nativ*
marble, and superseded the old rude figures cut
out of limestone by delicate and beautiful statues
of glittering material.

It is impossible here to follow, even in outline, the process whereby the sculptors of Greece succeeded in embodying more and more completely the types of the great deities of their race. It was a long and intricate history. A great English book on the subject is L. R. Farnell's *Cults of the Greek States* (5 vols., Oxford, 1896–1909). A still larger work had been planned by J. Overbeck (*Kunstmythologie*, Leipzig, 1871–89), but he died after publishing only three volumes. The articles in W. H. Roscher's *Ausführliches Lexikon der gr. und röm. Mythologie* (Leipzig, 1884 ff.) contain usually the most recent information on the subjects with which they deal; but the material grows every day; and a complete digest of it is scarcely possible. Three statues of Apollo, represented on coins, may serve to illustrate the process: fig. 10 is of the Apollo of

[1] Paus. v. xix. 5.

Delos, a 6th cent. work of Dædalidæ; fig. 11 is of the Apollo of Miletus, made by Canachus of Sicyon late in the 6th cent.; fig. 12 is of the Apollo at Alexandria Troas, a work of Scopas, but in a somewhat stiff and archaic style.

It is evident that the higher qualities of the deity are much less easy thus to incorporate than the

FIG. 10.—Coin of Athens.

lower. Apollo as the god of the gymnasium was easy to render in art, since he had to be only an idealized athlete. Apollo, the god of music and song, could also be embodied, a rapt and poetic expression being not beyond the resources of developed Greek art. But Apollo as the prophet

FIG. 11.—Coin of Miletus.

FIG. 12.—Coin of Troas.

of the supreme Deity, or as the great patron of purification, was a less easy subject for art. In the same way, Artemis as an archeress or as the queen of the nymphs naturally attracted the artist, but Artemis as goddess of moisture and source of the springing powers of nature was less easy to depict. Thus the rendering of the gods in human form did undoubtedly tend in a measure to limit them, and to throw into the background that which in them inspired awe rather than pleasant appreciation. Perhaps, however, we may make a few exceptions to this rule. Of the gold and ivory colossus of Zeus at Olympia (fig. 13), Quintilian says that it added something to the accepted religion;[1] and Dio Chrysostom in the 1st cent. A.D. tells us how it affected educated men.

FIG. 13.—Coin of Elis.

'Our Zeus is peaceful and gentle in all ways, as the overlooker of an undivided and united Hellas . . . set up gentle and stately in form above all grief, giver of life and means of living and all good things, the common father and saviour and guardian of men, so far as it was possible for a mere man by meditating to copy the divine and infinite nature. . . . If any man were utterly burdened in heart, after meeting in life many misfortunes and troubles, a stranger to sweet sleep, even he, I think, standing before this image would forget all the terrible pains and sufferings of our mortal life' (*Orat.* xii.).

In the same way, the great statue of Athene Parthenos at Athens (fig. 14) concentrated about herself the patriotic ardour of the people of the city; she was not only the deity who gave wisdom in council and skill in craft, but she also embodied the common life, the destiny, the star of the Athenians, and all the better because she was as dignified and majestic as Pheidias could make her. So also, when, about 300 B.C., Eutychides the sculptor made for the people of the newly-founded city of Antioch a representation of the Fortune, or Tyche, of that city, he represented her as a most graceful figure seated on a rock, with the river-god Orontes emerging at her feet. The statue, of which copies are extant (fig. 15), not

FIG. 14.—Coin of Athens.

FIG. 15.—Coin of King Tigranes.

only gained wide admiration, and was copied in many other cities, but we are told that it was held in the highest religious reverence. Probably it greatly helped to make the people of Antioch feel that they were citizens of no mean city. In Greece, civic politics and religion were nearly related: the general or the statesman was often also a priest of the deity of the city.

A different fate attended another sculptural creation of the same period—the Sarapis of Bryaxis. Religiously, Sarapis was of great importance, as he united the conquering Greek and the conquered Egyptian in a common cultus,[1] since the former could see in him a form of Hades, and the latter a modification of Osiris. But the sculptor, if we may judge from the poor copies extant, tried to introduce into the expression of the face of the deity too much of mystery and solemnity, and so passed the bounds of possible sculpture. In a painting he might have been more successful.

Strict anthropomorphism in the embodiment in art of their deities was eminently suited to the Greeks. They were little inclined to mysticism; their minds were clear-cut and practical; and they were content to abide within the limits set them by the eminently statuesque character of their art. At the best, they could produce images perfectly adapted to the character of their worship and their religious festivals—figures which a good citizen of fine taste could look on with pride, and which he could with self-satisfaction contrast with the poorer inventions of surrounding peoples. But in the latter part of the 4th cent., when the city-State was falling into decay, and the city festivals were becoming mere pageants, we cannot be surprised that the statues of the gods lost their high dignity. Sculptors of that age, notably Praxiteles, though they could still produce exquisite forms, produced them at a lower level. The images of the gods no longer embodied human nature at its highest ideal stage, but rather human nature on the level of the average sensuous man. The Apollo killing a lizard, by Praxiteles, represents the deity on the model of an idle and sportive youth. His Aphrodite, though she cannot be called impure or sensual, is yet little more than a woman of exquisite form engaged in taking a bath. The tendency thus begun soon went further, and in the Hellenistic age we find images of male and female deities which could satisfy only a sensual and pleasure-worshipping people. Of course, there were reactions. The great statues of Demeter and Persephone set up by Damophon at Lycosura in Arcadia in the 2nd cent. B.C., still extant in a

[1] *Inst. Orat.* XII. x. 9.

[1] Cf. GRÆCO-EGYPTIAN RELIGION, § 2 (1), vol. vi. p. 376.

fragmentary condition, have much of the ancient dignity. Sculptors who were set to make cultus-images for temples went back for their models to the great creations of the 5th century. Some new types, such as that of the Fortune of Antioch already mentioned, had real religious value. But an art which cannot produce original types suited to the genius of a new age must soon decay. In the Roman age the figures of the Greek deities which were produced in unlimited abundance in the workshops of the sculptors have no vitality. They are only elegantly eclectic — charming compositions, but not at all stimulating to the powers of worship. We are not, therefore, surprised to find, from the trustworthy evidence of coins, that many of the cities of Asia Minor set aside the fine Greek statues of their city deities which held the place of honour after Alexander the Great, and re-installed the quaint and ugly figures which those statues had superseded. In the time of St. Paul the people of Ephesus had gone back to the image which fell from heaven. Rome was filled with splendid statues of the gods brought from Greece by conquering generals and by Emperors; but they were cherished mainly as works of art, and not as cultus-images. In fact, the same transition from worship to admiration took place in regard to these statues which has occurred in the change of modern feeling in regard to Gothic cathedrals.

2. **Roman.**—In Roman religious usage, images do not take nearly so important a place as they do in Greek. Neither the anthropomorphic tendency nor æsthetic taste was so highly developed among the Romans. In fact, the primitive deities of the Romans were in nature too vague and abstract to be at all appropriately rendered in plastic art. At lowest, they were mere traditional dæmonic forces connected with agriculture, or the pastoral life, or the various activities of man; at highest, special aspects of a great spiritual force. Perhaps, apart from Greek and Etruscan influence, the Romans would not have had any statues of the gods. The early graves of central Italy furnish us with no such population of terra-cotta figures as do those of Greece and Asia. Perhaps the only images of true Roman type, which the Romans themselves called *imagines*, were the naturalistic portraits or masks, in wax or metal, of heroes and ancestors which Romans of birth set up in their houses and carried in funeral processions, and which served to localize the spirits of the departed, and bind them to the living. But Greek influences began at an early period to tell upon Rome, alike radiating from Greek colonies such as Cumæ, and coming through the mediation of the Etruscans. As the Greek gods, through the influence of the *Sibylline Books*, were called to Rome on the occasion of famine or pestilence, or any crisis with which the native deities seemed unable to cope, they must needs have their temples, and Greek sculptors were called in to make images for those temples. On the coins of the Roman Republic we find copies of many such statues; but there is little that is Roman about them; they are merely Greek figures of the Hellenistic age. Occasionally the sculptor was called on to portray beings of Roman origin, such as Vejovis (fig. 16), Saturnus, Janus (fig. 17), Nerio, or Acca Larentia; but he fulfilled his task by merely adapting the nearest Greek type in his repertory. The veneration of images, however, by the 1st cent. B.C. had become part of the ordinary domestic religion. We learn from the excavations at Pompeii that many houses had a *Lararium*, or private shrine, presided over by the *Lares* (fig. 18), who were represented either by snakes or by the figures of young men, the type of whom was probably taken from the Greek Dioscuri.

The vast crowd of images of the gods which had been constantly increasing in Greece and It the 3rd cent. A.D. met with extreme hat the Christians, who were as eager to destı

rather than as objects of cultus; but they g ally disappeared; and naturally none survive Turkish conquest.

LITERATURE.—In addition to the works mentioned course of the art., reference may be made to H. B. Wa *Art of the Greeks*, London, 1906, and *Art of the Romai* 1911; P. Gardner, *Principles of Greek Art*, New York, S. Reinach, *Répertoire de la statuaire grecque et ron* 3 vols., Paris, 1897–1904; G. Wissowa, *Rel. und Kultı Römer*², Munich, 1912.

P. GARDNE

**IMAGES AND IDOLS** (Hebrew and Can ite).—I. *HEBREWS IN PRE-PALESTINIAN TI* —Israelite tradition on this subject is confused contradictory. In its oldest form (J) there is suggestion of idol-worship among the forefat of the nation, except in the Golden Calf epis (Ex 32), which is a satirical narrative dire against the bull-worship of the Northern kingd The E cycle, while admitting that not only Fathers, including Teraḥ, the father of Abraha but also the Hebrews in Egypt (Jos $24^{2. 14ff.}$) w shipped other gods, shows no knowledge of legend according to which the father of Abrah was an idolater and even a maker of idols (*Jubile* 12; *Apoc. Abr.* 1–8; *Gen. R.* xxxviii. 13; *Qur'* ix. 115, xix. 43 ff., xxi. 53 ff., xxvi. 70 ff., xxx 81 ff. etc; cf. *JE*, *s.v.* 'Abraham'). This cy represents the worship of the *tᵉrāphîm*, that is say, of at least one class of images, as a forei custom (Gn $31^{19. 34 f.}$). Ezekiel, on the other han accuses the Israelites of having worshipped 'abon nations,' no doubt images, in Egypt ($20^{8. 18}$ $23^{3.}$ cf. $16^{26}$), and perhaps also of having served the tribal gods ('the "abominations" of the house Israel') under the form of 'creeping things an abominable beasts' ($8^{10-12}$).

It is probable, however, that, as long as th Hebrews led a nomadic existence, they made littl or no use of figured representations of the divinity at least in public worship (cf. the case of the pre Islāmic Arabs [J. Wellhausen, *Reste arab. Heiden tums*², Berlin, 1897, p. 102]). Even at a mor advanced stage of culture, the Semitic people still represented the divinity in their most venerated sanctuaries (*e.g.* on Mount Carmel) by objects which had little or no resemblance to the human form (Tac. *Hist.* ii. 78). Analogies may be found in the case of the Romans (Varro, in Aug. *de Civ. Dei*, IV. xxxi. 2; Plut. *Numa*, 8; Pliny, *HN* xxxiv. 4 [15]), Greeks (Lucian, *de Sacrif.* 10 f.), Egyptians

(Lucian, *de Dea Syr.* 3), and Persians (Deinon, in Clem. Alex. *Protrept.* 65 [ed. Dindorf, i. 71]; Herod. i. 131; Strabo, xv. iii. 13 [732]).

As a matter of fact, the religion of Jahweh at the time of the sojourn in the desert probably did not carry with it such a strict prohibition against the use of images in worship as the first decalogue ascribes to Moses (Ex $20^{4f.}$, Dt $5^{8f.}$); otherwise it would be difficult to explain the freedom with which the most faithful worshippers of Jahweh made use of them down to the 8th cent. (see II. 2). The much more ancient decalogue of Ex 34 condemns only a certain kind of images ($34^{17}$). It is probable that the nomadic Hebrews used statuettes as amulets and in private worship (Gn $31^{19. 30-35}$ $35^{2. 4}$; cf. Ex $33^{5f.}$ $35^{22}$). Among the Arabs of the time of Muhammad (W. R. Smith, *Rel. Sem.*[2], London, 1894, p. 208 f.), the Phœnicians, and the Canaanites, images were much more frequently employed for domestic purposes than for public worship. The same is true of the Ægean peoples (G. Karo, *ARW* vii. [1904] 155 f.).

II. *AFTER THE SETTLEMENT IN PALESTINE.*—**1. Idol-worship among the Canaanites.**—Canaan was a land of idols (Nu $33^{52}$, Dt $7^{25}$ $12^{3}$ $29^{17}$, Ps $106^{38}$, etc.)—a fact which has been confirmed by the excavations recently made in Palestine. As yet nothing has been found in the sanctuaries but stelæ, and it is probable that the deity was usually represented on them under the form of a *maṣṣēbhā*, an *'ăšērā*, or some natural object. But in private houses, in tombs, and in a sacrificial trench at Gezer, statuettes have been discovered in profusion which were obviously used in private worship (amulets, *ex-votos*, etc.). Those of most frequent occurrence are images of goddesses (Astarte) in bas-relief or, more rarely, in the round, tending towards the Babylonian type in the North and becoming more 'Egyptized' in the South. An Atargatis (?) has also been found, some phalli, heads and shoulders of the bull, a brazen serpent, figurines of doves, cows, fish, statuettes of Egyptian divinities—Ptah, Osiris, Thōth, Naprit, Thueris, and, above all, Bes. Although statues were of rarer occurrence in the public sanctuaries of Palestine, we need not conclude that they were entirely lacking (1 S $5^{2-4}$); they were naturally much more exposed to destruction than private ones.

LITERATURE.—*PEFSt*, especially from vol. xx., new ser. (1890); *ZDPV*, from vol. xxv. (1902); *MNDPV*, from vol. viii. (1902); *Harvard Theol. Review*, ii. [1909] 102–118, iii. [1910] 136–138, 263–288, iv. [1911] 136–143; *RB*, vols. i.–xii. (1892–1903), new ser. vol. i. ff. (1904 ff.); H. Vincent, *Canaan, d'après l'exploration récente*, Paris, 1907, pp. 152–180 (an excellent general survey).

**2. Idol-worship in Jahwism.**—After they had settled in Palestine, the Israelites, no doubt taking their lead from the people of the country, proceeded freely to the fabrication of images of Jahweh (and eventually of other gods), and began to worship them in the public sanctuaries as well as in private.

Micah had in the 'house of gods' of which he was proprietor a graven image and a molten image (according to another version, an *'ēphōd* and a *terāphīm*) which were afterwards transferred to the great sanctuary of Dan, where priests of the line of Moses officiated (Jg 17–18). Gideon made an *'ēphōd* which was worshipped by the whole of Israel ($8^{24-27}$). At Nob there was an *'ēphōd* served by the priests of the family of Eli, which was often consulted by Saul and David (see II. 7). David had a *terāphīm* in his house (1 S $19^{13-16}$).

In the great sanctuaries of the Northern kingdom, *e.g.* at Bethel and Dan, and perhaps in Samaria (Hos $8^{6}$), Jahweh was worshipped in the form of a golden bull (1 K $12^{28-30}$). The author of the Book of Kings, who looks on the past from the point of view of the prophets of the 7th cent. B.C., describes these acts of idolatry as innovations of Jeroboam I., but they were quite in keeping with the ideas which were dominant in the Jahwism of the 10th cent. B.C.: neither Elijah nor Elisha, nor even Amos in the 8th cent., thought of censuring the worship of 'golden calves.' In the kingdom of Judah a brazen serpent, said to have been made by Moses himself, received sacrifices till Hezekiah destroyed it (2 K $18^{4}$). The land was full of idols (Is $2^{8}$). Ezekiel, about 592 B.C., mentions an 'image of jealousy' set up in the Temple ($8^{3. 5}$).

At Gezer and at Taanach several statuettes of Astarte have been found in heaps of Israelite débris (Vincent, *op. cit.*, 162, 164 f.).

**3. The meaning attached to idol-worship.**—The first Semitic statues were probably stelæ (*maṣṣēbhā*) which had been given a human or animal form: the statue of Panammon is called *nṣb*, the same word as *n<sup>e</sup>ṣībh* (a Heb. synonym of *maṣṣēbhā*), and the Arab. *nuṣb*. Idolatry was thus in principle only a variety of fetishism, commonly practised by the Hebrews and the other Semites (*maṣṣēbhā*, *'ăšērā*, 'ark'). We must, then, consider the image as having been, like all other fetishes, a dwelling-place offered to the god, where he consented to take up his abode only after the performance of certain inauguration ceremonies (Jg $8^{27}$; cf. C. Fossey, *La Magie assyrienne*, Paris, 1902, p. 132 f.; M. J. Lagrange, *Études sur les rel. sém.*[2], do. 1905, pp. 166, 229; E. B. Tylor, *PC*[3], London, 1891, ii. 168 ff.).

**4. The rites connected with idol-worship.**—In ancient Israel images were kissed (Hos $13^{2}$, 1 K $19^{18}$; cf. Job $31^{27}$; Mish. *Sanh.* vii. 6; Apul. *de Magia*, 56; S. I. Curtiss, *Ursemit. Rel. im Volksleben des heut. Orients*, Leipzig, 1903, pp. 164, 287); incense was offered to them (Ezk $8^{11}$); they were consulted as oracles (see II. 7 and 8); they were placed in a closed *cella*, differing thus from most of the other sacred objects of the ancient Semites (Jg $17^{5}$; cf. Ep. Jer. $^{13. 17f. 21. 55}$, 1 Mac $10^{83}$, Wis $13^{15}$); they were clothed in sumptuous garments (Ezk $16^{18}$; cf. Jer $10^{9}$, Ep. Jer. $^{11f. 20. 33. 58. 72}$; Mish. *Sanh.* vii. 6).

Other customs connected with idol-worship are mentioned, but in passages which refer expressly only to pagan idolatry—*e.g.*, the custom of carrying idols in procession (Is $46^{1. 7}$, Jer $10^{5}$, Am $5^{26}$ (?), Ep. Jer. $^{4. 26}$), of giving them food (Sir $30^{18}$ [Heb. 19], Ep. Jer. $^{28. 30}$; Bel and the Dragon), of embracing them, anointing them, washing them, and sprinkling them with water (Mish. *Sanh.* vii. 6), of bowing before them (*ib.*; Ep. Jer. $^{6}$), of decorating them with jewels and garlands (Ep. Jer.$^{9}$; Mish. *Aboda Zara*, i. 9), of fixing them in their place with nails (Is $41^{7}$, Jer $10^{4}$, Wis $13^{15}$) or chains (Is $40^{19}$), and of lighting candles for them (Ep. Jer. $^{19}$).

**5. Names for idols.**—The diffusion of the worship of images in ancient Israel is attested by the multiplicity of words used to designate them (cf. *HDB* ii. 451; G. F. Moore, *EBi* ii. 2146–2150). (*a*) *General terms.*—(1) *Ṣelem*, 'image' (2 K $11^{18}$ [2 Ch $23^{17}$], Ezk $7^{20}$ $16^{17}$, Nu $33^{52}$, Am $5^{26}$ [gloss]); (2) *semel*, 'statue' (Dt $4^{16}$, Ezk $8^{3. 5}$, 2 Ch $33^{7. 15}$); (3) *tabhnîth*, originally 'model,' whence 'representation' (Dt $4^{16-18}$, Is $44^{13}$, Ezk $8^{10}$ [gloss ?]); (4) *t<sup>e</sup>mûnā*, 'form' (Dt $4^{16. 23. 25}$ $5^{8}$ [=Ex $20^{4}$]; (5) *n<sup>e</sup>śû'ā*, 'portable idol' (Is $46^{1}$). (*b*) *Names taken from material or manner of fabrication.*—(6) *'Aṣabbîm* (sing. *'ōṣeb*; to it, as to many of the reputedly pagan terms, the Massoretes gave the vowels of בֹּשֶׁת 'shame,' and it thus became identical with עֹצֶב, 'grief'). This term, which is usually applied to idols in general, even idols of silver and gold, doubtless originally meant clay statues (cf. עָצַב, עָצָב); this is probably the reason why the עֲצַבִּים are sometimes distinguished from the graven image (Is $48^{5}$, Mic $1^{7}$) and from the molten image (Is $48^{5}$, Hos $13^{2}$). Besides clay statues (Vincent, 158–162, 166, 169, 172 [idol mould]; cf. Wis $15^{7-13}$), there are also: (7) the *p<sup>e</sup>sîlîm* (sing. *pesel*), 'graven images,' made of wood (Dt $7^{5. 25}$ $12^{3}$) or of stone (Is $21^{9}$, 2 Ch $34^{4}$; Vincent, 153, 157, 173), and sometimes (at least in the case of pagan idols) painted (Wis $13^{14}$ $15^{4}$) or ornamented with silver and gold (Jer $10^{4}$). This must have been a very common kind of image, for the word *p<sup>e</sup>sîlîm* could be applied to idols in general, even those made of metal (Is $40^{19}$ $44^{10}$, Jer $10^{14}$).

There was also (8) the molten image, *massēkhā*, *nesekh* (Is $41^{29}$ $48^{5}$, Jer $10^{14}$ $51^{17}$), *nāsîkh* (Dn $11^{8}$), in gold, silver, or sometimes bronze (see II. 6 (2)). According to certain texts, the bulls of Dan and Bethel were *massēkhôth* (Hos $13^{2}$, Ex $32^{4}$, Dt $9^{12.16}$, Neh $9^{18}$), made by pouring the molten metal into a mould (Ex $32^{4.8.24}$): נָסַךְ = 'to cast,' 'to melt' (Is $40^{19}$ $44^{10}$). Cf. Vincent, 163 f., 167 f., 173–175. Again, we have (9) the περίχρυσα and περιάργυρα (Dt $7^{25}$, Is $30^{22}$; cf. also Ep. Jer.$^{8.24.39.50.55.57.70f.}$). The framework on to which the sheets of gold or silver were hammered and soldered might be of some common metal (Is $40^{19}$ $41^{7}$; cf. the statuette of Osiris, R. A. S. Macalister, *PEFSt*, new ser., xxxv. [1903] 39) or of wood, such as the 'golden calves,' according to the evidence of Hos $8^{6}$ ('in pieces'), Ex $32^{4}$ ('fashioned it with *a graving tool*'), $32^{20}$ ('*burnt* it with fire . . . strewed it *upon the water*'). (10) Figured stones, *'ebhen maśkîth* (Lv $26^{1}$, Nu $33^{52}$, Ezk $8^{12}$ [?]), probably intermediary between the stele and the statue (Lv $26^{1}$), were used as idols, and also (11) images carved out (or, according to others, 'drawn' ['graven' images]) on the inner walls of the Temple (Ezk $8^{10}$).

There are numerous ironical descriptions of the manufacture of idols, but they are all post-Exilic, and are directed against foreign idols—Hab $2^{18f.}$, Is $40^{18-20}$ $41^{6f.}$ $44^{9-20}$ $46^{6f.}$, Jer $10^{2-5.9.14f.}$, Ps $115^{4-8}$ = $135^{15-18}$, Wis $13^{10-16}$ 15, Ep. Jer. (= Bar 6 [cf. Weigand Naumann, *Untersuchungen über den apokr. Jeremiasbrief*, Giessen, 1913, pp. 3–9]), *Apoc. Abr.* 1–8.

**6. Forms of idols.**—(1) *Human.*—The Israelites, like the Canaanites (see II. 1), the Philistines (1 S $5^{4}$), and the pagans (Is $44^{13}$, Ps $115^{4-8}$), possessed human idols (Dt $4^{16}$, 1 S $19^{13}$, Ezk $16^{17f.}$), but theriomorphic images were of much more frequent occurrence (Dt $4^{17f.}$ $5^{8f.}$ = Ex $20^{4f.}$).

(2) *Animal.*—(*a*) The *n<sup>e</sup>ḥushtān*, 'brazen *serpent*' (*n<sup>e</sup>ḥōsheth*), was worshipped in Jerusalem down to the 8th cent. B.C. (2 K $18^{4}$). As far as one can judge from tradition (Nu $21^{4-9}$), the Israelites regarded this statue as the image of the *jinn*—subject to Jahweh rather than identified with Him, as has been supposed (A. Loisy, *Rel. d'Isr.*$^{2}$, Paris, 1908, p. 81 f.)—who becomes incarnated in fiery serpents (*s<sup>e</sup>rāphîm*), and in turn heals and inflicts mortal wounds (cf. E. Meyer, *Die Isr. und ihre Nachbarstämme*, Halle, 1906, pp. 116, 426 f.). It is quite probable, however, that this bronze statue was originally an ancient Canaanite idol representing the spirit of a spring (there was a 'serpent stone' by the side of the sacred spring of Rôghēl in Jerusalem [1 K $1^{9}$]), perhaps the eponymous ancestor of the Hivvites. In the Canaanite high place of Gezer a little brazen serpent, and at Taanach six or seven real serpent heads and one in terra-cotta, have been found (Vincent, 117, 174–176). (*b*) Jahweh was usually represented under the form of the *bull*, as a symbol of His irresistible force (Nu $23^{22}$ $24^{8}$). Hosea and the prophetic writers call these statues 'calves,' perhaps derisively, from their small size. Reisner, however, in 1910 found on a Samarian ostracon the proper name *'Eghelyo* (*Harvard Theol. Rev.* iv. [1911] 141), which may be interpreted: 'Jahweh is a calf, *i.e.* a young bull' (said in no spirit of mockery); the name, however, seems rather to signify 'calf of Jahweh,' *i.e.* 'son of the bull-Jahweh' (cf. Abel, *RB*, new ser., viii. [1911] 293). The Israelites probably borrowed this symbol from the Canaanites (see BULL [Sem.]), who in their turn may have got it from the Egyptians.

In Palestine, besides several bulls' heads and figurines of cows, statuettes of goddesses have been found with horns on their head [Vincent, 160, 164, 169 f., 174]—a decoration probably copied from the statues of the Egyptian goddess Hathor.

This symbol occurred with great frequency throughout Israel, and played a great part in the ornamentation of the temple in Jerusalem. The seal of a certain 'S<sup>e</sup>ma'yāhû ben 'Azaryāhû' bears the figure of a bull (I. Benzinger, *Heb. Archäol.*$^{2}$, Tübingen, 1907, p. 227). From thi comes the epithet of ''*ăbhîr* ('stron 'bull') of Israel' or 'of Jacob,' given (Is $1^{24}$, Gn $49^{24}$, Is $49^{26}$ $60^{16}$, Ps $132^{2.5}$), a also the custom of placing horns at th the altar (1 K $2^{28}$, Am $3^{14}$; cf. Lagrang ser., iv. [1907] 501, for the same custom

**7. The Ephod.**—The *'ēphôd* and th must be treated separately because o certainty as to their true nature. The w signifies: (*a*) in certain ancient texts, worn by the priest (*'ēphôd badh*) (see *HI* (*b*) in P, a piece of cloth which the high p above his dress and from which hung a p containing the oracle (*ûrîm-tummîm*) DRESS, vol. v. p. 67ᵃ). But there are (*c*) number of ancient passages where *'ēphôd* stands for some symbol of the divinity, a ably for a sort of statue.

In Jg $8^{24-27}$ Gideon, with the golden ear-rings tak from the Midianites, the weight of which amount shekels, made an *'ēphôd* which he set up (or 'put') and 'all the sons of Israel went a whoring after it th means, according to the ordinary sense of this expre the Israelites offered it an illegal worship (cf., howeve Lv $20^{5f.}$, Nu $15^{39}$). It would obviously be impossible garment or an oracle pocket weighing over 60 lbs. I the custom to manufacture divine symbols out of gold used as amulets or otherwise held sacred—the Golde 32); the ark (Ex $33^{4-6}$ $35^{22}$; cf. Dt $7^{25f.}$). In the story (Jg 17–18) the *'ēphôd* is mentioned in connexion with and 'a graven image and a molten image.' In the san Nob, there was an *'ēphôd* behind which the sword o was kept wrapped up in a cloak (1 S $21^{9f.}$). This *'ēp* often consulted by Saul and David in their campaig priest on those occasions held it 'in his hand' (1 S $23^{6}$); asked to 'bring it hither,' and carried it to the person consulting it ($14^{18}$ $23^{9}$ $30^{7}$)—he 'carried' it (נָשָׂא = 'to ca to wear'; $14^{3}$ $22^{18}$ [LXX]).

It would be utterly impossible to bring to all the different acceptations of the word under one general meaning, by supposing, *e.g.* the word had always the signification of 'p one corner of which formed a pocket for ho the *sortes* (Foote, *The Ephod*, pp. 19, 27, 4 Moore, *EBi*, art. 'Ephod' [exception made *'ēphôd* of Gideon]), or that it was the golden of the divine statue which the priest put on he was delivering oracles (Duhm, *Handkomm. AT*, Göttingen, 1892, on Is $30^{22}$).

One would rather do well to remember that semantic disclosed in every language diversities of meaning whic far more singular than those attaching to the word *'ēp* אֵפוֹד, whatever its etymological significance, and whethe verb אָפַד, 'to cover,' is a denominative of אֵפוֹד or not, c mean a 'garment,' then a 'covering' of precious metal statue (this is the natural meaning of אֲפֻדָּה in Is $30^{22}$; and in the end a 'statue' covered with a layer of gold or s (cf. II. 5 (9)).

The objection has been raised that a statue d not declare oracles, especially oracles obtained a sort of drawing of lots like the Urim a Thummim (1 S $14^{41}$ [LXX]). Yet the *t<sup>e</sup>rāphîm* (E $21^{26}$, Zec $10^{2}$ [see, however, II. 8]) and the molt image (Hab $2^{18}$) gave consultations. In Babyloni questions were apparently 'whispered' to newl consecrated idols (Lagrange, *Études rel. sém.* 232). In Egypt there were statues which nodde their heads or spoke, the priests who made the move or speak being supposed to be inspired by th god. Another suggestion is that the *'ēphôd* was statuette which, when set in motion by the priest could stop in two or three different positions, or an idol with a cavity containing sacred lots, possibly like the vases of female or animal shape found in the Palestine excavations (Vincent, 229, 314).

LITERATURE.—In addition to the works quoted above, see G. F. Moore, *Judges*, London, 1898, p. 331; T. C. Foote, *The Ephod, its Forms and Use*, Baltimore, 1902 (with bibliography); H. T. Elhorst, *ZATW* xxx. [1910] 259-276.

**8. The Teraphim.**—It is difficult to draw from the text any coherent idea of what the *t<sup>e</sup>rāphîm* were.

Rachel steals those of her father Laban, and, when he asks for 'his gods,' she conceals them in the camel's furniture (Gn $31^{19.\ 30-35}$). Later, Jacob buried these 'strange gods' under the (sacred) terebinth of Shechem ($35^{2-4}$). Here *terāphîm* signifies small statues representing strange gods. Micah has in his sanctuary an *'ēphôd* and *terāphîm* (Jg 17–18), which were used in the worship of Jahweh. Hosea also mentions the *terāphîm*, connecting them closely with the *'ēphôd* as one of the indispensable elements of the Israelite cult of his day ($3^4$). Michal assisted her husband David in his flight from Saul by putting 'the *terāphîm*' in bed in his place (1 S $19^{13}$); for the subterfuge to be successful, the *terāphîm* in question must have had the size and appearance of a man. From this anecdote we gather that in the time of David the *terāphîm* was one of the normal articles of furniture in an Israelite house. On the other hand, in all texts belonging to a date later than the 8th cent. B.C., the *terāphîm* are condemned side by side with divination (1 S $15^{23}$), necromancy, and idolatry (2 K $23^{24}$). Nebuchadnezzar, hesitating between two ways, consults the oracles: he shakes the arrows to and fro, consults the *terāphîm*, and inspects the liver; the divination for Jerusalem having come into his right hand, he sets his face towards that town (Ezk $21^{26f.}$). Here *terāphîm* is used for a pagan means of divination. In Zec $10^2$ the word is used of a pagan or illegal mode of consultation (connected with soothsayers and dreams).

The suggestion has been made that *terāphîm* should be identified with *serāphîm* (C. S. Wake, *Serpent Worship*, London, 1888, p. 47), but there are no clear grounds for adopting it.

Others think that the *terāphîm* were statuettes used as *sortes* and enclosed in the *'ēphôd*, which would then be a kind of pouch (Foote, *op. cit.*; K. Marti, *Kurzer Handkomm.* xiii., Tübingen, 1903, on Hos $3^4$; cf. John Spencer, *de Leg. Hebræorum ritualibus et earum rationibus*, Cambridge, 1685, bk. iii. diss. 7). This explanation, however, would not suit Michal's *terāphîm* of human size, and in any case the use of *terāphîm* for divination is supported only by late texts.

It is held that the *terāphîm* were images of ancestors (Lippert, Stade, Schwally, Nowack, Budde, Charles, Torge). If this were proved, the fact that the *terāphîm* sometimes appeared as domestic idols (Laban, Michal) and were used in various countries (Laban, Nebuchadnezzar) would be explained. But why should the Danites have transported the images of Micah's ancestors into their public sanctuary, or why should the daughters of Laban have stolen the *terāphîm* of their father, since ancestor-worship could not be taken part in by women? Would Rachel and Michal have treated the images of the ancestors of their family with such scant ceremony? Again, no traces have been found up till now of any statues of ancestors among the Babylonians.

According to another explanation, the *terāphîm* originally represented the familiar spirit of the house, and were analogous with the *lares* and *penates* (Cornelius à Lapide, *Comm.*, Antwerp, 1681; E. Reuss, *Die Gesch. der heil. Schriften Alten Testaments*², Brunswick, 1890, p. 177; J. Frey, *Tod, Seelenglaube und Seelenkult im alten Israel*, Leipzig, 1898, pp. 102–104; C. Grüneisen, *Der Ahnenkultus und die Urreligion Israels*, Halle, 1900, p. 175; H. Gunkel, *Gen.*³, Göttingen, 1910, p. 345; A. Loisy, *Rel. d'Isr.*², 202).

In Babylonia each place has its tutelary genius, each individnal even has 'his god' and 'his goddess.' The cult of the *genius loci*, of the *gad* (Fortune) of the house, continued among the Jews down to Talmudic times (Bab. *Sanh.* $20^a$; *Ned.* $56^a$); clear traces of it are found in the foundation sacrifices of modern Syria (Curtiss, *Ursem. Rel.*, pp. xvi, 208 f., 265–267). This interpretation seems the most plausible, at least if the word *terāphîm* always signifies one and the same thing. It still seems rather curious, however, in spite of the analogy of the *kerûbhîm*, that these statues of *genii loci* should almost always have had a place in the sanctuaries of Jahweh (Jg 17–18, Hos $3^4$), and that the Danites should have carried off to Laish the statue of a *genius loci* of Mount Ephraim.

The explanation of the difficulty of finding any agreement between the different contexts in which *terāphîm* occurs may be that the word, for which no satisfactory etymology has been found, is one of the opprobrious terms used by the Jews of recent times in Biblical texts as a substitute for the abhorred names of idols and false gods (see III. 3). *Terāphîm* may be the plural of *tōreph*, which in the Hebrew of the Mishna means 'foulness,' 'obscenity.' Now, in this case, we have no assurance that this abusive term was everywhere and always substituted for one single expression. In Zec $10^2$ the Peshiṭṭa still appears to have read יִדְּעֹנִים ('spirits of divination' or 'necromancers'), ܝ̈ܕܘܥܐ (cf. Lv $19^{31}$ $20^{27}$, 1 S $28^9$, 2 K $23^{24}$ etc.); in other contexts there may have been some term signifying idol in general (*pesîlîm*, Ezk $21^{26}$ LXX; *'ǎṣabbîm*) or god (*'ĕlôhîm*).

LITERATURE.—In addition to the works quoted, reference may be made to A. Lods, *La Croyance à la vie future et le culte des morts dans l' antiquité israélite*, Paris, 1906, i. 231–236; P. Torge, *Seelenglaube und Unsterblichkeitshoffnung im AT*, Leipzig, 1909, pp. 141–143.

III. *REACTION AGAINST IDOL-WORSHIP*.—1. **Before the 8th cent. B.C.**—The worship of images soon became suspect to the upholders of the true religion of Jahweh; Asa is said to have done away with those which his fathers had made, but the second decalogue (Ex $34^{17}$), towards the 9th cent., condemns only the worship of 'molten gods,' *i.e.* statues whose splendour contrasted too strongly with the simplicity of olden times. The history of the Golden Calf (Ex 32) reflects the same point of view.

2. **The Prophets.**—Hosea is the first to lay down the principle of the incompatibility of idol-worship with the true worship of Jahweh ($8^{4-6}$ $13^{1f.}$; cf. $3^4$). Isaiah forbids the use of idols of gold and silver ($2^{8.\ 20}$); and Hezekiah, apparently at his instigation, breaks the brazen serpent in pieces (2 K $18^4$). It was probably about this time that all manufacture or worship of images of the deity was absolutely prohibited (Ex $20^{4f.}$). The reforms instituted by Josiah (621 B.C.) include a prohibition against all representations of Jahweh—even unfigured ones (Dt $16^{21f.}$, 2 K $23^{6.\ 14.\ 24}$). Dt $4^{15f.}$ (7th–6th cent. B.C.) indicates a motive—the only one formulated in the OT—for this prohibition, namely, the fact that the Israelites on Mount Horeb saw no form or shape.

One of the arguments used by the prophets of the 7th cent. B.C. and later against pagan gods is that they are gods of stone and wood. They describe the manufacture of these idols with complacent irony, and identify them purely and simply with the divinities that they represent (a frequent theme from the 6th cent. B.C. onwards; see II. 5). This line of argument presupposes that it is an accepted Jewish belief that Jahweh has not, and cannot have, any material representation.

3. **Judaism.**—These divine images still retained their prestige among the common people to a certain degree (2 Mac $12^{40}$; cf. perhaps Ps $16^4$ $31^7$, Zec $10^2$ [?], Is $30^{22}$, if these passages are post-Exilic and refer to Jews). In the ruins of Jewish houses at Elephantine some bas-reliefs and statues have been found, which were probably worshipped by the members of the Jewish colony of that town (O. Rubensohn, *ZA* xlvi. [1909] 30; E. Meyer, *Der Papyrusfund von Elephantine*, Leipzig, 1912, p. 65 f.). But probably idol-worship was now only a popular superstition; and, when the author of Enoch ($99^{14}$ $104^9$) accuses his Jewish adversaries of 'following idols,' it is apparently to be understood as a polemic exaggeration respecting their tolerance of the pagans and Greek art.

Among the Jews who were most rigorous in keeping the law, the Second Commandment was

so scrupulously followed that all manufacture of images was forbidden, even when the images were not intended for worship at all (cf. Wis 14$^{13-20}$). Thus, while animal representations abounded in the decoration of the pre-Exilic Temple (cf. Sir 38$^{27}$), a perfect storm of disapproval arose when Herod set a golden eagle above one of the doors of the sanctuary (Jos. *Ant.* XVII. vi. 2-4, *BJ* I. xxxiii. 2-4). Pilate also met with great opposition when he attempted to allow the legions to enter Jerusalem with their ensigns (*Ant.* XVIII. iii. 1, *BJ* II. ix. 2 f.). In A.D. 66 the Jewish insurgents destroyed the palace of Herod Antipas at Tiberias because it was decorated with sculptures representing animals (Jos. *Life*, 12). It was out of regard for this scruple that neither Herod nor the Romans put human or animal effigies on the *as* or fractions of the *as* coined for Judæa.

The pious Jew avoided even pronouncing words signifying 'images,' 'idols,' etc. (Zec 13$^{2}$, Ps 16$^{4}$), substituting for them opprobrious terms, which were usually those used to replace the names of pagan gods (Ex 23$^{13}$, Dt 12$^{3}$, Hos 2$^{17}$; בַּעַל, *e.g.*, was read בֹּשֶׁת, 'shame,' in proper names), so that it is often difficult to tell whether idols or strange gods are meant: *'ĕlîlîm*, 'nothingness' (according to others, 'small gods'); *gillûlîm*, 'dung' (RV 'abominations'; according to others, 'shapeless masses,' 'grotesque figures'); *šiqqûṣ*, *tô'ēbhā* (Is 44$^{19}$, Jer 16$^{18}$, Dt 27$^{15}$), 'abominable thing'; *miphleṣeth*, 'object of horror'; *p<sup></sup>ghārîm* (Lv 26$^{30}$), *n'bhēlā* (Jer 16$^{18}$), 'carcass'; *mēthîm* (Ps 106$^{28}$), 'the dead'; *'āwen*, 'trouble,' 'wickedness'; *hebhel*, 'vanity'; *lō' 'ĕlôhîm* (Hos 8$^{6}$), 'not God.' Some of these terms of abuse go back to the Prophets (*e.g.*, Am 5$^{5}$, Jer 2$^{5}$, Is 44$^{20}$); but in many cases they were introduced into Scripture at a very late date by Jewish scribes as a substitute for neuter terms. As a matter of fact this process continued even after the time of the Septuagint version (2 S 5$^{21}$, 1 K 11$^{5.7.33}$, 2 K 23$^{13}$, Is 19$^{3}$). Cf. G. F. Moore, *EBi* ii. 2148–2150.

ADOLPHE LODS.

**IMAGES AND IDOLS** (Indian).—**1. Introductory.**—In no part of the world, perhaps, can the characteristics of idolatry be investigated with more success than in India, owing to the abundance of the material, and the attention given to it since Hinduism and its allied faiths, Buddhism and Jainism, came under the observation of the foreigner. A visitor to one of its sacred cities is at once aware of the prevalence of image-worship. The streets, like those of Athens in the time of St. Paul, appear to be 'wholly given to idolatry' (Ac 17$^{16}$ AV). Writing forty-five years ago, M. A. Sherring estimated that the city of Benares contained 1454 temples, and that

'the number of idols actually worshipped by the people certainly exceeds the number of the people themselves, though multiplied twice over; it cannot be less than half a million, and may be many more.' 'Idolatry,' he adds, 'is a charm, a fascination to the Hindu. It is, so to speak, the air he breathes. It is the food of his soul. It is the foundation of his hopes, both for this world and for another' (*The Sacred City of the Hindus*, London, 1868, p. 41 ff.).

Since his time, for reasons elsewhere explained (§ 8), the number of temples and images in this and other sacred cities has largely increased. There are in all about sixty temples in Nāsik, a number which has earned for it the name of the Benares of W. India (*BG* xvi. [1883] 503). Within the sacred enclosure at Puri rise about 120 temples 'dedicated to the various forms in which the Hindu mind has
imagined its god' (W. W. Hunter, *Oris*
1872, i. 128). At all the Hindu sacred
minor idols enshrined in little niches
streets and the entrances to the bathing
innumerable.

Among the more primitive tribes only
the Muṇḍās or Kandhs, are said to p
image-worship; but this does not exclu
of rude stocks and stones (E. T. Dalton
*Ethnol. Bengal*, Calcutta, 1872, p. 256;
*The Mundas and their Country*, do. 19
S. C. Macpherson, *Memorials of Service*
London, 1865, p. 102). According to J.
in Burma 'none of the races have, or a
admit that they have, idols. There is n
down to stocks and stones' (*Upper Bur*
1900, pt. i. vol. ii. p. 83). There are, c
numerous images of the Buddha, but to the
'the accusation of bowing down to stocks a
is intolerable, and the implication is comb
feverish energy. Where there are no *pr*
the technical sense of the word, there ca
idolatry.' The words uttered before his i
features 'are not a supplication for *merc*
but the praises of the Lord himself, thro
contemplation of whose triumphant victo
passions and ignorance the most sinful *ma*
to a better state' (Shway Yoe [J. G. Sco
*Burman*, London, 1882, i. 220).

Many writers, missionaries in *particular*,
denounce the grossness of Hindu idolatry
Dubois, *Hindu Manners and Customs*³, (
1906, pp. 548, 581, 590 f.; W. Ward, *The Hi*
Serampore, 1818, Introd. ii, x f.). Some
writers, however, recognize that the preval
image-worship is not the chief obstacle
spread of Christianity. The growth of ag
cism, the revival of Vedāntism, and the
modern sects, like Sikhism, or the Ārya an
Brāhma Samāj (*qq.v.*), which reject the idol
Purāṇic cults, and seek to revive an earlie
simpler form of worship, are a more *seriou*
drance to Christian propaganda.

**2. The historical development of idolatry.**–
universality of image-worship in its more *elab*
form is comparatively modern among the Hi
In the Vedas we observe the deification of te
trial objects—rivers, mountains, plants, trees,
plements, and weapons; and 'material object
occasionally mentioned in the later Vedic litera
as symbols representing deities' (A. A. Macdo
*Vedic Myth.*, Strassburg, 1897, p. 154 f.).
existence of idols in Vedic times has been asse
in the cases of a painted image of Rudra, of *Var*
with a golden coat of mail, in the distinction dr
between the Maruts and their images (Rigve
II. xxxiii. 9, I. xxv. 13, V. lii. 15, in J. Muir, *Or*
*Skr. Texts*, v. [1872] 453 f.). The comparat
scarcity of these references, however, does not s
port the conclusion that idolatry, in its gene
sense, as contrasted with the lavish idol-worship
a later age, is modern, because, though the hig
Vedic religion may not have admitted images
sacred places, there must have been a lower stratu
of Animists, who did not confine their worship
the deities of Nature (cf. A. Barth, *Rel. of Indi*
London, 1882, p. 60 f.). Fergusson (*Hist. Ind. Arc*
do. 1899, p. 183) pressed the case too strongly whe
he suggested that 'it may become an interestin
investigation to inquire whether the Greeks we
not the first who taught the Indians idolatry.
The influence of the Hellenistic school of Gandhār
on Hindu sculpture is undoubted (V. A. Smith
*Hist. of Fine Art in India and Ceylon*, Oxford
1911, p. 97 ff.). But it is more than doubtful
whether the use of idols can be solely attributed
to this influence. Manu (*c.* A.D. 200 in the present
recension, but embodying much more ancient

material) gives rules about circumambulating an image, forbids stepping on its shadow, and refers to the taking of oaths in its presence (*Laws of Manu*, iv. 39, 130, viii. 87). In the *Mahābhārata*, with which the *Laws* are closely connected, idol-worship is found fully established (E. W. Hopkins, *Rel. of India*, London, 1902, p. 370 ff.). Early Buddhism knew nothing of image-worship, which arose with the spread of the Mahāyāna school (A. Cunningham, *Mahābodhi*, London, 1892, p. 53 f.). In fact, the worship of the image of Buddha, if the attitude of the Buddhist to images of the Master can be considered a form of idolatry, dates from the 1st cent. A.D., about four or five centuries after his death (L. A. Waddell, *Buddhism of Tibet*, London, 1895, p. 13; H. Kern, *Manual of Indian Buddhism*, Strassburg, 1896, p. 95; A. Grünwedel, *Buddhist Art in India*, London, 1901, p. 67; Smith, *Hist.* 79, 106). The early artists did not dare to portray his bodily form, which had for ever vanished, being content to attest his spiritual presence by silent symbols—the footprints, the empty chair, and so forth. Further, the absence of images of Buddha from early Indian art does not imply that images of the Hindu gods were then unknown; they were certainly in use as early as the 4th cent. B.C. (Smith, 79 n.; *IA* xxxiii. [1901] 145 ff.). The modern idolatrous system dates from the establishment of neo-Brāhmanism on the downfall of Buddhism. Though image-worship prevails widely in S. India, it must be comparatively late in its present form, because all the Malāyālim terms for images are of Sanskrit origin (W. Logan, *Malabar*, Madras, 1887, i. 184).

3. **The aniconic stage.**—It is needless to discuss whether the stage of aniconism historically precedes or leads up to that of pictures and images—an evolution denied by some modern anthropologists (*EBr*[11] xiv. 329). In India the two stages exist side by side, and it is possible in many cases to watch the rude stock or stone developing into the anthropomorphic image. The so-called 'fetish'—to use a term which has lost most of its significance to students of the present day—appears in many forms, included in the two general types of poles or stocks and stones. We observe, first, the pre-animistic type, in which a rude stock or stone, from its quaint or unusual appearance, is looked on as the manifestation of some unknown, vague power, which impresses the imagination of the observer. In the case of stones, this form of belief is more apparent in the great alluvial plains, where stone is a rare substance, and is naturally regarded with a feeling of awe. Thence we pass to the animistic stage, where the stone, stock, or pole suggests a well-defined form, animal or human, which fits it to be the abode of a spirit. In one type of such beliefs the stone is supposed to be a petrified man or animal, the conversion into stone being due to the wrath of some offended god or saint, or it is a punishment for the breach of some stringent tabu. Many such peculiarly shaped stones are connected by some ætiological legend with the cults of one or other of the orthodox deities. Some stones, stocks, or poles, again, acquire special sanctity, like the boundary-stone, the guardian stone of the village, death and memorial stones, the stone on which the bride is made to stand so that she may acquire strength and stability, the grindstone used as a fertility charm at birth or marriage rites. Similarly, among stocks, posts, and poles, we have the sacrificial post, the wedding post, the tank post, the village guardian post, the death post, the house pillar and posts, the post burned at the vernal fire festival, the Holī, symbolizing the burning of the old year (see artt. STONES [Indian]; POLES AND POSTS [Indian]).

4. **The iconic stage of idolatry; anthropomorphism.**—The Hindu forms his gods in his own image, and we can trace the development, by various means, of the rude stone or stock into the idol.

In parts of the Central Provinces, squared pieces of wood, each with a rude figure carved in front, representing the village goddess with her five brothers, who are credited with the power of sending disease and death, are set up close to each other beside the highways (S. Hislop, *Papers relating to the Aboriginal Tribes of the Central Provinces*, Nagpur, 1866, p. 15). In Mirzapur, similar figures, with rude heads and faces, represent Bīrnāth, the cattle godling of the Ahīrs (W. Crooke, *TC*, 1896, i. 63 f.). In honour of spirits, the Nāikdās of Gujarāt fix teak posts in the ground, roughly hacking them at the top into something like a human face; these posts are smeared with red dye, and rows of small clay horses, the 'equipage' of the spirits, are placed round them (*BG* ix. pt. i. [1901] p. 327). In the Telugu country, the stake representing Poturāzu, brother or husband of the village goddess, develops into a painted image, on which the deity sits as a warrior, sword in hand, and carries a lime and nine glass bangles belonging to his sister Ellama (H. Whitehead, *Bull. Madras Museum*, v. 124). In the same districts, four village goddesses are represented by stone pillars with the figures of women carved upon them (*ib.* 143). On the same principle, one of the chief *liṅgas*, or representations of Śiva, is shaped in front into an image of Brahmā holding a small figure of Viṣṇu on his head, thus forming the sacred Triad (*BG* vii. [1883] 551). The development of the 'fetish' into an anthropomorphic image is also shown by the use of masks which are permanently attached to the stone or stock, or used only at special feasts or ceremonies. At Nāsik in the Deccan, a *liṅga* has a silver mask with five heads, which it wears on special days, particularly the full moon of the month Kārttik (Nov.); and Bālaji, a form of Kṛṣṇa, always wears a golden mask (*ib.* xvi. [1883] 505, 507). A *liṅga* at Pur wears a rude copper mask of a man's face, with staring eyes and a curled moustache (*ib.* xviii. pt. iii. [1885] p. 427). At Benares, Bhaironnāth, warden of the city, occasionally wears a silver mask fixed on the stone which represents him, and the image of Durgā is covered with tinselled cloth and has a face of brass, silver, or other metal, according to the whim of her priests, who keep on hand a stock of masks which fit the head of the image (Sherring, 62, 166).

The result of this process of anthropomorphization is that the idol is supposed to possess powers of volition and movement.

There are numerous instances in which the image refuses to be moved by human agency, or moves only by order of certain persons. When, in anticipation of a raid by Aurangzīb, the ancient image of Keśava Deva was removed from Mathurā to Mewār, as they journeyed the wheels of the carriage refused to move, and the image, one of the most venerated statues of Kṛṣṇa, insisted on remaining at the village now known as Nāthdwārā, 'door of the Lord,' where it stands to the present day (F. S. Growse, *Mathura*[3], Allahabad, 1883, p. 180; J. Tod, *Annals of Rajasthan*, Calcutta, 1884, i. 558). The image of Śiva was being taken to his capital, Laṅkā, by the demon Rāvāṇa, and preferred to remain at Gokarn (*q.v.*), where it is at present (F. Buchanan, *Journey from Mysore*, London, 1807, iii. 166). A Rājā in Berār found an image on the river bank, and prayed that the god would accompany him to his capital; the reply was that it would follow him so long as he did not look back; at Sirpur he violated the tabu, and the image refused to move farther (A. Lyall, *Berar Gaz.*, Bombay, 1870, p. 178). The image Bālmukand, found lying in the river Jumnā, attached itself to the Brāhmanical cord of the saint Vallabhāchārya, as he was bathing in the river (Bholanauth Chunder, *Travels of a Hindoo*, London, 1869, ii. 49). The image of Jagannāth followed a gardener's daughter as she sang a verse from the *Gīta-govinda* (M. A. Macauliffe, *The Sikh Rel.*, Oxford, 1909, vi. 9). There is a story current in S. India that an image of Kṛṣṇa, plundered from a Hindu temple, shared the bed of one of the Delhi princesses, and that she finally became absorbed within it (F. Buchanan, ii. 70 f.). The *liṅga* at Nagardhan opened to receive a pious woman who was unjustly suspected by her husband of infidelity (R. V. Russell, *Nagpur Gaz.*, 1908, i. 307 f.). Some images are known to grow in size, like the stone called the 'cat mother' (Bilāī Mātā), which has grown from infancy to youth; Tilabhandeśvara, 'Lord of the sesamum storehouse,' increases daily in size to the amount of a grain of the seed (A. E. Nelson, *Raipur Gaz.*, 1909, i. 287; Sherring, 151). An image of Buddha in Burma recently began to develop a moustache (Shway Yoe, *The Burman*, London, 1882, i. 235). An old legend tells that an image sweated so copiously that the Brāhmans were obliged to cool it with their fans, and a similar story is current in Burma (Stobæus, *Physica*, i. 56, in J. W. McCrindle, *Ancient India as described in Classical Lit.*, Westminster, 1901, p. 173; Shway Yoe, i. 234 f.). In Baroda, an ancient image is called 'Mother of the Scorpions,' because a gummy substance, like a small red scorpion, oozes from its belly (*BG* vii. [1883] 601).

5. **The manufacture and consecration of images.**—(*a*) *The substances from which images are made.*—These are numerous, and in the case of the so-called 'fetishes' the variety is specially great.

In Bombay, Humāī, the goddess of the Vārlis, a forest tribe, is represented by a ball made from the brains of a cow, or by a

small figure of the animal; their household deity, Hirvâ, is a bunch of peacocks' feathers, or the figure of a hunter with his gun, a warrior on horseback, or a five-headed monster riding on a tiger (*BG* xviii. pt. i. [1885] p. 188). An image of one of the village goddesses in S. India is made of turmeric kneaded into a paste (H. Whitehead, 143). The Mâlâ goddess, Sunkalamma, in S. India, is in the form of a cone made of boiled rice and green gram; a little hollow is made in the top, and this is filled with butter, onions, and pulse; four lampwicks are put into it, a nose-jewel is stuck on the outside of the lump, two garlands are tied round it, and the whole structure is decorated with religious symbols (Thurston, *TC* iv. 357). Ashes, either from the sacred fire or from the funeral pyre, are often made into images; among the Gaudos of Madras, an image of the deceased is made on the spot where he was cremated, and to this food is offered (*ib.* ii. 275; cf. vi. 357). Balls or cones of clay often represent the deity or a sainted ancestor, as among the Aruvas, whose gods are a mass of mud in conical shape, with an areca-nut stuck on the top (*ib.* i. 60; cf. iii. 461 f.). Eight little heaps of brick plastered over with clay represent the village gods in the Shâhâbâd district of Bengal (*NINQ* i. [1891] 128). The household deity of the Koravas of Madras is a brick picked up at random (Thurston, iii. 469). The Kânphaṭâ Jogis represent their ancestors by unhusked coco-nuts, changed yearly on New Year's Day, the old coco-nut being made into oil to feed the lamps of their shrine; the family god of the Mukris is an unhusked coco-nut; the house *nat* is represented in every Burmese house by a coco-nut hung in a frame of cane (*BG* xv. [1883] pt. i. pp. 354, 376; *Census Rep. Burma*, 1911, i. 156). Ambâ Bhavâni, a caste goddess in Sholapur, is a lamp (*BG* xx. [1884] 108). Clay pots are commonly used to contain the deity, as among the Mâlas of Madras, who represent Lakṣmi, goddess of prosperity, by a pile of six pots; in W. India pots are commonly used as homes for spirits (Thurston, iv. 359; *BG* xv. pt. i. [1881] p. 248 n.).

For anthropomorphic images the material most used in ancient times, as in the case of the Greek *ξόανα*, was probably wood (J. G. Frazer, *Pausanias*, 1898, iv. 245 f.; Farnell, *CGS* i. [1896] 14 f.).

Jagannâth, originally a rude block, has, under Buddhist influence, been adapted to represent the Triad—Buddha, Dharma, Saṅgha (A. Cunningham, *Bhilsa Topes*, London, 1854, p. 358 ff.; W. W. Hunter, *Orissa*, i. 92 ff., 129). The wood of the *nîm*, or margosa tree (*Melia azadirachta*), is used for the most sacred images (*JASBo* ii. 275). Ancient wooden images have naturally, for the most part, disappeared. But there are records of their existence in Kâśmir. 'In Inner Kashmir, about two or three days' journey from the capital, in the direction towards the mountains of Bolor, there is a wooden idol called Śârada, which is much venerated by pilgrims' (al-Bîrûnî, *India*, tr. E. C. Sachau, London, 1910, i. 117). Commenting on this passage, Stein (Kalhaṇa, *Râjataraṅgiṇî*, London, 1900, ii. 285) remarks that al-Bîrûnî associates this image with other famous idols, like that of the sun-god at Multân, Chakraśvâmin of Thâneśvar, and the *liṅga* of Somnâth; 'I am unable to trace elsewhere any reference to the image of Śârada being a wooden one. There was a famous wooden statue of Maitreya, much venerated by Buddhists, in Dâril, not far from Cilâs. It is mentioned by Fa-hien and Hiuen Tsiang (see *Si-yu-ki*, tr. Beal, i. pp. xxix, 134). This image was 80 feet long, and its upturned feet 8 feet, much worshipped by neighbouring kings. Hiuen Tsiang says it was about 100 feet high.' Similar images have recently been found in Orissa (Nagendranath Vasu, *Arch. Surv. Mayurbhanja*, Calcutta, 1911, i. c). For other religious carvings in wood, see V. A. Smith, *Hist. of Fine Art in India and Ceylon*, p. 364 ff.

Many of the images now in use are made of metal of various kinds. Among the more primitive tribes iron in various shapes is used.

If a Savara dies of wounds caused by a knife or other iron weapon, a piece of iron or an arrow is thrust into a rice-pot to represent the deceased (Thurston, vi. 331). Among the gods of the Goṇḍs are found a spear, sword, or iron bar (R. V. Russell, *Census Rep. Cent. Prov.*, 1901, i. 94). Spears often represent the S. Indian village goddesses, and among the Lamânis of Bombay needles are worshipped in the name of dead ancestors (H. Whitehead, 124; *Eth. Surv. Bombay*, no. 140 [1909] 10). For house images and for those carried in procession, brass is usually employed, and, cast by the *cire perdue* process, is found even among primitive tribes like the Kandhs (Thurston, iii. 391). A combination of eight metals—gold, silver, copper, tin, lead, brass, iron, and steel—(*aṣṭadhâtu*) is specially sacred; of this substance the face of the image of Bâgheśvarî at Benares is made (Sherring, 90).

Metal images are made at Benares, Mathurâ, Ujjain, Ahmadâbâd, and other places; Gayâ, Bardwân, and, in particular, Jaipur, supply stone images (T. N. Mukharji, *Art Manufactures of India*, Calcutta, 1888, Index, *s.v.* 'Idols'). Tavernier states that in his time Armenians used to export idols to India, and his editor asserts that at the present day Bohemia sends idols made of cast glass to India, which undersell the marble images of Agra (*Travels*, ed. V. Ball, London, 1889, ii. 261). J. G. Scott says that images of Gautama are imported from Birmingham to Burma; but this has been denied (*Burma*, London, 1906, p. 336).

(*b*) *Carving and style of images.*—The style of the sculptor is always dominated by ritual pre-
scription or hieratic formalism, and
modern idol is monotonous in executic
sesses little artistic beauty; it is onl
exceptional ability that have been ab
their powers apparent, and elevate c
mainly conventional to the rank of w
(V. A. Smith, 184 f.; Shway Yoe, *Th*
London, 1882, i. 237 f.). The proporti
of the various parts of an image are ca

almost identical, but the one at Yenûr has the "special p
arity of the cheeks being dimpled with a deep, grave sm
which is considered to detract from the impressive effect' (
Smith, 268).

(*c*) *Consecration of images.*—The molten or ca
image, until the deity can be induced or compe
to enter it, is useless and unfit for worship am
those castes and tribes which have risen beyond
level of mere 'fetishism.'

The rite of consecration, in parts of S. India, provides t
the image, when brought from the workshop, should be was
with the five products of the cow, and kept in a copper pot
twenty-four hours. It is then taken out, and the sacred fir
lighted; while this is burning the priest recites verses. T
image is kept buried under a heap of rice for about half
hour, and it is then covered with a silk cloth. The pri
touches the image in all its limbs, and finally breathes in
its mouth. The sacred fire is re-lighted, and the image is th
fit for worship (*BG* xv. pt. i. [1883] p. 147 n.). In Bengal,
the festival of Durgâ, the officiating Brâhman consecrates t
image of the goddess, and, placing it in its appointed place
the temple, recites the proper formulæ. After this comes th
giving of eyes and life to the image. With the two forefinge
of his right hand he touches the breast, cheek, eyes, and for
head of the image, saying: 'Let the soul of Durgâ long con
tinue in happiness in this image!' After this he takes a lea
of the *vilva* tree (*Ægle marmelos*), rubs it with butter, an
holds it over a lamp until it is covered with soot, of which h
takes a little on the stalk of another *vilva* leaf and fills the
pupils of the eyes with the soot (Ward, ii. 85). In other
places, when an image is not prepared, the goddess Devi is
caused to enter an earthen pot by a priest, who is obliged
to undergo fasting and submit to other tabus of food during
the nine days' ceremony (*NINQ* iv. [1894] 20 f.). Following a
still cruder form of ritual, among the Tibetan Buddhists,
'internal organs of dough or clay are sometimes inserted into
the bodies of the larger images, but the head is usually left
empty; and into the more valued ones are put precious stones
and filings of the noble metals, and a few grains of consecrated
rice, a scroll bearing "the Buddhist Creed," and occasionally
other texts, booklets, and relics. These objects are sometimes

mixed with the plastic material, but usually are placed in the central cavity, the entrance to which, called "the charm-place," is sealed up by the consecrating Lâma' (Waddell, 329). The rite of making the eyes of the image is often supposed to confer life upon it, and until this is done it is not worshipped (Thurston, iii. 106 f.). A strange story is told regarding Jagannâth, that the priests periodically make a new image of the god, and place something inside—according to some, a bone of Kṛṣṇa, according to others, 'the spirit of the god.' 'When two new moons occur in Assur [Âṣâṛh] (part of June and July), which is said to happen once in seventeen years, a new idol is always made. A Nim tree is sought for in the forests on which no crow or carrion bird was ever perched. It is known to the initiated by certain signs. This is prepared into a proper form by common carpenters, and is then entrusted to certain priests who are protected from all intrusion; the process is a great mystery. One man is selected to take out of the idol a small box containing the spirit, which is conveyed inside the new; the man who does this is always removed from this world before the end of the year' (Col. Phipps, *Mission Register*, Dec. 1824, quoted by A. Sterling, *Orissa*, London, 1846, p. 122; Ward, ii. 163; *Calcutta Review*, x. 223, quoting Brij Kishore Ghose, *Hist. of Puri*, 18). The Rath-jâtra, or car festival, of 1912 was of special importance, because the image, after thirty-six years, was to be changed (*Times of India*, weekly ed., 20 July 1912). It is, of course, quite contrary to the spirit of the Vaiṣṇava cultus of Jagannâth that anything in the shape of a bone should be enclosed in the image. The tradition obviously represents a survival of Buddhist relic-worship, as in the Tibetan customs quoted above.

**6. The ritual of image-worship.**—(*a*) *Forms of worship.*—The ritualistic worship of images takes various forms, ranging from that adopted by the more primitive tribes in the cult of the rude stocks and stones in which their spirits, usually malevolent, are embodied, through the more highly organized cult of the village and local deities, up to the worship of the orthodox gods conducted by Brâhmans or by members of the ascetic orders.

Among the forest and menial tribes the worshippers, more particularly when disease or other calamity menaces the hamlet, make a sacrifice to the stone or collection of stones which represents their local or tribal deity. The victim, usually a chicken or a castrated goat, is taken to the shrine, the worshipper or his priest decapitates it with a single stroke of an axe or knife, the form and material of such ritualistic implements being sometimes specially prescribed, and they are placed in charge of the Baigâ or other medicine-man, who hands them down to his successor, at the same time explaining to him the form of the ritual and the invocations which are used at the service. Some of the victim's blood is then dropped on the stone, and sometimes rude offerings consisting of milk or the fruits of the soil are laid on an earthen platform or altar in the hut which the deity is supposed to occupy. After this the victim is cooked and eaten in the immediate presence of the deity by the worshipper and his friends, the head being usually reserved as the perquisite of the priest.

Among the more settled tribes, particularly in S. India, the ritual assumes a coarser form. Thus, at the worship of Mâriyamma in the Bellary district, men and women substitute garments of the margosa tree (*Melia azadirachta*) for their ordinary clothing, and offer to the image milk and curds, which are drunk by the priest. The change of dress possibly points to a survival of the leaf clothing which up to quite recent times was worn by the Juângs and other primitive tribes, or it may merely indicate that they are in a state of tabu and remove their usual clothing lest it may become infected (cf. the special dress (*iḥrâm*) worn by the Muhammadan pilgrim at Mecca [W. R. Smith, *Rel. Semites*, 1894, pp. 333, 484; T. P. Hughes, *Dict. Islam*, 1885, p. 196]). A buffalo bull is bound with ropes and dragged with shouts to the shrine; it is beheaded and its head is placed on the ground beside the goddess, with the right foot, which is also cut off, in its mouth. On the fourth day of the festival a booth is erected in which the goddess is represented by a brass plate containing ashes, red powder used by women for their adornment, earthenware bangles, and a gold necklace. 'The people congregate there, and a man whose patronymic is Pôturâz ["ox-king"] brings a small black ram to the goddess. Standing in front of the goddess he holds the ram in his arms, and seizing its throat with his teeth bites the animal until he kills it. He tears the ram's bleeding flesh with his teeth and holds it in his mouth to the goddess. The body of the ram is then buried beside the booth, and Pôturâz is bathed by the headmen of the village, who put a new turban on his head and give him a new cloth' (*JASBo* ii. 164 ff.; G. Oppert, *Original Inhabitants of Bharatavarṣa*, Westminster, 1893, p. 475 f.). Accounts of similar rites of sacrifice will be found in H. Whitehead, 'The Village Deities of Southern India,' *Bull. Madras Museum*, v. [1907], no. 3. Similar brutality is shown at the sacrifices performed by the Gorkhas at the Dasahrâ or Durgâ Pûjâ festival in Nepâl (H. A. Oldfield, *Sketches from Nipal*, London, 1880, ii. 345 ff.). A survival of these rites of blood sacrifice appears in the custom of smearing rude stones and images with red paint, in order to endow them with a warm vitality, or as a substitute for an older practice of feeding a god by smearing the face, and especially the lips, of an idol with the blood of a sacrificial victim (*CGS* v. [1909] 248; *GB*[3], pt. i. 'The Magic Art,' vol. ii. [1911] p. 175 f.).

When the worship falls into the hands of Brâhmans, who are influenced by the humanistic traditions of Buddhism, particularly in the Vaiṣṇava cultus, the grosser types of worship disappear. Thus, in the case of the cult of Devî at Bechrâjî in Baroda, though the local legend implies the former prevalence of animal sacrifices, the chief priest, in the morning, after ablution, enters the sanctuary, and pours five holy liquids (*pañchâmṛta*)—milk, curds, butter, sugar, honey—over the image, and drops cold water on it from a perforated pot. While this rite (*abhiṣeka*) is taking place, the Brâhman chants Vedic hymns. The goddess is then dressed and ornamented with coloured powder and flowers, and incense is burnt. The first meal, known as the 'child's meal' (*bâlbhog*), is offered in the morning, and then the waving rite (*ârti*) is performed, in which lamps are waved, camphor is burnt, and hymns are sung to the ringing of bells and beating of gongs. She is again fed at 10 p.m., a little food being sprinkled over the image and the rest consumed by the priests. In the evening, passages from the sacred books describing the exploits of the goddess are read, and the evening meal, known as the 'great offering' (*mahânaivedya*), with gifts from pilgrims, is presented (*BG* vii. [1883] 611 f.).

The widest extension of the rites of feeding and dressing the image is found in the Vailabhâchârya cult of Kṛṣṇa, which includes the washing of the idol at dawn, dressing it, feeding it at noon—the food being shared between the temple priests and the votaries—the siesta and the awaking, the afternoon repast, the evening toilet, and the repose for the night (*BG* ix. pt. i. [1901] p. 535 f.; F. S. Growse, *Mathurâ*, p. 290).

In contrast to this elaborate ritual, that of Śiva is much simpler. To the *liṅga* are offered sandal-wood paste, water, and the leaves of the *vilva* or bel tree (*Ægle marmelos*). It is only on his special 'nights' that the stone is covered with a mask (§ 4), or decked with pieces of refrigerated butter, or carried in procession (*BG* ix. pt. i. [1901] p. 541). Sometimes as a rain-charm, a form of sympathetic or imitative magic, the *liṅga* is covered with water (*PR*[2] i. 76; *BG* xiv. [1882] 5, xviii. pt. iii. [1885] p. 339; *GB*[3], pt. i. vol. i. pp. 304 ff.).

(*b*) *Processions of images.*—There is a common custom of carrying images in procession, often accompanied with a 'sacred marriage,' of washing them in water to remove pollution and strengthen them for the discharge of their duties, or of flinging them into water as rain or fertility charms. The idol procession, which is intended, partly to please the deities, partly to spread their beneficent influences through the streets along which they pass, usually implies Jain or Buddhist tradition, and is more common in S. than in N. India.

A typical instance of such processions is the car festival (*rath-jâtrâ*) of Jagannâth. At Madura, during the spring festival, Śiva is wedded to Mînâkṣî, the local goddess, and a leading incident of the rite is the dragging of the images through the streets (W. Francis, *Madura Gaz.*, 1906, i. 270, 273). The rite of bathing their patron goddess, Gaurî, consort of Śiva, by the Râjputs of Udaipur is one of their most solemn festivals (J. Tod, *Annals of Rajasthan*, 1884, i. 603 ff.). At the Kundalpur temple the chief rite is the ceremonial bathing (*jaljâtrâ*) of the god Mahâvîra or Vardhamâna; the water in which the god has been bathed is sold by auction, and votaries buy a little to rub on their hands and faces (R. V. Russell, *Damoh Gaz.*, 1906, i. 203). Among the Prabhûs of the Deccan, their goddess, Gaurî, is fed, laid on a winnowing-fan, and stripped of all her ornaments, except her nose-ring, glass bangles, and black bead necklace. Some food and four copper coins being tied to her apron, she is placed in the arms of a servant, who, without looking back, while an elderly woman sprinkles water on his footprints, walks straight to a river or lake, and, leaving the goddess in the water, brings back her silk waist-cloth, the winnowing-fan, a little water, and five pebbles (*BG* xviii. pt. i. [1885] p. 248). On the banks of the Indus, Daryâ Ṣâḥib, the river-god, is represented by an image made of reeds, which is ornamented with flowers, worshipped, and finally thrown into the river (H. A. Rose, *Punjab Census Rep.*, 1901, i. 118).

(*c*) *Images used in divination.*—The use of images for the purpose of divination is common.

At the Dharmâvaram temple, when any worshipper craves a boon at the shrine of a famous Sannyâsi, the priest puts a leaf of the *vilva* tree on the head of the image, and, if soon after it falls off, it is believed that the request will be granted (W. Francis, *Vizagapatam Gaz.*, 1907, i. 316). At the shrine of Pisharnâth, on Matherân Hill, near Bombay, the priest explains to the god what is desired, and lays two stones in a hollow formed in the breast of the image; if the right-hand stone is first to fall, he tells the worshipper that his request is granted; if the left-hand stone falls, an additional offering is needed (*BG* xiv. [1882] 263 n.). When the Muhammadans destroyed the temple at Mandhâta on the Narbadâ river, the leader was told that the *liṅga* had the power of showing by a reflexion within its surface the creature into which the soul of the inquirer would pass at the next metempsychosis; when the Musalmân officer looked into it he saw a pig, and in his rage flung the *liṅga* into the fire; this explains how it gained its jet black colour (C. Grant, *Cent. Prov. Gaz.*, 1870, p. 261).

(*d*) *Binding the god.*—The custom of binding an image so as to keep the deity under control is found in India (*FL* viii. [1897] 325 ff.).

The image of Hanumān, the monkey-god, is sometimes barred in by means of strips of wood nailed in front of his shrine, to prevent him from wandering in the jungle (R. V. Russell, *Betul Gaz.*, 1907, i. 53). In Kumaun, some of the local gods are shut up in a copper vessel or covered with a cylinder, lest they may do mischief (*NINQ* iii. [1893] 145). Near Madras is a temple where the reformer, Śaṅkarāchārya, put the goddess Kālī down a well, and placed a large stone on the top to keep her confined, because she used to eat a Brāhman daily (*JASBo*, ii. 281). The Kurumbas of Madras worship their god, Vīra, the 'hero,' only at his annual festival, and for the remainder of the year keep him shut up in a box (G. Oppert, 238).

(*e*) *Stolen images.*—Images which have been stolen from other people are more valuable than those acquired by purchase or gift, because they bring with them the luck of the former possessor, and are more easily propitiated (*NINQ* iii. [1893] 55; cf. J. Grimm, *Teut. Myth.*, tr. J. S. Stallybrass, London, 1882–88, iv. 1321; Gn 31[19]).

Among the Meitheis, in recent times, a celebrated ammonite, which had been stolen more than once, was the subject of a lawsuit in the British Courts. In ancient days the Meitheis used to plunder and remove to their capital the sacred stones of the Nāgas (T. C. Hodson, 102). The Kallans, a thieving tribe in Madras, do not hesitate to steal a god, if they think he will be of use to them in their predatory excursions (Thurston, iii. 85; F. R. Hemingway, *Trichinopoly Gaz.*, 1907, i. 3318). It was the habit of some Kandhs to steal their neighbours' gods in order to acquire influence as priests (S. C. Macpherson, *Memorials*, 200 ff.). A Rājā of Kulu, afflicted with leprosy, was advised in a dream to steal the image of the god Raghunāth from Oudh; his messengers stole the god, were pursued and overtaken, but the god showed such a decided wish to go to Kulu that they were allowed to take him away, and the Rājā was cured (*FL* ix. [1898] 184 f.).

**7. Legends of discovery of images.**—Most of the legends of the discovery of images are ætiological, invented to explain the rudeness of the type, their existence in spite of iconoclasm, or other miraculous powers attributed to them.

The image is often said to have been originally a shapeless log which was found floating down a river or discovered on the seashore. That of Gokulnāth in Mewār was discovered in a ravine on the river bank (J. Tod, i. 580). That of Jagannāth was discovered by a Savara, one of the jungle tribes (W. W. Hunter, *Orissa*, i. 92 ff.). About a century ago the god Manoharji appeared to a Khārvā fisherman in Bombay, and informed him that his image had floated ashore; when search was made, it was discovered (*BG* v. [1880] 81). Many famous *liṅgas* have been identified by a cow dropping her milk on the spot where they were subsequently discovered. That of Balāchari still bears the mark of the cow's hoof; that at Indī was identified by a cow dropping milk on it, and, when being dug out, it sank into the ground, and was thus proved to be self-existent (*svayambhu*) (§ 3). At Bhimaśankar, a man, while cutting timber, saw blood oozing from a tree, but the wound healed when a cow dropped her milk on the stump, and a *liṅga* came out of the tree; at Pāshān, a man found a cow feeding a snake in an ant-hill, which, when excavated, disclosed five *liṅgas* (*BG* xiii. [1884], 655, xxiii. [1884] 655, xviii. pt. iii. [1885] pp. 120, 265). An image is often discovered as the result of a dream, like one which recently appeared in Bombay, or that of Jāgīśvara Mahādeva at Bandakpur (*NINQ* i. [1891] 165; C. Grant, *Cent. Prov. Gaz.*, 1870, p. 175). Sometimes, when attacked by foreigners, an image is miraculously defended by swarms of hornets, as in the case of the Bileśvar *liṅga* in Kāṭhiāwār, or that at Bheṛagaṛh on the Narbadā (*BG* viii. [1884] 401; W. H. Sleeman, i. 66 f.). When the Muhammadans attacked the image of the bull Nandi, at Nirvangni, or that of Omkārjī on the Narbadā, blood gushed out, and the assailants were discomfited (*BG* xviii. pt. iii. [1885] p. 263).

**8. The future of idolatry.**—The attitude of the Hindus towards their images has been discussed elsewhere (art. HINDUISM, § 38). The influence of monotheistic religions, like Christianity and Islām, has done much to suggest purer conceptions of the Godhead—the belief in a single, spiritual, benign Providence. A similar effect has been the result of sectarian movements, such as Sikhism, the Brahmā and the Ārya Samāj, and other recent movements of the same kind which encourage the study of the Vedānta, reject the Purāṇic scheme of Hinduism, and aim at restoring the Nature-worship of the Vedic age. But, granting this, idolatry still not only prevails widely among the menial and forest tribes, but is actively encouraged by the Brāhman hierarchy, and, in particular, by
those priestly classes which act as pilg
at sacred cities and places of pilgrim
growth of a moneyed class under Britis
largely encouraged the erection of temp
are still built in great numbers, as the
religious enthusiasm and ostentation, an

restoration of an ancient shrine or the re
old image. It is improbable that a form o
which is so deep-rooted and universal, a
in the present state of their culture, r
wants of the masses of the population, wi
disappear.

To quote A. C. Lyall (*Asiatic Studies*[2], London, 19
'Idolatry is only the hieroglyphic writ large, in popular
it came because unlettered man carves in sticks and
rude and simple imagination of a god; and this
expressing the notion by handiwork continues ar
highly intellectual societies, until at last the idea be
subtle and sublime to be rendered by any medium o
written or spoken word.'

LITERATURE.—The vast subject of Indian idolatry
been investigated in no single monograph. The illust
images contained in the popular works on Hinduism
rule, taken from the coarse lithographs found in the
many castes. It is understood that the Indian Arch
Department contemplates the preparation of a
iconography showing the development of the ido
historical times—a work which is much needed. Many
tions of Indian sculpture will be found in V. A. S

through a wide literature of Indian ethnography—accou
tribes and castes, local gazetteers, census reports, and si
publications, to which reference is made in the course o
present article.

W. CROOKE

**IMAGES AND IDOLS** (Japanese and Kore
—I. *JAPANESE.*—i. IN THE INDIGENOUS RELIGI
—1. The use of images and idols as objects
worship is not indigenous to Japan, for one char
teristic of pure Shinto is the absence of all figur
Among the archæological remains of greatest an
quity, however, many clay images of men, and
horses and other animals, known as haniwa, ha
been found in the burial vaults of Imperial a
noble families. It had been the custom at
funeral to sacrifice attendants, servants, a
beasts of burden, that they might accompa
their master upon his journey and attend him i
the spirit land. In the reign of Suijin (29 B.C.
A.D. 23), when the Queen died, Nomi-no-sukune
councillor to the throne, advised the Emperor t
substitute clay images for living victims. On
hundred potters were summoned from Idzumo t
the court, and these made figures which were
placed about the royal tomb. The custom thus
established was followed by the nobles and promi-
nent families for several hundred years, down to
the 7th cent. A.D. Recent excavations in ancient
tombs have brought *haniwa* to light in as many as
32 provinces of the Empire, thus witnessing to
their widely prevailing use. The rules concerning
tomb-construction issued in the first year of
Taikwa (A.D. 645) make no mention of *haniwa*;

but in special cases their use was probably continued to a later date. The latest instance was in 1912, when *haniwa* were placed by the tomb of the Emperor Meiji Tenno, in deference to ancient custom and sentiment. At no time were these images objects of worship, though they possessed religious significance as symbolic offerings to the spirits of the dead (see, further, art. HUMAN SACRIFICE [Japanese and Korean]).

2. Although in Shinto no images are used to represent objects of worship, a mirror is usually placed in the holy place within the shrine. The mirror within the Shrine at Ise is alleged to be the one used by Ama-terasu, the sun-goddess, or ancestress of the Royal Family. It is octagonal, although usually the mirrors are round. They are not strictly objects of worship, but typical of the human heart which in its purity reflects the image of Deity; and faithful followers of Shinto are instructed to bow before the mirror of the shrine morning and evening in an act of self-examination.

3. Before the mirror of the Shinto shrine hang the **gohei**, strips of white paper cut into small squares and draped upon an upright of wood, supposed to symbolize the ancient offerings of cloth. Together with the mirror, the *gohei* are not infrequently objects of popular worship.

4. About the shrine the **shime-nawa**, a straw rope with tufts of straw or cut paper at regular intervals, is often hung. This rope may be placed about anything considered sacred or worthy of reverent care, and is supposed to avert evil influences. Trees, rocks, and caverns are occasionally so defended; and the custom of surrounding with straw rope the area upon which a house is to be erected may have its origin in the idea of thus averting evil.

ii. AS INFLUENCED BY BUDDHISM.—The beginning of real image-making in Japan dates from the coming of Buddhism, whose influence is to be noted even in Shinto shrines, for a gradual mutual adaptation took place and various images came to be placed in the shrines.

1. The most popular of these is that of Sugawara Michizane († A.D. 901), worshipped by the people under the posthumous name of Tenjin, as the god of learning, especially of calligraphy. He is represented in the robe of an ancient court-noble seated on a matted floor.

2. The **Ni-o** or **Deva**, as gate-guardians to scare away demons, are often found before Shinto shrines as well as before the temples of certain Buddhist sects; and the images of animals traditionally associated with specific deities are placed in their shrines and popularly worshipped as images of the deity itself. For example, *Inari*, called also Uga-no-Mitama, is the goddess of rice, and hence much worshipped by Japanese, who are rice-raising, rice-eating people. The fox is her servant or messenger; and images of foxes are always found at Inari shrines, being regarded by many as images of the goddess herself. In the case of *Benten*, one of the seven deities of luck, the snake, her attendant, is often imaged as an embodiment of the goddess.

3. **Images of Buddha.**—For the most part, images to which religious reverence is paid are closely associated with Buddhist temples. The first record of the introduction of Buddhistic images is to the effect that, in A.D. 522, Shibatatsu of Ryo (one of the provinces of China at that time) came to Japan and settled in Yamato, bringing with him several images which were worshipped in his home. The people in general, however, paid little attention to the fact. Some time later, in A.D. 552, the Korean king sent ambassadors to the Japanese court, who brought a gilt-bronze statue of Buddha with hanging canopies and several Buddhist Scriptures. The new faith gained ground through favour of the court circle, and the making of images became a professional art. Shibatatsu was himself a skilled sculptor, and was succeeded by his son and grandson, the latter, Tori-busshi, being considered one of the greatest ever known in Japan. Several of the most famous images at Horyuji, the oldest Buddhist temple in Japan, are declared to be by his hand. In the sixth year of Bintoku (A.D. 577) the king of Kudara made a present to the court of Japan of a large image of Buddha which was accompanied by the artist; and in A.D. 585 a Japanese sculptor is known to have executed two images of Buddha. The images of this early period were of wood; but during the reign of Bintoku a large stone image of Miroku was presented by the court of Kudara, and set the fashion for work in stone. Gradually bronze, clay, and hard lacquer were used; and images were made in great numbers, especially about the middle of the 8th century. This continued till the 12th cent., when the art began to decline. From the 8th to the 12th cent., many famous sculptors, including Keibunkai and Kasuga (8th cent.), Eshin (10th cent.), Jocho, Kokei, and Unkei (11th cent.), and Tankei and Kwankei (12th cent.), devoted their energy and skill almost exclusively to the making of Buddhist images and idols. Among the most famous images are the *daibutsu* in Nara, Kamakura, and Kyoto. See art. DAIBUTSU.

4. One of the most popular objects of worship is the image of **Kwannon** (Skr. Avalokiteśvara [*q.v.*]), the goddess of mercy, who listens to the prayers of the unhappy. The sex of the deity is a matter of dispute, but in popular worship the pity invoked is that of the eternally feminine. The San-ju-san-gen-do, a temple to Kwannon in Kyoto, contains 33,333 images of the deity. The temple was originally founded by the ex-emperor Toba in 1132, and in 1662 the present building was erected. Ranged in rising tiers throughout the length of the temple are 1000 figures, each 5 ft. high, and bearing upon its head and hands smaller images, making a total of 33,333. Some of these were executed by the best artists of their time; and, while all represent the same deity, no two are exactly alike in the arrangement of the myriad hands which hold forth various articles.

5. **Jizo** (Skr. Kṣitigarbha) is a very common figure, not only in temples, but also along country roadsides and by mountain paths. He is a helper of those in trouble; and is especially besought by pregnant women and by children. A stone image of Jizo swathed in little bibs, the offerings of women in distress, is one of the most pathetic sights amid all the image-worship of Japan.

6. Among other popular Buddhist images may be mentioned **Rakan**, **Emma**, **Fudō**, and **Benzuru**. Rakan (Skr. Arhan) includes all the immediate disciples of Śākyamuni, such as the five hundred disciples (Gohyaku Rakan) or the sixteen disciples (Juroku Rakan). Emma (Yama rāja) is the ruler of the Buddhist hell, a most ferocious-looking image. Fudō (Achala), the immovable, is represented in blazing fire. Benzuru, one of the sixteen Rakan, is a god of healing sympathy; and the lower classes believe that their bodily diseases will be healed by their touching the corresponding part of his sacred image.

7. **The seven gods of Luck**—Ebisu, Daikoku, Benten, Fukurokuju, Bishamon, Jurojin, and Hotei—receive special regard from merchants and small traders. Their images, now as much in jest as in earnest, are frequently to be seen; and figures of them adorn popular advertisements. The present trend of things is clearly seen in the

fact that less and less respect is paid to the images which once meant something very real in the life and thought of the people.

8. Besides images, the commonest object of worship is the ancestral tablet, *ihai*, which plays a prominent part in Japanese Buddhism. The custom was introduced from China and is universal among all classes of people, and with Shintoists as well as Buddhists. The tablets are usually of rectangular shape, a slip of planed wood, rounded at the top, and placed on a pedestal. The size differs according to the rank or wealth of the family and the age of the dead. On the front side is inscribed the posthumous name of the dead, and on the back the date of his or her birth and death. They are put in a small shrine or on a shelf, not infrequently with the images of Amida or other Buddhist deities, and are placed in a room specially prepared for the purpose or in a sitting room of the family. Often duplicates of the tablets are kept in the Buddhist temples of their own attachment. For a certain length of time after death food and drink are offered, generally until the 49th day, and thereafter on the 100th day and on the 1st, 3rd, 7th, 13th, 25th, 33rd, and 50th anniversary. The idea of these offerings before the tablets is not the same as for deities. It is with the idea of feeding the souls in the world beyond, or simply to keep bright the memory of the dead. Priests are invited on the anniversaries to read scriptures before *ihai*. In the time of the *bon*-festival on the 13th, 14th, and 15th days of July (old calendar) the souls of the dead are believed to come to the world in order to visit the members of their family, when special feasts are offered before the tablets. The custom is steadily declining, giving way to the coming in of more intelligent faith.

9. **Picture-trampling.**—It may be of interest to note that, following the introduction of Roman Catholic Christianity by the Jesuit missionaries in the 16th cent., the persecution found expression in a peculiar form of *efumi*, or picture-tramping, all suspected of Christian sympathies being required to trample upon the picture of the Christ. Later, an iron plate was substituted for the picture; and the practice was continued until the beginning of the Meiji era, when religious freedom was allowed to the people.

II. *KOREAN.*—Buddhism was introduced into Korea at a time when the country still formed three separate kingdoms—Shiragi, Korai, and Kudara.

1. **Buddhist images.**—Korai, being nearest to China, was the first to receive Buddhist missionaries, with whom came the idols of that faith, in A.D. 343. Soon after there was built a large Buddhist temple called *Iburanji*. Twelve years later, Buddhism was introduced into Kudara, and forty years later into Shiragi, gradually spreading over the entire peninsula. The idols and images in the Korean temples are for the most part not different from those in Japan, images of Buddha, Kwannon, Amida, Jizo, Emma, and Rakan being most frequent. The largest Buddhist statue in Korea is that of *Miroku* (Maitreya), in the temple of Kwanchokji in the province of South Chusei (Chung Chong). It was made in stone about 1000 years ago, by a priest called Emyo (Heimiung), who, it is said, employed one hundred workmen for thirty-seven years. It is 55 ft. in height, with a width of 30 ft. On the forehead, which measures 6 ft. in width, is set a precious stone.

2. In addition to Buddhist images, the image of **Kwang-woo** is frequently seen. Kwang-woo was an ancient Chinese general; and in the city of Seoul alone there are four shrines to his honour, one each in the north, south, east, and west. He is popular as a household deity with the common people; and the images of Gentoku, ‹ Komei, three other generals, are often p his.

3. **The mountain-god.**—The imag mountain-god is that of an old man mou a tiger. He is very popular, and occu shrines upon the hill-tops.

4. **Post-gods.**—Everywhere in Korea wayside and at the entrance to villag demon-posts, rudely cut with grinning horrible faces. They were originally posts, which gradually became objects of believed to be strong defences against the forces of the unseen world.

5. **Ta Chue**, or 'the Lord-of-the-place,' of straw in a hollow form generally ab long and 5 in. wide; and within him are pl coins, bits of pretty cloth, and similar tr He is enshrined in the corner of the roo kitchen or store-house, and offered *moc* cake) on the 1st and the 15th of the old c months. He is supposed to avert evil an luck to his owner.

TASUKU HAR.

**IMAGES AND IDOLS** (Lapps and Sam —The worship of idols and images of woo stone appears to have been at one time comn all the Ugrian races occupying the Arctic r of the Eurasian continent. This worship sti vives among the Samoyeds of the Russian Er and it has not been long abandoned by the Sam or Sameh, of Lapland, otherwise known as Fi Lapps, the former term being current in Nor and the latter in Sweden, Denmark, Britain other countries. It is true that the people of land outwardly professed the Lutheran for Christianity as early as the 17th cent.; but at that time they secretly retained the relig ideas which they had inherited from their fathers. Of the condition of the Lapland Same in the 17th cent., the best contemporary *expo* is John Scheffer, Professor in the Universit Upsala, whose *Lapponia*, published at Frank in 1673 (Eng. tr., Oxford, 1674), contains very cise accounts of the existing religious practice these people. A striking feature of the L religion was the worship of certain idols.

These were two in number, popularly known 'the wooden god' and 'the stone god.' T wooden god (*muora jubmel*) was called *Aijek* 'the ancestor,' and, alternatively, Thor, or Ti mes, 'the thunderer.' It may be that the na of Thor, and his association with this *particul* idol, ought properly to be regarded as a Teuton intrusion in Lapland, but that is a detail in which it is unnecessary to enter here. *The imag* of Aijeke or Thor was always made of birch woo

'Of this wood they make so many idols as they have sacrifice and, when they have done, they keep them in a cave *by som* hill side. The shape of them is very rude; only at the top the are made to represent a man's head' (Scheffer, p. 40, Eng. tr.)

Scheffer's book portrays one of the rudest o these idols, a mere wooden block, but there is also a more elaborate representation of Thor's image, standing upon a table or altar. The trunk is simply a block of wood, with sticks projecting on either side to represent arms. At the end of the right arm is fixed a mallet, intended for the hammer of Thor. Across the chest are cross-belts or bandoliers. The head is shaped to resemble a human head, with eyes, eyebrows, nose, and mouth. On either side of the skull are two spikes, in accordance with Scheffer's words:

'Into his head they drive a nail of iron or steel, and a small piece of flint to strike fire with, if he hath a mind to it' (p. 40).

On the table, in front of the figure, is a plate of

birch bark, containing portions of a sacrificed reindeer. Behind the figure are deer's antlers, and round the base of the table are branches of birch and pine. A Lapp kneels in adoration before the altar.

Gustaf von Düben, in his work *Om Lappland och Lapparne* (Stockholm, 1873, p. 288), reproduces a drawing from a MS of the year 1671, by Rehn, Stockholm, which is in close agreement with Scheffer's contemporaneous picture. Rehn's drawing shows three images of Thor upon one table, and in front of them are three upright sticks bearing portions of the sacrificed animal. Von Düben draws attention to the branches adorning the sides of the altar, to the two antler-heads between the images of Thor, to the hammers wielded in each hand of these images, and to the haloes encircling their heads. It is noteworthy that the sacrifice of animals is an essential element in the worship of these idols. Scheffer states that the Lapps make a new image to Thor every autumn, consecrating it by killing a reindeer, and smearing the idol with its blood and fat. The skull, feet, and horns are placed behind the image. Part of the meat is eaten by the Lapps, and part is buried, together with the bones.

In addition to 'the wooden god,' the Lapps also worshipped 'the stone god' (*kied kie jubmel*), otherwise, in Swedish, *Storjunkar*, or 'the great Lord.' The term *seita* was also applied, generically, to a stone god. In form, the *seita* sometimes resembled, or was supposed to resemble, a bird, or a man, or some other creature.

'The truth is, its shape is so rude that they may sooner fancy it like something themselves than persuade other people that it is so. Their imagination is so strong that they really believe it represents their *Storjunkar*, and worship it accordingly. Neither do they use any art in polishing it, but take it as they find it upon the banks of lakes and rivers. In this shape, therefore, they worship it, not as though it were so made by chance, but by the immediate will and procurement of their god *Storjunkar*, that it might be sacred to him' (Scheffer, p. 41).

The last sentence, it will be seen, implies that the *seita* was the medium through which an invisible deity was worshipped, and was not itself an object of worship. Von Düben shows (*op. cit.* pp. 236–246) representations of three Lapp *seitas*, one taken from a reindeer-pasture and another from a stream, while the third, of white marble, with a covering or cap of calcareous spar, was found in a small island, at a spot known to Lapp tradition as a place of sacrifice, where many horns and bones were found. It may be added that, although the *seitas* are generally quite unworked, there are some instances in which the upper part has been carved sufficiently to bring out a resemblance to the head of a man or of an animal.

The ceremonies connected with the worship of *Storjunkar* were very similar to those associated with 'the wooden god.' The animal specially selected for sacrifice was a male reindeer. Its right ear having been pierced and a red thread run through it, the reindeer was killed, and its blood carefully preserved in a barrel. The officiating priest then took the blood, some of the fat, the antlers, the bones of the head and neck, and the feet and hoofs, to the hill where the sacred stone had already been placed. Uncovering his head and bowing reverently, he then anointed the stone with the fat and blood, and placed the antlers behind it, the right horn having the penis of the reindeer attached to it, while on the left horn was an amulet of tin and silver worked together with red thread.

Although not represented by any special image, the sun was also worshipped by the Lapps of the 17th century. Scheffer states his belief that the sun was incorporate in Thor, who, it may be noted, was sometimes decorated with a nimbus round his head. The act of sun-worship, at any rate, was performed before the altar of Thor, upon which occasion the sacrificial bones were arranged in a circle upon the altar.

In return for the reverence paid to them, or through them, the wooden and stone gods were believed to protect their worshippers against misfortune and to aid them in hunting and fishing. Each family had its own sacrificial mount, with its wooden or stone god; but in some cases individuals possessed *seitas* who were understood to be specially interested in their welfare and to whom they prayed.

Rites similar to these are common to other cognate races in Northern Europe and Siberia.

'The Samoyedes, Ostiaks, Voguls, and Lapps all smear the mouths of their idols with blood and fat' (John Abercromby, *Pre- and Proto-historic Finns*, London, 1898, i. 159).

Among the Samoyeds of to-day the religious practices of the 17th cent. Lapps are still in full swing, as several modern travellers have shown. In 1875 and 1878 the Swedish explorer Nordenskiöld and his comrades visited sacrificial sites on Vaygatz Island and the Yalmal Peninsula. To these places the Samoyeds are accustomed to make pilgrimages, sometimes from a distance of six or seven hundred miles, in order to offer sacrifices and make vows. At a sacrificial eminence on the south-western headland of Vaygatz Island, the Swedish explorers found a large number of reindeer skulls and horns, bones of the bear, various objects of metal, and several hundreds of idols, described as

'small wooden sticks, the upper portions of which were carved very clumsily in the form of the human countenance, most of them from fifteen to twenty, but some of them 370 centimetres in length. They were all stuck in the ground on the south-east part of the eminence. Near the place of sacrifice there were to be seen pieces of drift-wood and remains of the fireplace at which the sacrificial meal was prepared. Our guide told us that at these meals the mouths of the idols were besmeared with blood and wetted with brandy, and the former statement was confirmed by the large spots of blood which were found on most of the large idols below the holes intended to represent the mouth' (Nordenskiöld, *Voyage of the Vega*, Eng. tr., London, 1881, i. 94 f.)

That these customs are still in force seems quite evident. In 1894, Frederick Jackson, in the course of his expedition to Franz-Josef Land, learned that the Samoyeds of Vaygatz at that date were accustomed to sacrifice a reindeer to their god, killing the animal by slow degrees. The Samoyeds, moreover, carry small portable gods with them during their sledge-journeys. In 1878, Nordenskiöld purchased four of these gods from a Samoyed woman. Two of them were dolls, one was a miniature garment, and the fourth was 'a stone, wrapped round with rags and hung with brass plates, a corner of the stone forming the countenance of the human figure it was intended to resemble' (*op. cit.* i. 86). This last appears to have been identical with the 'stone god,' or *seita*, of the Lapps.

'Professor De Harlez thinks it possible that the small domestic idols of felt and rags, used by the Mongols, and mentioned as early as the year 1200 by Armenian authors, may have been introduced by the Buddhist preachers, as Vartan states without hesitation' (Abercromby, *op. cit.* i. 163).

The stationary wooden idols of the Samoyeds seem to have been larger in past times. Martinière in 1653, Linschoten in 1601, and an old Dutch engraving reproduced by Nordenskiöld (i. 84) all show images as large as a man; and in the last instance the human trunk as well as the head is carved with some elaboration. Probably the earliest written description of Samoyed idols is that given by an English traveller, Stephen Burrough, in 1556 (Hakluyt's *Voyages*, new edition, Glasgow, 1903–05, 'Principal Navigations,' ii. 338). Burrough speaks of his visit to

'a heap of the Samoeds idols, which were in number above 300, the worst and the most unartificiall worke that ever I saw: the eyes and mouthes of sundrie of them were bloodie, they had the shape of men, women, and children, very grosly wrought, & that which they had made for other parts, was also sprinckled with blood. Some of their idols were an olde

sticks with two or three notches, made with a knife in it. . . . There was one of their sleds broken, and lay by the heaps of idols, & there I saw a deers skinne which the foules had spoyled: and before certaine of their idols blocks were made as high as their mouthes, being all bloody, I thought that to be the table whereon they offered their sacrifice.'

A comparison of these various statements makes it evident that the idol-worship of the Samoyeds and of the Lapp Samelats was substantially the same. The only striking difference is that the Samoyed idols have not the outstretched arms wielding the hammer of Thor which formerly characterized the wooden gods of Lapland. It is reasonable to presume, therefore, that the idea of Thor and his hammer was introduced into Lapland from the South.

LITERATURE.—Appended to Von Düben's *Lappland* (Stockholm, 1873) there is a list of over 250 works relating to Lapps, a considerable number of which include references to their religion. Nearly as ample is the bibliography prefixed to Abercromby's *Finns* (London, 1898). Special mention may be made of C. E. Lenequist, *De superstitione veterum Fennorum*, Abo, 1782; C. Ganander, *Mythologia Fennica*, do. 1789; A. Andelin, 'Religion der heidnischen Lappen,' in Erman's *Archiv für wissenschaftl. Kunde Russlands*, xx. 167-180 and 349-365; and V. M. Mikhailovskii, 'Shamanism in Siberia and European Russia,' in *JAI* xxiv. (1894) 62.

DAVID MACRITCHIE.

**IMAGES AND IDOLS** (Muslim).—Muḥammad protested strongly against idolatry, but other Arabs had done so before him. While he was yet a lad, there were men, called the Ḥanīfs, who rejected the gross idolatry around them. Some of these afterwards became Christians; some remained unitarians. Of the latter, Zaid ibn 'Amr was one of the chief. He embraced neither Christianity nor Judaism, but said that he worshipped the God of Abraham. He kept entirely aloof from idol-worship and all connected therewith, and had a great influence on Muḥammad's early preaching. So long as Muḥammad only exhorted to better lives, or spoke of the Last Day, the Meccans treated him with good-humoured contempt; but when he attacked the idolatry of the Ka'ba, the case was different. He must respect their temple and its gods, for which Mecca was famed far and wide. His uncle Abū Ṭālib begged him to make some concession, but he replied, 'Say there is no God except Allāh, and renounce what you worship beside Him.' So the friendly offices of his uncle came to nothing. The persecution now became severe. The Meccans called him a liar, a demoniac, a sorcerer. Again he had to seek the protection of his powerful relatives. Some of the Meccan leaders then proposed that the God of Muḥammad should be worshipped at the same time as the Meccan deities, or alternately each year. Muḥammad did not fall into the snare, but produced this revelation, showing that the two religions must be kept quite distinct:

'Say, O ye unbelievers, I worship not that which ye worship, and ye do not worship that which I worship; I shall never worship that which ye worship, neither will ye worship that which I worship. To you be your religion; to me my religion' (cix.).

Very soon after he gave the most emphatic testimony to the doctrine of the unity of God which is to be found in the Qur'ān:

'Say, He is God alone: God the Eternal! He begetteth not, and He is not begotten; and there is none like unto Him' (cxii.).

Still the people of Mecca were hard-hearted, and the preaching of the Prophet at this time is full of denunciations of the despicable person, the back-biter, the defamer, the insolent, as he terms the prominent individuals who led the opposition. Protected himself by his powerful family connexions, the Prophet could not save his followers from persecution, and a number took refuge in Abyssinia. His cause did not gain ground. Then came another proposal for compromise. A leading man of Mecca was deputed to call on Muḥammad and to point out to him that blaspheming their gods, reviling their religion, and charging them and their fore-fathers with unbelief had done no goo[d] ... it not be better to come to some ter[ms] ... would only acknowledge their deities, t[h]... would accept Allāh as one of their go[ds] ... ship him. It was a great temptatio[n] ... circumstances such as these, Muḥamma[d] ... came upon a group of men near the Ka'[ba] ... a friendly way began to recite the ope[ning] ... of *sūra* liii.:

'By the star when it setteth, your compatriot er[reth not] ... is he led astray, neither speaketh he from mere in[clination] ... Qur'ān is no other than a revelation revealed t[o] ... mighty in power taught it him.'

Then he went on to refer to some of th[e] ... idols by name. 'Do you see al-Lāt and ... and Manāt, the third besides?' Then ... astonishment and joy of the Meccans, ... words: 'These are the exalted females, a[nd] ... their intercession is to be hoped for.' T[h]... trated themselves in worship and said, ' ... know that it is God alone that giveth ... taketh it away; that createth and sup[porteth] ... These our goddesses make intercession for ... as thou hast accorded to them a position, ... content to follow thee.' Thus were they ... to fulfil their part of the compact. But ... credit of Muḥammad it must be said that ... the grave error that he had committed, a[nd] ... the people would still retain their idols. Tr[adition] ... records that a verse inserted in a later *sū*[*ra*] ... came, showing Muḥammad that as other pr[ophets] ... had been tempted of the devil so had he:

'We have not sent an apostle or prophet before thee ... whose desires Satan injected not some wrong desire, b[ut] ... shall bring to nought that which Satan had suggested' (x...

The mind of the Prophet being set at res[t] ... revelation came as it now stands in the *Qur'ā*[*n*]:

'Do you see al-Lāt and al-'Uzzā, and Manāt, the thi[rd] ... besides? What, shall ye have male progeny and God f... This were, indeed, an unfair partition! These are mere ... ye and your fathers named them thus' (liii. 19-23).

The Meccans were much displeased at this, ... said, 'Muḥammad hath repented of his favou[rable] ... mention of the rank held by our goddesses b[efore] ... the Lord. He hath changed the same and bro[ught] ... other words in their stead.' The persecutio[n] ... commenced; but Muḥammad henceforth attem[pted] ... no compromise, and now and for ever broke ... idolatry. He received a solemn warning neve[r to] ... run into such danger again:

'Verily, they had well-nigh beguiled thee from what we ... vealed to thee, and caused thee to invent some other thin[g in] ... our name' (xvii. 75).

The idols of Mecca are derided:

'What think ye of the gods whom ye invoke besides All[āh?] ... Show me what part of the earth they have created' (*xxxv*. ...

Before he left Mecca, Muḥammad said to ... opponents:

'Call now on those whom ye made God's *companions*; ... they shall call on them, but they will not answer the[m]' ... (xxviii. 64).

The statues of false gods furnish fuel for hell:

'Fear the fire prepared for the infidels, whose fuel is men a[nd] ... stones' (ii. 22).

Idolaters are likened to

'the spider who buildeth her a house: But, verily, *frailest* ... all houses surely is the house of the spider' (xxix. 40).

They are not to be prayed for (ix. 115); their en[d] ... is to enter into the fire (vii. 36). Marriage *wit*[*h*] ... an idolatress is forbidden (ii. 220). Idolatry is a[n] ... unpardonable sin (iv. 51).

A few converts were gained at Medina, *who*, when they came to Mecca to perform the annual pilgrimage, took an oath of obedience to Muḥammad, in which a promise to give up idol-*worship*, as with all converts, was an important point. Later, in Medina the Prophet made it quite clear that idolatry was a great crime, an unpar*donable* sin:

'Verily, God will not forgive the union of other gods with Himself! But other than this will He forgive to whom He pleaseth. And he who uniteth gods with God hath devised a great wickedness' (iv. 51; cf. 116 f.).

In the year A.D. 629, Muḥammad, with the permission of the chief men in Mecca, was able to perform the pilgrimage to the Ka'ba, and went through the usual ceremonies—after which he returned to Medina. The time, however, soon came when it was necessary that Mecca should be the centre of the new religion; and so, seizing an opportunity for a quarrel, he marched with 10,000 men against the city. The Meccans saw that the time for opposition was past, and submitted. Muḥammad proceeded to the Ka'ba, saluted the Black Stone, but destroyed all the idols. Idolaters are henceforth to be severely dealt with:

'When the sacred months are past, kill those who join other gods with God, wherever ye shall find them; and seize them, besiege them, and lay wait for them with every kind of ambush; but if they shall convert, and observe prayer, and pay the obligatory alms, then let them go their way' (ix. 5).

Idolaters are no longer to make the pilgrimage:

'O Believers! only they who join gods with God are unclean! Let them not, therefore, after this year come near the sacred Temple' (ix. 28).

The people of Ṭā'if made a stout resistance to Muḥammad, and, when they finally submitted, begged to be allowed to retain their idols. They received fairly good terms, but this request could not be granted, and the idols were all destroyed by Muslims appointed to do the work. Whilst Muḥammad destroyed all the idols at Mecca, he still retained the pagan ceremonial of the Pilgrimage and the Black Stone as an object of superstitious reverence, thus leaving the old stone-worship of the pagan Arabs intact. The retention of the Pilgrimage was perhaps a necessity in order to win over all the Arab tribes, by yielding to their reverence for Mecca as the centre of a national faith; but it has worked evil since, not only by giving undue importance to the mechanical performance of the old pagan ritual, but by emphasizing the fact that Islām was started as a local and national religion, and that rules suited for Arabs in the 7th cent. are binding on the most diverse peoples in the 20th.

There is a curious tradition which relates how Muḥammad was lost when a little boy. An old man comforted his nurse and led her to the idol house. He then walked seven times round the idol, kissed its head, and said, 'O exalted Hubal, wilt thou be pleased to bring back Muḥammad ibn 'Abd Allāh, whose wet-nurse this woman is?' Hubal and the other idols fell prostrate to the ground, and Hubal said, 'O old man, do not mention Muḥammad's name before us; the destruction of ourselves and the other idols and the idolaters is to be in his hands. Tell the idol-worshippers that our greatest sacrificer is to be Muḥammad; that is, he is to kill us all, whilst they that follow him shall be safe' (Mirkhond's *Rauḍat-aṣ-Ṣafa*, pt. ii. vol. i. p. 115).

The Wahhābites, who are most careful to avoid anything which might seem to impair the dogma of the unity of God, and who look upon many practices of other Muslims as tending towards polytheism, or *shirk*, have defined the latter in these four terms: *shirk al-'ilm*, ascribing knowledge to others than God; *shirk at-taṣarruf*, ascribing power to other than God; *shirk al-'ibāda*, offering worship to created things; *shirk al-'āda*, performing ceremonies which imply reliance on other than God. It is *shirk al-'ilm* to suppose that prophets and holy men have any knowledge apart from that which God gives them. Hence it is wrong to place any reliance on the words of soothsayers and astrologers. It is *shirk at-taṣarruf* to look upon any human being as an intercessor with God. The orthodox view is that Muḥammad is now an intercessor. The Wahhābites deny this and quote the verses:

'Who is he that can intercede with Him but by His own permission?' (ii. 256). 'Say: Intercession is wholly with God' (xxxix. 45). 'No intercession shall avail with Him but that which He shall Himself allow' (xxxiv. 22).

It is *shirk al-'ibāda* to prostrate oneself before any created thing, or to visit the shrines of saints. It is *shirk al-'āda* to trust in omens and lucky days and to keep up superstitious practices. Though idolatry is severely condemned and the worship of idols is unknown, saint-worship is very common, and in all Muslim lands pilgrimages to the tombs of holy men are constantly made.

EDWARD SELL.

**IMAGES AND IDOLS** (Persian).—I. **Introductory.**—From the earliest antiquity the Persians had no idols in the sense of a representation of the godhead set up as an object of worship. Such allusions to the practice as are found are always in the way of condemning it as an abhorrent custom employed by foreigners and unbelievers. Zoroaster, the Prophet of Ancient Irān, makes no reference to idol-worship, even though his vision saw graphic pictures of the hosts of heaven. These vivid images, however, which might easily have been given a plastic form, remained, with the seer and with his people, simply a visualization of the ideal. Throughout the history of the religion of Irān, idolatry played no part.

This is true despite the fact that the Persians of Achæmenian and Sasanian times had no religious scruples against images, as is shown by the delineation of the divine being, and occasionally of other spiritual manifestations, on the monuments of the great Persian kings and the monarchs of the House of Sasan. This use of sculptured forms, however, did not mean to them in any sense a worship of graven images. If Darius and the other Achæmenian sovereigns portrayed in bas-relief on stone a conventionalized half-figure of Ormazd as floating in a circle above the head of the king, and presenting to him, as by divine right, a ring or symbol of sovereignty, it was a motive borrowed from Assyrian and Babylonian art, and was doubtless chosen with the express purpose of appealing to the non-Persian conquered nations, who were more anthropomorphic in their ideas.[1] Nor is an exception made by the Sasanian bas-relief at Naqsh-i-Rustam, on which Ormazd is represented on horseback approaching to offer the sovereignty to Ardašir, who is similarly mounted; the intent was the same as before.[2] There is kindred evidence regarding the nimbus-crowned figure, holding a fluted staff, in a Sasanian sculptured niche at Ṭāq-i-Bustān, near Kirmānshāh, which is supposed to represent Zoroaster, but may possibly portray Mithra, genius of the sun (see Jackson, *Persia Past and Present*, New York, 1906, pp. 215–220, for a discussion of the subject and for photographs). A like possibility may be claimed, though it seems less certain, for the view that the figure graven in a group in the adjoining vaulted arch portrays Anāhita (*q.v.*), goddess of the heavenly streams; yet such an interpretation still awaits more authoritative corroboration (cf. Jackson, *op. cit.* p. 225, n. 3). Other examples of images as effigies, but not as idols, may likewise be cited from Sasanian carvings as referred to in ART (Persian), in vol. i. p. 881 f. The general result is the same, and the statements of the Greek and Latin authors bear out this fact, as shown by the testimony from the classic writers cited in the following paragraph.

[1] For a discussion of this special subject and for reasons against assuming (as some do) that the conventionalized figure represents not Ormazd but the *fravaši*, or idealized spirit of the king, see Jackson, 'Ormazd,' in *The Monist*, ix. (Chicago, 1899) 168 f.

[2] The figure is known to represent Ormazd, because his name appears in the inscription on the stone as describing the purport of the bas-relief; for references see Jackson, *op. cit.* p. 169, n. 1; and cf. E. W. West, 'Pahlavi Literature,' in *GIrP* ii. (Strassburg, 1904) 77.

**2. Greek and Latin testimony to the Persian abhorrence of idols and image-worship.** — The oldest Greek reference, though somewhat indirect, to the Persian hatred of images and temples is found in Æschylus, *Persæ*, 809 (produced in 472 B.C.), in which the Athenian dramatist places on the lips of the spectre of Darius the statement that the Persian hosts,

'when invading Greece, shrank not from destroying the wooden figures (βρέτη) of the gods, nor from burning the temples.'

Well-known above all, however, is the classic passage, which was written a few years later in the 5th cent. B.C. by Herodotus (*Hist.* i. 131), in which the father of history said of the Persians:

'They do not make it a custom to erect images (ἀγάλματα) and temples and altars; on the contrary, they impute a charge of folly upon those who do so; because, as it seems to me, they do not conceive of the gods as having the nature of men, as the Greeks do.'

This statement by Herodotus has always been justly regarded as representing in its tenor the true facts of the Persian view.

Four centuries later the same statement was reiterated by Strabo (*c.* 63 B.C.–A.D. 21) when he emphasized it as holding good in his time, for he says (*Geog.* XV. iii. 13 [p. 732]):

'The Persians do not erect images (ἀγάλματα) and altars,' though he does mention, a few paragraphs beyond (XV. iii. 15 [p. 733]), the existence of 'temples of Anaïtis ['Ανάϊτις, *i.e.* Av. *Anâhitâ*] and of Omanes ['Ωμάνης, *i.e.* Av. *Vohu Manah*] as belonging to these shrines; and a statue [ξόανον] of Omanes is carried in procession; we ourselves have seen these things' (cf. XI. viii. 4 [p. 512]).[1]

The Church Father Clemens Alexandrinus (at the end of the 2nd cent. A.D.), when referring to the Persian Magi in his *Protrept.* 5, cites the older authority of Deinon in his statement that

'they, as Deinon says, sacrifice beneath the open sky, regarding fire and water as the only images (ἀγάλματα) of the gods; . . . nor have they presumed stocks and stones to be images of the gods, like the Greeks (ἀγάλματα μὲν θεῶν οὐ ξύλα καὶ λίθους ὑπειλήφασιν, ὥσπερ Ἕλληνες), nor ibises and ichneumons, like the Egyptians, but fire and water, as do the philosophers; and Berossus, in the third (book) of his *Chaldaics*, shows that it was later—after many periods of years—that they worshipped images in the likeness of man,[2] this practice having been introduced by Artaxerxes, son of Darius Ochus,[3] who first, after setting up the image of Aphrodite Anaïtis in Babylon and Susa and Ecbatana [and] Persepolis [lit. Persæ],[4] and Bactra and Damascus, and Sardis, taught that she be worshipped.' In connexion, furthermore, with the latter half of this citation it may be added that the names Mithra and Anâhita appear in the inscriptions of the Achæmenians first on the monuments containing the edicts of Artaxerxes II., 404–358 B.C. (cf. Justi, Gesch. Irans,' in *GIrP* ii. 467).

The great patristic writer Origen (*c.* A.D. 185–253), in his controversial defence of Christianity in opposition to Celsus, inveighs against all the points made by that Epicurean philosopher, but dialectically admits some matters in favour of the Persians, who had a natural aversion to idols and image-worship. In referring to other peoples who, like the Persians, were non-idolaters, Celsus says of the latter (in Origen, *c. Celsum*, vii. 62):

'They cannot tolerate temples, altars or images,' and he continues by citing the passage quoted above from Herod. i. 131 as to the Persian abhorrence of such usages; to which Origen replies (vii. 63 f.) that the Persians do not reject idols for the same reason as do Jews and Christians.

Equally strong is the statement of the later Greek historian and biographer, Diogenes Laertius (fl. *c.* A.D. 200), in his reference to Persian Zoroastrian Magi, of whom he says:

'The Magi . . . give accounts of the existence and generation of the gods, saying that they are fire, earth, and water; and they condemn the use of carved images (ξοάν[...] all things do they condemn those who say that [...] male and female. . . . It was quite consistent [...] Xerxes) to destroy the images (ἀγάλματα) of [...] *Clarorum Philosophorum Vitis, Procem.* 6, 9).

In the Greek 'Passion of SS. Acindynus and h[...] Companions,' written at an unknown date, men[...]tion is made (ii. 9) of an image (ξόανον) in a templ[...] (ναός) to which the persecuting king Sapor lead[...] the martyrs. As they pray, the image falls t[...]

1 On certain elements connected with the general interpretation of Strabo's remarks in the light of the Avesta, observe the tone in the rest of the present art. and cf. what has already been stated in Art (Persian), vol. i. p. 881.

2 This sentence, referring to Berossus, μετὰ πολλὰς μέντοι ὕστερον περιόδους ἐτῶν ἀνθρωποειδῆ ἀγάλματα σέβειν αὐτοὺς Βήρωσσος ἐν τρίτῃ Χαλδαϊκῶν παρίστησι, is rendered in the tr. by W. Wilson, *Clement of Alexandria*, Edinburgh, 1867, i. 67, as: 'Berosus shows that it was after many successive years that men [*sic*] worshipped images of human shape.'

3 *i.e.* Artaxerxes II., 404–358 B.C.

4 On Persæ (Πέρσαις) as Persepolis see Curzon, *Persia and the Persian Question*, London, 1892, ii. 132, n. 3. The copula καί, 'and,' has been necessarily supplied in the tr. above from the context.

1 From statements as to the subsequent fate of the Artemi[...] statue, see Paus. III. xvi. 8. In this connexion it may be noted that among the sculptures in the modern Museum at Athens there is a finely carved female figure which was taken to Persia by Xerxes, but afterwards sent back to Greece by Alexander the Great.

2 According to Paus. I. viii. 5, the latter group was eventually restored to Athens. It is possible that in carrying away this trophy Xerxes may have been influenced more by a desire to remove such a memorial than by any appreciation of it as a work of art.

3 It would be far-fetched, if not altogether wrong, to interpret as a reference to an image the allusion by Phœnix of Colophon (in Athenæus, *Deipnosophistæ*, xii. 40) to 'touching the god with sacred rods' when he speaks of Ninus, king of Assyria, as not taking his place among the Magi in worship; the passage, however, does allude to the *barsom*-twigs, or rods, used in the Zoroastrian ritual (cf. art. Barsom).

the ground and is broken in pieces. A parallel text calls the image 'the idol of the statue' (τὸ εἴδωλον τοῦ ἀνδριάντος), and yet another MS names the idol 'Zeus,' which would be Ahura Mazda (*AS*, Nov. i. [1887] 470; cf. also the version of Simeon Metaphrastes, *ib.* p. 496 [=*PG* cxvi. 20]). These citations practically exhaust the material that may be drawn from outside sources; what follows is derived from the Persian sources themselves.

**3. Earliest times: before Zoroaster, or at least prior to the 7th cent. B.C.**—There is little or no direct evidence regarding the use of idols and images in the most remote period of Iranian history, because no truly archaic sculpture of any size has yet been found. It is possible that some of the small terra-cotta images and bronze figurines which have been unearthed from ancient graves or excavated from antique sites may indicate signs of idolatry (see ART [Persian], vol. i. p. 881); but, if so, it would be merely a witness of primitive beliefs or of foreign practices that were later rooted out when Zoroastrianism became the religion of Persia. Support is lent to such a view by the tenor of some of the passages referred to below, especially in the section on Pahlavī literature.

**4. Absence of special allusions in the Avesta.**—The Avestan texts, which represent the conditions prevailing in the period of Zoroaster, or before and after the 7th cent. B.C., contain practically no references that can be construed into a direct allusion to any prevalent existence of idol-worship in Irān. It is true, as already stated, that some of the passages in the Avesta referring to demon-worshippers (*daēva-yasna*) and sorcerers (*yātu*) may possibly contain an implication as to idolatrous customs existing among infidels, but, if so, an execration of such practices is equally implied.[1]

An obscure Avestan word *baosavas* (possibly a plural, though its etymology is wholly uncertain), which occurs in the fragmentary *Haḏōxt Nask*, ii. 13, and in the likewise fragmentary *Vištāsp Yašt*, 37, has been interpreted as alluding to the sin of idolatry among unbelievers, because its obscure Pahlavi rendering, *b u s d k*, is glossed by *aighšān (ku šān) šēdā(dēv)-yazakīh*, that is, 'the demon-worship of these.' Possibly some support for this interpretation may be found in the Pahlavī rendering of the word *baoσdyā* (as it is there written) in the parallel Avestan fragment, *Vištāsp Yašt*, 37, the gloss being in Pahlavī, *aūzdēs-būt-parastīh*, lit. 'idol-image-worship'; but the whole matter remains rather uncertain (see Darmesteter, *Le Zend-Avesta*, ii. 653, n. 15, and ii. 676, also in *SBE* xxiii. 316; and cf. West, *Arda Virāf Translated*, Bombay and London, 1872, pp. 287, 312, and C. Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, *s.v.* 'Baosav-,' col. 920).

A further question might be raised as to whether a passage in the Avesta (*Vend.* xix. 20–25) relating to cleansing may not imply indirectly an image of Vohu Manah, the Zoroastrian archangel of Good Thought, such a supposition being based on Strabo, xv. iii. 15 (p. 733), and possibly on Amm. Marcell. XXIII. vi. 23–25 (both cited above); but to interpret the Avestan passage in that manner would be extremely hazardous (see ART [Persian], vol. i. p. 881). On the other hand (since sculptures, though not images in the sense of idols, certainly did exist as early as Achæmenian times), it is not unreasonable to regard the description of Ardvī Sūrā Anāhita in *Yašt* v. 126–129 as possibly influenced by some consecrated type of statuary of the goddess of the heavenly stream.[2] Yet this particular passage need not be understood as involving real image-worship, any more than does the description which Xenophon (400 B.C.), in his historic romance (*Cyrop.* VIII. iii. 11 ff.), gives of the triumphal procession headed by Cyrus the Great with chariots of pomp, each of which was dedicated to a particular divine being. The same may be said of the statement of Dio Chrysostom (A.D. 100), in his *Borysthen. Orat.* 36, p. 448, regarding Zoroaster's glorification of the celestial chariot, because the Avestan passages which refer to the 'course of the sun' (Gāthā Av. *x̌ᵛēng . . . advānem*, *Ys.* xliv. 3), 'the swift-horsed sun' (Younger Av. *hvarᵉ aurvat-aspem*, *Yt.* vi. 4, x. 13, x. 90), and the like, are purely metaphorical expressions, and in no sense imply image-worship. It may be re-affirmed, therefore, that the Avesta, especially the Zoroastrian Gāthās, or oldest part of the canon, is significantly lacking in any allusion to idol-worship.

[1] For some references also to certain passages in the Pahlavī literature which might be similarly interpreted see West, *SBE* xlvii., Introd. pp. xxvi–xxvii.

[2] Such is the interpretation by Darmesteter, *SBE* xxiii. 58, and *Zend-Avesta*, ii. 365; also by Justi, *Gesch. des alten Persiens*, Berlin, 1879, p. 95, where is reproduced from Loftus, *Travels in Chaldæa and Susiana* (reprinted), New York, 1857, p. 379, a clay figurine of Anāhita found at Susa among a number of similar small terra-cotta images of the goddess, the type, especially the profile, being decidedly Assyrian.

**5. Bas-relief sculptures in Achæmenian, Parthian, and Sasanian times.**—Sufficient intimation has already been given and references enough have been made to prove the existence of sculptured bas-reliefs, though not the use of images as idols, in Achæmenian, Parthian, and Sasanian times. For a discussion of the entire subject in its relation to the Achæmenian era (559–330 B.C.), it may suffice to refer to ART (Persian). A like reference may be made with respect to the antique stone lion at Hamadān (exceptional in Persian art, as being carved in the round)—a sculpture which may possibly date back to Median times, and is still regarded as a sort of talisman of that ancient city. With regard to the bas-relief winged figure of Cyrus the Great at Pasargadæ (near the modern Mashad-i-Murghāb) and the high-reliefs of Darius I., hewn on the Bahistān Rock, and again of Darius, Xerxes, and their royal successors, chiselled at Naqsh-i-Rustam and Persepolis (mod. Takht-i-Jamshīd), in all of which, as stated above, an effigy of Ormazd appears, a similar reference is enough. Besides the Achæmenian monuments themselves, Herodotus (vii. 69) refers to a golden statue of Darius's favourite queen, and (ii. 110) alludes to the fact that Darius, while in Egypt, wished to set up a sculpture (ἀνδριάντα) of himself in front of those which Sesostris had erected, before the great temple, in his own honour and in commemoration of his family, but was dissuaded from this act by the officiating Egyptian priest.[1]

For Parthian times (*c.* 250 B.C.–A.D. 224), reference may be made to the still existing martial image of the Arsacid king Gotarzes (A.D. 46–51), hewn in a panel near the base of the Bahistān Rock (cf. Jackson, *Persia Past and Present*, p. 209 f.); likewise to the moulded effigies on the so-called slipper coffins (Loftus, *Travels in Chaldæa and Susiana*, p. 204), and to some Parthian terra-cotta figurines (Loftus, *op. cit.*); but they all are memorials, and have in them no element of idolatry and image-worship.

As to a sculptured panel possibly representing Mithra (if not Zoroaster), which belongs to the Sasanian era (A.D. 224–650), see above, § 1; and for other Mithraic monuments, as bearing indirectly upon the whole question in relation to Persia, consult ART (Mithraic) by Cumont, vol. i. pp. 872–874. In direct connexion, however, as covering the general subject of image-carvings during the Sasanian Period, reference may once more be made to ART (Persian); and for numismatic representations of Iranian divinities see M. A. Stein, in *BOR*, 1887, pp. 155–166.

**6. Allusions in Pahlavī literature of Sasanian times and later.**—Important in its bearing—as a sequel and to supplement the material drawn from glyptic art—is the testimony offered by the Pahlavī literature of the Sasanian age and later, or the centuries directly preceding and following the Muhammadan Conquest about A.D. 650. The entire subject will be found fully discussed in a monograph prepared for the forthcoming *Jubilee Volume of the Sir Jamsetjee Jejeebhoy Zarthoshti Madressa*, to appear in Bombay, 1914. Many of these Pahlavī allusions refer back to an age, a millennium or more, before Zoroaster appeared

[1] In this connexion mention may be made, without laying undue stress upon the fact, of the action of Cambyses in slaying the Apis bull (Herod. iii. 29), and of his derision of the Egyptians for having 'gods of blood and flesh, sensible to steel,' as well as of Cambyses' mockery of the idol (ἄγαλμα) in the temple of the Egyptian Hephæstus (iii. 37).

as the founder of the national religion of Persia, and are the more valuable as showing the traditional attitude of Irān in regard to idols and images. Only the main references need be given here.[1]

The *Dīnkarṭ* (vii. 1. 19), which is a Pahlavī work based upon very old material, contains an antique legend of Takhmūrūp (a monarch placed by tradition in the 4th millennium B.C.) that names him as a pioneer who 'cast out idol-worship (*aūzdēs-parastākīh*) and promulgated among creatures the reverence and worship of the Creator.'[2] The same work alludes in another passage (vii. 4. 72) to the idol-worship (*aūzdēs parastiānīh*) and witchcraft practised by the monster Dahāk of Babylon, whose usurping reign over Irān is assigned by tradition to the 3rd millennium B.C., and whose baneful influence in this heretical regard was only eradicated two thousand years later by the establishment of the religion of Zoroaster. The passage reads in translation :

'Through that seduction [of Dahāk] mankind had come to idol-worship ; . . . but through the words of the triumphant religion, which Zartūsht [*i.e.* Zoroaster] proclaimed in opposition to that sorcery, it [*i.e.* the heresy] is all dispersed and disabled.'[3]

Another legend, oft-repeated in the Pahlavī books, is the story of the crusade waged against idol-worship by the ancient ruler Kaī Khūsrau (*Kavi Haosravah* of the Avesta), who is reputed to have reigned about 800 B.C. By the help of the Kingly Glory (Pahl. *xᵛārīh*; cf. Av. *xᵛarenah*) this monarch demolishes the idol-shrine which his arch-enemy, Frangrāsīāk of Tūrān (Pahl. *Frāsīak*, Mod. Pers. *Afrāsiāb* ; cf. Av. *Tūirya Franrasyan*), had maintained on the shore of Lake Chēchast, and substituted for it the great fire-temple of Ādhār-gushnāsp, with which his name was afterwards associated.[4] The *Dīnkarṭ* (vii. 1. 39), *e.g.*, tells of how Kaī Khūsrau

'vanquished and smote Frangrāsīāk of Tūr, the sorcerer, and his fellow-miscreants, [namely] those of Vakyīr, Kērsēvazd, and many other vile world-destroyers, and applied himself to the demolition of that idol-temple (*aūzdēs-čār*) on the shore of Lake Chēchast, which was a frightful thing of fiendishness.'

The same legend of the destruction of this noted idol-temple is referred to several times in other Pahlavī works. The *Būndahišn*, xvii. 7, *e.g.*, in telling of this pious achievement adds a detail regarding the help given to the hero in his work by the sacred fire, Āṭār Gushnāsp, as follows :

'When Kaī Khūsrau was demolishing the idol-temple (*aūzdēs-čār*) of Lake Chēchast, it [*i.e.* the Fire] settled upon the mane of his horse and drove away the darkness until he destroyed the idol-temple.'[5]

Kaī Khūsrau's religious act is praised, furthermore, in two passages of the *Maīnōg-ī Khraṭ* (ii. 93–95 and xxvii. 59–61), which may be dated somewhere about the 6th cent. A.D. The idolatrous practices of the tyrant Frāsīak (Afrāsiāb) are alluded to in a somewhat later treatise, *Shatrōīhā-ī Aērān*, 7, which anathematizes this foe for having

[1] For full citation of the Pahlavī passages in transliteration, with tr., see the above-mentioned monograph in the *Jubilee Volume*; tr. of almost all the texts will be found in West, 'Pahlavi Texts Translated,' in *SBE* v., xxiv., xxxvii., xlvii.

[2] The Pahlavi word for 'idol' (which is here transcribed as *aūzdēs* and is also written in Pahlavī as *auzdēz*, *aūzdēst*, with other variations) is derived from Av. *uzdaēza*, the original meaning of which is 'elevation, something raised up,' and may refer to an idolatrous structure as well as to an image itself.

[3] An allusion in later Persian literature to the use of images by Dahāk (or Ḍaḥḥāk, as he is called in Mod. Pers.) is found in a passage referred to below from the epic poet Firdausī.

[4] Lake Chēchast (Pahl. *Var-ī cēčast*, Av. *Vairi caēčasta*) is the ancient name of the body of water corresponding to the modern Lake Urumiah and its environs in Azarbaijān, N.W. Persia ; see Jackson, *Persia Past and Present*, pp. 70–73.

[5] The fact that a reminiscence of this legend of the descent of the fire, in the form of lightning which settled on the pommel of Kai Khūsrau's saddle, while thus engaged, lingered as late as the 16th cent. of our era is shown by a passage in the Pers. Lexicon (*Risālah*, or *Farhang*) of Vafāī, dated A.D. 1526, which is discussed by A. Yohannan, in *Spiegel Memorial Volume*, Bombay, 1908, pp. 150–152.

transformed each of the sacred shrines in t of Samarkand, in Sogdiana, into 'an idol- (Pahl. *aūzdēst-čār*), the abode of demons.'

A statement has been made above regardi attitude which Zoroaster in his own time have held towards anything approaching id as shown by the tenor of his religion, even t no direct pronouncement by him on the sub preserved in the Avesta itself. Additional ev is furnished by the fact that in the Pahlavī *Ba Yašt*, iii. 30 and iii. 36 f., the hero Pēšyūtān son of Zoroaster's patron Vištāsp, is said to received divine authority from Ormazd, com with the archangelic aid of the Amšaspand that of the sacred fires, in his crusade to 'd and smite the idol-temple (*aūzdēst-zār*) o demons'; and 'that idol-temple was dest through the glorious exertion of the illus Pēšyūtanū.' Again, a section in the Pa *Jāmāsp Nāmak* (vi. 1 ; ed. J. J. Modi, Bom 1903, p. 73), which is a book probably written time before A.D. 900 and purporting to hand the words of the sage Jāmāsp, chief-counsell the court of Zoroaster's patron Vištāsp, cont in its Pāzand version of this chapter, a prop of the time (not then wholly fulfilled becau heretics) when the true spirit of the faith prevail and 'the priests will come to the cou of Īrān and smite idolatry (*aūzdēs*).' The *Mai Khraṭ*, ii. 93–95, looks forward to the final dest tion of the wicked 'idol-worshippers' (*aū parastān*) in the last millennium of the world w the Saviour (Pahl. *Sūšāns*, Av. *Saošyant*) s appear before the Day of Judgment.

There are several general allusions to the ha of idolatry in other Pahlavī books besides th already mentioned.

The *Arṭā Vīrāf Nāmak*, lxviii. 11, *e.g.*, in an account o apocalyptic vision, enters upon the roll of the damned a wo whose perversity led her to choose the practice of 'idol-wors (*aūzdēs-čār*); and the *Šāyast lā-Šāyast*, ix. 2 f., a compila dating from about the 7th cent. A.D., though based on o sources, sees a like fate awaiting a priest 'who passes ove idolatry' (or, possibly, 'passes away in idolatry'). Among most abominable places on earth, according to *Maīnōg-ī Kh* vi. 7, is the one 'on which they build an idol-temple (*aūz čār*); and accordingly the commandment is given (ii. 93– 'Abstain from idol-worship (*aūzdēs-parastīšnīh*) and dem worship,' because its enormity is 'eighth' (Pahl. *haštūm*) amo the most heinous sins (xxxvi. 10). For this reason the *Dīnk* vi. 275, sees in the disappearance of idolatry a sign of the grov of the true religion, on the ground that, 'if idol-worship annihilated, no faith in the good spirits will thereby disappe

It is easy, therefore, to understand the importance attach to the exploit of Ardašīr, founder of the Sasanian Empire, overthrowing an idolatrous monster that ruled over Kirm and was known as the 'Worm' (Pahl. *Kērm*), a vile practiser idolatry (*aūzdēs*), as told in the Pahlavī romance *Kārnāma Artākhshīr*, vii. 1–12, viii. 1–11 ; this story presents int esting parallels to the OT narrative of Bel and the Drago as discussed, with bibliographical references to the Pahl editions of the work concerned, by Jackson, 'Notes on O Apocrypha,' in *Essays published as a Testimonial to Char Augustus Briggs*, New York, 1911, pp. 95–97.

The practice of idol-worship by foreign nation who were outside the pale of Zoroastrian Irā comes in for a share of condemnation in the Pahla texts. For instance, the veneration which th Hindus paid to images, personified as the ido *Būt* (lit. 'spectre, spook,' then 'image, idol'), i execrated in *Būndahišn*, xxviii. 34 (cf. also *Grea Iranian Būndahišn*, ed. B. T. Anklesaria, Bombay 1908, p. 187) as follows :

'The demon Būt[1] is he whom they worship among th Hindus, and his prayer is in the *būt*-shrine abode [*i.e.* goblin shrine].'[2]

A similar damnable practice of the worship of a *būt* is attributed, according to the Pahlavī-Pāzand *Jāmāsp Nāmak*, vii. 3–4 (ed. Modi, p. 76 f.), to the people of China, Bārbāristan, and the Tājīks—the

[1] Regarding this word, which appears in Pahl., Av., Skr., and Mod. Pers., see Bartholomae, *s.v.* 'Būtay,' col. 968.

[2] The designation in Pahl. is preferably thus to be read as *būt-gāh*, 'idol-shrine,' even though West, *SBE* v. 111, n. 6, and Darmesteter, *Zend-Avesta*, ii. 259, n. 4, read the word as *būtīhā*, 'idols.'

name of the latter nation probably including the tribes of Central Asia as well as those of their Islāmitic ancestors in Arabia who conquered that territory and may have retained traces of pre-Muhammadan idolatry fostered by the primitive beliefs of the people they vanquished.

7. **After the Muhammadan Conquest in the 7th cent. A.D.**—The overthrow of Zoroastrianism as the national faith through the Muhammadan Conquest by the Arabs in the 7th cent. A.D., whatever it may have signified in other regards, meant no significant change with respect to the true Persian hatred of idolatry. Vanquished and victors were at one in this matter, and many of the citations given above from the Zoroastrian patristic works in Pahlavī may, in fact, date from a time after the Muslim victory over Persia, even if the sources on which their standards were based go back to a far earlier period. It must be conceded, however, that the iconoclastic spirit of Islām killed off all progress in the Persian art of sculpture, as being a factor that might lead to encouraging idolatry, despite the fact that there was no such inclination in the Persian heart. This circumstance accounts for the fact that no sculptured portrait was carved after the downfall of the Sasanian Empire through Islām until modern times, when, about the beginning of the 19th cent., Fath 'Alī Shāh (1798–1835) caused his effigy to be sculptured over an antique carving of Sasanian times, thus unfortunately effacing an old bas-relief that had been cut some 1500 years before; but this innovation, or, rather, this resumption of the old practice of carving portraits on rocks, combined with one or two other modern instances, is a matter of recent times (consult ART [Persian]).

8. **References in later Persian literature.**—The whole tone of later Persian literature, or for the past 1000 years and more, has been strongly against idolatry, and that, too, irrespective of Muhammadan influence as well as under a natural sympathy with the iconoclastic tenets of the Qur'ān. Only a few references need be given to show this. The great epic poet of Persia, Firdausī (fl. A.D. 1000), *e.g.*, tells with evident zest and in spirited heroic verse how Farīdūn, 2500 years before, overthrew a talisman (Pers. *ṭalismi*) in the form of an idol which the monster Ḍaḥḥāk (or Dahāk, whose idolatry has been alluded to above) maintained in his palace (see Firdausī, *Shāhnāmah*, ed. Vullers and Landauer, Leyden, 1877, i. 53, l. 357; tr. J. Mohl, *Le Livre des rois*, Paris, 1876, i. 72; tr. A. G. and E. Warner, *Shāhnama*, London, 1905, i. 161). Many instances might be cited from other Persian authors. The poet and moralist Sa'dī (*c.* A.D. 1184–*c.*1291) recounts how he discovered in his travels the trick by which the famous idol in the great temple of Somnāth in India lifted its hand; and, outraged by the infamous delusion, he thereupon slew the priest in charge of the sanctuary. Yet it must be confessed that, in his account, Sa'dī has hopelessly confused some of his allusions to Hindu idolatry with the so-called worship of fire in the 'Avastā and Zand' to which he refers (cf. Sa'dī, *Būstān*, ch. viii., story 9, tr. A. H. Edwards, London, 1911, pp. 106–109). Sa'dī also makes use of a story of an idolater to adorn a tale in his *Būstān*, ch. x., story 3 (tr. Edwards, p. 121 f.). The great lyrist Ḥāfiẓ (*c.* A.D. 1325–*c.*1389) often makes allusion in his *Ghazals*, or 'Odes,' to 'idol-worship' (*but-parastī*), or likens his beloved to an 'idol' (*but*) or to an 'image' (*ṣanam*); but his references are mostly in the way of poetic similes drawn from love (*e.g.* *Ghazals*, 301, verse 3; 210, v. 3; 254, v. 8; 297, v. 5; 172, v. 10, in the ed. by H. Brockhaus, *Die Lieder des Hafis*, Leipzig, 1863, pp. 225, 130, 175, 221, 92). Finally, the last classic Persian poet, Jāmī (A.D. 1414–1492), in vol. vii. of his *Haft Aurang*, entitled *Khirad-nāmah-i Iskandarī*, or 'Book of Alexander's Wisdom,' represents Alexander the Great as destroying a well-known temple of idols. Citations might easily be multiplied from other later Persian writers, but they would all be of a similar character as showing the deep-seated Persian hatred of idolatry. This persistent detestation of the use of idols and images is as marked as ever in the attitude of the Parsis, or modern followers of Zoroaster, both in India and in Persia.

LITERATURE.—The bibliographical references to edd. of the Gr. and Lat. works quoted have been given above. For the Avesta consult the Eng. tr. by J. Darmesteter and L. H. Mills, in *SBE* iv., xxiii., xxxi., Oxford, 1880–87, and the Fr. tr. by Darmesteter, *Le Zend-Avesta, traduction nouvelle*, 3 vols., Paris, 1892–93. For trr. of the Pahlavi works, see E. W. West, *Pahlavi Texts Translated*, in *SBE* v., xviii., xxiv., xxxvii., xlvii., Oxford, 1880–1897; cf. also the forthcoming monograph by A. V. W. Jackson, in the *Jubilee Volume of the Sir Jamsetjee Jejeebhoy Zarthoshti Madressa*, Bombay, (to appear in) 1914.

A. V. WILLIAMS JACKSON.

## IMAGES AND IDOLS (Teutonic and Slavic).

—1. **Teutonic.**—The evidence for the existence of idols and images among *Germanic* peoples is somewhat conflicting. The pronouncement of Tacitus, that the Germani had no images of their gods, is repeated by later Christian writers; but this is evidently an uncritical re-statement. On the other hand, there is sufficient, if not abundant, evidence to attest the existence of images among the different Germanic peoples, at the several periods of their conversion to Christianity.

Tacitus definitely says of the Germani:

'Ceterum nec cohibere parietibus deos, neque in ullam humani oris speciem assimulare, ex magnitudine coelestium arbitrantur' (*Germ.* 9);

and again, of the Nahanarvali, that they have no *simulacra* of their twin-gods Alcis (*Germ.* 43). Elsewhere, however (*Germ.* 7), he tells of the symbols taken from the sacred groves, and borne into battle: *signa*, probably attributes of the gods, as the ship which he names the *signum Isidis* (*Germ.* 9); and *effigies*, probably representations of animals which possessed a sacred significance. Such might be the *ferarum imagines* of the Batavi (*Hist.* iv. 22). Later examples would be the dragon-heads on poles shown among the spoils taken from the Germani by Marcus Aurelius, and depicted on the Antonine Column (cf. P. S. Bartoli, *Columna Antoniniana*, Rome, n.d., pl. 37 f.); these are perhaps similar in form to the Dragon of Wessex displayed as Harold's standard in the Bayeux Tapestry. Such representation of animals appears in a slightly different form in the *eoforcumbol* and *eoforlic* mentioned in *Elene*, line 259, and in *Beowulf*, line 303; or in the boar-helmets worn by the warrior-figures on the Torslunda helmet. On the other hand, Tacitus's account of the worship of the goddess Nerthus (*Germ.* 40), in which *numen ipsum* is immersed in a sacred lake, would seem to point to some kind of image, although it may mean nothing more than a symbol. It is probable that Nerthus appears in Norse mythology, with change of sex, as the gods Njörðr and Freyr; and in the worship of Freyr a similar ceremonial procession is described, in which an image is used (*Oláfs Saga Tryggvasonar, Fornmanna Sögur*,[1] ii. ch. 173). If the cult of Nehalennia, representations of whom were found at Walcheren, contains any Germanic elements, we then have very early evidence of the representation of a deity; but, even if she is Germanic, the whole style of the figure shows very strong Roman influence.

It seems probable that the Germanic representation of gods passed through the usual stages of development (cf. R. M. Meyer, *Altgerm. Religionsgesch.* ch. v. § 24). There is no actual evidence for the shapeless log or stone, which was probably the earliest form of idol, or for the worship of meteoric

[1] Hereafter quoted as *F.M.S.*

stones, as in classical mythology. But it is likely, from what we know of the later use of logs, straw figures, branches, etc., in plough, harvest, and other ceremonies, that this stage did exist (cf. W. Mannhardt, *Mytholog. Forschungen*, Strassburg, 1884, p. 332 f.; Grimm, *Teut. Myth.* ch. 24, pp. 768, 782, 784); and it is even possible that some such rough figure may be denoted by the *numen ipsum* of Nerthus. Contemporary evidence does exist, however, for the second stage—the trunk or log, carved with a representation of the head only, or of the head and shoulders. Pillar-worship, of which the reverence paid to the Irminsul by the Saxons and to the high-seat pillars by the Scandinavians seems to have been a late survival, probably belongs to this stage. For the more artistic stage—the complete reproduction of deities—there is sufficient evidence, especially from Scandinavia; they are represented with their attributes, as Thor with his hammer; or with ornaments of gold and silver. Finally, as with some statues of classical gods, and with Christian images, one finds instances of images that can move, walk, and speak.

The earliest definite evidence for the existence of Germanic idols is connected with the *Goths*, and dates from the latter half of the 4th century. The Constantinople Column, erected by Arcadius to commemorate the wars of Theodosius, has representations of Gothic gods, borne on the backs of camels in his triumph. These are life-size figures of bearded men, of which the head and shoulders only are carefully carved; the rest of the figure is of the *xoanon* type, with slight indications of ornament to represent a robe (cf. A. Banduri, *Imperium Orientale*, Venice, 1729, ii. 417, pl. ix.). Sozomen, *HE* vi. 37, writing of the same period, mentions that Athanaric, king of the Goths, in his attempt to revive heathenism, caused a statue (ξόανον) to be carried in a waggon to the houses of Christians, that they might worship and sacrifice.

The references of Christian writers to the existence of idols among the remaining Germanic peoples are numerous, but reliance can be placed only on those in which images are specifically mentioned or described (*simulacra*, *imagines*). Phrases such as 'idola colere' are not definite enough, nor is the mention of temples positive evidence, as it is possible that Germanic temples did not invariably contain images; the custom of alluding to Germanic gods under the names of the approximately corresponding classical deities sometimes causes confusion.

For *Frankish* images, there is continuous evidence. The earliest reference, dating from 491, is the speech of Clotilda to her husband King Clovis, in favour of baptism:

'Nihil sunt dii quos colitis, qui neque sibi, neque aliis poterunt subvenire; sunt enim aut ex lapide, aut ex ligno, aut ex metallo aliquo sculpti' (Gregory of Tours, *Hist. Franc.* ii. 29).

In the *Constitutio* of Childebert, *c.* 554, punishment is decreed against those who refuse to destroy from off their land, or who prevent the priests from destroying, 'simulacra constructa vel idola daemoni dedicata' (Pertz, *MGH*, 'Leges,' Hanover, 1835 ff., i. 1). In the *Vita S. Goaris*, contained in the *Acta Ordinis S. Benedicti*, Paris, 1668–1701, sect. ii. p. 282, we are told that *c.* 649 the saint

'coepit . . . gentilibus per circuitum (*i.e.* Ripuaria) simulacrorum cultui deditis et vana idolorum superstitionis deceptis verbum salutis annuntiare.'

The only definite authority for *Saxon* idol-worship is to be found in the anonymous *Indiculus Superstitionum* of the 8th century. With entry 26, 'De simulacro de consparsa farina,' may be compared the story of the figure of Baldr, which was baked and smeared with oil (*Friðþjófs Saga*, 9; *Fornaldar Sögur*, ii.). Possibly such cakes were sometimes representations of a divine attribute, or of an animal sacred to the god, and not of the god himself. Entry 27, 'De simulacris de panais (pannis), factis,'
may refer to doll-images for the private us
shippers (cf. A. Saupe, *Indiculus Superst*
Leipzig, 1891, *ad loc.*); or to figures in st
rags, such as the effigy of Death, which
times we know to have been carried r
procession (cf. Grimm, ch. xxiv. p. 771). E
'De simulacro, quod per campos portant,
that the Saxons practised the general G
custom of religious processions, probably t
fruitfulness and prosperity.

There is little definite reference to the
of idol-worship among the *English*; th
convincing is the description of the heathen r
in Essex, *c.* 660:

'Coeperunt fana, quae derelicta erant, restaurare, e
simulacra' (Bede, *HE* iii. 30).

Other references are found in Bede; Pope Gr
writing to Bishop Mellitus, gives instructior
'ipsa quae in eis (*i.e.* fanis) sunt idola, destruantur' (i.
Boniface v. in his letter to Edwin, king of
umbria, quotes the description of idols in I
and reinforces it thus:

'Quomodo . . . possunt habere virtutem hi, qui ex corr
materia inferiorum etiam subpositorumque tibi manib
struuntur; quibus videlicet artificium humanum adcom
eis inanimatam membrorum similitudinem contulisti; q
a te moti fuerint, ambulare non poterunt, sed tanquam
uno loco positus, ita constructi nihilque intellegentiae h
. . . nullam . . . facultatem adepti sunt' (ii. 10 [*PL* lxxx

The force of these two references is weal
by the fact that the writers of the letters
foreigners, and not immediately in touch
English conditions. Again, in the story of
and of his active share in the destruction o
temple at Goodmanham (Bede, *HE* ii. 13), no
more definite than *ydola* is used; but in the p
account of the incident by Alcuin, *Versu*
*Pontificibus et Sanctis Eboracensis Ecclesia*
162, Paulinus is represented as saying, 'on
sternantur fundo simulacra deorum.' The w
*wîh* occurs in Old English in the meaning of 'id
thus it is used of Nebuchadrezzar's golden ima
its most peculiar use is in the phrase *Wóden wor*
*weós* (Gnomic Verses, l. 133, *Exeter Book*). Ag
in *Beowulf* (line 176) the word *wîgweorðung*, 'hon
to idols,' is used in an express description o
heathen custom: 'At times they ordained wors
of the idols in the temples.'

For the *Frisians* the evidence is neither full r
very conclusive; there is no direct reference to
idol in the descriptions of the sanctuary of Fos
on Heligoland given by Alcuin, *Vita S. Willebror*
i. 10 (*PL* ci. 700); by Altfrid, *Vita Liudgeri*, i.
(*MGH*, 'Scriptores,' Hanover, 1826 ff., ii. 410 [
xcix. 778]); and by Adam of Bremen, *Gesta Hamm*
*burg.* iv. 3 (*MGH*, 'Script.' vii. 369 [*PL* cxlv
623 f.]). Elsewhere (i. 13) Alcuin speaks of Wil
brord's arrival

'ad quandam villam Walachrum nomine, in qua antiqui error
idolum remansit.'

In Willibald's description of the heathen reactio
under the Frisian king Redbod, *c.* 716, we read:

'idolorum quoque cultura exstructis delubrorum fanis lugubrite
renovata' (*Vita S. Bonifacii*, iv. 12 [*MGH*, 'Script.' ii. 339
*PL* lxxxix. 611]).

The most definite reference is that of Anskar in hi
account of the preaching of St. Willehad in the
middle of the 8th cent. to the Frisians at Humarcha:

'Barbaris coepit . . . persuadere . . . dicens insanum esse . .
a lapidibus auxilium petere, et a simulacris mutis et surdi
subsidii sperare solatium' (*Vita Willehadi*, 3 [*MGH*, 'Script.
ii. 380; *PL* cxviii. 1015 f.]).

Grimm quotes from different lives of St. Gall an incident which would be a proof of the existence of idols in *Alamannia*, if, as he thinks, it can be referred to Germanic deities (Grimm, ch. vi. p. 108). Although there is some confusion in the account of Ratpert, *Casus S. Galli*, 1 (*MGH*, 'Script.' ii. 61 [*PL* cxxvi. 1058]), it seems clear that on the Lake of Constance, near Bregenz, St. Gall and Columban discovered, *c.* 612, a sanctuary dedicated to

St. Aurelia; it nevertheless contained 'tres imagines aereas et deauratas' (*Vita S. Galli I.*, i. 6 [*MGH*, 'Script.' ii. 7; *AS*, Oct. VII. ii. [1869] 886]). These the missionaries threw into the water. Walafrid Strabo says definitely that they were images of heathen gods; 'isti sunt dii veteres et antiqui huius loci tutores.' He says, further, that they were 'parieti affixas' (*Vita S. Galli*, vi. [*Acta Bened.*, sect. ii. p. 233; *PL* cxiv. 983]). Grimm cites later instances of this practice of retaining the ancient gods, 'probably to conciliate the people' (p. 108, n. 1), and it has approximate parallels in classical mythology (cf. Pausanias, III. xiv. 5: 'the wooden [*i.e.* the archaic] image of Thetis is still preserved in secret').

For *Scandinavian* images there is very full evidence, the most trustworthy coming from Christian sources; the words *skurðgoð* and *trégoð* are used in Icelandic, but the custom prevails of speaking of the image merely by the name of the deity. The most important evidence is the account by Adam of Bremen, in the 11th cent., of the great sanctuary at Upsala, with its statues of Thor, Odin (Wodan), and Freyr (Fricco). Odin is represented armed, Freyr with the symbol of fertility, and Thor 'cum sceptro Iovem simulare videtur'; this probably refers to his hammer, the attribute of the thunder-god (*Gesta Hammaburg.* iv. 26 [*MGH*, 'Script.' vii. 379; *PL* cxlvi. 642 f.]). Other statues of Thor and Freyr are mentioned (*ib.* ii. 60, p. 327, iv. 9, p. 371; *PL* cxlvi. 543, 627). The most detailed accounts we owe to the Christianizing expeditions of Oláfr Tryggvason, and St. Oláfr. Thus at Rauðsey, Oláfr Tryggvason encountered a representation of Thor which could speak, walk, and even make war upon him (*Oláfs Saga Tryggvasonar*, 150, *F.M.S.* i.). At Mori near Trondhjem the same king found an image of Thor with his hammer, adorned with gold and silver; it stood in a chariot drawn by two wooden goats, round the horns of which was a silver chain (*Flateyjarbók*, *Oláfs S. Trygg.* 268). St. Oláfr was opposed in the Highlands by Guðbrandr, a votary of Thor, and a great chief; Guðbrandr's son described Thor's image to the king:

'He has a hammer in his hand, and is great of stature . . . he is hollow within . . . four loaves are brought to him every day, and therewith meat in the same proportion.' The image stood upon a pedestal, and was adorned with gold and silver; when it was shattered, out came 'mice as big as cats, and lizards and snakes' (*Oláfs S. hins Helga*, 107-108, *F.M.S.* iv.).

Statues of Thor seem to have been particularly numerous; in *Njálasaga* 88 we find, in a temple at Hlaðir, Thor in a chariot, and with him Thórgerðr, Hölgabrúðr, and Irpa; each wears a great gold armlet, and Thórgerðr has a kerchief on her head. Reference has already been made to the story of Freyr, and of his image being borne in yearly procession (*Oláfs S. Trygg.* 173, *F.M.S.* ii.); also to the story of the baked image of Baldr (*Friðjófs S.* 9). It seems to have been a common Scandinavian custom to place several statues in one temple; even the temple built by Hrafnkel, who was a special votary of Freyr, contained other gods (*Hrafnkels S. Freysgoða*, 15). Still, the notice of the great temple in Gautland, with its hundred gods, is probably an exaggeration (*Jómsvíkinga S.* 12).

Traces are found of the practice of carrying on the person small images, probably for secret worship, or as amulets; the skald Hallfreðr carried an ivory 'likeness' of Thor in his pocket (*Hallfreðar S.* 6); and Ingimundr wore a silver talisman of Freyr (*Vatnsdœla S.* 10). For similar protective reasons Earl Eirikr carried an image of Thor at the prow of his ship (*F.M.S.* ii. 253). We even find such a familiar use as the image of Thor carved life-size on the back of a chair (*Fóstbrœðra S.*, pt. ii. 9). The walls of Oláfr Pái's hall in Iceland were adorned with representations of old stories, probably in painted wooden reliefs (*Laxdœla S.* 29); these were described by Ulfr Uggason in the *Húsdrápa*, and, from the fragments that remain of the poem, they seem to have depicted the burning of Baldr, Heimdallr's fight with Loki, Thor's journey to Hýmir, and his fight with Miðgarðsormr. The high-seat pillars were also adorned with figures; thus Thor was carved upon the pillars which Thórólfr Mostrarskegg threw overboard on approaching Iceland, in order to find a landing-place; these same pillars were afterwards set up in the temple built by Thorolfr.

To sum up, then, our knowledge of Scandinavian images: they were very numerous, often life-size, generally of wood (cf. *trémaðr*, 'wooden man'), and frequently adorned with gold and silver. In later times the people identified the image with the god, and in this way they were able to believe that the figure had the power of movement; a very clear example of this occurs in the story of Thróndr of Gata (*Færeyinga S.* 23), where the statue of Thórgerðr loosens a ring as a sign of acquiescence, but clasps it tightly when she denies her favour. The story of Gunnarr and his intercourse with Freyr's priestess proves that the god was identified with his image. The idea of vitality and volition in the image is carried so far that the statue of Thor at Rauðsey is made to compete in wrestling with Oláfr Tryggvason, the object being to hurl the vanquished into the fire; the king proved the stronger, and the wooden figure was burned to ashes.

There is very little archæological evidence for Germanic gods; the representations of Nehalennia and of the *deæ matres* are more Roman than Germanic in style, and with them may be classed the altar to Mars Thingsus, with its representation of the god armed. Although it was found in England on Hadrian's Wall, the votaries, who came from near Deventer, were probably Batavi; the stone dates from the first half of the 3rd cent. (cf. Helm, *Altgerman. Religionsgesch.* i. 366 ff.). Again, the most important evidence is connected with Scandinavian mythology. The figures on the Gallehus horns are too problematical to count as evidence; and even the figure on one of the plates of the Torslunda helmet may represent a mere warrior, though it is tempting to identify it with Odin, accompanied by his two ravens. Undoubted representations of Odin exist on the gravestones of Ardre, Hablinghö, and Tjängvide; here we see Odin on Sleipnir, but even these are late representations and show a somewhat specialized aspect of the god (cf. Helm, i. 213). Curiously enough, the clearest representations of Scandinavian deities are found in England. The Gosforth Cross in Cumberland shows probably the last fight of Viðarr with the Fenrisulfr; another group probably represents the punishment of Loki. On the Gosforth Stone is a group evidently meant to represent Thor's fishing. From time to time wooden figures have been unearthed, especially in Jutland, which seem to show primitive types of images; for a detailed discussion of these, cf. Helm, i. 214 ff.; according to him, the majority of them may be considered to represent deities of fertility.

2. Slavic.—The discussion of Slavic images is rendered difficult by the fact that much of the early evidence really refers to Scandinavians who were settled among Slavic populations; in particular, the chief god of whom one finds images is really Thor, the Swedish thunder-god, worshipped under the same aspect, but under a Slavic name, Perun, thunder-bolt. It is therefore not easy to disentangle the Scandinavian worship from the Slavic, and only at one period does the evidence refer incontrovertibly to the Slavs—the period of

Slavic settlements in the island of Rügen, and around the Elbe. The evidence for Poland, however, appears fairly trustworthy.

The 10th cent. narratives of Arabian travellers, though nominally concerned with the Slavs, in reality treat of the Russians, *i.e.* of the Scandinavian settlers around the Volga. Ibn Fadlān (ed. Fraehn, St. Petersburg, 1823), ambassador to the Russians, describes the worship paid to 'a high wooden pillar, that has a human face and is surrounded by small figures.' Here, again, is evidence for the rougher form of image. The narrative of Mas'ūdī, in the *Fields of Gold*, is far less trustworthy; he describes gorgeous temples, one of which contained 'a colossal statue of an old man holding a rod with which he called forth skeletons from their tombs,' while another temple contains an idol formed wholly of precious stones (Mas'ūdī, *Les Prairies d'or*, ed. and tr. C. Barbier de Meynard, Paris, 1861–77, ch. lxvi.). Apart from the inherent improbability of his account, it is difficult to know of whom he is speaking, and of what place; Arkona has been suggested, but there seem to be no means of settling the question.

Even some of the early Christian evidence really refers to Scandinavians. The so-called Chronicle of Nestor, dating from the 11th to the 12th cent., gives a detailed account of the setting up of idols in 978 at Kieff by Vladimir:

'Upon a public eminence he set up several idols; Perun in wood with a silver head and a golden beard, and also Khors, Dazbog, Stribog, Simargl, and Mokoch. Sacrifices were offered to them; the people offered their sons and their daughters as victims to the idols' (*Chronique de Nestor*, ed. and tr. L. Leger, Paris, 1884, ch. 38).

We hear again of an attempt to force a Christian Vareque to sacrifice to the idols; he replies:

'These are not gods; these are only wood, which is to-day, but to-morrow is rotten; they do not eat, or drink, or speak. It is the hand of man which has cut them out of wood' (*ib.* 39).

Ten years later Vladimir reversed his work at Kieff:

'He commanded the idols to be thrown down. Some he had burnt, and the rest cast into the fire. He commanded men to tie Perun to the tail of a horse, and to drag him down . . . to the stream; and he ordered twelve men to beat him with staves, not because he thought the wood had any feeling, but to insult the demon who in this form had insulted men, and to punish him for his deceptions. . . . While he was being dragged along the stream as far as the Dnieper, the heathen wept for him. . . . Then . . . they threw him into the Dnieper' (*ib.* 43).

Another statue of Perun was set up by Vladimir's uncle at Novgorod (*ib.* 38). There are later references to the statue of Perun at Kieff, and to the church of St. Basil which stood upon its site, but apparently nothing independent of the account in Nestor (cf. Dlugosz, *Historia Polonica*, ed. H. von Huyssen, bk. ii., Leipzig, 1711, col. 104).

From the *Chronica Bœmorum* of Cosmas of Prague, we have 12th cent. evidence for the primitive worship of idols by the *Czechs*. The passage has a legendary tone, and is not above suspicion, but is interesting as far as it goes. A certain princess Tetcka taught the people the worship of Oreads, Dryads, and Hamadryads:

'sicut hactenus multi villani velut pagani, hic latices seu ignes coluit, . . . iste lucos et arbores aut lapides adorat, . . . alius quae ipse fecit idola surda et muta rogat et orat, ut domum suam et se ipsum regant' (i. 4 [*MGH*, 'Script.' ix. 35; *PL* clxvi. 62]).

Similar practices are described more in detail in the account of the extermination of paganism by Duke Bracizlaus, but there is no mention of actual idols (*ib.* iii. 1, p. 102 [*PL* clxvi. 189]). On the other hand, the princess Ludmilla, in her pagan days, had a golden idol of the goddess Krosina, which was of more than human size (*AS*, Sept. v. [1866] 344).

Dlugosz, who wrote his *Historia Polonica* late in the 15th cent., gives a long and somewhat doubtful list of *Polish* gods, identified with Roman deities, and shows that their cult was by the Poles with all the apparatus of *simulacra*, and *flamines*. The notice on Dziewanna is interesting:

'Diana quoque quae superstitione gentile femin existimabatur, a matronis et virginibus serta simu ferebantur' (bk. i. col. 37).

Later on, at the conversion of Miecslau scribes the measures taken to stamp out id

'Strictissimo posthaec Miecslai edicto, . . . conf idola, et falsorum deorum simulacra. . . . Quae quide et dearum idolorumque immersio et confractio tunc simulacris Dziewannae et Marzannae in longo ligno e bus, et in paludes in Dominica Quadragesimae Laetar entibus et demergentibus, repraesentatur, renovatur diem nec hujus consuetudinis vetustissimo effectus us apud Polonos defluxit.'

This account of Dlugosz is cited by Cro *De origine Polonorum*, iii., Basel, 1568, p. for survivals of this Polish custom in Mid-L Grimm, ch. 8, p. 190; ch. 24, pp. 773, 782.

The evidence of foreign chroniclers is abundant, and is, on the whole, more trustw although even such circumstantial testimo that concerned with Otto of Bamberg is no from suspicion. The greater part of this f evidence deals with the Slavs settled on the of the Baltic, and round the basin of the Elbe early reference occurs in the *Annales Weissen genses* for 1069:

'Rex Heinricus barbaros trans Alpiam flumen cons cum exercitu invasit . . . fana cum simulacris succ (*MGH*, 'Script.' iii. 71 [*PL* cxli. 527]).

Adam of Bremen's testimony is importan contemporary 11th cent. evidence; he men the town Rethra:

'templum ibi magnum constructum est demonibus, qu princeps est Redigas. Simulacrum eius auro, lectus paratus' (*Gesta Hammaburg.* ii. 18 [*MGH*, 'Script.' vii. *PL* cxlvi. 513]).

Thietmar, *Chronicon*, vi. 17 (*MGH*, 'Script.' p. 812), gives a more minute description of sanctuary in Mecklenburg-Strelitz, but differs some important details, notably in calling town Riedegost, and the god Zuarasici (contr Helmold, *Chronicon Slavorum*, i. 23 [*MGH*, 'Scri xxi.]). In the temple

'dii stant manu facti, singulis nominibus insculptis, g atque loricis terribiliter vestiti, quorum primus Zuarasici d tur. . . . Vexilla quoque eorum, nisi ad expeditionis necess . . . hinc nullatenus moventur.'

Later, he speaks of the Liutici and of th goddess whom they carried with them into batt 'in vexillis formata' (*ib.* vii. 47, p. 857); a elsewhere he refers to the general Slavic practi of image-worship:

'Quot regiones sunt in his partibus, tot templa habentur, simulacra demonum singula ab infidelibus coluntur' (*ib.* vi. p. 812).

Next in chronological order come the reference connected with the Christianizing missions of Ott of Bamberg to the *Pomeranian* Slavs, early in th 12th century. The references to idols and thei destruction are frequent; unfortunately the valu of these lives by Herbord and Ebbo is much dis puted. The most detailed description is that of great temple at Stetin, apparently very like tha at Rethra:

'Erat autem ibi simulacrum triceps, quod in uno corpore tria capita habens, Triglaus vocabatur' (Herbord, *Dialogus de Vita Ottonis*, ii. 32 [*MGH*, 'Script.' xii. 794; *AS*, Jul. i. [1867] 357]).

At Gutzkow there was an idol of great size and beauty, which was mutilated and burned (Ebbo of Bamberg, *Vita Ottonis*, iii. 10 [*MGH*, 'Script.' xii. 866]). Ebbo gives more details on the image of Triglaus at Stetin:

'Tricapitum habebat simulacrum, quod aurea cidari *oculos* et labia contegebat, asserentibus idolorum sacerdotibus ideo summum eorum deum tria habere capita, quoniam tria procuraret regna, id est coeli, terrae et inferni; et faciem cidari operire pro eo quod peccata hominum quasi non videns et tacens dissimularet' (*ib.* iii. 1, p. 859; *AS*, Jul. i. 388).

In the temple at Julin were 'statuas . . . auro et argento decoratas' (*ib.* iii. 1, p. 858; *AS*, *Jul.* i. 387).

Helmold, who went on his mission in 1155, is the first to mention the sanctuary at Rügen, and the image of Svantovit, with the confusion between Svantovit and Saint Vitus (*Chronica Slavorum*, i. 6 [*MGH*, 'Script.' xxi.]). An interesting general reference occurs:

'Hi (*i.e.* Slavi) simulacrorum imaginaria formas praetendunt de templis, velut Plunense idolum cui nomen Podaga; alii . . . lucos inhabitant, ut est Prove . . . quibus nullae sunt effigies expressae' (*ib.* i. 83, p. 75).

In 1168, Waldemar of Denmark captured Rügen, and destroyed

'simulacrum illud antiquissimum Zvantevith, quod colebatur ab omni natione Sclavorum' (*ib.* ii. 12, p. 96).

Helmold's evidence is confirmed by the more detailed account, by Saxo Grammaticus, of Waldemar's campaign in Rügen and capture of Arkona (*Gesta Danorum*, xiv. p. 565, ed. A. Holder, Strassburg, 1886). The temple is described minutely, and the image of Svantovit:

'Ingens in aede simulacrum, omnem humani corporis habitum granditate transcendens, quatuor capitibus totidemque cervicibus mirandum perstabat, e quibus duo pectus totidemque tergum respicere videbantur. Ceterum tam ante quam retro collocatorum unum dextrorsum alterum levorsum contemplacionem dirigere videbatur. Corrase barbe, crines attonsi figurabantur ut artificis industriam Rugianorum ritum in cultu capitum emulatam putares . . . Leva arcum reflexo in latus brachio figurabat. Tunica ad tibias prominens fingebatur, quae ex diversi ligni materia create, tam arcano nexu genibus iungebantur, ut compaginis locus non nisi curiosiori contemplacione deprehendi potuerit. Pedes humo contigui cernebantur, eorum basi intra solum latente.'

On the gate-tower of the town the people displayed *signa* and *aquilas*:

'Inter quas erat Stanitia (marg. Stuatira), magnitudine ac colore insignis' (*ib.* p. 575).

Bishop Absalon found at Karentia (*i.e.* Garz), in Rügen, three temples similar to that at Arkona; in the inmost shrine of one was found a gigantic oaken figure,

'quod Rugievithum vocabant . . . In eius capite septem humane similitudinis facies consedere, quae omnes unius verticis superficie claudebantur. Totidem quoque veros gladios cum vaginis uni cingulo appensos eius lateri artifex conciliaverat. Octavum in dextra destrictum tenebat. Hunc pugno insertum firmissimo nexu ferreus clavus astrinxerat, nec manui nisi precise evelli poterat; quae res truncande eius occasio extitit. . . . Nihil in hoc simulacro iocundum visentibus fuit; lineamentis impoliti celaminis deformitate sordentibus' (*ib.* p. 577).

In the next temple was the image of Poreuithus:

'Id quinque capitibus consitum sed armis vacuum fingebatur.'

In the third temple was found Porenutius:

'Haec statua, quatuor facies representans, quintam pectori insertam habebat, cuius frontem leva, mentum dextera tangebat' (p. 578).

The destruction of the idols in Rügen is described in *Knytlingasaga*, 122; Svantovit appears as Svantaviz, and the names of the three images at Karentia are given as Rinvit, Turupið, and Puruvit. Statues with several heads seem to be peculiarly Slavic; there is apparently no similar representation of Germanic gods.

Unfortunately there appears to be practically no trustworthy archaeological evidence for Slavic images (cf. Leger, *Mythologie slave*, pp. 33 f., 221 ff.).

3. In connexion with the Teutonic and Slavic evidence, brief reference may be made to the neighbouring Prussian peoples; Simon Grunau, *Preussische Chronik*, tract II. cap. v. § 2, describes a Prussian sanctuary built in an oak, in the 6th century.[1] The description is thus adapted and rendered in Latin by Alexander Guagninus, *Rerum Polonicarum*, Frankfort, 1584, ii. 107 f.:

'Quercus haec tripartita fuit; . . . ex una parte Prutenorum Deum, qui Peruno, id est fulmen, dicebatur, habebant. . . . Ex altera parte collocatum erat Patrimpo idolum; cuius cultus erat in serpente vivo retinendo. . . . Tertia ex parte daemoniacum idolum, Patelo nomine, situm fuit.'

[1] It must be admitted that Usener, *Götternamen*, Bonn, 1896, p. 83, discredits the accuracy of Grunau in general, and of his mythology in particular, thus following the lead given by M. Toeppen, *Gesch. der preuss. Historiographie*, Berlin, 1853, p. 122 ff., esp. 178 ff., 190 ff. On the other hand, H. M. Chadwick, *Origin of the Eng. Nation*, Cambridge, 1907, p. 254 ff., accepts the evidence of Grunau on the characteristics of Prussian gods, and uses it in connexion with his Nerthus-Freyr theory.

In descriptions of late survivals of Prussian or Lithuanian paganism, mention of the serpent-cult recurs frequently, but apparently there is no other reference to images.

To sum up the evidence: Teutonic and Slavic peoples alike seem to have had no idols in early times, but they must certainly have possessed them at a later stage; in their adoption of them they may have been influenced by classical cults. Although individual references by early chroniclers may not be above suspicion, the weight of their collective testimony is too great to be disregarded.

M. E. SEATON.

**IMAGES AND IDOLS** (Tibetan).—**1. Occurrence.**—In Tibet images and idols abound, though not, perhaps, to any greater extent than in other Buddhist countries, even of the 'Southern,' or relatively primitive, division of that religion—*e.g.* Burma and Ceylon. Whilst, however, in the latter case, the images are mainly reduplicates of the conventional effigy of the historical Buddha, Śākyamuni (in one particular attitude, namely that of 'the earth-touching pose' [*bhūśparśamudrā*], at the supreme moment of attaining Buddhahood, under the 'Tree of Wisdom' [*Bodhi*]), in Tibet, on the other hand, as in the other countries of the polytheistic Mahāyāna form of Buddhism, the images represent also a host of deified Buddhas and celestial Bodhisattvas (or potential Buddhas), saints, and demons. Besides the images enshrined in temples and other religious buildings, *chortens* (*q.v.*), etc., a large number of miniature images are met with on domestic altars, and worn by the people in amulet-boxes, as talismans. Pictures of many of these divinities are as abundant in the houses of laymen as in temples, and illuminated in colours on the title-pages of favourite scriptures and manuals of worship. Consecrated medallions are also bestowed by the grand Lamas upon generous donors of alms. The images of the pre-Buddhist aboriginal religion, the *Bon*, are now cast in Buddhist form.

**2. Divinities, saints, etc., represented.**—The great majority of the divinities represented by the idols are those of the orthodox Mahāyāna Buddhism of India, as was first elicited by the present writer, who has also traced the origin of the majority of these divinities and their images to an adaptation of Brāhmanist myth, and to the deification of metaphysical categories and different modes of Buddha's 'Word' (or *Logos*) by a concrete symbolism. The more commonly prevalent images are as follows.

(*a*) *Buddhas, celestial and human.*—Of these the most frequently represented is perhaps the divine *Amitābha* (*'Od-dpagmed*), or 'The Buddha of Boundless Light' (see ĀDIBUDDHA) of the Western Paradise, and his mode *Amitāyus* (*Ts'e-dpag-med*), 'The Boundless Life' (see AMITĀYUS). Other common forms are the Medical or Æsculapic Buddha (*sMan-bla*), the primordial Ādibuddha as *Samantabhadra* (*Kun-tu-bzaṅ-po*), or *Vajradhāra* (*rDo-rje-chaṅ*), or *Vajrasattva* (*rDo-rje-sem-dpa*), and their mystical Tantrik modes displaying their female energies; also the remaining Buddhas of the four quarters of the universe; and—less common than these—the historical Buddha, Śākyamuni (*Sākya-tu'b-pa*).

(*b*) *Bodhisattvas*: the coming Buddha, or *Mai-*

*treya* (*Byāms-pa*), usually figured seated in European fashion, not cross-legged, and usually of gigantic size, as a several storeyed image, or carved on rocks; *Avalokiteśvara* (*q.v.*) (*Spyan-ras-gzigs*), or personified Compassion, *Mañjuśrī* (*Jam-dbyans*); personified Wisdom, *Vajrapāṇi* (*P'yags-rdor*); *Tārā* (*Sgrol-ma*), consort of Avalokita, as 'the white' (*Sitā*) and 'the green' (*Bhṛkuṭi*); *Marīchī* (*rDo-rje p'ag-mo*); *Prajñāpāramitā*, personified Divine Wisdom; 'the all-victorious Diadem,' *Uṣṇīṣavijayā*; 'the White Umbrella Invincible against others,' *Sita-ātapatra-aparājitā*; 'the Great Turner away of Harm,' *Mahāpratyaṅgirā*; 'the Flaming Crown,' *Uṣṇīṣajvala*.

(*c*) *Placid gods* (*lha*) *of Brāhmanist type*: modes of Indra and Brahmā as door-keepers and attendants on Śākyamuni; the four Guardian gods of the Quarters; and Jambhala, the god of Wealth.

(*d*) *Demoniacal tutelaries* of the fierce type of Śiva as 'Defenders of Religion' (*Ch'os-skyoṅ*), *e.g.* 'the fearful Thunderbolt,' *Vajrabhairava* (*rDorje-'jigs-byed*), a form of Yama, the god of the Dead; 'the horse-necked demon,' *Hayagrīva* (*rTa-mgrin*); 'the Goddess,' *Devī* or *Lha-mo*.

(*e*) *Local gods and demons*: chiefly indigenous, namely 'country-gods,' *yul-lha*, and earth-demons, *sa-bdag*, of which the most numerous are red (*tsan*) and black (*bdud*).

(*f*) *Saints*: the sixteen apostles or 'the sixteen Arahats'; also the two chief disciples, '*Mongol-pu*' and '*Sari-pu*'; *Padmakara* or *Padmasambhava*, whom the present writer has shown to be the founder of Lamaism; also the reformer of Tibetan Buddhism, Tsonkhapa, the founder of the Yellow-hat sect, now the dominant Church, to which belong the Grand Lamas of Lhasa and Tashilhunpo. The image of Padmasambhava is given the chief place in temples of the Red-cap sect, and Tsonkhapa in the Yellow. Each of the other minor sects accords its own particular founder a chief place on its altars.

**3. Canon descriptive of images.**—The authoritative source for the detailed description of the images of Buddhism is the great body of the *Sādhana* (*Sgrub-t'ab*) literature of rituals for the worship of these respective divinities. The rituals were composed in India, in the early centuries of our era onwards, during the rise of the *bhakti*, or devotional movement, which permeated both Brāhmanism and Buddhism. They number many hundreds, and each purports to contain minute descriptions of the form assumed by the deity on becoming manifest to a votary; the distinctive form, dress, posture, and pose of body and hands, as well as the colour, and the symbols held in the hands to emblemize the functions and attributes, are all detailed therein. Several recensions of these texts are on record as translated into Tibetan. Two large collections are included in the great Tibetan commentary, *Tangyur*, of which the titles have been published by F. W. Thomas and P. Cordier. It is from these Indian manuals that Tibetan artists form their images. Many of the deities are given a variety of forms, owing, it seems to the present writer, to the apparent incorporation of popular Brāhmanist and other aboriginal divinities to whom their functions and symbolism are thereby assimilated. These polymorphic forms fall into three types: (*a*) placid, mild, or benign (*śiva*); (*b*) fierce (*khroda*); (*c*) terrible and demonist (*dragpo*).

**4. Style of art and technique.** — The Tibetan artists have preserved to a great extent the mediæval Indian style of Buddhist art. This is especially noticeable in the dress and form of the female divinities, who are represented displaying exuberant charms of figure, according to the Indian ideals of female beauty. This character contrasts strikingly with the Chinese treatment, which tends to repress sexual distinctions. In the conv treatment of externals, such as landscap clouds, water, trees, and houses, the Tibeta and pictures exhibit a decided Chinese i rather than Indian, though Tibet has to tent evolved a special style of its own, inter between that of its two great neighbours, tinct from that of Nepāl. Some of the larg in Tibet were cast in Nepāl by Newar artis

**5. Materials of image.**—The commonest are composed of plastic material—clay, or ture of incense-paste, flour, and clay mould shape, dried, painted, and gilded. The images are fashioned from brass or copper, cast from moulds and gilded. The most images are inlaid with turquoises and other p or imitation stones. Stone is seldom us images or statues, though figures are som outlined on rocks. Bas-reliefs and medallio often made in butter, in the winter seas certain festivals. Following the Indian cu auspicious times must be selected for the pr tion of the materials, and for the execution work, especially of the principal organs, *e.g* eye, etc. A remarkable realistic detail is t sertion into the larger images of models of heart, lungs, stomach, and intestines. The ventional colour of Buddha's hair is dark blue

On completion of the image, it requires to be secrated. For this purpose sacred texts are rec and into the hollow interior are inserted rolls of texts, one of which often is 'the Bud Creed' or a spell (*dhāraṇī*). Other objects inserted are grains of consecrated rice from altar, bodily relics, hair, nail-parings, shred the robes of holy men, and filings of precious met The image is usually wrapped with silk sc giving the impression that it is clothed. Pict (*z'al-t'aṅ*) of images are painted in distem usually on cotton, seldom on silk. Someti the paintings are executed on the walls of *tem* as mural frescoes.

**6. Worship of images.**—The image, as in ot Buddhist countries, is popularly worshipped a sort of fetish, holy in itself, and not merely as diagram or symbol of the infinite or unknow Food and drink are regularly offered to it. *It* believed to hear and answer prayers. It is a co mon experience to hear the devotees in a tem addressing personal requests for benefits before t image. Certain of the older images of which t history has been forgotten are, like those Brāhmanism and other religions, regarded miraculous in construction, and credited with bein 'self-formed' or as 'fallen from heaven read fashioned.'

**IMAGE OF GOD.—1. General view.**—(1) 'God is a Spirit,' said Jesus to the woman of Samaria at Jacob's well at Sychar (Jn $4^{24}$), thereby giving utterance to the deep truth that God is free and self-determining, essentially ethical in His nature. This great idea is the basal conception on which the interpretation of man as made in God's image, as set forth in Scripture, must proceed. For, if God is a Spirit, then man, reflecting Him, must be a spirit too; in other words, human nature has more in it than what we find in sensuous experiences, animal proclivities, and fleshly inclinations. He

stands erect, and is by nature allied to the Divine; and his attachments, in the first instance and properly, are heavenwards and not towards earth. He has fellowship with the Source of his being, then; and his own nature, to the extent that it is pure and unsullied, may be held as revealing the Divine. The foundation of his being is deeper than anything that may be seen or tasted or handled: it is found in relation to the unseen and the eternal. Consequently, what the nature of the great God is can be discovered in part by consideration of His image as reproduced in man; and, however much more God may be than what finite intellect, finite will, finite conscience, and finite love may disclose, He must at least correspond to the reflexion of Himself that the higher faculties and emotions of man's soul exhibit: if the human spirit is not the Divine Spirit, at any rate it reflects it, and may be trusted as a revealer to the extent of its capacity.

The line of argument which is suggested by Jesus' utterance is supported by the OT, and especially by the Creation narratives (P and J) at the opening of the Book of Genesis. Whatever be the historical or the scientific value of these two narratives, they lie at the root of both the Jewish and the Christian faith, and embody truths that are indispensable for the understanding of redemption. According to them, man is a spirit, being created by God, who is 'the Father of Spirits,' and having the breath of life 'breathed into his nostrils' by God Himself. This renders him the image of his Maker: the Divine Spirit is the Source of the human spirit, and the rational creature is thus far stamped with the stamp of the Creator.

(2) Now, if this be the Scripture teaching, OT and NT, what is the practical significance of it? Clearly this—that, if man is essentially a spirit, drawing his being from the great Creator Spirit, the agnostic position that God, even if we suppose Him to exist, is unknown and unknowable is untenable. God cannot be unknown, much less unknowable, if man bears in him the Divine image. Even the reflexion of a face in a mirror is a copy; and, although it lacks the warmth and fullness of the original, it does, nevertheless, within limits reproduce it, and thus far gives a true idea of it. Further, on the Bible conception of man's spiritual nature and original heavenly relationship, both natural theology and Divine revelation become possible, and, indeed, are seen to be inevitable; and the distinction between the two becomes one of degree and not of kind. But, on the supposition that man is not a spirit, it is not possible to see how either natural theology or Divine revelation could be. Divine revelation is shown to be a necessity from the fact that, as man's deepest need is God, and as God is a Person, it is only if God reveals Himself that we can come to know Him. It is the characteristic of personality to be self-declaratory and self-communicative. Even in the case of our fellow-men, who are persons, we cannot know them unless they themselves will to disclose themselves to us. Knowledge of a neighbour depends upon whether he opens his heart and lays bare his thoughts to us: the motion must come from *his* side; otherwise, we are powerless. We might, without his revelation, come to learn something about him; but we should not know himself. Now, the revelation of one person to another is also the revelation of that other to himself. We can never know ourselves except in the light of our experience and knowledge of others. This arises from the necessities of the case—in particular, from the circumstance that our nature is in the essence of it social, and that imitation is largely our teacher in our early days. How much more, then, is the revelation of God to us also the revelation of ourselves to us! It is only in His light that we see light. But the meaning of this is that humanity is taken up into the Divine; which, again, implies that the image of God—and, therefore, the Godward attitude—is the primary fact in man. God and man in union and communion is the same thing as saying that man is naturally allied to God, that the Infinite is not the contradictory, but the complement, of the finite.

Still more obvious is the need for revelation if we introduce, as Scripture does, and as our own experience attests, the idea of sin, or voluntary transgression, intervening to create a rupture between man and God. There is now not only ignorance or limited knowledge to cope with, but also voluntary alienation or estrangement. The understanding is weakened, but the will also is perverted, and the affections are turned away in the wrong direction. A thorough transformation has to be effected in the sinner—clearness of perception has to be brought back to his intellect, strength to his will, purity to his heart, and peace to his conscience. Only a Divine revelation can do this.

**2. OT teaching.**—(1) The psychology of the OT centres in the terms 'body,' 'soul,' 'heart,' and 'spirit.' Of these four factors man consists. His body is at first conceived simply as 'dust' (*'āphār*, עָפָר), or 'dust of the ground,' *i.e.* simply as the earthly part of him, composed of dust and resolved at death into dust again, but without any idea of unworthiness or degradation attaching to it. It is a work of the Creator, and, like other such works, it was pronounced at the beginning to be 'very good.' Looked at as an animated and sentient organism, it is viewed as 'flesh' (*bāśār*, בָּשָׂר), devoid, however, of any implication of vitiosity or carnal desire, which so frequently attaches to 'flesh' in the NT. Nevertheless, although 'flesh' is not represented in the OT as the source or origin of sin, it is regarded as indicating man's mortality and frailty, and also the fact that the body may be the instrument of evil desires and passions. Thus, while, on the one hand, it says, 'All flesh is grass' (Is 40[6]), on the other hand, it records the depravity of the race at a particular moment in the significant phrase, 'All flesh had corrupted his way upon the earth' (Gn 6[12]), though even then the congruity of 'flesh' with 'spirit' is not lost sight of, for it is said, in almost immediate connexion, 'My spirit shall not always strive with man, for that he also is flesh' (Gn 6[3]). The body as flesh is congruent with spirit: hence the Psalmist can say, 'My heart and my flesh cry out unto the living God' (Ps 84[2]). The 'soul' (*nephesh*, נֶפֶשׁ) is specially the seat of the emotions and the will, although other functions are frequently accorded to it. It is the soul that 'hopes,' 'fears,' 'trusts,' 'desponds,' 'praises,' 'is glad' and 'longs,' etc.—all emotive and volitional states. To the 'heart' (*lēbh* or *lēbhābh*, לֵב, לֵבָב) are assigned thought, wisdom, intellect, understanding; so that 'the heart,' in Hebrew usage, so far from signifying the chief seat of affection, as in English, is the nearest equivalent to the English term 'mind.' It is also the seat of character—the centre of man's being, moral and religious. As the seat of sin, 'the heart is deceitful above all things, and it is desperately sick: who can know it?' (Jer 17[9]). It is deep and hidden from common view, and is reached only by God: 'I the Lord search the heart, I try the reins, even to give every man according to his ways, according to the fruit of his doings' (17[10]). But neither soul nor heart constitutes man's outstanding greatness. That is reserved for his 'spirit' (*rūach*, רוּחַ), which is distinctively the heaven-derived principle in him, drawn immediately from the Divine Spirit, 'breathed' into him

directly from that Source, and thereby making him specifically a person, a self, with power to determine his actions and to control his nature, and, therefore, above all, an ethical being—an ethical being whose inmost inclination is religious, who, if unsullied, is ever looking towards God, responsive to His influence, and drawing his inspiration from Him. This is what gives him his supreme dignity and worth, making him 'but little lower than God' (Ps $8^5$), and securing his dominion over the lower animals and over all the earth. Thus we are introduced to the fundamental conception of man as made in God's image: 'And God said, Let us make man in our image [lit. 'shadow,' *ṣelem*, צֶלֶם], after our likeness [*d<sup></sup>mûth*, דְּמוּת]: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth. And God created man in his own image, in the image of God created he him; male and female created he them' (Gn $1^{26f.}$).

(2) All this goes to show that, in the view of the OT, man holds a unique place in the earth. He is, like the lower animals, a creature of God indeed; but he is more. His body, like that of the brutes, is dust of the earth, and is animated as a physical organism; but he is spirit, and stands to his Creator as a son to his father. Thus are the facts of our experience interpreted. It is not for nothing that, in the first creation narrative, with its charming pictorial setting, the account of man's creation is isolated from that of the other creatures by being introduced by the solemn injunction, 'Let us make man,' and followed up by the sublime announcement, 'And God created man in his own image, in the image of God created he him.' There is no word here of creation 'after its kind,' which is the formula used in the case of both animals and plants: it is a peculiar and special creation. Nor is any secondary agency invoked to bring about the result, such as we read of in the case of animals, 'Let *the earth* bring forth the living creature after its kind,' and of fishes, 'Let *the waters* bring forth abundantly the moving creature that hath life.' The act in man's case is immediate, personal, direct, thereby indicating the exceptional worth of the spiritual being now brought into existence, and his special kinship to his Maker.

The OT estimate of the worth of the Divine image in man is further shown by the fact that it uses the possession of it as an argument for the just and impartial treatment of man by man in the world. In the pronouncement that God is represented as making to Noah, as recorded in Gn $9^6$, the condemnation of murder and the punishment of it are based on this very fact: 'Whoso sheddeth man's blood, by man shall his blood be shed: for in the image of God made he man.' And in this same spirit St. James, in the NT, tries to curb the unruly tongue, and to show the enormity of slander, backbiting, and the like (all of which are really species of murder), by the very same argument of man's native dignity and celestial relationship: 'Therewith bless we the Lord and Father; and therewith curse we men, which are made after the likeness of God' (Ja $3^9$).

(3) In man's spiritual nature, drawn from its heavenly Source, is involved the fact of immortality and never-ending life. This is a logical deduction from the possession by man of the Divine image: spirit cannot die. How far, however, this was understood by the Jews is subject to dispute. What is obvious is that the idea of a future life grows in the OT as the ages run; and, when it does crop up, it comes as an intuition of the heart rather than as the result of logical reasoning, and is associated with the thought of communion and fellowship with God. It is the

expression of the vision and the aspira
psalmist and of prophet prompted by the
for purity and righteousness, and poured
the individual's glowing faith: 'As for me,
behold thy face in righteousness: I shall b
fied, when I awake, with thy likeness' (P
'likeness' = תְּמוּנָה, LXX δόξα, Vulg. *gloria*).

But the objection has been raised that i
tality was lost by the Fall; for our first p
were driven out of the Garden of Eden (such
representation), lest they should 'put forth
hand, and take also of the tree of life, and ea
live for ever.' The signification of this c
is that an everlasting life to a fallen or
creature, in the condition to which his fa
reduced him, would not be a blessing but a
and that something better was in store for
man, even though it should cost him labour,
and sorrow. To eat of the tree of life and li
ever just as he was would simply be to pr
degradation and misery. But the whole less
the Fall is that of hope for man. The curse c
ground was for man's sake; it was for man's
that he was expelled from the Garden, and
access to the tree of life was strictly guarde
cherubim and a flaming sword. In a finely
pressive way the myth brings out that man
now realized that his life is to be a battle of
right against the wrong, of good against evi
strenuous resistance of temptation, of rising
higher things through personal effort; and t
through this continued warfare the potentiali
that are in him are to be actualized, characte
to be formed, and spiritual progress secured. A
the NT throws further significance into the f
when it insists that the conflict is not confined
men, but is shared by Heaven itself. It is
characteristic of the very Son of God, the Id
Man, who was made perfect through suffering, a
in whose victory over sin and temptation we ha
the highest revelation of the Divine purpose w
men and the truest manifestation of the Fathe
love.

3. **NT teaching.**—The fact of sin and the u
versal degradation and bondage of men on accou
of it, and the need, nature, and purpose of t
remedy offered in Jesus Christ, are the subje
matter of the NT. The worth of the individu
soul lies at the root of it—the supreme value of t
image of God in man, which had become corrupte
defaced, and blurred ('How is the gold becom
dim! how is the most pure gold changed!' [La $4^1$]
and the determination of God that this imag
shall not be finally lost. A new creation is re
quired: man has to be regenerated, 'renewed i
the spirit of his mind' (*ἀνανεοῦσθαι δὲ τῷ πνεύματ
τοῦ νοὸς ὑμῶν*), submitted afresh (in the altere
circumstances) to the enlivening, quickening influ
ence of the Divine Spirit. The means is the perso
of Jesus Christ and His work of redemption—Hi
life on earth, His death, His atoning sacrifice, His resurrection and ascension, His sovereignty and continual priesthood, and, through all, the active working of the Spirit in the hearts and minds of believing men, making application to them of the remedy, creating them anew, purifying, enlightening, subduing them, and reinstating sinners in their sonship to God and keeping them in immediate filial communion with Him. 'If any man is in Christ, he is a new creature: the old things are passed away; behold, they are become new' (2 Co $5^{17}$). And not only so, but Nature itself is represented as suffering through man's sin. As he was created with dominion over all the earth, his fall had a cosmic significance; and, therefore, St. Paul pictures 'the earnest expectation of the creation' as 'waiting for the revealing of the sons of God. For the creation was subjected to vanity,

not of its own will, but by reason of him who subjected it, in hope that the creation itself also shall be delivered from the bondage of corruption into the liberty of the glory of the children of God. For we know that the whole creation groaneth and travaileth in pain together until now' (Ro $8^{20-22}$).

This gives the meaning of the whole teaching of the NT regarding man and God.

(1) In regard, first, to the NT psychology, it is pertinent to remark that it follows largely that of the OT. Neither of them is, strictly speaking, philosophical. How should they be, seeing that religion, not philosophy, is the great end of the Bible? But Christianity is the completion of the OT revelation, and would be unintelligible if severed from it. Yet it must not be forgotten (*a*) that Divine revelation is a progressive thing, and, consequently, that the terms received new content as time went on; and (*b*) that Christianity was affected by Hellenism, especially through the LXX. It is only quite recently that scholars have come to realize how much the NT owes to the LXX, not least for its language; and, indeed, it is hardly extravagant, in the face of modern research, to say, with E. C. Selwyn (*Expositor*, 8th ser., v. [1913] 169), that 'the time is not far distant when it will be seen that the Greek Bible was the cradle of the Christian faith.' St. Paul's teaching, too, bears many traces of Hellenism, as was inevitable in the case of a man who was a Roman citizen of Tarsus (a chief seat of Stoicism in St. Paul's day), and a pupil of the scholarly and liberal-minded Gamaliel. Above all, it is essential to remember that Christianity is offered as the remedy for sin. Its object is to bring man back to the Source from which he had wandered, and to reinstate him in his rightful heritage. Consequently, it has much to say of mortality, corruption, death; and much also of immortality, incorruption, life.

(2) How, then, is sinful man's nature renewed? Through redemption brought by Christ, and applied by the Holy Spirit.

In considering this, it is well to begin with the fact that Jesus is set forth in Scripture as 'the Image of the Invisible God' (εἰκὼν τοῦ θεοῦ τοῦ ἀοράτου), 'the firstborn of all creation' (Col $1^{15}$). This means that He is Himself a Spirit (for 'God is a Spirit'), and that, in a special sense, He is God's Son, the 'Son' of His love; for He is '*the* Image' of God, and not simply, like man, 'made *in*' it. On this account He makes to men the supreme revelation of God's nature, which is that of a Father, whose essence is love—the revelation of a compassionate God ('not willing that any should perish'), and of a suffering God with love at the core of it, bringing redemption through sacrifice.

He is also said by St. Paul (Ph $2^6$) to be 'in the form of God' (ἐν μορφῇ θεοῦ). That refers to Christ in His pre-existent state; but it cannot fail also to suggest the Divine image in which man was at first made (Gn $1^{26}$), where 'form' might not inaptly translate the Hebrew *ṣelem* ('shadow'). And, agreeably to this, St. Paul, in Ro $8^{29}$, speaks of those who are predestinated as 'conformed to the image of his Son' (συμμόρφους τῆς εἰκόνος τοῦ υἱοῦ αὐτοῦ), where the word 'conformed' clearly takes us back to the original Hebrew term for 'shadow,' with outline or form as the predominant idea. And it is significant in this connexion that, when St. Luke traces the genealogy of Jesus from Joseph upwards (Lk $3^{23-38}$), he ends with Adam, whom he designates 'the Son of God.' Thus the Lucan pedigree connects the second Adam with the first Adam: 'it places a son of God at either end of this list of names'; 'it makes *us* out to be children of God both by nature and by grace, by birth and by second birth' (S. Cox, *Expositions*, i., London, 1885, p. 27). And so it is well for us to remember that 'both he that sanctifieth and they that are sanctified are all of one'—*i.e.* have all the same origin—ἐξ ἑνὸς πάντες (He $2^{11}$).

(3) How the image of God in sinful man is renewed is set forth in many ways in the NT. Sometimes we meet with terms that are common to Christianity and Greek thought, such as 'following' and 'imitating'—significant words to be found frequently in Plato and among the Stoics and the Neo-Platonists; but, when this is the case, the powerful personal influence of Jesus lies at the root of the process. It is not simply 'following' Jesus that we find, but it is Jesus' magnetic personality drawing men towards Him as disciples and Himself saying to each, 'Follow me' (ἀκολούθει μοι). Hence, it is not the verb ἕπομαι that is used (that verb never occurs in the NT), but ἀκολουθέω, thereby indicating that it is the following of disciples who are also *companions* that is meant—men who are living in the constant consciousness of the Master's presence with them. Again, it is not only the command to 'imitate' Jesus and take Him as our Example or Model that is issued to us, but it is also St. Paul exhorting us, 'Be ye imitators (μιμηταί) of me, as I also am of Christ' (1 Co $11^1$). In other words, the personal note in this connexion is distinctive and supreme. But there are other modes of statement, all of them recognizing the fact that the renewal of the image in the individual man is a gradual process, requiring time and life's experiences, and even looking forward to the future life: 'Now are we children of God, and it is not yet made manifest what we shall be. We know that, if he shall be manifested, we shall be like him; for we shall see him even as he is' (1 Jn $3^2$). Yet, although the renewal is a process, in every man who has accepted Christ the new image is there at any moment, needing only to be realized, for 'Christ is all and in all.'

This is brought out very clearly in Col $3^{9-11}$ and in 2 Co $3^{18}$. These passages and many more go to show that re-creation, or the new birth, or regeneration, does not mean a despising or rejecting of the faculties that man as man possesses, or a making of any addition to them, but a taking of them up by the Spirit of Christ into a higher influence, imparting to them a new vigour, quickening them in their exercise, and turning the operation of them in a new direction. Intellect, feeling, and will are found in every man (that is the heritage from the original creation), but, through Christ and through Divine grace, they are purified and invigorated and dedicated afresh to the service of God.

(4) It is obvious, from the whole tenor of what has now been said, that the renewed image of God in man cannot be restricted to man's life on earth. We saw, under the OT teaching, that immortality is logically involved in the conception of man as a spirit. But this is explicitly brought out in Christianity and put in the forefront. St. Paul claims for Christ that He 'abolished death, and brought life and incorruption to light through the gospel' (2 Ti $1^{10}$). That was the end and aim of His earthly mission: resurrection and immortality are effected by Himself as 'a life-giving Spirit' (πνεῦμα ζωοποιοῦν, 1 Co $15^{45}$). The assurance of immortality, therefore, is now complete: 'Because I live, ye shall live also' (Jn $14^{19}$). And the life promised is to the whole man—body and soul, not soul only apart from body. There is more than philosophical immortality promised: there is the final redemption of the body, as well as the salvation of the soul—complete redemption means complete future existence for the redeemed. Even under the OT, the fact of future life might have been evident, as Jesus Himself indicated to the Sadducees (Mt $22^{31ff.}$),

when He reasoned from God's revelation of Himself to Moses in the land of Midian as the God of Abraham, of Isaac, and of Jacob, on the ground that 'God is not the God of the dead, but of the living.' But it is accentuated now, and become the great motive power of the Christian teaching. The constraining Scripture passages are such as these: 'I am the resurrection and the life' (Jn $11^{25}$), and 'When Christ, who is our life, shall be manifested, then shall ye also with him be manifested in glory' (Col $3^{4}$).

WILLIAM L. DAVIDSON.

**IMAGINATION.**—Originally both the Gr. term φαντασία and the Lat. *imaginatio* meant simply the power of bringing an object before the mind in the absence from perception of the object itself. The product of imagination was an 'image' or copy of the object as perceived. Later, when perception was known to have a physiological basis in the central nervous system, the image was regarded as produced through the revival, without an external stimulus, of the same cerebral process as accompanied the original perception—a 'decaying sensation' or perception, as Hobbes put it, or, in Kuelpe's phrase, a 'centrally excited sensation.' Such images might be combined in the same order as that in which they were originally given, or in new and different orders. The former was called 'reproductive,' the latter 'productive,' imagination. But, as Wundt points out (*Grundzüge der physiolog. Psychol.*[5], Leipzig, 1902–03, iii. 631), this usual distinction of productive imagination from memory (or reproductive imagination), as that faculty by which we can reproduce ideas and experiences in altered arrangement, is quite unsatisfactory, for memory itself invariably alters the experiences it recalls. The differences must be sought either in the mechanism or in the purpose of the processes in question. In memory, as Wundt argues, the mind moves in succession from point to point, according to the ordinary laws of association by contiguity, while in imagination, in the narrow sense, some idea of the whole that is to be formed always precedes the actual formation; it is a development from within, while memory is an accretion from without of part to part. On the other hand, recent experiments have shown that in memory also there is invariably an idea of the whole anteceding the recall of the details of an experience, and that the laws of associa quite inadequate to explain the processes (see, *e.g.*, H. J. Watt, *Theorie des Denkens*, 1904). A more fruitful distinction between and imagination is in the purpose or fu each. The object in memory is to reviv experience of the individual, something t already occurred, a 'real' event, percep thought. In imagination the purpose is struct or prepare for a *new* experience, so hitherto unrealized by the individual; it f future, as memory the past; its product is ally new, spontaneous, original, as that of r is essentially old, reproduced, imitative. history lesson, it is by memory that a child the words of the textbook, or of the teache by imagination that he pictures, and 'lives into' the personalities and events. So I r member what I have read or heard of Tibet, is imagination that makes real to me the c and its people. The two processes are to a c extent antagonistic to each other; a stron accurate memory for details is rarely found a panied by a vivid power of realizing in imagi the events passed through, or of communi their *spirit* to others.

Imagination does not work merely with in but also with percepts—as in the child's play doll or pet, the artist's work with colours canvas, or the sculptor's with clay or marble- with concepts, abstractions, non-presentat meanings and thoughts—as in scientific inve and literary creation. On the other hand, im are used not only by imagination and by men but also by every other process of the mind, in ing perception itself. Thus images are by means characteristic of imagination, eithe materials or as products. Imagination is a c plex power, to be paralleled with reasoning with will, not with sensation or feeling. It is primitive form of reasoning, 'thinking in pictu Reasoning works more in the abstract, with ve images, imagination more in the concrete, w object-images; reasoning is governed by con tions of law and necessity, imagination is free a unlimited; reasoning in the main seeks to det mine what *is*, or what *must be*, as the necess outcome of what is, imagination is concerned w what *might be*, or *might have been*, had other c ditions been present. But none of these charact is essential. Some recent criticism would redu reasoning to a special form of imagination (s F. C. S. Schiller, *Formal Logic*, London, 191 In all higher thinking, at any rate, imagination as essential a constituent as reasoning in t narrow sense. Both rest, as Ribot points o (*Essai sur l'imagination créatrice*, Introd.), upon faculty of perceiving or thinking resemblances— preponderance of exact resemblances on the on side, or of remote and superficial resemblances o the other, making the difference between th 'thinkers' and the 'imaginatives' or 'dreamers. One may add that vividness and accuracy o imagery may be a bar rather than an aid to imagi nation; the French are described by Galton a the keenest visualizers among European races; in science and criticism they are also among the foremost; but one of their own psychologists describes them as devoid of imagination (A. Fouillée, *ap.* Ribot, p. 161). No one would deny that Edgar Allan Poe had imagination, but a study of his poems and tales shows his imagery to have been vague and formless in the extreme. So it is not definiteness, but vagueness in a child's imagery, that makes its thinking 'imaginative.'

What most strongly separates imagination from reasoning is, however, the personal and individual element—the emotional tone, that characterizes

the first, and is absent, in theory at least, from the second. Imagination, like other psychophysical functions, has, in its origin, a purely practical value. It is an extended perception, an anticipation of experience, foresight of the issue of an action that is in process, of the effect from an observed cause, of the outcome of a given situation. Its possession enables the organism to adapt itself to new situations and environments, not merely, as in memory, to cope with recurring cases. It retains this practical side, from the earliest attempts to meet physical dangers or to satisfy hunger, up to the scientist's search into the hidden causes of things or the artist's pursuit of the ideal. Its driving force is, therefore, always an emotion of some kind—a want or desire and its accompanying dissatisfaction with the present. In the imaginative mind there is necessary a combination of strong desires and impulses, on the one side, and a rapid and varied flow of imagery, on the other.

'There may be in the mind an inexhaustible mass of facts and images, yet nothing is created, for example the great travellers who have seen and heard much, and who cannot draw from their experiences anything more than colourless recitals, men taking part in great political events or military adventures, which leave memories of the driest and poorest kind; prodigious readers, living encyclopaedias, crushed under the weight of their learning' (Ribot, p. 87).

Equally uncreative, however, is the vigorous active type, with poor imagery and intellect. Two good examples of the contrast referred to are to be found in the two tramps in R. L. Stevenson's essay 'On Beggars.'

Several features of imagination are explained by the closeness of its connexion with emotion: (1) the vagaries, the bizarre connexions, the inexplicable leaps, in its lower forms; ideas and experiences tend to be revived, not through their direct connexion with other ideas, but through the emotional tinge which they have in common with the excitant ideas; (2) the predominance in emotional natures of the type called 'passive imagination,' as opposed to 'active imagination'; in the former the flow of imagery is spontaneous, uncontrolled by the will of the subject, who is a spectator rather than an actor, while in the latter the subject can alter the imagery at will, but has a far poorer range and vividness (see A. Binet, *Étude expér. de l'intelligence*, p. 42); (3) the intensity and concentration of the imaginative state, as in the 'psychic' blindness and deafness of day-dreams, of play, of the creative mood (see Stanley Hall, *Aspects of Child Life*); as in all strong emotion, there is a temporary dissociation of the personality; from this point of view the imaginative state suggests comparison with somnambulism, hypnotism, and with the phenomena of double consciousness; (4) the sense of strangeness, suddenness, 'inspiration,' or 'possession,' with which innumerable creations of the imagination are accompanied. Much of the elaboration which is embodied in imaginative products takes place unconsciously. R. L. Stevenson's account of the source of some of his plots (see 'A Chapter on Dreams') is paralleled by the reports of many writers, artists, musicians, as to how their greatest creations 'came to them.' The most interesting attempt to explain this feature is that of Freud and his pupils (references in Lit.). A dream, as it is experienced by the subject (the manifest content), is the transformed, symbolic presentment of a deeper system of ideas (the latent content) suppressed by the censorship of consciousness; this latent content in its turn may be the suggested realization of some hidden desire, which the conscious subject has repressed, because impossible of attainment, absurd, childish, or immoral. These principles, originally formulated for dreams and for some forms of mental disease, are being applied to the materials of poetry, of art generally, and especially to the myths, fairy tales, and legends of primitive imagination.

**IMBECILITY.** — See DEGENERATION, DEVELOPMENT (Mental), INSANITY.

**IMMACULATE CONCEPTION.** — The Roman Catholic Church teaches that from the very first instant of her conception the Virgin Mary was immune from original sin. This privilege is called 'immaculate conception.' Before the 12th cent. there was no thought of exempting the mother of Christ from the law of original sin. The Feast of the Conception of Mary, however, was in vogue; and it is from this Feast that the belief in the immaculate conception arose.

1. The Feast of the Conception of Mary originated in a legend circulated by the *Protevangelium of James*, a 2nd century apocryphal writing. The substance of the book is as follows:

Joachim and Anna had no children, and their unfruitful union caused them to be exposed to public contempt. One day an angel appeared to Anna, and said to her: 'Anna, Anna, the Lord hath hearkened to thy prayer: thou shalt conceive and bring forth a child, and thy posterity shall be spoken of throughout the whole world.' At the same moment Joachim, who was tending his flocks in the field, also received a revelation from heaven. An angel said to him: 'Joachim, Joachim, the Lord God has hearkened to thy prayer; descend hence, for behold thy wife Anna has conceived in her womb' (according to other MSS: 'thy wife Anna will conceive in her womb,' but the reading 'has conceived' seems to be the original; this is the form known and followed by Epiphanius in the *Panarium* [*Hær.* lxxix. 5]). Nine months later, Anna gave birth to a daughter, whom they called Mary, and who became the mother of the Saviour. The *Protevangelium* seems to say that Mary was conceived in the womb of Anna in a virginal manner (especially if we follow the reading: 'thy wife has conceived'). In any case it was in this sense that the story was interpreted for a long time by popular piety. But Epiphanius (*loc. cit.*) and, following him, several other writers explain that the conception of Mary took place according to the ordinary laws, after union with Joachim. Gradually the justice of their explanation was allowed, and the virginal conception gave place to a conception which was no doubt miraculous—for Anna was barren—but at least conformed to the ordinary laws of human reproduction.

Christians wanted to celebrate the marvellous events related in the *Protevangelium*, and so they held a Feast of the Conception of Mary—of the conception as they understood it, *i.e.* at first the virginal conception, and later, the miraculous, though not virginal, conception. This Feast made its appearance in the East probably during the 7th cent.; but its first witnesses are Andreas Cretensis and Joannes Eubœensis, who belong to the 8th century. Andreas, in his *Canones* (*PG* xcvii. 1305 and 1312), mentions, under the date December 9th, what he calls the 'conception of St. Anna,' *i.e.* the conception of Mary in the womb of Anna. Joannes Eubœensis has left a sermon on the conception of Mary (*PG* xcvi. 1459–1500), which concludes with the words:

'On the 9th of December we celebrate the anniversary of the day on which the blessed Joachim and Anna were informed of the conception of Mary. We celebrate this festival, which is not universally accepted.'

From the East the Feast of the Conception spread into England. As regards the details of time and manner we are reduced to guess-work. Most probably Theodore, archbishop of Canterbury, was the cause. Born at Tarsus, a monk at Rome, placed by Pope Vitalian at the head of the church of Canterbury, which he governed for more than twenty years (668–690), Theodore was an Easterner dwelling in the West—a combination of the conditions necessary for the solution of the problem before us. A pontifical of Canterbury previous to 1050 contains a benediction: 'For the day of the conception of the holy mother of God, Mary'; and two calendars belonging to the abbeys of Old Minster and New Minster in Winchester contain under the date of December 8th the following inscription: 'The conception of the holy mother of God.' The Irish Church supplies similar texts, some of which go back to the 10th century. From these evidences it is clear that the Feast of the Conception of Mary was celebrated in England and Ireland long before the Norman Conquest. At the beginning of the 12th cent. wonderful stories came into circulation tending to prove that the Virgin Mary patronized this liturgical practice. Supported by these 'revelations,' the Feast of the Conception gradually spread, and was approved by the Council of London in 1129. It even reached the Continent, penetrated into Normandy, and as far as the church of Lyons, where we find it about 1128. At this date it encountered a formidable enemy—Bernard of Clairvaux. This famous abbot wrote a very strong letter (*Ep.* 174) to the canon of Lyons, in which he tried to prove that the Feast of the Conception was a 'superstition' (*superstitione deprehensa*) condemned by the principles of theology. But, in spite of Bernard's protestations, the Feast continued to spread. At the end of the 13th cent. nearly all the dioceses in France celebrated it, and England placed it among the obligatory festivals (council of Exeter, 1287). The papacy refused at this time to join the general movement; but it also yielded, during the residence at Avignon (14th cent.). Long before this the Feast of the Conception had lost its original object. Its purpose was no longer to honour the virginal, or simply miraculous, birth of Mary; what it celebrated was the exemption of Mary from the law of original sin—an important transformation, the history of which we shall now trace briefly.

**2. The belief in the immaculate conception.**—The Feast of the Conception caused no difficulty in the East. In the West, however, the Augustinian theory was prevalent, according to which the generative act, vitiated by the concupiscence which accompanies it, vitiates in its turn the human organism which issues from it; and this organism also vitiates the soul that comes to dwell in it. By virtue of these principles, the conception of Mary, which took place in conformity with the law of generation—they believed in a miraculous but not virginal conception—was necessarily vitiated. It could not, therefore, decently be celebrated by a Feast. Objection was made as early as 1125 by the English monks; it was made emphatically by Bernard in his letter to the canon of Lyons. An answer had to be given. Some English monks replied by explaining that, by a special privilege, Mary had escaped the defilement of the generative act performed by her father Joachim, and that, therefore, her body and soul were immaculate from the first moment of their existence; *i.e.*, the objection of the opponents of the Feast was met by the proclamation of the immaculate conception of Mary. In a word, the belief in the immaculate conception made its appearance between 1121 and 1130; its apostles were a few unknown English monks; it aimed at the legitimization of the Feast of the Conce[ption by] reconciling this Feast with the Augustinia[n doctrine] of original sin.

For nearly a century and a half schola[rs were] unanimous in asserting that it had not [attained] its aim. Hugh of St. Victor and Peter L[ombard] held that Mary was under the dominion [of sin] until the moment when the mystery of [the In]carnation took place within her womb, a[nd they] did not condescend even to discussion wi[th the] upholders of the new belief. Alexander of [Hales,] Albert the Great, Thomas Aquinas, Bona[venture] —in fact, all the scholars of the 13th cent[ury dis]cussed and refuted it. They all taught tha[t Mary] had contracted the original stain, and th[at the] hypothesis of an immaculate conception [was in] contradiction to the principles of the faith. [They] should, logically, have condemned the Fe[ast of] December 8th, but it had become so wide-[spread] that there was no possibility of suppressi[ng it.] Being forced to tolerate it, they found them[selves] reduced to interpreting it. They said, ther[efore,] that the Feast had as its object not the conce[ption] of Mary itself, but the sanctification with [which] Mary had been gratified after her concepti[on, at] a date which was unknown, but before she [came] forth from her mother's womb—a false stater[ment;] for, wherever the festival of December 8th [was] celebrated, the homage of the people was of[fered] to the conception of the mother of Christ. In [fact,] theology and popular piety were in conflict. [One] or the other had to come to terms.

It was theology that capitulated. Its op[posi]tion to the immaculate conception came fro[m the] Augustinian doctrine of original sin. Now, tow[ards] the middle of the 13th cent., it modified its [doc]trine. For the theory that concupiscence inf[ected] the body of the child, and then, by means of c[on]tact, its soul, it substituted a theory accordin[g to] which the hereditary stain was constituted [by] the lack of original righteousness. This s[ub]stitution was accomplished by Thomas Aquin[as.] Naturally Thomas did not intend to serve t[he] cause of the immaculate conception, of which [he] was one of the keenest opponents; he allow[ed] himself to be guided solely by metaphysical co[n]siderations, the elements of which he borrow[ed] from Anselm of Canterbury. But the immacula[te] conception benefited from the operation. Fro[m] the day on which the concupiscence inherent [in] the principle of generation ceased to be origin[al] sin, the conception of Mary might be regarded [as] immaculate, although taking place under t[he] dominion of concupiscence.

Theology had come to terms; but not the theo[logians.] They—at least those of them who wer[e] well known—remained firm. It was not until th[e] 14th cent. that scholars took account of the ne[w] fact expounded by Thomas Aquinas. Duns Scotus the Franciscan monk, took the initiative. He wa[s] English, and had been brought up in the belief i[n] the immaculate conception which the English monks had handed down from the 12th century. When he became a scholar, in spite of the authority of the scholars, he remained faithful to the convictions of his childhood, and exonerated Mary from the law of original sin. He was followed by the order of Franciscans, of which he was the oracle. After that time the immaculate conception ceased to be a purely popular belief; it took first rank among the most serious, as well as the most disputed, theological doctrines. The Dominicans, out of respect for Thomas Aquinas, retained the attitude of the ancient Scholastics, and accused the Franciscans of teaching heresy. The immaculate conception became a battlefield where Dominicans and Franciscans engaged in ever renewed conflicts. In these conflicts the

sympathies of the people were on the side of the Franciscans, who maintained the most glorious theory for Mary; and the papacy, although very circumspect, found itself obliged to follow the people. The immaculate conception assumed a more and more important place in the liturgy, and in the religious life of the faithful. Pious souls gradually became accustomed to venerate it as a dogma, and were impatient for the day when it would be placed among the verities of the Catholic faith. Their prayers were answered by Pius IX., who, in the bull *Ineffabilis*, which was promulgated on 8th December 1854, wrote as follows:

'We declare, pronounce, and define that the doctrine which holds that the Most Blessed Virgin Mary, from the first instant of her conception, was, by a most singular grace and privilege of Almighty God, in view of the merits of Jesus Christ, the Redeemer of the human race, preserved from all stain of Original Sin, is a doctrine revealed by God, and therefore to be firmly and steadfastly believed by all the faithful.'

JOSEPH TURMEL.

**IMMANENCE.—I. Meaning of the term.**—The word 'immanence' is used in modern theology to denote the presence or indwelling of God in the world. Its opposite is 'transcendence,' which means God's apartness from or elevation above the world. The two conceptions may exist together: God is at once in the world and above it; or they may be mutually exclusive: God is wholly in the world or He is wholly apart from it. The theological use of the words is modern, dating only from the 19th cent.,[1] but the ideas for which they stand are very old.

**2. History.**—Christianity inherited from Judaism belief in God as a strictly personal being, Creator and Ruler of the world; and, though Jesus in His emphasis upon God's love and men's filial attitude towards Him substituted the sense of His nearness and approachableness for the notion of His remoteness and inaccessibility, which had become increasingly common in later Judaism, the idea of Divine immanence in the full sense of the word seems to have been far from His thought. At least there is no trace in His recorded utterances of the notion that God is within the world of nature or physical things. The Oxyrhynchus Logion—'Raise the stone and there thou shalt find me; cleave the wood and there am I'—is in sharp contrast with the canonical Gospels in this respect. Nature to Jesus was not the seat of God's indwelling, but the work of His hands.

[1] In the vocabulary of philosophy the words have had a long and varied history, being employed, though in different senses, by the Schoolmen, Spinoza, and Kant. With the philosophical use of the words this article is not concerned.

In the Hellenistic world of the period two opposite conceptions of the relation between God and the universe were widely current. By many God was thought of as wholly above the world and separate from it (as in the dualism of the later Platonists), by others as completely resident within it, its soul or vital force (as in the pantheism of the Stoics). To these two contrasted views the names 'transcendence' and 'immanence' may justly be applied.

The Gnostics were the most consistent representatives of the former view in the early Church. The conception of God as a person and the belief that He was the Creator and Ruler of the world, made the latter view in its extreme form impossible to most Christians. The words of Hermas are typical of the common Christian attitude:

'First of all, believe that God is one; even He who created all things and set them in order, and brought all things out of non-existence into being, and comprehendeth all things, being alone incomprehensible' (*Mand.* i.; cf. also the *Apology* of Aristides, chs. i. and xv., and the *Apology* of Athenagoras, ch. iv. ff.).

*Clement of Alexandria*, following the Jewish philosopher Philo, undertook to combine Platonic transcendence with Stoic immanence by means of the Logos conception. As the Absolute, God is remote from the world, inaccessible and inconceivable; in the Logos, He is present, creating and informing all things and revealing Himself to His creatures. But the identification of the Logos with the Son of God incarnate in Jesus Christ, and its consequent personalization, tended to narrow the sphere of its activity and to confine its significance to the revelation and mediation to Christian believers of the Supreme God, in Himself remote and unapproachable. As a consequence the dogma of the Trinity, by which the Logos idea was given an assured place in Christian theology, while it has made the synthesis of Divine transcendence and immanence possible to many theologians (particularly in the West, where the subordination of the Son and His distinction from the Father were less marked than in the East), has more often had the value, which it had primarily to Athanasius himself, of guaranteeing the deity of Christ in order to the redemption of man. Christ possesses the Divine nature, and hence union with Him through the sacraments means participation in the nature of God, otherwise entirely foreign to us. Thus the Catholic doctrine of salvation denied implicitly, if not explicitly, the immanence of God in the world apart from the Christian Church.

The absorption of most *ancient theologians* in the Christian revelation and its implications prevented much speculation upon the question of God's general relation to the world and the reconciliation of the notions of Divine transcendence and Divine immanence; but, when the matter was thought of at all, it was commonly taken for granted that the transcendent God who was before the world and above it, its Creator and Ruler, is yet in some sense at least present and active in it. Sometimes this presence was interpreted in terms of substance, as, *e.g.*, by Scotus Erigena:

'When we hear that God made all things, we ought to understand by it nothing else than that God is in all things, that is, subsists as the essence of all things' (*de Div. Nat.* i. 72).

Sometimes it was interpreted rather in terms of activity or power, as, for instance, by Origen, who taught the doctrine of eternal or continuous creation, and by Augustine, who declared that God did not withdraw from the world after He had created it, but was always filling heaven and earth with omnipresent power (*de Gen. ad Litt.* iv. 12; *de Civ. Dei*, vii. 30). This was a very common notion both

in East and West, it being everywhere believed that God's activity was necessary to sustain the world and keep it from lapsing into nothingness. The idea of God's ever-active power did not exclude the notion of substance, which was always present, at any rate where the influence of Neo-Platonism was felt with its conception of absolute being apart from which there is no reality; nor did the idea of substance exclude that of activity. In the passage just quoted from Erigena we read: 'In God is there no difference between being and doing, but are they one and the same thing? I cannot avoid this conclusion.'

A position similar to Augustine's was held by many of the *Schoolmen*, *e.g.* Anselm and Thomas Aquinas. According to the latter, God is the absolute being, apart from whom there is no real existence. He has not only created all men and things, He is in them all, and every event is but an expression of His all-controlling will. Nothing but God has any independent reality or activity of its own (*Summa*, I. qu. 8). God is thus transcendent, existing independently of men and things, but He is also immanent in the fullest sense of the word. In spite of this metaphysical theory of immanence, Thomas was an orthodox Catholic, denying the possibility of communion with God here and hereafter to any but Catholic Christians.

A still more consistent and outspoken statement of the theory of immanence is found in the writings of the Protestant theologian, Ulrich Zwingli, particularly in his striking little work entitled *de Providentia*. According to Zwingli, God is at once the only real being and the only real will. All that is exists only in Him, and all that occurs is due to His immediate agency. All the acts of men, evil as well as good, are God's acts; but, as man is under law while God is above law, what is sin in man is not sin in God. There is nowhere to be found a clearer and more fearless statement of the view that God is the alone being and the alone will, a view in which an extreme doctrine of Divine immanence is associated with the unhesitating recognition of Divine transcendence.

A conception of Divine immanence, no less thoroughgoing but of quite a different type, is illustrated by many of the great *mediæval mystics*. Some of them, *e.g.* Meister Eckhart, were so full of the sense of God's presence that they almost wholly lost sight of the difference between God and the creature, and taught a mystical pantheism of an extreme, if not always consistent, form. Eckhart's pupil, John Tauler, and the author of the famous *Theologia Deutsch*, while emphasizing the immanence of God and the possibility of immediate contact with Him, and while making religion consist in the complete loss of oneself in God, yet kept the distinction between God and the creature, insisting upon the majesty of the former and the meanness of the latter. They thus escaped the pantheism of many of the mystics and reached a religious position closely allied to the metaphysical position of Thomas.

Meanwhile in the period of the *Renaissance* a new conception of Divine immanence became common. It was not due to contempt for the world, which in Neo-Platonism and in the Christian theology influenced by it had resulted in the denial of all reality apart from God; it was due rather to the sense of the world's greatness. A more or less sentimental exaltation of the beauty, sublimity, and harmony of Nature grew increasingly common and resulted sometimes in its complete deification. The way was thus opened for a genuine pantheism in which the world itself is identified with God, and in which Divine transcendence, retained by all the Fathers and Schoolmen, entirely disappears (cf. especially Giordano Bruno).

A similar tendency to magnify the dignity and worth of the creature—in this case man rather than Nature—a tendency in which the modern age was foreshadowed, had already led Duns Scotus to exactly the opposite conclusion. Duns was interested primarily to conserve the freedom and independence of the human will. Reading reality in terms of will rather than of substance, and reacting against the determinism of Augustine, he pushed God out of the universe altogether, and gave the latter a wholly external relation to its creator. Closely allied with the voluntarism of Duns was the Nominalism of his successors, which was pluralistic in its interest rather than monistic. As Nominalism gained in popularity in the later years of the Middle Ages, the transcendence of God was inevitably more and more emphasized at the expense of His immanence.

A conception of Divine transcendence closely allied to that of Duns is found in the system of the Protestant theologian, John Calvin, who interpreted God, as Duns had done, wholly in terms of will. At the same time, sharing with Augustine and most of the mediæval theologians a low estimate of man and the world, his doctrine of God as will resulted in the belief that God is the only independent will in the universe and that all the acts of man are caused by Him. The extreme transcendence of Duns was thus supplemented by an immanence doctrine of a certain kind (immanence of will only, not of substance) which resulted not in the glorification of man but in his belittlement.

In the 17th and 18th centuries the development of *physical science* led to views of Divine transcendence more extreme than anything found in earlier days. As men became increasingly aware of the universality and invariability of natural law, the tendency was to push God back to the beginning of things, and to find Him less and less necessary to account for the ever changing phenomena of the world. Galileo's first law of motion had wide influence in this connexion: 'Every body continues in its state of motion or of rest unless acted upon by some opposing force.' Hitherto it had been commonly believed that the power of God was needed, not only to start the heavenly bodies upon their courses, but also to keep them in motion. Newton still thought Divine interference occasionally necessary to correct observed irregularities in their movements; but La Place, a century later, showed that such irregularities corrected themselves, and that Newton's assumption was, therefore, gratuitous. The steadily-growing tendency, indeed, was to find ever less place for Divine activity in connexion with the conduct of the physical universe. It came to be more and more widely believed that in the beginning God had impressed upon the world the laws by which it was thenceforth to be governed, and had then left it to run of itself. This extreme doctrine of Divine transcendence is commonly called Deistic, though it was neither shared by all the Deists nor confined entirely to them. Increasingly it took possession of the minds of the 18th cent., and it may fairly be called its characteristic conception of the relation of God and the world.

In the 19th cent. the idea gave way again to views of Divine immanence, as extreme in comparison with the ideas of an earlier age as was the 18th cent. notion of Divine transcendence. The prevalence of the new conceptions was due largely to reaction against the current notions of transcendence, but this was only one phase of a general reaction against many of the leading tendencies of the 18th cent., and it was aided by various influences. The reaction found its most striking expression in the literary and æsthetic movement known as *Romanticism*, which dominated Western

Europe during the early part of the 19th century. Romanticism was a complex phenomenon, but it was commonly marked by emotionalism, subjectivism, self-expression, often in the most untrammelled forms, by love of nature, affected if not real, and by the recognition of man as part of a larger whole, in oneness with which and in openness to whose influence he finds his true life. An important part of culture, according to the Romanticists, consisted in learning to appreciate the beauty and harmony of the universe, in coming into more intimate sympathy with it, and in acquiring a sensitiveness to the whole world of nature and of man. It was a common tendency among them to try to reproduce the conditions of earlier ages before the modern spirit of enlightenment had taken possession of the world, when every one believed in immediate intercourse between man and the universe about him, in apparitions, fairies, and fables, and when the fancy had free play and was not yet destroyed by the ruthless hand of reason. The effect upon religion was very diverse. Some of the Romanticists felt the religious impulse strongly, but were led by their hostility to the dominance of reason which they believed began with the Reformation, and by their distaste for the prevalent coldness and barrenness of contemporary Protestantism, to turn to Catholicism and to seek in it what they could not find in the newer faith. The result was a great revival of Catholicism in Germany and France, and later in England, where the Oxford Movement gave expression to certain elements of the Romantic spirit. Many of the Romanticists, on the other hand, particularly in Germany, far from finding themselves attracted by Catholicism, revolted against religion altogether, which they knew only in its rationalistic form, and looked down upon it in contempt. It was for Romanticists of this class that the theologian Schleiermacher wrote in 1799 his famous *Discourses upon Religion addressed to the Educated among its Despisers*. The most important of the Discourses is the second, on 'The Nature of Religion.' Its general thesis is that religion has its seat neither in the intellect nor in the will, but in the feelings, and consists in the sense of the universal or infinite. Schleiermacher's religious sense was simply a translation into other terms of the artistic sense of the Romanticists. What they called openness to the universe he called openness to God. What they regarded as a sense of the beauty and harmony of the universe he made a sense of the Divine. And hence he claimed that the highest culture, of which the Romanticists made so much, includes religion, and that to be without the latter is to neglect an important part of one's nature and to be content with a partial and one-sided development. Religion raises a man above his individual limits into converse with the Infinite, and the religious man recognizes in everything a manifestation of the Divine. Every event is a miracle, a sign of God's presence and activity. The ego, or spirit, and non-ego, or matter, are simply differentiations of the Infinite. In the Infinite the two exist in perfect unity; in the world they are separated, but they become one again in every impression of the world upon us. The universal manifests itself only through the individual, and, on the other hand, the individual comes to his true life only in the universal; and to be aware of this life is to be religious.

'The usual conception of God as a single being outside of the world and behind the world is not essential to religion. It is only one way of giving expression to it, seldom entirely pure, and always inadequate. . . . The true essence of religion is neither this idea nor any other, but the immediate consciousness of Deity as we find him in ourselves as well as in the world' ('Reden über die Religion,' *Sämmtliche Werke*, Berlin, 1843, i. 264).

This is a genuine doctrine of Divine immanence, and fitly illustrates the influence of Romanticism in the sphere of religion.

The influence of certain *philosophical tendencies* of the modern age has also promoted the theory of the immanence of God. Much of modern philosophy, from Descartes down, was frankly dualistic; but now and then monism, even before the 19th cent., when it became almost everywhere dominant, had its representatives, and resulted in a more or less thoroughgoing doctrine of Divine immanence, as, for instance, in the occasionalism of Malebranche and the idealism of Berkeley, both of whom made God the immediate and sole cause of all phenomena; as also in the Neo-Platonism of Jonathan Edwards, who thought of the universe as an emanation of the infinite fullness of God.

Of still greater historical importance was the system of Spinoza, in which the modern conception of Divine immanence had one of its principal roots. For a hundred years and more after his death Spinoza found little favour. The dominant spirit of the age was radically opposed to his spirit. He first came to his rights in the revolt against the one-sided rationalism and individualism of the century which began in Germany under the lead of such men as Lessing, Herder, and Goethe. In 1787, in a little book entitled *Gott* (see art. by A. C. McGiffert, in *HJ* iii. [1905] 706 ff.), Herder came to the defence of Spinoza, claiming that he had been commonly misunderstood, and at the same time setting forth an original interpretation of his system, which was in many respects a misinterpretation, but had profound influence upon his contemporaries. Reading Spinoza in the light of the philosophy of Leibniz, he succeeded in showing, at least to his own satisfaction, that the former was neither an atheist nor a pantheist. In substituting force for extension in his definition of matter, Leibniz had departed not only from Descartes, but also from Spinoza. He had departed from the latter also in substituting multiplicity for unity. The universe, according to Leibniz, is not the embodiment of one great and all-embracing force, but of an infinite number of forces. Spinoza was a monist, Leibniz a pluralist; and hence the two systems represented two radically different tendencies. But, unlike as they were, they were combined by Herder, who preserved the unity of Spinoza's system without sacrificing the multiplicity upon which Leibniz laid stress, by making force the essence of Spinoza's infinite substance. The result was a conception of Divine immanence of such a sort as to prove very attractive to multitudes of thinkers of his own and subsequent generations. The theory was essentially monistic, and yet it did not sacrifice individuality, but rather, so Herder claimed, promoted and deepened it. It thus fell in admirably with the growing Romanticism of the age.

Among others of the late 18th or early 19th cent. whose thought was dominated more or less completely by the influence of Spinoza, were the poet Goethe, the theologian Schleiermacher, and the philosophers Schelling and Hegel, and it is largely because of Spinoza's influence that post-Kantian philosophy, whether idealistic or realistic, spiritualistic or materialistic, has been so controllingly monistic. Religious thought, too, has shown the same tendency. Many of the leading religious thinkers of the 19th cent. were completely under the sway of one or another monistic system, particularly Hegelianism. But the modern conception of Divine immanence is due ultimately, not to the prevalence of any particular system of philosophy, but rather to the general monistic tendency which runs through various systems, and of which they are the exponents. It is, therefore, enough simply

to have called attention to the revival of Spinozism, and to have pointed out its general effect.

Meanwhile the influence of *science*, to which modern scepticism was largely due, was also working to promote belief in the immanence of God, or at any rate to make the belief seem natural and rational. By most thinkers of the 17th and 18th centuries the universe was looked upon as a machine, and the laws of nature were viewed as mechanical laws imposed upon it from without. A classic illustration is found in the familiar passage in Paley's *Natural Theology* (1803), where the world is represented as a watch. When the universe is viewed under this aspect, God, if He exists at all, can be transcendent only, outside of the machine which He has made and set in motion. But during the 18th cent. evolutionary ideas became common, and in the 19th cent. took almost entire possession of the field. Whatever form the theory of evolution may take, the general conception means the recognition of immanent energy by virtue of which the universe is continuously changing and advancing. The world as we know it has not come ready-made from the hand of God or of any other power; it has gradually grown to be what it is through the play of forces resident within itself. This great change from a mechanical to an organic conception meant much for religious thought. With the old idea a transcendent God, maker of the world machine, Himself entirely above and apart from it, was a natural assumption. But the new idea of the universe as an organism suggests a God within rather than without the world process, and, as a matter of fact, one of the most notable consequences of the increasing prevalence of evolutionary ideas has been the rapid growth of the doctrine of Divine immanence at the expense of the doctrine of Divine transcendence. The following quotations will illustrate the situation:

'Out of all this the modern conviction has arisen that God creates now and will always create; that his creative act is normal and incessant, and that the notion of a definite era at which he brought the world into being is as puerile and gratuitous as is that of a theatrical "Day" of Judgment with God seated on a throne. Hence, whatever matter may be, it seems to follow that it is co-eternal with God, and the thought inevitably presses itself in that the great forces of the universe, gravitation, electricity, and such-like, are the means by which creation and other divine action are carried on. In fact, they seem to be strictly inseparable from the divine existence. And if what we call nature is inextricably interwoven with God, we have to make fundamental changes in the deistical theory of the last century' (F. W. Newman, *Relations of Theism to Pantheism*, Ramsgate, 1872, p. 11).

'The one absolutely impossible conception of God, in the present day, is that which represents Him as an occasional Visitor. Science had pushed the deist's God farther and farther away, and at the moment when it seemed as if He would be thrust out altogether, Darwinism appeared, and, under the guise of a foe, did the work of a friend. It has conferred upon philosophy and religion an inestimable benefit, by shewing us that we must choose between two alternatives. Either God is everywhere present in nature, or He is nowhere. He cannot be here and not there. He cannot delegate His power to demigods called "second causes." In nature everything must be His work or nothing. We must frankly return to the Christian view of direct Divine agency, the immanence of Divine power in nature from end to end, the belief in a God in Whom not only we, but all things have their being, or we must banish Him altogether. It seems as if, in the providence of God, the mission of modern science was to bring home to our unmetaphysical ways of thinking the great truth of the Divine immanence in creation, which is not less essential to the Christian idea of God than to a philosophical view of nature' (Aubrey Moore, in *Lux Mundi*[12], London, 1891, p. 73 f.).

Such passages as these, and they could be multiplied indefinitely, do not show that modern science promotes faith in God, but only that it leads many to substitute Divine immanence for Divine transcendence. Belief in God is not a scientific, but a philosophical or religious, belief. Science may affect the form which faith in God takes, but the faith itself has commonly other roots. It has proved of great religious significance, however, that the science of recent times permits for those who desire it a theistic interpretation of the universe, which was becoming increasingly difficult in the face of the science of an earlier generation.

*Religious considerations* have also had their part in promoting the doctrine of the immanence of God. In this connexion the influence of German Pietism and English Evangelicalism must not be overlooked. The Pietists and Evangelicals emphasized the immediate presence of the Holy Spirit in the hearts of believers, witnessing to their regeneration. This, of course, did not mean a recognition of Divine immanence in the strict sense as distinguished from Divine transcendence, for it was only in the hearts of believers, not in the world and in nature, that immediate Divine activity was recognized. But set over against the common tendency of the age to push God far away and to admit His presence only in ages known, in distinction from their own, as the ages of revelation and inspiration, the assertion of the presence of the Divine and its constant activity, even in a limited sphere, could not fail to have its effect in breaking down the old ideas of externality and aloofness. Closely connected with this emphasis upon the presence of the Holy Spirit was the Evangelical notion of the redeemed man's possession of a special faculty enabling him to perceive spiritual things as directly as he perceived the material world with his bodily senses. This, of course, promoted the idea of the nearness of the Divine and led to the growing substitution of the witness of one's own individual experience for the external Christian evidences upon which the Rational School of the 18th cent. laid all the stress. There can be no doubt that this increasing attention to religious experience has made the older ideas of Divine transcendence less satisfying to religious men of various sects. And yet we must not over-estimate Evangelical influence in promoting the theory of Divine immanence. The Evangelical doctrine of the Holy Spirit is in some respects radically opposed to modern immanence ideas, for the essence of the doctrine is that the Spirit works in the hearts of believers in a wholly unique way, and the existing tendency to see the immediate presence of the Divine in all nature involves commonly the neglect, if not the complete repudiation, of those peculiar doctrines of Christianity which Evangelicalism made most of, such as the Fall of Man, Original Sin, and Vicarious Atonement. As a matter of fact, the influence of religious considerations upon the rise and spread of the doctrine of Divine immanence has been largely secondary, not primary, and negative, not positive. Modern science tended to make belief in a transcendent God appear superfluous and unfounded. Only by the doctrine of Divine immanence did it seem possible to vindicate the reality of God, who had been proved unnecessary to account for the creation and maintenance of the physical universe. And so their religious need of God has led many to faith in an immanent God simply because no other God seems possible.

The effects of the various influences that have been described are similar and yet in many respects diverse. All have tended to promote belief in Divine immanence, but the belief takes many forms, according as one or another interest is dominant. God is conceived as the soul of the world, the spirit animating all nature; the universal force which takes the myriad forms of heat, light, gravitation, electricity, and the like; the all-embracing substance of which men and things are but differentiations; the principle of unity underlying all multiplicity; the infinite consciousness in which all things have their existence; the indwelling personality with whom we

commune when we contemplate nature or look into our own souls. The conception may be crass or refined, spiritual or material, idealistic or realistic, but in every case it is a form of cosmical theism, faith in a god of whom the world of nature is in some real and immediate sense a manifestation or expression.

3. **Present position.**—An important result of the process which has been described is the outflanking of the scepticism of the 18th century. The God who had been read out of the universe by the progressive discovery of natural forces adequate to account for all phenomena has now been brought back into it, not as before to supplement its insufficiencies and incapacities, but to give it spiritual meaning and worth. Science, of course, can never prove the presence of God in the world, nor can it disprove it. The indwelling God is an object of faith, not of sight. To him who believes in an immanent God the multiplying discoveries of modern science have no terrors. Physical forces may accomplish all that is claimed for them, and natural laws be accurate descriptions of their way of working, but they are interpreted by such a believer only as manifestations of Divine activity. The doctrine of Divine immanence evidently offers a refuge for faith which science is powerless to invade, and this constitutes one of its greatest attractions to the religious men of our day, who live in an age of science and know the havoc wrought by the modern study of nature in the theism of the past.

The modern notion of Divine immanence has also led to many significant changes in the traditional system of Christian theology. The old chasms between the Divine and the human, God and the world, this life and another, have been bridged by it, and the result has been a profound modification of the old doctrines of salvation, eternal life, the incarnation, the person and work of Christ, the sacraments, religious authority, and the like.

But the conception of Divine immanence is beset, from the point of view of Christian theism, with serious difficulties. The tendency of the doctrine is undoubtedly pantheistic. In the hands of many of its exponents, indeed, it has been nothing more nor less than thoroughgoing pantheism. But pantheism imperils, if it does not destroy, the personality of God, the individuality of man, and the reality of sin, and hence seems to make religion and ethics in the Christian sense alike an illusion. As a consequence, many modern theists, while accepting the doctrine of Divine immanence, have striven to distinguish it from pantheism and to safeguard the interests imperilled thereby.

Thus they claim that, while God is immanent in the universe, He also transcends it. All things are pervaded by Him, but He is more than them all. A strict pantheism identifies God with the totality of men and things. The theists referred to recognize God as including this totality, but as more and greater than it. This form of theism has been called, in distinction from pantheism, panentheism (*e.g.* by the German philosopher, K. C. F. Krause), its formula being not 'all things are God,' but 'all things are in God.' In reaction against the extreme transcendence of the 18th cent. the tendency among Christian theists of the early 19th cent. was to emphasize immanence to the complete exclusion of transcendence. But more recent theologians have tried to make again the old combination, and it is now frequently said that the difference between theism and pantheism lies not primarily in the character or nature of the God assumed by theists or pantheists, but in the assertion or denial of his transcendence (cf. Illingworth, *Divine Immanence*, p. 82). When, however, it comes to the definition of transcendence, there is as great variety as in the definitions of immanence. Some take it crassly and baldly as a quantitative conception: God is larger than the universe of men and things, which exhausts only a part of His being; or the universe is but His activity in space while He Himself in His immensity transcends all space. Others interpret it temporally: God is eternal, and the universe is but a passing expression of Him, His manifestation in time, while He Himself transcends time.

Again, the objections to pantheism are avoided by insistence upon the personality of God. Herder denied the Divine personality on the ground that the term is anthropomorphic, but he ascribed intelligence and will to God, and so distinguished his theism from pantheism, which, as he claimed, makes God mere unconscious substance or blind force. Difficulties in the notion of personality as applied to an immanent God have been felt by many since Herder's day (cf. Schleiermacher's discussion in his 'Reden über die Religion,' *Sämmtl. Werke*, i. 256 f.). Personality seems to involve limitation—a self and a not-self—and hence to be inapplicable to the being who includes and embraces all that is (cf. Strauss, *Die christl. Glaubenslehre*, Tübingen, 1841, i. 500 f.). This difficulty is now commonly met by asserting that the essence of personality lies not in the distinction of self from not-self, but in free intellectual and volitional activity. Such personality, it is claimed, belongs in complete measure only to the absolute or infinite being, God. As the philosopher Lotze says:

> 'Perfect personality is in God only . . . the finiteness of the finite is not a producing condition of . . . personality, but a limit and hindrance of its development' (quoted from Illingworth, *Divine Transcendence*, p. 47).

To this may be added the following passage from the theologian James Martineau:

> 'For these reasons the modern scruples that are felt with regard to the personality of God appear to me not less intellectually weak than they are morally deplorable. If any one is fastidious about the word and thinks it spoiled by the Athanasian controversy, let him supply us with a better; but some symbol we must have of the divine freedom in the exercise of will, the acknowledgment of which makes the difference between theism and pantheism, and gives religion its entrance into the conscience and affections of men. As the parts of our nature which thus enter into relation with God are precisely those which make us persons and distinguish us from other living things, it is difficult to see why the same term should not be given to the corresponding attributes of rational and moral will in him, and where the idea is really present and craving expression I believe that for the most part it will be glad of the word. At all events its contents are just what we rescue from pantheism' (*Study of Religion*, Oxford, 1888, ii. 183).[1]

Similarly, the evils of pantheism are avoided by interpreting God in ethical terms. The God who is resident in the world is a God of moral ideals, and is working out His holy will through all the processes of nature and of life. Such writers as John Fiske in his *Through Nature to God* (London, 1900), Joseph Le Conte in his *Evolution and its Relation to Religious Thought* (New York, 1888), and C. B. Upton in his *Bases of Religious Belief* (London, 1894) assert that God must be ethical, because the ethical is the highest thing in the universe, and God is the indwelling force in all the evolutionary process from the beginning to the end. Eventuating as it does in the ethical and spiritual, the process involves the ethical and spiritual character of God, the immanent cause.

Again, immanence has been guarded against some of the defects of pantheism by emphasis upon the reality of human personality. Already in the 2nd edition of his *Gott*, Herder grappled with the problem of individuation, and maintained that Divine immanence does not destroy the

[1] Cf. also W. A. Brown's *Christian Theology in Outline*, New York, 1906, pp. 200, 229, where God's transcendence is found in His personality. God is a personal being, and so transcends, or is distinct from, the universe, which is His dwelling-place.

personality of man, but only makes it the more real and vivid (cf. also Schleiermacher's *Monologen*, which appeared the year after his *Reden über die Religion*, and in which human personality and freedom are strongly emphasized). The discussions of Josiah Royce in the volume entitled *The Conception of God* (New York, 1897) and in his Gifford Lectures on *The World and the Individual* (do. 1901) are among the most notable of modern contributions to the subject. According to Royce, individuality consists in the partial nature of human consciousness which is distinguished from the Absolute's all-embracing consciousness by its limited and fragmentary character.

A still more emphatic assertion of human individuality, providing a more secure place for freedom and initiative, and so for moral responsibility on the part of man, is found in Martineau's *Study of Religion*, according to which God is immanent in nature, but not in man. All natural phenomena are due to the immediate activity of God, who is their sole cause; but man is a free spirit, created such by God, and his actions are his own, not God's. He thus in a real sense, though, of course, by Divine appointment, transcends God, and constitutes a sphere of independent causality, a centre of free ethical life.[1] Thus the individuality of man and the reality of human righteousness and sin are preserved by a partial denial of immanence and its limitation to only a portion of existence—a significant admission of the ethical inadequacy of any thoroughgoing doctrine of immanence.

The many attempts to combine immanence with Christian theism abundantly reveal the serious difficulties involved in immanence. That the difficulties are insuperable need not be asserted, but it is evident at any rate that two disparate interests, the cosmical, leading to the emphasis of immanence, and the ethical, leading to the emphasis of personality, are involved in the combination.[2]

The modern books setting forth the doctrine of Divine immanence in one or another form are legion, but few of them have large philosophical or theological value. The doctrine of Divine immanence, indeed, common as it is, is seldom clearly conceived or carefully defined. With most it is hardly more than an instinctive protest against traditional mechanical and external notions of the relation of nature and the supernatural, or against the deistic banishment of God from the world and from human life; and, when the attempt is made to say what is involved, problems emerge most of which are neither solved nor as a rule seriously grappled with.

LITERATURE.—In addition to the works referred to in the body of the article, and the various standard Histories of Philosophy and of Christian Doctrine, may be mentioned the following: G. W. F. Hegel, *Philos. der Religion*, Berlin, 1832; H. Ritter, *Ueber die Erkenntniss Gottes in der Welt*, Hamburg, 1836; T. Parker, *A Discourse of Matters pertaining to Religion*, Boston, 1842, and *Sermons of Theism, Atheism, and the Popular Theology*, do. 1853; G. Weissenborn, *Vorlesungen über Pantheismus und Theismus*, Marburg, 1859; J. W. Hanne, *Die Idee der absoluten Persönlichkeit oder Gott und sein Verhältniss zur Welt*, Hanover, 1861–62; H. Ulrici, *Gott und die Natur*, Leipzig, 1862; J. A. Picton, *The Mystery of Matter, and other Essays*, London, 1878; E. H. Gillett, *God in Human Thought*, New York, 1874; C. E. Plumptre, *General Sketch of the Hist. of Pantheism*, London, 1882 (1st ed. 1878–79 anon.); J. Caird, *An Introd. to the Philos. of Religion*, Glasgow, 1880; G. C. B. Pünjer, *Gesch. der christl. Religionsphilos. seit der Reformation*, Brunswick, 1880–83; O. Pfleiderer, *Religionsphilos. auf geschichtl. Grundlage*[3], Berlin, 1883–84; J. Hunt, *Pantheism and Christianity*, London, 1884; J. Fiske, *The Idea of God as affected by Modern Knowledge*, do. 1885; R. Eucken, *Grundbegriffe der Gegenwart*[3], Leipzig, 1893, p. 292 ff.; A. Drews, *Die deutsche Spekulation seit Kant mit besonderer Rücksicht auf das Wesen des Absoluten und die Persönlichkeit Gottes*, Berlin, 1893; J. R. Illingworth, *Divine Immanence*, London, 1898, *Divine Transcendence*, do. 1911; W. R. Inge, *Christian Mysticism*, do. 1899; W. Dilthey, 'Der entwickelungsgeschichtl. Pantheismus nach seinem geschichtlichen Zusammenhang mit den älteren pantheist. Systemen,' *AGPh*, Berlin, 1900, p. 445 ff.; A. Caldecott, *The Philos. of Rel. in England and America*, London, 1901; J. A. Leighton, *Typical Modern Conceptions of God*, do. 1901; T. Steinmann, 'Die lebendige Persönlichkeit Gottes, seine Immanenz und Transcendenz als religiöses Erlebniss' (*ZTK*, Leipzig, 1904, p. 389 ff.); B. P. Bowne, *The Immanence of God*, London, 1905; H. M. Gwatkin, *The Knowledge of God and its Hist. Development*, Edinburgh, 1906; F. Ballard, *The True God*, do. 1907; R. J. Campbell, *The New Theology*, London, 1907; W. N. Clarke, *The Chr. Doct. of God*, New York, 1909, p. 311 ff.

A. C. McGIFFERT.

[1] This is in interesting contrast with the position of the German philosopher F. H. Jacobi, who held that God is immanent not in nature, but in human personality.

[2] To how complete a repudiation of the notion of Divine immanence a controlling ethical interest may lead is strikingly shown in G. H. Howison's reply to Royce in the volume already referred to (*The Conception of God*, p. 81 ff.); and particularly in his *Limits of Evolution and other Essays* (New York, 1905). Similarly Ritschl's ethical interest led him to insist always upon the contrast between God and the world and man and the world rather than upon their oneness, and this made him more of a dualist than a monist (cf. *e.g.* his *Rechtfertigung und Versöhnung*, Bonn, 1870–74, vol. iii. ch. iv. *passim*).

**IMMORTALITY.—1. Introductory.**—The significance of this term—in that sense of it which has determined the shape of the problem as it has come down to modern reflexion—may be stated in the words of Kant: 'The Immortality of the Soul means the infinitely prolonged existence and personality of one and the same rational being.'[1] By 'personality' is here meant the conscious rational unity which links together the years of a sane man's life on earth; and immortality signifies the continuance of this rational consciousness *in sæcula sæculorum*—the degree of its continuity being at least as great as in earthly life, and the duration of its continuity being essentially unlimited. The purpose of the present article is to investigate the degree of truth and of value involved in this conception. Its adequacy, even as a mere conception, forms one of the primary questions to be raised; we shall have to ask whether it must not be materially modified in order to reveal even the significance of the problem itself. There are, however, certain inquiries which must first be referred to in their relation to the point of view here adopted, although the treatment of them lies outside the scope of this article.

(*a*) It is said that every form of belief in the power of human personality to survive bodily death is invalidated because such belief arose among primitive men in consequence of an erroneous interpretation of sleep, dreams, and similar psychophysical phenomena. Against this, it must be insisted that the validity of a conception is a question entirely distinct from that of its origin or genesis. When the truth or falsity of a belief is under investigation, it is a mere irrelevancy to raise the question of the manner in which the belief arose in distant ages of time. The latter question constitutes an important historical inquiry, belonging to a branch of anthropology in which valuable work is now being done (see artt. SOUL, ANIMISM, DREAMS AND SLEEP, LIFE AND DEATH, DEMONS AND SPIRITS, ANCESTOR-WORSHIP, COMMUNION WITH THE DEAD); but these historical and descriptive inquiries have no bearing on the validity of the developed forms of the belief in survival. From the historical point of view, we assume that assignable conditions and causes can be found not only for the first beginnings, but for the continued survival of any belief; and we must insist that the causes which condition its continued survival may differ fundamentally from those which originally brought about the belief.[2]

(*b*) The 'animistic' explanation of the origin of belief in the soul as distinct from the body calls for a critical comment which has a bearing on our present argument. The theory is that the dream-image is the prototype of the 'soul.' In dreams the primitive man sees himself and others, together with common objects of experience; and to all these images he attributes an independent and etherial existence. This interpretation becomes specially impressive to the man when in dreams he sees the images of those who have died (see reff. under art. ANIMISM; esp. Tylor, *PC*). This theory needs to be supplemented in one important respect. We must ask: What leads the man to attribute *mental life* to the moving image which he

[1] Kant, *Critique of Pure Reason*, bk. II. ch. ii. § 4 (cf. John Watson, *Selections from Kant*, Glasgow, 1897, p. 294). Kant does not intend to exclude the idea of *growth*; but he assumes that the essential element in the idea of immortality is that of mere endlessness.

[2] Cf. S. H. Mellone, *Immortal Hope*, London, 1910, ch. i.

sees in his dream, and which resembles the living body seen in waking life? It is evident that he must have had some vague awareness of a mental life of his own, before he could regard the image even as an animated 'double.' Hence some writers have spoken of a 'personifying tendency' leading primitive man to attribute an inner life, resembling his own, to forms which he recognizes as outwardly more or less like himself (cf. H. Siebeck, *Geschichte der Psychologie*, 'Einleitung,' Gotha, 1880-84; R. Avenarius, *Der menschliche Weltbegriff*, Leipzig, 1847, ch. iii.).

2. **Survival of personality.**—A marked feature of the scientific and philosophical thinking of the present century is the gradual substitution of dynamical for statical views of existence. There has prevailed a tendency to assume that (notwithstanding the universality of change) everything has a fixed nature, and that, when we know anything of this fixed nature or constitution, we know so far what the thing is. The tendency which now prevails—and which is progressively justifying itself by its results—is to regard existence as an active productive process, so that to the question 'What is it?' the first answer must be 'What it is is shown in what it does'; and 'what it does' means especially 'what it can produce or bring forth'; a thing *is* what it *does*. This is the principle which we apply in our conception of the material world, of human nature, of the human mind and its faculties—in a word, in our conception of the universe and all that it contains. In every case, it must be remembered that we thus derive only a partial answer to the question; for, if we want to know all that a thing is, we must know all that it does and all that it is capable of doing; and as yet we do not know this of anything.

In the application of it which especially concerns us here, this principle leads us to lay special stress on the idea of growth in reference to human personality. 'Growth' is not exclusive of self-direction. The growth of human personality is, so to speak, an achievement, realized through conscious activity. The essential nature of mind consists in its creative functions, which are inexhaustible, though they work under conditions which are given. From this point of view it follows (*a*) that the value of human personality must be estimated by considering not merely what men are, but what they have it in them to become; (*b*) that the future life, if it is to be anything at all, must be not a life of mere sameness, or mere endlessness, but of continued growth; (*c*) that human personalities as such—not merely the aggregate of the results of the best human achievements and ideals, but the personal lives from which these achievements spring—are themselves worth preserving, and will not perish in growing. It is evident that this involves a material modification of the conception of immortality which was stated above (after Kant). The vitally important factor in the conception, we repeat, is not mere endlessness, but continued growth. It is true, growth is the progressive fulfilment or realization of latent powers; it involves, and must involve, a process in time. But to suppose that the process is literally endless in time is to go far beyond anything that experience or reflexion warrants in our present state. When it is asked, 'If there is an end, why not at death?' the answer is that the 'end' we look for is not annihilation at some point of time; it is the absolute completion of our nature—the complete fulfilment of the purpose or meaning of each individual life. We have no means of knowing how far this fulfilment will carry us; only we know that it is not realized at death.

The survival of personality, so understood (whether as problem or as belief), must be carefully distinguished from two entirely different conceptions with which it has been confused.

(*a*) It must be distinguished from the so-called 'corporate immortality' based on the solidarity and continuity of the human race, which simply means that the effects of each man's thoughts, desires, and deeds on his fellow-men are real and permanent. The reality of this permanent influence of every personal life is not in question; but we must insist that it is mere confusion of thought to regard this as equivalent to or as an adequate substitute for the belief in personal survival. In truth, the human individual cannot be regarded as a mere means to the survival and improvement of the race. When individuality has risen to self-conscious personality, it cannot be a mere means, existing only to contribute to an end in which *as an individual personality* it has no share. For, if the individual were only a means, the humanity as a whole could be nothing more than a system of means, and, therefore, would exist only for the sake of some end outside itself; and the supposed 'corporate immortality' would prove illusory.[1]

(*b*) It must be distinguished from that 'eternal life' which means experience of the super-personal and eternal, in which we may share irrespective of time. This is not a question of survival—'Does our individuality endure?' It is not a question of what is to be. It is a question of present reality, of what is; 'Do we share in the Eternal Life of God, and may this connexion become a matter of experience?' It is evident that an answer to one of these questions is not necessarily an answer to the other. If man is a 'reproduction' or 'differentiation' of the Eternal Mind, it does not follow that, regarded as an individual spirit, he is eternal; and, if this metaphysical tie is what gives absolute value to human life, the thing of value would remain, however transient each single life might be.

The most prominent representatives of this point of view in the history of modern philosophy are Spinoza and Schleiermacher. Whether Hegel also shared it is open to debate. There is no doubt that for Hegel the essential element in experience is the eternity of Spirit, which is not merely future, but is realized even now whenever the human spirit thinks and wills what is universal; but it does not appear that Hegel made any distinct pronouncement as to the survival of the individual soul. With Spinoza it is different. In his early treatise, *de Deo, Homine, et ejus Felicitate* (c. 1655), he asserted the immortality of those souls who in love to God had come to have part in His unchangeable being. But in bk. v. of the *Ethics* this view appears in a different light. He there speaks of a *pars æterna nostri*—the eternity of the active spiritual element in the human soul, which is greater as our love to God is greater. But memory, on which the continuity of self-consciousness depends, is treated by Spinoza as part of the *imaginatio*, which is a function of the physical body and perishes at death. Hence there can be no survival of finite personality. For Schleiermacher, in like manner, the only real immortality is one which we may fully possess in this life in time, and which it is the purpose of this life to realize: in the midst of the finite to be one with the Infinite—to be eternal every moment. Hence Schleiermacher denied both the reality and the value of personal survival of bodily death. This is equivalent to saying that the value of the Eternal, as such, is not affected by the transiency of the finite forms in which it is manifested; or—as some have urged, against belief in the value of finite personality—that what we want is *depth*, not *length*, of life.

It has been our purpose not to criticize this conception of eternal life, but to point out that it cannot be substituted for, and must not be confused with, any belief in the survival of personality. We may, however, with McTaggart, seriously question the assumption that the value of the eternal, as such, is unaffected by the transiency of its finite manifestations: 'It is not justifiable to assert that a state of consciousness can ever rise so high that its duration or extinction in time should be completely irrelevant. It is true that if such a state reached absolute perfection, it would not matter if it were extinguished immediately afterwards. But why is this? Only because a perfect state is an eternal one, and the eternal does not require duration in time for its perfections to be displayed in; but then the eternal is the timeless, and therefore its end in time is not only unimportant but impossible. . . . If we deny that a perfect state is eternal, we have no reason to suppose that a perfect state is indifferent to its duration. But if the perfect is the eternal, it

[1] Cf. T. H. Green, *Prolegomena to Ethics*, Oxford, 1883, § 184 ff.; J. M. E. McTaggart, *Studies in Hegelian Cosmology*, Cambridge, 1901, § 12 ff.

seems quite clear that no state which is imperfect enough to cease in time can be perfect enough to entirely disregard its cessation.'[1]

**3. Objections to belief in immortality.**—The main contentions of those who at the present time reject all belief in personal immortality appear to resolve themselves into three propositions: (*a*) there is 'no evidence' of the power of human personality to survive bodily death; (*b*) more definitely, such survival can be shown to be impossible on scientific grounds; and (*c*) if it were possible, it would have no ethical value.

(*a*) In dealing with this proposition, we must ask: (1) What kind of evidence is in fact demanded? and (2) What kind of evidence would it be reasonable to expect in the subject under consideration?

If by 'evidence' is meant 'conclusive evidence,' it must be pointed out that of conclusive evidence for anything mankind possesses comparatively very little. What we usually have is a convergence of reasons more or less fundamental in character, which, taken together, may in some cases be overwhelming, but which are not strictly conclusive. Scientific evidence is essentially of the same character as that which in law is termed 'circumstantial evidence,' and has the same elements of strength and weakness.[2]

The kind of evidence available in the various branches of physical science, where experiment is applicable, does afford a high degree of reliability in the results, because these rest on definitely measurable facts of sense-perception, constantly and uniformly recurring in our experience. The 'exactness' of physical science consists in measurement. If, then, definite facts of sense-perception are the only kind of evidence admissible, it is true that there is 'no evidence' for the survival of personality. This criterion of what is credible would, however, rule out most of the evidence on which, in this and countless other matters of serious import, we as rational beings are wont to rely, since we can find no principle of logic, or mathematics, or ethics, and no psychological fact in the way of thought, feeling, or will, whose reality and validity can be warranted by sense-perception alone. This may be said to be one of the assured results of modern philosophy since the publication of Hume's *Treatise of Human Nature* (1739).

What, then, are the actual logical conditions of the argument? The truth of personal survival may be held, not as we hold the results of particular observations and experiments, but as a reasonable faith, based on the essential reasonableness of the world. The primary facts, which are appealed to, are not definitely measurable facts, and their adequate interpretation is not immediately obvious; but they form a constant and uniform experience. It has been well said that 'within the whole range of the wide world's literature we find no more constant theme than this disparity between man's possibilities and aspirations on the one hand, and the narrow scope afforded them in the brief space of the present life on the other.'[3] These possibilities and aspirations are the distinctive features of human life, which is thus planned on a greater scale than earthly life can ever satisfy; hence, if existence has a meaning, human life extends beyond earthly life. This we may call the 'teleological argument' for survival. This is the only avenue of *direct proof*; and we must repeat that what it establishes is not conclusive certainty but reasonable faith. From this point of view, the special work of philosophy in the matter is to show the connexion of this faith with the distinctive features of human personality, to demonstrate its value, and to purify it from all comparatively unworthy motives.

In addition to these considerations, there are lines of *indirect proof* converging to a conclusion which may be held with considerable confidence: namely, that there are no sound reasons for denying the power of human personality to survive bodily death. The purpose of these lines of thought is to show that the apparent indications of the annihilation of personality at death, which are supposed to be warranted by some of the facts of ordinary experience, or by some of the conclusions of 19th century science, are only apparent and not real, and break down one by one upon examination. Hence the original conclusion, established as a reasonable faith, remains in possession of the field.

The 'indirect proofs' are, as we have already implied, occupied with objections, difficulties, and denials which have actually been alleged against belief in survival. In effect, they amount to a demonstration of the impossibility of a materialistic interpretation of the world.

Those constructive philosophical systems which admit personal immortality have usually done so by combining with metaphysical spiritualism a teleological view of personality. That is to say, they defend an interpretation of existence throughout in terms of mind, implying that the world consists fundamentally of spiritual beings, sharing the Life of the Absolute Spirit, acting and reacting on one another, and carrying in their nature the power of survival; so that what we call the physical world is the result of the interaction of 'subjects,' or beings ultimately spiritual in nature. This involves the teleological view that the fulfilment of the potentialities of finite personality is part of the purpose of the universe and involves life beyond death.

The most celebrated and impressive system of this type is that of Leibniz (*q.v.*), presented in popular form in his *Monadologie* (1714), and involving the fundamental view of the soul as an independent 'monad' capable of infinite development, to which death imports no more than a transition to a new stage of growth. The more definitely pluralistic philosophy of Herbart, for whom the individual is alone the real, naturally carried with it a doctrine of the immortality of the individual soul; but an element of difficulty arises because, according to Herbartian principles, the consciousness of the soul springs only from its union with the elements which form the body; hence it is not easy to find a place in the system for the continuance of the same personal self-consciousness beyond death. The teleological argument for survival was revived and restated by K. C. F. Krause (*System der Philos.*, Göttingen, 1828; cf. Pfleiderer, *Phil. of Rel.*, Eng. tr., London, 1887, iv. 48 ff.). Dealing with the assertion that interest in the future life promotes forgetfulness of the claims and value of the present life—that our earthly life as such has its distinctive value and justifiable satisfactions, and is not to be degraded into a mere means for a life to come—Krause observes that, just as each period of our earthly life (*e.g.* childhood, adolescence, early manhood, mature manhood) has its own peculiar significance and worth, and is never merely a means to the succeeding period, so this earthly life as a whole, when compared with the life beyond death, has its own peculiar significance and worth. The fact that it is not the whole, but only a fragment, is no reason for treating it as nothing but a means; and the law of development holds of every individual life now as it will do in the future.

Among the purely metaphysical, as distinguished from the ethical and teleological, arguments for the immortality of the soul, there is one of special historic interest, which was elaborately worked out by Moses Mendelssohn in his *Phædon* (1767). He deduced the immortality of the soul from the abstract metaphysical idea of a simple substance, which idea he regarded as expressing the essence of the soul. A simple substance, from its nature, cannot cease to exist; hence the immortality of the soul follows. If so, we must add, it also follows that the soul can never have been created; it existed from the infinite past and must exist through the infinite future. Even if the validity of this use of the conception of substance be granted, it does not logically involve personal immortality, since the imperishable substance which constitutes the nature of the soul must have borne, in its past lives, qualities totally different from those which form the personality in which it now expresses itself, and it may do so again in its future lives. But in any case such a use of the conception of substance is not now admitted to be valid. It was attacked by Kant, in his *Critique of Pure Reason* (1781 and 1787), as a serious logical paralogism (see J. Caird, *Critical Philosophy of Immanuel Kant*, Glasgow, 1889, vol. ii. p. 290 ff.). Kant pointed out that the unity of the soul is not that of a simple substance, but the unity of self-consciousness, in which the many different mental activities are held together in so far as they are able to be referred to the common centre, self, as 'mine.' Kant's own view, in the *Critique of Practical Reason* (1788), made immortality a postulate of the practical reason. Reason prescribes absolute obedience to the Moral Law as the *highest* good: this is virtue. Reason also prescribes, as the *complete* good, the union of

[1] *Op. cit.* p. 44.
[2] Cf. Mellone, *Introductory Text-Book of Logic*[5], London, 1909, ch. viii. §§ 3, 4.
[3] James Ward, *Realm of Ends*, Cambridge, 1911, p. 396.

happiness with virtue. The highest virtue is unrealizable in any finite period owing to the persistent opposition of man's animal, impulsive, and passional nature to the demands of the moral imperative. Further, the complete good (the union of virtue and happiness) is, as a matter of fact, unrealized in this life. Hence Kant formulates immortality (an endless duration of personal life) as a postulate which must be granted if the supreme ends of practical reason are to be possible.

The defect in Kant's argument consists in the implicit dualism of duty and inclination or desire. Duty can never completely overcome and never be completely reconciled with natural desire. But nothing less than this victory is the purpose and meaning of duty; hence an endless life is demanded for duty to do what can never be completely done (see Caird, *op. cit.* ii. 303). Apart from this ethical dualism, the inner meaning of Kant's argument is akin to what we have called the teleological proof. It is noteworthy that Mendelssohn, in addition to developing the argument referred to above (from the conception of substance), accurately conceived and stated the teleological argument from man's natural striving after ever greater perfection—a striving which Mendelssohn held to have been implanted in man by his Creator as his destiny. This destiny even death cannot hinder him from fulfilling; and, if this striving is to go on, the soul's essential properties of thought and will must continue.

It is of much interest to notice that some philosophical thinkers of the first rank have been prepared to defend a doctrine of the type described as Conditional Immortality: those shall be immortal who are worthy of it. Spinoza appears to have held such a view in his early treatise *de Deo*, etc. In like manner, J. G. Fichte at least held as a possible view that not every individual is destined to share in the life beyond death, but only those who in this life have developed out of themselves a character of abiding and universal worth. Similar views were held by Goethe, I. H. Fichte, C. H. Weisse, and Lotze. The spirit of the doctrine is well expressed in the following quotation from Lotze: 'Every created thing will continue, if and so long as its continuance belongs to the meaning of the world; everything will pass away which had its authorised place only in a transitory phase of the world's course. That this principle admits of no further application in human hands hardly needs to be mentioned. We certainly do not know the merits which may give to one existence a claim to eternity, nor the defects which deny it to others.'[1] (On this subject, see art. CONDITIONAL IMMORTALITY.)

(*b*) Are there any valid scientific reasons for denying that survival of bodily death is possible? We are not concerned with speculative philosophical systems which involve this denial, such as those of Spinoza or Schopenhauer. A theory of the universe may be by no means 'materialistic,' and yet may completely exclude belief in a future life. The examination of such theories is manifestly beyond the scope of this article. We are now concerned with the appeal which is made to 'modern science,' and the attempt to cover the denial of immortality with the prestige which science enjoys. Only on one condition can this attempt succeed, namely, that the view of the world known as Materialism is shown to be a valid inference from the assured results of science. We are concerned with Materialism, not as a general tendency partly ethical in character, and not merely as a mental inclination to affirm certain things and deny others; we are concerned with it as a definite conception. In this sense it rests directly on the assumption that the *mechanical* aspect of existence is the fundamental aspect, all else being derivative. Two primary principles are involved in this assumption. (1) Until recently it was believed that the material world was built up out of some seventy elementary substances which are themselves changeless in their properties and indestructible; these elements, separately and by 'combining' with one another, make up the various substances which we know. The discovery and study of 'radio-activity' have led to the modification of these conceptions in form rather than in principle. The ultimate elements of matter are differently defined—as 'units of negative electricity,'—but still, so far as experience and induction can penetrate, they are found to be indestructible: hence the 'indestructibility of matter' is assumed as an axiom of universal validity. (2) Along with this principle is likewise assumed the so-called 'Conservation of Energy.' This principle is usually stated in a semi-metaphysical form: 'the quantity of energy available in the universe is constant, and can neither be increased nor diminished.' In their actual use of the principle, scientists are not concerned with 'the universe,' but with the verifiable fact that energy passes from one form to another, passes, *e.g.*, from electricity to heat, and from chemical attraction to electricity, but in all its changes undergoes neither increase nor diminution. The direction in which these conceptions point was concisely indicated by Helmholtz:

'If, then, all elementary substances are unchangeable in respect to their properties, and only changeable as regards their combination and states of aggregation—that is, in respect to their distribution in space—it follows that all changes in the world are changes in the local distribution of elementary matter, and are ultimately brought about through Motion.'[1]

This is the fundamental assumption of modern physics; the substance of the world—however that substance may be defined—has, as its most fundamental and essential attribute, motion; and motion is always a change determined from behind, *i.e.* by some other mode of motion preceding it in time. This is the essence of what we may call the 'Mechanical Theory.' This theory has been applied to the human body and brain with remarkable results; it is a theory which has been found to work. The laws which regulate the constant interchange of material in the brain-cells—so far as physiology is able to investigate them—are found to be not different in kind from the laws derived from a study of the less complex forms of matter. The difference is one of complexity. It has been computed that there are in the 'grey matter' of the brain (*i.e.* that portion of it which is specially the 'seat of mind') about 3,000,000,000 cells; and every one of these cells is 'an active organ of most complicated internal arrangements, so far independent in action, and each has attached to it as part of it "dendrites" and means of connexion with other cells and with the organs of the body.'[2] Yet, notwithstanding this unimaginable complexity, the human brain becomes merely one small aggregate in the vast material universe, and as such is swept into the system of matter and motion to which physics has reduced the world.

Now the question is not one of the right of physics and physiology, as special sciences, to regard the facts in this way and exclusively in this way. It is clear that only in the light of the hypothesis that the ordinary physical laws do hold in the brain can physiology hope to make any progress in the investigation of that organ. The mechanical assumption 'works'; and this means that life, mental and physical, actually has a mechanical aspect. And, when a special science limits itself to the exclusive study of a real and important feature of things, then for the purposes of that special science this feature of things is fundamental. We cannot, however, infer that it is the fundamental feature also *in rerum natura* and from the point of view of ultimate truth. We cannot infer that all natural law is mechanical law. We cannot infer that the series of physical changes which take place in the brain (the building up and breaking down of the brain-cells, which are the concomitants of mental activity) is in absolute conformity to mechanical law. In a word, the laws of motion do not hold good absolutely.[3]

Materialism rests entirely on the assumption which is here rejected—namely, that the mechanical theory is capable of providing a complete explanation of the facts because it is a complete and

[3] For a further development of the foregoing points see Mellone and Drummond, *op. cit.* ch. v.

accurate copy of the fundamental nature of things. This assumption involves a pushing of scientific hypotheses into regions where they have never been verified; and it leads to absurdities so intolerable that we have a *prima facie* right to deny that such verification will ever be forthcoming. The absurdity of the mechanical theory is seen when we ask: What is the place of consciousness in such a universe? The distinctive feature of mechanism is determination *a tergo*, by previous mechanical movement. The distinctive feature of consciousness is determination *a fronte*: *i.e.* human conscious activity is essentially purposive activity. It involves a specific process in the way of forecasting of ends. Now, in a purely mechanical universe consciousness is useless. Any momentary brain condition is the inevitable result of the condition immediately preceding, and both are only a part of the continuous series of mechanical movements which constitutes the universe. Hence the actions and words of every individual of the human race would have been exactly what they have been in the absence of mind. Had mind been wanting, the same empires would have risen and fallen, the same battles would have been fought and won, the same literature and art would have been produced, the same indications of friendship and affection given. Thus we have a universe devoid of purpose or rational meaning, continually evolving more and more complex forms of mechanism, and at numerous points producing a kind of existence (consciousness) diametrically opposed in its distinctive properties to those of mechanism—making no difference to the course of events—yet continually creating illusions as to its own place and importance in the course of events.

Purposive rational action is not the only feature of human experience which is inexplicable if the Mechanical Theory is true. The same may be said of the unity of consciousness. Every retrospect of our past mental life arouses the idea of the ego as the combining centre of its simultaneous variety and its temporal succession; these are thus unified by their relation to a being which is in nature one.[1] The unity of conscious life, centred in one single being, is utterly without parallel in the material series; 3,000,000,000 cells, each highly complex and variable, certainly provide no such central unity. Taking into account their molecular constitution and activities, it may be maintained that they do not even form a physical basis conceivable as the correlate of such a unity.

Further illustrations might be given of the intellectual impossibilities involved in Materialism, but it is enough to point out that careful scientific thinkers are aware of these considerations. The futility of attempting to reduce mental activities to mechanical processes is admitted. 'No effort enables us to assimilate them. That a *unit of feeling* has nothing in common with a *unit of motion* becomes more than ever manifest when we bring the two into juxtaposition.'[2]

In order to evade some of the more obvious of these difficulties, the speculation has been put forward that to every particle of matter in the universe there is attached an element of feeling or sentience. Clifford, who vigorously defended this doctrine, called these minute particles of sentience 'mind-stuff'; and the use he made of the doctrine is shown in the following statement: 'When matter takes the complex form of a living human brain, the corresponding mind-stuff takes the form of a human consciousness, having intelligence and volition.'[3] This quality of sentience attributed to material particles is, of course, a mere speculation for which there is not a shadow of evidence. Hence it throws a somewhat sinister light on the attitude of some materialistic writers, when we find this hypothesis stated dogmatically as an assured 'scientific' result, as is done by Haeckel in his well-known book, *The Riddle of the Universe* (London, 1900).[4]

Haeckel calls his system 'Monism' and repudiates the name 'Materialism,' on the ground that the system affirms the reality of 'force' as well as of 'matter' and assumes the elementary particles to be sentient. The arbitrary hypothesis of mind-stuff avails little in relief of the difficulties of Materialism. The material particles are conceived to be combined in the brain according to mechanical laws: how are the corresponding particles of sentience combined? In thought, especially in the unity of consciousness involved in judgment and self-knowledge, we have a concrete indivisible activity, which, accordingly, must pertain, not to an assemblage of particles of sentience devoid of intelligence and volition, but to a single central agent or permanent principle of intelligence and volition. Nor are the difficulties of Materialism affected by any distinction between 'matter' and 'force.' In fact, such distinctions only conceal the real point at issue—the place of Mechanism in the universe. The Mechanical Theory means that the substance of the world (whether that substance is defined as 'matter,' 'force,' or 'mind-stuff') has, as its most fundamental attribute, motion determined *a tergo*. If it manifests itself not only in mechanism but also in other modes of activity, this means that there are changes in the universe where mechanical laws do not hold; and the fundamental assumption of Materialism breaks down.

In an Essay to which we have already referred (*CR* xviii. [1871] 464) Huxley said: 'There is every reason to believe that consciousness is *a function of nervous matter*, when that nervous matter has attained a certain degree of organization, just as we know the other "actions to which the nervous system ministers," such as reflex action and the like, to be.' We must ask: What is meant by a 'function of matter'? The term is ambiguous in the extreme. It might be made to cover what William James has called 'transmissive function,' in connexion with the hypothesis that brain and nerve are the instruments of transmission by which the conscious mind manifests itself in the spatial and temporal world. The mind is dependent on the instrument, but the instrument does not in any sense create or produce the mind.[1]

Those who use the language of 'function' do, however, by no means desire to turn the conception in this direction. If we keep to assured scientific results, what can the word 'function' mean when used of the mind's relation to the brain? We may answer in the words of W. James: 'If we are talking of science positively understood, function can mean nothing more than bare concomitant variation. When the brain activities change in one way, consciousness changes in another. . . . In strict science, we can only write down the bare fact of concomitance.'[2] This fact has suggested the famous hypothesis of 'psycho-physical parallelism,' that every change in consciousness corresponds to a change in the activity of the brain—a hypothesis which is well grounded as regards the more elementary facts of sensation and ideation, and is assumed to hold throughout. This principle, rightly used, should exclude materialistic and all other assumptions as to the real connexion between the mental and the physical series, for about this connexion it says nothing. It is adopted by careful writers for that reason, as a hypothesis regulating the study of mental in relation to physical facts. But many of the physiological school have given it a materialistic turn by speaking as if the mental state were entirely 'dependent' on the bodily, and assuming that the mental state is 'explained' when the corresponding bodily state is assigned. Hence the idea has arisen that the 'new' psychology has proved everything characteristic of human personality to be due to the activity of the brain and nervous system, while the truth is that, if such results appear in the end to be proved, it is only because in the beginning they were taken for granted.[3]

In addition to the works already referred to, we may add the following references to literature dealing with Materialism: F. A. Lange, *History of Materialism*, Eng. tr., London, 1892; J. Martineau, 'Modern Materialism,' in *Essays, Reviews, and Addresses*, London, 1890–91, iv.; James Ward, *Naturalism and Agnosticism*; G. T. Ladd, *Outlines of Physiological Psychology*, London, 1896, pt. iii. ch. iii. §§ 15–24, ch. iv. §§ 11–25; S. H. Mellone, *The Immortal Hope*, chs. iv. and v.; Oswald Külpe, *The Philosophy of the Present in Germany*, Eng. tr., London, 1913, chs. iii. and iv.; T. M. Herbert, *The Realistic Assumptions of Modern Science Examined*, do. 1886, §§ 7–19; M. Guthrie, *Spencer's Unification of Knowledge*, do. 1882, ch. iv. § 3; artt. BODY AND MIND, and BRAIN AND MIND, in this work. On Haeckel the best is Erich Adickes, *Kant contra Haeckel*[2], Berlin, 1906 (not yet translated into English).

On the whole, modern physiology has nothing valid, positive or negative, to contribute to the solution of our problem. Physiology has effectually disposed of 'the whole classic platonising conception' of soul and body as two separate things, of which the body is necessary to the soul

only in this world of sense. We find it impossible to say where body ends and soul begins; but physiology affords us no means of making clear the distinction between them. And, apart from mere assumptions, we are told nothing as to their connexion which is not obvious from common experience. We do not need the physiologist to tell us that there is a good deal of the body in the affections and emotions of the soul, that in deep thought the brain is taxed, that anxiety or joy affects the heart, that other instincts affect other organs. There is nothing in all this to prove the identity of the soul with the body, since all the facts are reconcilable with the supposition mentioned above, that the dependence of the soul on the body is the dependence of an agent on the instrument which transmits and expresses its activities. All experience points to the view which may be thus stated: the soul is distinct from the body and has a being in and for itself as the subject of its various activities; the functions of the soul are in many ways dependent on those of the body through which they act, but not dependent in such a way that the soul necessarily perishes with the death of the body; we can conceive the distinction between the two only by saying that the soul is more essential to the personality and the body less so. Our whole discussion in the preceding paragraphs tends to show that there is no scientific ground for questioning any of these propositions.

(c) Our third proposition raises the question of the ethical value of the belief in a future life. It has been urged that the race would rise to a higher point of view if the hope of immortality were dispensed with.

Most of those who hold that the immortal hope is grounded on truth and reason are prepared to lay down a primary and fundamental principle, namely, that the superiority of truth, beauty, and goodness to their opposites is not conditional on the permanence of the individual life. If some one doubted their superiority, we could not cure him of his moral scepticism by convincing him that his personality was to last for centuries or millenniums. To ask, as Tennyson[1] asks, what it is all worth, if death is the end, is to put the emphasis in the wrong place. Immortality is not the whole of the religious view of the world, but a part of it—a consequence of the fundamental view that truth, goodness, and love are supernal realities, whose permanent worth does not depend on the continued existence of any man or million of men. 'Human ministers of justice fail, but justice never.' Hence, far from saying that a noble earthly life is not worth living without immortality, we say the opposite: immortality is worth having, because a noble earthly life has an intrinsic worth of its own. It follows that the only true preparation for another life is to make this life noble; and the profound truth of Spinoza's saying appears—'Homo liber de nulla re minus quam de morte cogitat.'

It is affirmed that a true substitute for personal immortality may be found in the fact that, if individuals perish by the way, their work survives even after they are forgotten. This is true so far as it goes. How far it goes will be made clear to any one who tries to answer Huxley's forcible question: 'Throw a stone into the sea, and there is a sense in which it is true that the wavelets which spread around it have an effect through all space and all time. Shall we say that the stone has a future life?'[2] The universal life of humanity, deepening, developing, and advancing through the ages to its consummation, has a deeper unity than any which science finds in dead matter; but it is none the less true that to take this fact—the fact of the results of our individual lives being incorporated into this wider life of humanity—as a substitute for the belief in personal immortality is to deceive ourselves.

The desire to live after death has been declared to be merely the barren utterance of human egoism. It is admitted by believers in immortality that the desire for another life as affording 'compensation' may be so held as to become a refined form of selfishness. But it is affirmed, on the other hand, that the real meaning of the wish for 'compensation' is nothing ignoble or selfish. Frequently we can trace in it a motive like that which animated Milton in his greatest work to 'assert Eternal Providence, and justify the ways of God to men,' to live to see the meaning of the apparently undeserved sufferings of life. Even when we regard it simply as the expression of a man's interest in his own destiny, it is the opposite of a merely personal or selfish wish. The man who desires the compensation of another life is not desiring anything which he can enjoy by himself, and from which others are excluded. His desire is to go on being and doing whatever of truth and good he has realized in this life, and more than this life has ever given him opportunity to realize.

The 'ethical' objections to belief in another life are not characteristic of any particular school of writers and thinkers, though they appear to be professed most widely among the followers of Auguste Comte. It cannot be said that the objections are of great weight; but the discussion of them serves to bring out further features of the true meaning of the immortal hope. We may refer to John Caird, *Fundamental Ideas of Christianity* (Gifford Lectures), Glasgow, 1899, esp. ii. 292 ff.; Edward Caird, *Lay Sermons*, do. 1907, esp. p. 276 ff.; H. Jones, *Immortality of the Soul in the Poems of Tennyson and Browning* (Essex Hall Lecture, London, 1905); Mellone, *The Immortal Hope*, ch. ii.

**4. The 'teleological argument' for immortality.**—We have already indicated the general nature of what may be called the 'teleological argument' for immortality (§ 3 (a)); and in the absence of any valid scientific or ethical reasons for questioning the possibility and value of a future life, it must be admitted that this argument holds the field. The root of the argument lies in a twofold motive which is specially prominent in forming the desire for another life: that personal affection may continue, and that personal goodness may grow;[1] *i.e.* that our faculties may be realized and exercised to their fullest capacity. In this life we do not find it possible to be and to do all that we feel and know ourselves to be capable of; every element in the life that now is seems rudimentary, incomplete, and preparatory.

This principle is applied to the distinctive qualities of human nature. Without entering into interrupting refinements concerning 'animal intelligence' or 'animal conscience,' it is evident that, while human life includes animal life, it rises above the latter; and that those higher things which distinguish man from the animals are his higher rational, spiritual, and moral qualities. It must be admitted that everything that is best in us bears witness in itself to a power of life and growth far beyond the utmost afforded by the opportunities of this world. It is, indeed, true that there are human beings in whom the higher emotional, intellectual, and moral qualities seem crushed out of existence, and there are others who seem to show no sign of possessing such qualities. Yet every one who has begun to use the higher gifts of his manhood has begun to find in them possibilities of growth to which no limit can be seen; and, the more truly he does all that this life calls for, the

more he feels that many such lives would not exhaust his powers.

We may make in the sphere of spiritual life an assumption similar to that which science makes in the sphere of physical life; *i.e.*, we may assume that these characteristically human qualities have their proper use and function, which is not realized until they are exercised in all their fullness. Some writers have treated this principle as a self-evident axiom. It is, rather, a consequence or corollary of a deeper principle, which is not a logical axiom but a progressively verified faith—that the world is at bottom a harmonious and completed whole, a rational whole, and not 'a confusion and dispersion'; so that nothing which exists and shares in the universal sustaining life of the whole can remain permanently incomplete and imperfect. Man, as a spiritual being, cannot completely realize his powers in that round of experience which he calls his life in this world. Their complete realization demands another life; and, if all things form, in God, a perfect system, that other life will be granted. Apart from this act of faith in the reasonableness of the world—an act of faith on which the trustworthiness of all reasoning depends, and which is progressively but never completely verified by acting on it or working it out—there would be no reason for supposing that human capacities fulfil any purpose by their growth, or that the incompleteness of life has any meaning.

These distinctively human qualities do not serve any merely physical purpose; they are not useful in the biological sense. As soon as we enter into the inner circle of human characteristics, the interpretation of these characteristics as instruments for working the bodily organism utterly fails us. In fact, to explain them, in their present form, by this means is never attempted; but it is supposed that they were manufactured out of primitive animal wants whose utility to the organism needs no demonstration. Against this whole conception it is contended that such a process of manufacture is inconceivable when seriously examined, and that it rests on a fundamental misconception of all that development can possibly mean.[1]

It appears then to be a reasonable assumption that human existence is constructed on a scale such that each man can put forth in their fullness the distinctive possibilities of his humanity; and this means that the life begun here is continued beyond death, where these endowments may find progressively more adequate scope and employment. At first sight the analogies of nature's ways do not lead us to regard this suggestion as a very hopeful one. What if the undeniable waste in the animal and vegetable world has its analogue in the human world? It appears to involve a waste of resource and a frustration of purpose and capacity; if in the case of man death ends his life, there would only be a similar blighting of promise, and perishing of capacities which have only just begun to unfold. Granting that the analogy is a true one—*i.e.* that there is mere waste in both cases—we must observe that in the one case it is a waste of physical capacity, in the other a waste of intellectual, moral, and spiritual capacity. Has this difference any significance? Have we a right to hold the growth of human love and reason as worth more—to expect that, though physical life may be wasted, spiritual life will not be wasted? A conviction of the absolute and indefeasible worth of these human ideals answers the question. These are the only things that give value to life; and, if we have a right to believe anything, we have the strongest moral and intellectual right to believe that they shall abid for ever. And, if the progress of humanity con tinues, while the actual human beings whose effort contribute to it perish by the wayside, then wha perishes is the best part of the whole achievemen —the effects of each man's work which remain i his living, growing self; since all ideals are realize in life only by personal activities which grow b their personal use.

It is at this point that we reach the absolutely fundamenta issue of all arguments really relevant to the problem of im mortality. In the last resort they all depend on the view take of the worth of human personality, as such, in the nature o things. The essential question could hardly be stated bette than by Pringle-Pattison: 'Man as rational, and, in virtue o self-conscious reason, the free shaper of his own destiny, fur nishes us, I contend, with our only indefeasible standard o value, and our clearest light as to the nature of the divine. He does what science, occupied only with the laws of events, and speculative metaphysics, when it surrenders itself to the exclusive guidance of the intellect, alike find unintelligible, and are fain to pronounce impossible—he *acts*. As Goethe puts it in a seeming paradox, *Man alone achieves the impossible*. But inexplicable, in a sense, as man's personal agency is—nay, the one perpetual miracle—it is nevertheless our surest datum and our only clue to the mystery of existence.'[1]

Whatever view may be taken of this question of the significance of personality, if the question is seriously dealt with, its decision will determine the decision of the problem of immortality and, in fact, of all the fundamental problems of metaphysics; and this question of personality may be used as a principle of division for the classification of philosophical systems and tendencies. In this reference, systems otherwise opposed (*e.g.* extreme Idealism and extreme Materialism) may be found on the same side of the line. This does not prove that the principle of division is not fundamental; on the contrary, it is so fundamental that it brings to light the inner affinities of philosophies which in form are diametrically opposed. Extreme idealism and extreme materialism are opposed much more in appearance than in reality. Thus, speculative materialism treats the soul as a merely derivative function of the brain and nervous system, whence it follows that the distinctive features of human personality are not what they appear to be, and personality has no real existence. Again, some forms of speculative idealism treat the soul as a derivative function (realized by means of the body) of a universal ideal principle; and, since the individuality of that soul rests exclusively on the body, the soul is in effect the derivative function of the body; and the distinctive features of human personality are an unreal appearance. From the point of view adopted in this article, it is contended that all such systems involve *ab initio* a fatal fallacy, resulting from the arbitrary rejection of a fundamental fact of experience, namely, our own immediate awareness of our individual reality and personal agency. If this primary fact is treated as an illusion, it is hard to see what else can claim superior validity. The classic example of a philosophy involving the assumption that finite personality is an unreal appearance is, of course, seen in the system of Spinoza. In quite recent years the same result has been reached by two eminent English thinkers: F. H. Bradley, *Appearance and Reality*[2], London, 1893, and B. Bosanquet, *The Principle of Individuality and Value* (Gifford Lectures), do. 1912.

We must insist that the primary and fundamental aspect of experience consists in its personal form. Indeed, when we investigate the full concrete meaning of fact as such—when we ask, What is any fully concrete fact in our experience?—we seem compelled to admit that, whatever more it may be, it is always an element in some one's personal life. Whenever you have a 'fact' in the full meaning of the word, you have 'a conscious field *plus* its object as felt or thought of *plus* an attitude towards the object *plus* the sense of a self to whom the attitude belongs.'[2]

**5. Conclusion.**—From different points of view we are thus led to the conclusion that 'matter,' as it figures in the literature of physical science, is an abstraction. Some of the prophets of science would admit this, and eagerly assure us that we do not, and perhaps never shall, know what matter really is. But they would at once repudiate the supposition that the qualities of 'matter' which we do not yet know should make any difference to those which we do know; *i.e.*, that they should be capable of any efficient action inside the region which is known. It is as if we were shown 'a sort of sunlit terrace' where mathematical physics

builds up its constructions of the world; and, where that terrace stops, science stops, and the absolute metaphysical ground of the world begins (for science the unknowable). Certain types of recent idealistic philosophy[1] have done much to encourage this conception, that the teeming universe in which we live is verily nothing else than a thing of two aspects—mechanism and causation on the one hand, and meaning on the other: the world of mechanical causation being the world in which science is at home, and the other world (not a world of other things, but another way of viewing the same things) being the eternal world of the absolutely real. 'If anything,' says W. James, 'is unlikely in a world like this, it is that the next adjacent thing to the mere surface-show of our experience should be the realm of eternal essences, of platonic ideas, of crystal battlements, of absolute significance.'[2] And we may add: if anything is likely, it is that the material world contains objects of many kinds and degrees of reality operative within it, that there are kinds of matter and sources of energy subtler and more complex than were dreamt of, that the universe has in it resources deeper than any of which we have the faintest inkling, deeper than our deepest thought can reach so long as our bodily senses are limited as they now are. These statements are in accord with the whole tendency of recent science, which is opening up to us a material universe with possibilities of embodied existence far larger than any that science has destroyed.[3]

When, however, we seek for detailed knowledge of the manner of the future state, we find ourselves standing before the ultimate mystery, of that which 'eye saw not, and ear heard not, and which entered not into the heart of man' (1 Co 2[9]). We have not any conception, much less any mental picture, of the conditions of that existence. Dogmatic insistence on any particular representation is nowhere more blameworthy than here. But it may be maintained that this absence of knowledge is entirely beneficial. It leaves the possibility open to every one to frame such a view of the future as will meet his practical needs; and at the same time it checks the inclination (which easily becomes dangerous) to revel in these representations of the future to such an extent as to forget the claims and value of the present.

There are, nevertheless, two distinct ideas, or ideals, of the future state which may claim consideration, since both are equally based on human nature, and both have found expression in many historic types of doctrine. This question, we may observe in passing, is independent of the problem of conceiving how wilful wrongdoers will be treated in the world to come. On the one hand, we find that the dominant thought governing all representations of the future is that of restful peace; on the other hand, that of active progress. The one ideal is of that service of the Highest which finds its perfect realization in Vision and Communion; the highest blessedness is pictured to the mind as that of the Divine Home, the Heavenly Fatherland. The other ideal is of rising in an unwearying progress from one stage to another through the countless spheres of labour in the vast economy of the Infinite Whole. It need not be said that these are not two mutually exclusive ideas, one only of which can be entertained. They correspond to different types of temperament and experience, both of which must enter into the fullness of a complete life. Neither the man of Vision nor the man of Energy can claim that his experience is the whole experience; and we may be assured that both point to aspects of life which are reconciled in the Perfect Whole. It may be said that both elements are reconciled in the conception which we have suggested as defining the future life—*the development and perfecting of every personality* in thought, feeling, and will. The ideal of knowledge is Truth, and of feeling, Love; the perfect Will is that which is guided by perfect Truth and Love. These are inseparably bound up one with another; we can love only what we know to be true, and we can truly know only where we lovingly seek and find communion. The realization of these capacities brings us to God, the goodness in all that is good, the truth in all that is true. The perfect life, the final end of Divine Wisdom and Love, is the knowledge and love of God, not only God by Himself, but God along with all that is of Him in the world—all that is divine in nature and man. This conception satisfies at once the ideals of Communion and of Action (see, further, art. STATE OF THE DEAD).

**IMPLICIT FAITH.** — Implicit in contrast to explicit faith means believing all that the Church believes, or may in future believe. According to William of Auxerre († 1215), in nearly the first reference to the subject, *Credere explicite est credere in hoc universali, quicquid credit ecclesia, credere esse verum.*[1] He believes implicitly who, although ignorant of the details, accepts whatever is taught by the Church or is contained in Holy Scripture. The conception was designed to meet the case of the *simplices* or *minores*, *i.e.* the less instructed laity and lower clergy. The higher clergy (*doctores et maiores*) must believe explicitly, or with knowledge of detail, as being bound to give a reason for their faith. For, as the doctrine handed down by traditional theology became more complex, it was necessary to recognize an ever larger number as incapable of rightly understanding or expressly accepting all the Church doctrines. Learned theologians soon perceived the dangers of this. Thomas Aquinas and Duns Scotus both insist that the laity must believe expressly those

articles of faith which are concerned with redemption through Christ and are proclaimed in Church festivals. This practically means the Apostles' Creed. Items in the Scripture narrative, however, for which they admitted implicit faith to be sufficient are such facts as that Abraham had two sons or that David was the son of Jesse. The lower limit of express belief appears to be fixed by He 11[6]. Alarm may have been felt at the statement of Innocent III. († 1216) that no holder of an unorthodox opinion, provided he regards it as a belief of the Church, is a heretic; Innocent further says that by holding it in this sense he actually acquires merit. The scope of *fides implicita* was later much widened by William of Occam, who used it to protect himself against the charge of heresy; and Biel took a position which really permits to the implicitly believing ignorant a total indifference towards all specific Christian truth.

The conception has been defended or explained in two ways. (1) The Church believes, and my faith is contained in hers, since I am a constituent part of her. (2) The Church is the supreme doctrinal authority; hence whatever the Church teaches, I accept. I give a blank cheque, undertaking to honour it to any sum.

It is obvious that the notion of *fides implicita* is derived from the intellectualistic thought of faith current in Scholasticism. If, as with Thomas Aquinas, faith is an act of the intellect impelled to assent by the will, and if, being the acceptance of doctrinal propositions, it is an act of obedience to authority rather than of personal conviction, provision must of course be made for all those who are unable to follow the subtle obscurities of detailed theology.

The mediæval discussion ended in opaque and inharmonious conclusions, very various opinions being held regarding the scope of explicit and implicit faith respectively. Roman Catholic writers subsequent to the Reformation tend to narrow the range of the latter. Modern Jesuit divines seldom touch the subject. Ritschl argues that the Vatican Council of 1870, in its determination of the relations between faith and reason, virtually gives a wide scope to implicit faith even in the case of the learned.

Luther was the first to protest against the general notion, and Calvin echoes his denunciations. He says that it is very absurd to decorate with the name of faith what is merely 'ignorance tempered by humility.'[1] Some later Protestant writers, who revive the conception, argue that implicit faith suffices for justification but not for salvation; others, that it avails for both.

A man's verdict on the admissibility of *fides implicita* will depend on his conception of faith and of the Church. If it be held that Christ offers a present salvation, in fellowship with God, and that faith means the heartfelt trust by which we take this boon, implicit faith must be rejected as unmeaning. It is indeed a strange suggestion, in that case, that things are made easier for any one by waiving the necessity for a clear and conscious apprehension of the mercy of God in Christ. Nothing but explicit faith can avail, since the trust of others is not *our* trust. In Protestantism this can be denied only by those who assign a substantial value to what is called 'unconscious Christianity.' The fact which has been wrongly interpreted under the rubric of *fides implicita* is this, that a saving experience of Christ may be accompanied by very different degrees of knowledge. But, wherever faith is regarded as the obedient acceptance of dogmatic statements, not trustful adherence to a Person, the notion of implicit faith will appear unfailingly, and piety will so far be gauged by theological attainment.

## IMPOSITION OF HANDS.—See HAND.

## IMPRISONMENT.—See PRISONS.

**IMPUTATION.**—Imputation is a term which belongs in the first place to law, and in the second place to Christian theology, where that has been expressed in legal terms. The meaning is thus defined by Hodge, *Syst. Theol.* ii. 194: 'In the juridical and theological sense of the word, *to impute* is to attribute anything to a person or persons, upon adequate grounds, as the judicial or meritorious reason of reward or punishment.'

The theological use of the term belongs (apart from Biblical references) essentially to the Western Church, and may be distinguished as threefold. (1) There is a general usage, in which it has reference to God's judgment of individual persons on the basis of their own merits or demerits. He is said to impute to them fault or blame (*culpa*) or merit (*meritum*). In so far, however, as merits are transferable, the merits of others also can be imputed to a non-meritorious individual (see MERIT). (2) In particular, however, the term is used of the judgment passed by God upon the human race as guilty in view of the sin of Adam. This usage prevails in orthodox theology, Roman Catholic and Protestant alike, from Augustine onward, the view of Pelagius, that Adam's sin entailed no guilt upon his posterity, having been stamped as heretical. (3) Peculiar to the Protestant orthodoxy is the third usage, which speaks of the imputation of Christ's righteousness to believers. The last two usages demand further consideration.

**I. The imputation of Adam's sin to his posterity.**—This forms one aspect of Augustine's doctrine of original sin, for which see R. Seeberg, *Lehrbuch der Dogmengesch.* ii.[3], Leipzig, 1910, p. 450:

'Augustine conceives the matter thus. God visited Adam's guilt with punishment. In this state of punishment Adam begat children. On the one hand, these were now involved ideally in the guilt and punishment of Adam. On the other hand, they participated thereby in the concrete condition of Adam, *i.e.* they received from him a *languor* of the enfeebled nature, or evil concupiscence, ignorance, and mortality. Materially, however, the two things are identical, for just in this *languor* consists the punishment for Adam's sin. In that, therefore, all are placed, through procreation and birth, in the penal state of Adam, the punishment visited upon Adam's guilt realizes itself in them, or his guilt is punished in them, and is therefore also their guilt.'

This doctrine of Augustine determined the general view of Western Catholicism. Thomas Aquinas virtually repeats it, but defines further especially the point that, since original sin involves guilt before God, and guilt necessarily implies a voluntary act, therefore it is not enough merely to teach that from Adam his posterity derived a corrupt nature, but they must be regarded as involved in the guilt of his voluntary act of transgression. Cf. *Summa Theol.* II. i. qu. 81, art. 1:

'All men, who are born of Adam, can be considered as one man, so far as they agree in the nature which they receive from their first parent; just as in civil matters all men who are of one community are reputed as one body, and the whole community as one man.' Thus all men are to be regarded as members of one body by reason of their common descent from Adam; and just as murder is not imputed to a man's hand except as part of his body, so original sin is not guilt by reason of the will of each individual man, but by reason of the will of Adam.

This is a very clear doctrine of imputation. Aquinas accompanies it with an equally clear statement, after Augustine, that materially original sin is *languor naturæ* (II. i. qu. 82, art. 1). Aquinas, however, also defines original sin (as

Anselm had done before him) as the lack of original righteousness; and this definition opened the way to a more Pelagian apprehension of its nature, which, appearing first in Duns Scotus, reaches its full development in the Roman Catholic theologians of the time of the Reformation, Albertus Pighius and Ambrosius Catharinus. Duns admitted a corruption of human nature in so far as to acknowledge a proneness to inordinate desire. This corruption, however, means for him much less than the *languor naturæ* meant to Augustine or Aquinas. Cf. F. Loofs, *Dogmengesch.*[4], Halle, 1906, p. 596:

'The will remains free in spite of the *pronitas*. . . . Sin, however, can exist only in the will. . . . Original sin is, therefore, for Duns only original guilt or, more properly, a state of condemnation, which God inflicts upon all the posterity of Adam, since they as his posterity ought to possess but do not possess the *justitia originalis data a deo ipsi Adae pro omnibus filiis*.'

Following along this line opened by Duns, Pighius and Catharinus taught that original sin was nothing but the imputed guilt of Adam (see Bellarmine, 'de Amissione gratiae et statu peccati,' *Disputationes*, vol. iii., Ingolstadt, 1693, lib. v. cap. xvi.). It was in opposition to this tendency of Roman Catholic theology that the early Protestant doctrine of original sin was framed. The consequence is that it is chiefly the material side of the doctrine, or the corruption of human nature, that is emphasized in the early Protestant statements upon the subject (cf. Hodge, *Syst. Theol.* ii. 194, n. 1). The result as regards the Lutheran theology is thus expressed by H. F. F. Schmid (*Die Dogmatik der evangelisch-lutherischen Kirche*[6], Frankfort and Erlangen, 1863, p. 198):

'The doctrine of the *imputatio culpae et poenae primorum parentum* is first developed by the later doctors, say from Calov onwards, though a suggestion of it is to be found in the sentence of the Form. Conc. (sol. decl. 19), *quod hoc haereditarium malum sit culpa et reatus, ut omnes propter inobedientiam Adae et Hevae in odio apud Deum et natura filii irae simus*.'

The doctrine is very clearly stated by David Hollaz, who says:

'The first sin of Adam in so far as he is regarded as the common parent, head, stem, and representative of the whole human race, is imputed to all his posterity truly and by the just judgment of God, as guilt and as ground of punishment' (see Schmid, p. 196).

It was in the Reformed Church that the doctrine of imputation was most fully developed and discussed. It was here that the controversy arose as to whether the imputation of Adam's sin was immediate or mediate, *i.e.* whether men were punished directly for Adam's transgression, and the corruption that they derived from him was part of the punishment; or whether, inheriting as a matter of fact Adam's corruption, they are punished directly for this, and only indirectly for the sin which brought it into being. It is to be observed, moreover, that, in the very beginning of the history of the Reformed Church, Zwingli repudiated the doctrine of imputation altogether:

'Culpam originis non vere sed metonymice a primi parentis admisso culpam vocari' (A. Schweizer, *Die Glaubenslehre der evangelisch-reformirten Kirche*, Zürich, 1844–47, ii. 54).

As to the other great initiator of the Reformed theology, Calvin's doctrine of original sin certainly leans a good deal on the doctrine of mediate imputation. He asserts that,

'being perverted and corrupted in all parts of our nature, we are merely on account of such corruption deservedly condemned by God. . . . This is not liability for another's fault' (*Inst.* II. i. 8).

The general doctrine of the Reformed Church, however, is undoubtedly that of immediate imputation. B. Keckermann says:

'Imputatum (sc. peccatum) est nobis, quatenus in Adamo in radice et primo nostro principio potentia fuimus' (see Schweizer, p. 54).

To the same effect also J. H. Alsted and M. K. Wendelin (see Schweizer, p. 54). The doctrine of mediate imputation is especially connected with the name of Placæus (La Place) of Saumur, who presented his views in a disputation *de Statu hominis lapsi ante gratiam*, and afterwards more fully in a treatise *de Imputatione primi peccati Adami*. But the doctrine was condemned by the National Synod of Charenton in France (1644–45), by the Swiss Formula Consensus, and by the theologians of Holland. J. H. Heidegger, one of the theologians of the Swiss Consensus, says:

'The imputation of Adam's sin is immediate and antecedent, not mediate and consequent. . . . The imputation of sin is not by the mediation of inherent corruption, but the imputation of sin is the cause of inherent corruption' (Schweizer, p. 55).

**2. The imputation of Christ's righteousness.**—This is a form taken by the doctrine of justification by faith in the Protestant theology, though not in its earliest stage of development.

'The expression "justitia Christi imputatur" is seldom found in the older documents of the Reformation, and first comes more generally into acceptation through the controversy with Osiander' (R. A. Lipsius, *Dogmatik*[3], Brunswick, 1893, p. 676).

Osiander taught that the forgiveness of sins was the effect of the historical work of Christ, but that justification was more than mere forgiveness, and consisted in the imputation to the believer of the essential righteousness of the Divine Person, Jesus Christ. This imputation however, involves the infusion of this same righteousness in the believer, since God's imputation is necessarily according to truth (cf. Loofs, p. 870). This doctrine was rejected by the Lutheran Church as Catholicizing, and in opposition to it the Formula of Concord (sol. decl. iv. 16) maintains:

'The righteousness (of Christ) which is imputed before God to faith or to believers, is the obedience, passion, and resurrection of Christ, by which He satisfied the law for our sake and made atonement for our sins.'

There is, however, considerable difference in the later Lutheran doctrine as to the exact relation of the forgiveness of sins and the imputation of Christ's righteousness.

'The Formula of Concord sometimes sets both expressions side by side, sometimes it reduces the content of the justifying judgment to the single expression of the remission of sins' (Schmid, p. 356).

J. Brenz says that the imputation of Christ's righteousness is the reason of the forgiveness or non-imputation of sins (*ib.* p. 357). D. Hollaz says:

'The remission of sins and the imputation of the righteousness of Christ are acts undivided and intimately united, but still formally distinct, since the former is privative, the latter positive: the former follows immediately from the passive obedience, the latter from the active obedience of Christ' (*ib.*).

As regards the Reformed Church, we may take as typical statements those of F. Turretin (*Inst.*, Edinburgh, 1847, loc. xvi. 3. 9) and Jonathan Edwards ('Justification by Faith alone' [*Works*, London, 1817, vi. 257]). Turretin's statement is as follows:

'When we say that the righteousness of Christ is imputed to us unto justification, and that we through that imputed righteousness are just before God, and not through a righteousness which inheres in us; we mean nothing else than that the obedience of Christ, presented to God the Father in our name, is so granted to us by God, that it is to be regarded as really ours, and that it is the one and only righteousness on account of which, and through whose merit, we are absolved from the guilt of our sins and obtain a right to (eternal) life.'

Edwards says as follows:

'First, I would explain what we mean by the imputation of Christ's righteousness. Sometimes the expression is taken by our divines in a larger sense, for the imputation of all that Christ did and suffered for our redemption, whereby we are free from guilt, and stand righteous in the sight of God; and so implies the imputation both of Christ's satisfaction and obedience. But here I intend it in a stricter sense, for the imputation of that righteousness or moral goodness that consists in the obedience to Christ. And by that righteousness being imputed to us, is meant no other than this, that that righteousness of Christ is accepted for us, and admitted instead of that perfect inherent righteousness that ought to be in ourselves: Christ's perfect obedience shall be reckoned to our account, so that we shall have the benefit of it, as though we had performed it ourselves.'

It may finally be observed that in Protestant theology the imputation of Adam's sin and that

of Christ's righteousness are closely connected. The one is set over against the other, as balancing and countervailing it. B. de Moor, *Commentarius in Marckii Compendium*, Leyden, 1761–71, says:

'Imputatio justitiae Christi et culpae Adami pari passu ambulant, et vel utraque ruit, vel utraque agnosci debet' (see Hodge, ii. 207).

**3. The Scriptural basis of the doctrines of the imputation of Adam's sin and of Christ's righteousness.**—This is to be found principally in the Epistles of Paul. In the first place, Paul, following the Rabbinic theology, tends to view man's relation to God along juridical lines, though this is by no means his exclusive point of view, nor is his legalism thoroughgoing, even where it exists. In particular, as regards the imputation of Adam's sin and of Christ's righteousness the fundamental passage is Ro 5[12-21], where the effects of Adam's sin and of Christ's righteousness are contrasted: as sin flows from Adam, so righteousness flows from Christ. When this great passage is examined, however, it is found to lack altogether the sharp formulation of the later doctrine, and it cannot be said that the imputation either of Adam's sin or of Christ's righteousness is distinctly taught in it. All efforts to make Paul, here and elsewhere, an exact systematic theologian must fail; there is always about his statements a breadth and expansiveness in which much is left to the imagination, and the meaning is suggested rather than precisely defined. In the passage before us, while it is clear that Paul believed in the Divine imputation of sin and in the derivation of all human sin from Adam's transgression, it is by no means clear that he held, let us say, the doctrine of immediate imputation. In fact, v.[13] is inconsistent with this and with the doctrine of mediate imputation alike: 'until the law sin was in the world: but sin is not imputed when there is no law.' The famous ἐφ' ᾧ of v.[12] will not bear the sense put upon it by Origen and Augustine of 'in whom,' *i.e.* in Adam. 'In that case (i.) ἐπί would not be the right preposition; (ii.) ᾧ would be too far removed from its antecedent' (Sanday-Headlam, *Commentary on Romans*, Edinburgh, 1895, p. 133). Again, v.[18f.] are by no means theologically precise. It is clear in v.[18] that Paul traces back in general the condemnation of men to the trespass of Adam, but the intermediary links establishing the connexion are left vague. And so again with the connexion in the latter half of the verse between the ἓν δικαίωμα and the δικαίωσις ζωῆς. Besides, the exact meaning of δικαίωμα is uncertain, whether the righteous act or merit of Christ (K. C. J. Holsten, C. J. Vaughan, R. A. Lipsius, H. P. Liddon) or the justifying sentence (H. A. W. Meyer, E. H. Gifford, W. Sanday and A. C. Headlam). Finally, the exact sense in which we are to understand in v.[19] that the trespass of Adam and the obedience of Christ constituted the many sinners and righteous respectively is left vague. It is, no doubt, right to understand Paul to mean 'constituted' in the Divine judgment, *i.e.* imputed; but how the sin of Adam and the obedience of Christ bring about the imputation of sin or of righteousness is left unexplained.

If we turn to Ro 4[3] we find, instead of the doctrine of the imputation of Christ's righteousness, that of the imputation of faith for righteousness, which Paul derives from Gn 15[6], perhaps as a result of his Rabbinic training. It is at least interesting to observe that the imputation of one thing for another is known to the Rabbinic theology, *e.g.* vow for performance, willingness to suffer for martyrdom (see F. Weber, *Jüd. Theol.*, Leipzig, 1897, p. 282). The Mechilta actually says on Ex 14[31]: Abraham inherited this world and the world to come solely by the merit of faith, whereby he believed in the Lord, and He reckoned it to him for righteousness (see J. B. Lightfoot, *Galatians*, London, 1896, p. 162).

**4. Opposition to the doctrines of the imputation of Adam's sin and of Christ's righteousness.**—With the above statements in view, it is not surprising that, even apart from the moral difficulties of the doctrines, they should have been challenged on Scriptural grounds, even where the legal terminology of St. Paul has not altogether been abandoned. The Pelagians, and the Socinians after them, entirely repudiated the doctrine of the imputation of Adam's guilt. The Socinians and Arminians objected to the doctrine of the imputation of Christ's righteousness; the Arminians proposed instead to follow Paul in speaking of the imputation of faith for righteousness. On the last point the opinion of A. B. Bruce, *St. Paul's Conception of Christianity*, Edinburgh, 1894, p. 155 f., is noteworthy:

'The great doctors of the Lutheran and Reformed Confessions emptied faith of all moral contents, that no pretext might remain for ascribing to it justifying virtue, and assigned to it simply the humble service of claiming an interest in the foreign righteousness of Christ. They even went the length of setting aside the scriptural idea of the imputation of faith, and substituting for it the idea of the imputation of Christ's righteousness, keeping themselves right with St. Paul by the ingenious device of taking faith, in the texts where it is said to be imputed, *objectively*, so bringing out the meaning that not the act of believing, but the object believed in, the righteousness of Christ, is imputed. This manner of handling the *locus* of justification is very open to criticism. In the first place, it is unfortunate that the Protestant doctors, in their laudable zeal against neo-legalism, should have found it necessary to become un-Pauline in their terminology, banishing from their theological vocabulary the imputation of faith as not only inexact but even heretical, and employing exclusively a phrase which, however legitimate as an inference from Scripture texts, has no express scriptural warrant. This fact is an index that somehow they had got upon the wrong track, and had fallen into one-sidedness.'

Modern theology, as governed by the new emphasis on the Synoptic teaching of Jesus, and especially on His doctrine of the Fatherhood of God, tends away from legal analogies and modes of statement. The consequence is that the term 'imputation' has tended, except on account of its historical associations, to be banished from recent theology. So far as concerns, not the term, but the matter of the doctrines of the imputation of Adam's sin and Christ's righteousness, it is widely felt to be morally impossible to maintain that men in general are guilty because of Adam's sin, and also that, as above stated, Paul himself does not distinctly teach this. The usual line of modern teaching, therefore, follows the suggestion made by Paul in Ro 5[13], and, while recognizing the inheritance from the past of sinful propensities, admits guilt only where there is conscious and wilful transgression (so, *e.g.*, J. Kaftan, in his *Dogmatik*[4], Tübingen, 1901).

As regards the imputation of Christ's righteousness, the passage above quoted from Bruce is, on the whole, typical. Since Kant's *Religion innerhalb der Grenzen der blossen Vernunft*, the doctrine of justification by faith has been commonly stated in the form that God accepts our faith in Christ as the earnest of the Christlikeness which it is destined to produce, or sees in Christ the full fruition of what in the believer is present only in the germ. It is noteworthy, however, that Ritschl, with his glowing admiration for the principles of the Reformation, here substantially maintains the orthodox doctrine, though without the parallel doctrine of the imputation of Adam's guilt.

'On the other hand, when what we want is to see forgiveness become operative as the attribute of a community, this aspect of it is guaranteed by the community's Representative, whose inviolably maintained position towards the love of God, which is distinctive of Him, is imputed by God to those who are to be accounted His. Because Christ kept Himself in the love of God by His obedience even unto death, God's forgiving love is thereby secured beforehand to those who belong to Christ's

community. Their guilt is not taken into account in God's judgment, since they are admitted in the train of God's beloved Son to the position towards God which was assumed and maintained by Him. The verdict of justification or forgiveness is therefore not to be formulated in such a way that the community has its relationship to Christ imputed to it, but in such a way that the community which belongs to Christ has imputed to it His position towards the love of God, in which He maintained Himself by his obedience' (*Justification and Reconciliation*, Eng. tr., Edinburgh, 1900, p. 547).

This fine passage may be regarded as the classical modern restatement of the doctrine of the imputation of Christ's righteousness.

See, further, artt. SIN, JUSTIFICATION.

LITERATURE.—The principal literature has been indicated in the course of the article. It is to be observed that C. Hodge's *Systematic Theology*, London and Edinburgh, 1872–73, especially ii. 192 ff. and iii. 144 ff., is particularly valuable, both for the history of the doctrines of imputation and for an exact statement of their orthodox Protestant form.

ROBERT S. FRANKS.

**INCAS.**—See ANDEANS.

**INCANTATION.**—See CHARMS AND AMULETS, DIVINATION.

# INCARNATION.

**INCARNATION** (Introductory).—The term 'incarnation' is applied to the act of a divine or supernatural being in assuming the form of a man or animal, and continuing to live in that form upon the earth. Incarnation is thus distinguished, on the one hand, from 'transmigration,' in which the vagrant entity is not a deity, but a soul; and, on the other, alike from 'possession' (*q.v.*), in which a spirit or a deity takes up its abode in a human being, but only temporarily, and not for a whole lifetime, from 'emanation,' which implies a divine source, but not the actual presence of a deity, and from the capacity of deities, or of holy men and magicians, to assume on occasion whatever forms they please (as, *e.g.*, Verethraghna [*Yt.* xiv. 7 ff.] and Tishtrya [*ib.* viii. 16 ff.]; see art. METEMPSYCHOSIS).

Among primitive peoples there is really no such thing as incarnation in the strict sense of the term. The men and animals worshipped among such peoples are usually regarded and treated as actual deities, or at least divine, and not as the manifestations of certain gods or demons. Frequently, in cases where the men or animals worshipped have been supposed by investigators to be the embodiments of demons or other supernatural beings, a more searching inquiry has shown that in reality they ranked, and were worshipped, as living deities (J. G. Frazer, *Lectures on the Early Hist. of the Kingship*, London, 1905, pp. 132 ff., 279 f.). At a later stage, sacred beings of this type might be regarded as the incarnations of a god (*e.g.* Avalokiteśvara becomes incarnate in the Dalai Lama; see 'Tibetan' section of this art.). Among primitive races the closest approximations to the conception of incarnation are found in (1) the animals in which the primitive mind traces the peculiar and mysterious *force*[1] (see art. HOLINESS [Gen. and prim.], vol. vi. p. 735) of the dead—now regarded as divine and endowed with power—and which therefore become objects of worship, and (2) the aged and the medicine-men in the parts they play in the performance of the mysteries; here they assume the forms of the great personages of sacred tradition, and feel that they are one with these superhuman beings and deities (K. T. Preuss, *Die Nayarit-Expedition*, Leipzig, 1912, p. xcv ff.). It is true, of course, that this impersonation or embodiment was not permanent or complete. The sacrificed man-god of the Mexicans, 'our Lord God,' to impersonate whom a young and beautiful man was chosen from among ten picked captives, was regarded as the 'figurer' or representative of Tezcatlipoca (E. Seler, 'Die achtzehn Jahresfeste der Mexicaner,' in *Veröffentl. des königl. Museums für Völkerkunde zu Berlin*, vi. [1899] 194; see 'American' section). Even at a more advanced stage of religious development the craving for the immediate presence of deity gives rise, as a rule, to the practice of deifying men (as, *e.g.*, in the Athenian Hymn to Demetrius, Athenæus, vi. 253*c–e*, or in the cult of the emperors) rather than to the belief in incarnation.

Among Western peoples, again, the idea of incarnation in the proper sense seems to have originated in Egypt (see the 'Egyptian' section), and then, with Hellenism as its medium, to have reached its highest form in Christianity (see art. JESUS CHRIST) and heterodox Islām. A parallel development is the Indian doctrine of *avatāras* (see the 'Indian' section)—first mentioned in the *Bhagavadgītā*, iv. 7 f.—which in turn also exercised an influence upon the Muslim sectaries, *i.e.* in the Shī'ite doctrine of the *imām*.

The moderate Shī'ites do not teach incarnation in the strict sense; but certainly the Shī'ite doctrine that the right of succession belongs to the descendants of 'Alī, the Prophet's cousin, and of Fāṭima, his daughter, in virtue of blood-relationship and divine ordinance, and not, as the Sunnites hold, to the khalīfs installed by human election and appointment (I. Goldziher, *Vorlesungen über den Islam*, Heidelberg, 1910, p. 210), has some affinity with the idea of incarnation. The theory of the *imāms*, like Islām in general, rests upon various grounds. The divine sequence of these rulers is guaranteed not only by their legitimate descent from the Prophet's family and by their superhuman gifts, but also by their possession of a divine light-substance (cf. Shahrastānī, tr. T. Haarbrücker, Halle, 1850, i. 172, 206, 217 f.; it is a divine power [217], a part of deity [172, 200], and even the spirit of deity [170, 173]) which had streamed down from Adam in a succession of divine men, passed into the loins of the grandfather of Muḥammad and 'Alī, and was then portioned out to 'Abdallāh with his son, the Prophet, and the latter's daughter, Fāṭima, on the one side, and to Abū-Ṭālib with his son 'Alī, on the other; transmitted thereafter by the offspring of the marriage of 'Alī and Fāṭima, the martyrs of Kerbela, and by the successive *imāms* of the Prophet's lineage, it will culminate in the last, the 'hidden,' *imām*, who will appear in the final age.

The Sunnite tradition, too, had a place for the *nūr Muḥammad*, the 'light of Muḥammad,' which rested upon the forehead of Adam, and from which all the prophets have sprung. This light pervades all the ages, falling ever upon the bearers of the

[1] The approximation was much closer when this power came to be regarded as a soul, represented in the later civilizations of Greece and Rome as a migratory individual being.

divine tradition. It went through the forefathers of Muḥammad. But the Shī'ite sect invested 'Alī with one of the brightest aureoles of that light. Fourteen thousand years before the creation of the first man, the combined lights of Muḥammad and 'Alī shone before God, and then flowed 'through the pure and holy loins' (Goldziher, 'Neuplatonische und gnostische Elemente im Ḥadīth,' in *ZA* xii. [1909] 328 ff.). This light-substance, which attests the prerogative of each successive *imām*, and endows him with the supernatural gift, strikingly recalls the *khwarenah* of the Avesta (Pahlavi *khurrak*; in Firdausī, *farr*), and has perhaps some historical link with that Parsi conception (see Parsi' section). Goldziher (*ZA* xii. 327 ff.), it is true, rejects the hypothesis of any such relationship, though he emphasizes the close connexion between the light inherited throughout the ages and the pre-existence of the Prophet, and shows that traces of Jewish thought appear in this sphere of ideas. It is, at any rate, a significant fact that the idea of the inherited consecration, which is foreign to the orthodox doctrine regarding the Prophet, should have been specially developed in Persian Shī'itism.

It is true that Shahrastānī (Haarbrücker, i. 170, 172 f.) associates the transmission of the divine spirit or divine light to the *imām* with metempsychosis, which is unknown in the Avesta. The idea that every age must have its own *imām*—the love and trust accorded to him being regarded by the Shī'ites as a sixth pillar of the faith, and so added to the usual five—is undoubtedly influenced by the Neo-Platonic emanational theory of the cyclical manifestations of the cosmic reason (Goldziher, *ZA* xii. 339), and by the Indian doctrine that an *avatāra* of Viṣṇu is given to every successive age. The eschatological aspect of the last *imām*, who has been withdrawn from the earth, and now rules in secret, and who is destined to return and assume the final dominion, is a product of Jewish-Christian aspirations (Shahrastānī, i. 199, 216; Goldziher, *Vorlesungen*, p. 219). Jewish influence can also be traced elsewhere; thus the *sakīna*, which, in the sense of a divine and holy consecration, is sometimes ascribed to the *imāms*, is derived from the Jewish *sh'kīnāh*, *i.e.* the divine presence manifesting itself in visible symbols (Goldziher, *Abhandl. zur arab. Philol.* i., Leyden, 1896, p. 188). In like manner, the Jewish shekinah abode with Israel from the days of the Sinaitic legislation till the destruction of the Second Temple, and it rested upon Jacob and other men of God (F. Spiegel, *Erân. Altertumskunde*, Leipzig, 1871–78, ii. 50; cf. the *k'bhōdh Jahweh* in the OT).

The party of 'exaggeration' (*ghulāt*) were not content with the doctrine of the divine light, but taught an actual incarnation of deity, so that the title 'God' was applied at least to 'Alī (Shahrastānī, 217). Incarnation (*ḥulūl*), however, was condemned even by the ordinary Shī'ites (cf. R. A. Nicholson, *Trans. of the Third Intern. Congress for the Hist. of Religions*, Oxford, 1908, i. 295), and believers in incarnation (*ḥulūlīya*), like the 'exaggerators' (*ghalīya*), were compared by Shahrastānī (199 f.) to the Christians. In these circles 'Alī and his family, as embodiments of deity, were not infrequently exalted above Muḥammad himself, who, in relation to Allah, was clearly conscious of his human limitations, and the Semitic-Muslim conception of God was modified in the direction of Aryan thought (see art. SHĪ'A). In Persian Islām, God and man were regarded as more closely related. The identification of the Ṣūfī with deity, which has been fairly common since it began with the great Ṣūfī, Bāyazīd of Bisṭām,[1] in the 9th cent., must be distinguished from incarnation strictly so called. That Neo-Platonic and Indian ideas of union with the All-One played a ruling part in the rise of Ṣūfiism was already noted by al-Bīrūnī.[1] Such forms of pantheistic extravagance are common in all mystical theories of the kind, and in reality involve an expansion of the idea of incarnation that results in mere indefiniteness. An incarnation that embraces all religious persons has lost its specific meaning.

[1] Bāyazīd said: 'Of a truth I am God; there is no god beside me; give homage unto me! Glory be unto me! How great is my majesty!'

The conception of one solitary incarnation of deity is peculiar to Christianity. In India the development of the idea resulted in an exactly opposite view. The earliest incarnation of Viṣṇu would seem to have been Kṛṣṇa. Thereafter there is a constant increase in the number of embodiments—we find successively the figures ten, twelve, twenty-two, twenty-four, twenty-eight (A. Barth, *Religions of India*[3], London, 1891, p. 171)—until at length they are spoken of as innumerable, so that the great teachers of any religion whatever, as, *e.g.*, Buddha and Jesus, could be numbered among the *avatāras*. Eventually every *guru* ('teacher') claimed to be an *avatāra*. Even the theory of a single incarnation for each age leads here to the idea of an infinite number, as the several ages always recur. In certain schools of the Mahāyāna the doctrine of a Buddha in each 'non-void' cosmic period (see art. AGES OF THE WORLD [Bud.], vol. i. p. 189 f.) developed into the theory of a celestial prototype for each earthly Buddha, and subsequently into the idea of the one Buddha-god, of whom the various individual Buddhas are emanations. Schopenhauer (*Sämmtliche Werke*, Leipzig [Reclam][2], 1892, v. 413) and others are of opinion that the idea of a plurality of Buddhas is more rational than that of the one Christ.

The Shī'a and its sects adopted an intermediate position. There is among them no unanimity as to the number of *imāms*. On the ordinary enumeration, officially recognized by the Persian State religion, there are twelve, the last of whom, Muḥammad Abu-l-Qāsim (9th cent.), will return in the final age as the Mahdī. In the Middle Ages, the 'Sect of the Seven Imāms,' the Ismā'īlites, had a great vogue. They enumerated seven *Nāṭiq* ('speaking ones') or manifestations of God, viz. Adam, Noah, Abraham, Moses, Jesus, Muḥammad (with 'Alī as his *Asās*, 'deputy'), and Muḥammad Mahdī, the son of Ismā'īl, from whom the sect took its name (A. Christensen, *Muhamedanske Digtere og Tænkere*, Copenhagen, 1906, p. 77 ff.). As Islām, in conformity with the Bible as its literary source, teaches that human history has a consummation, the number of possible incarnations must in any case be limited.

LITERATURE.—This has been given in the course of the article.

## INCARNATION (American).

—The notion that the 'life' may be transferred from one body to another is wide-spread among the American aborigines. It is a conception fostered by that type of Animism which sees in Nature powers rather than things, or, at all events, no sensible thing without its active and concealed potency; and, again, it is a conception already mythically expressed in the frequent cosmogonies which derive the life of the Earth and of Earth's children from that of the demiurge whose transformed body the Earth is.

'The thought originally expressed by the ancient teachers of the Iroquoian and other barbaric peoples,' writes J. N. B. Hewitt (*21 RBEW* [1903], p. 138), 'was that the earth through the life, or life power, innate and immanent in its substance—the life personated by Tharonhiawakon—by feeding itself to them produces plants and fruits and vegetables which serve

as food for birds and animals, all which in their turn become food for men, a process whereby the life of the earth is transmuted into that of man and of all living things.'

'Tharonhiawakon' is the demiurgic titan, descended from the sky to become the fashioner and the soul of earth-life. The word means, says Hewitt, 'He grasps the sky (by memory)'—a designation which clearly places this being in the pan-mythic group of beings cast down from heaven to become sources of earth-life (cf., further, Hewitt, in *HAI* ii. [1910] 718 ff.). Other designations, such as 'Sprout' and 'Sapling,' indicate the reverse consideration of this being, *i.e.* as already fallen and as incarnate in the vegetable life of Mother Earth. This character appears explicitly in the close of the Onondaga version of the myth, as given by Hewitt (*21 RBEW*, pp. 218–220):

'Moreover, it is said that this Sapling, in the manner in which he has life, has this to befall him recurrently, that he becomes old in body, and that when, in fact, his body becomes ancient normally, he then retransforms his body in such wise that he becomes a new man-being again and again recovers his youth, so that one would think that he had just then grown to the size which a man-being customarily has when he reaches the youth of man-beings, as manifested by the change of voice at the age of puberty. Moreover, it is so that continuously the *orenda* immanent in his body—the *orenda* with which he suffuses his person, the *orenda* which he projects or exhibits, through which he is possessed of force and potency—is ever full, undiminished, and all-sufficient; and, in the next place, nothing that is *otkon*, or deadly, nor, in the next place, even the Great Destroyer, *otkon* in itself and faceless, has any effect on him, he being perfectly immune to its *orenda*; and, in the next place, there is nothing that can bar his way or veil his faculties. Moreover, it is verily thus with all the things that are contained in the earth here present, that they severally retransform or exchange their bodies. It is thus with all the things that sprout and grow, and, in the next place, with all things that produce themselves and grow, and, in the next place, all the man-beings. All these are affected in the same manner, that they severally transform their bodies, and, in the next place, that they retransform their bodies, severally, without cessation.'

This may be regarded as the general philosophy of those Animists who have not attained a clear conception of personality: life is regarded as fluid, passing readily from one embodiment to another; it has no monadic totality, but separates into qualities and functions rather than into organisms; into effluences and simulacra rather than into individual spirits. Almost universally the Indians hold such a view—the notion of individual immortality, and even the 'Happy Hunting Ground,' being largely developed under White influence.

This conception of a fluid life permeating all material things finds an early and logical expression in the innumerable sacramental rites whereby the Indians endeavour to acquire the traits of those creatures whose flesh they eat or of those divinities symbolized in the sacramental food. Thus Le Jeune (*Jesuit Relations*, ed. R. G. Thwaites, 1896–1901, ix. 121) notes:

'A savage, seeing a Frenchman eat the heart of a certain bird, said to him, "How! thou who art a man, darest thou eat that? If we people should eat it, our enemies would surprise us and would kill us; that is a woman's food."'

The inter-continental custom of eating the flesh, especially the heart, and of drinking the blood, of an enemy who had proved his courage in death by torture, that this courage might be transferred to the partakers (cf. ETHICS AND MORALITY [American]), is but a further, and terrible, illustration of this idea. Indeed, Garcilasso (*Royal Commentaries*, ed. Paris, 1830, I. xi.) states that some of the S. American tribes, after having eaten the body of such a victim, dried the nerves and bones and worshipped these remains as divine. In Mexico, in various festivals, we find cakes fashioned into the likeness of the deity, or of its attributes, or even, in the case of Omacatl, into the shape of a bone regarded as a bone of the god, which are then eaten as sacraments. Similar sacramental notions underlay the various forms of ceremonial cannibalism practised by the Aztecs and other Mexican peoples. The hearts of victims were customarily devoted to the divinity, but the bodies were eaten by the worshippers in many, if not all, cases. It seems to be beyond doubt that the partaker was expected to derive some magical or 'holy' power from the flesh of one who had in turn derived it from consecration to the divinity.

In the large number of Aztec instances in which the sacrificial victim is regarded as a personation of the god, this is certainly true. The theanthropic idea is everywhere present. Sahagun (*Hist. gén.*, Paris, 1880, bks. i., ii.) gives a multitude of examples. Thus, in the worship of the god of merchants, with his five brothers and his sister, 'they sacrificed to all together, or to each of them, one or more slaves, clothed in the ornaments of the god, as if they were his image.' Slaves were bought for this special purpose, care being taken that they were sound and without defect; they were fed and fattened for the sacrifice and the sacramental banquet following it, all the while being encouraged to dance and sing and live a life of rejoicing, so that, says Sahagun, 'they made no case of the death that was reserved for them' (I. xix.). The typical instance of this sort is perhaps that of the young man who for a year personated the great god Tezcatlipoca, living amid the splendour of temple service, with four maidens having the character of divine consorts. At the end of this time he was sacrificed to the god, while at the same time another youth, beautiful and unblemished, was chosen in his place.

'During the year he traversed the city carrying flowers in his hands and accompanied by a great following. He saluted graciously all whom he encountered, and they, on their part, taking him for the veritable image of Tezcatlipoca, threw themselves on their knees before him and worshipped him' (II. v.; see also the brilliant description in Prescott's *Conquest of Mexico*, London, 1874, ch. iii.).

The flaying of the victims and the wearing of their skins was a not uncommon mode of transferring the divine attributes. In the worship of the 'Mother of the Gods' the woman who personated the goddess was flayed and her skin worn by a priest, who, 'thus clothed, traversed the city, where he was the occasion of a thousand insanities' (Sahagun, I. viii.; cf. II. xi.). A curious divinity was Xipe Totec, 'the flayed one,' in whose rites the worshippers wore the skins of the sacrificed victims, assuming that they were clothed in the skin of the god, and expecting thereby to be healed of skin diseases (*ib.* I. xviii.). The notion appears to some extent in the northern tribes—at least the Pottawatomi 'Story of the man with six sons,' narrated by de Smet (*Life, Letters, and Travels*, New York, 1905, VII. viii.), presents striking analogies.

Ritualistic impersonation of mythical beings, spirits of ancestors, the heroic dead, etc., is to be found in many localities. It is probably a factor in all totemic rites and in symbolic face-painting. In the Pawnee *Hako*, when the consecrated child has been painted with the lines in which, says the priest, 'we see the face of Tiráwa atius, the giver of life and power to all things,' it is told to look into a bowl which has been filled with running water:

'The running water symbolizes the passing on of generations, one following another. The little child looks on the water and sees its own likeness, as it will see that likeness in its children and children's children. The face of Tiráwa atius is there also, giving promise that the life of the child shall go on, as the waters flow over the land' (A. C. Fletcher, *22 RBEW*, pt. 2 [1904], pp. 233, 241).

The most notable development of this conception is among the Indians of the North-West, where masked shamans personate mythic powers, and among the Pueblo Indians, with whom veritable mysteries are enacted by the priesthoods—tests of initiation implying at least some degree of participation in the supernatural character represented

(see J. W. Fewkes, *15 RBEW* [1897] and *21 RBEW*; M. C. Stevenson, *23 RBEW* [1904]; J. R. Swanton, *26 RBEW* [1908]).

It is not without significance that the Shawnee prophet Tenskwatawa was regarded by his followers as an incarnation of Manabozho. For Manabozho is the demiurge, the servant of the Good Manitou, through whose labours power has been brought from heaven to earth, and the life of man made tolerable—and it is in this capacity of creator and mediator that Manabozho holds a central place in the *Midē* rites. And not only was Tenskwatawa himself an incarnation of this demiurge, so that 'his words were believed to be the direct utterances of a deity,' but his body was regarded as transubstantiated in 'four strings of beans, which we were told were made of the flesh itself of the prophet'; these

> 'were carried with much solemnity to each man in the lodge, and he was expected to take hold of each string at the top, and draw them gently through his hand. This was called shaking hands with the prophet, and was considered as solemnly engaging to obey his injunctions, and accept his mission as from the Supreme' (J. Mooney, *14 RBEW*, pt. 2 [1896], pp. 675, 678 f.).

It is with Manabozho, again, that Longfellow identifies the Iroquoian chief and prophet Hiawatha—possibly with some traditional right, since the Iroquoian demiurge is very similar to the Algonquian.

The Aztec myth of Quetzalcoatl is a typical case of belief in re-embodiment. This deity-god of the winds, closely associated with the quetzal (*Pharomacrus moccino*), which was his emblem, was the ruler of Anahuac in a golden age of peace and plenty; driven thence by the conquering Tezcatlipoca, he set sail, over the eastern waters, for the land of Tlapallan, promising one day to return and rule again, king of a re-juvenated realm. The appearance of Cortes was mistaken for the millennial return of this deity, re-embodied in his ancient form, for he was traditionally bearded and light of hue—a fact which modified the resistance offered to the Spaniards by the superstitious Montezuma. Possibly Quetzalcoatl is but the personification of the quetzal itself (to which temples were erected as far south as Guatemala), regarded as a symbol of the Sun, and, like the phœnix, periodically dying to be born again. The plumes of the quetzal were insignia of the Mexican rulers, and it is an interesting analogy that the Peruvian Incas wore as a special sign feathers of the 'coraquenque,' of which they supposed but a single pair to exist, the earthly representatives of their sun-descended ancestors, Manco Ccapac and his spouse (see Garcilasso, *Royal Commentaries*, VI. xxviii.).

The Aztec deity Huitzilopochtli is another deity regarded as having once been an earthly hero, to whom 'after his death they rendered the honours of godship, making him offerings of slaves' (Sahagun, I. i.). A very curious rite in his service was his symbolic slaying, an elaborate effigy being made of cereals, into the heart of which a dart was plunged by a man personating Quetzalcoatl. Afterwards the body was eaten, but the participants in this strange sacrament were compelled to undergo such penance that, says Sahagun, they sometimes fled the country, preferring death at the hands of their enemies (III. i.).

This god, like many another god and wizard, possessed the shape-shifting power; and from this to belief in transmigration and reincarnation is a step the Indians were certain to take. 'They believe that souls enter other bodies after death' is the simple form in which this general notion is expressed by the Jesuits (Thwaites, xv. 183). The most primitive and crude form in which the idea appears is in that form of cannibalism which consists in eating the bodies of deceased relatives, in order that their 'life' may be transmitted to the partakers. This custom appears only among the lower peoples, chiefly in S. America, one form of it, interesting as probably representing a transition from the cruder forms noted by Garcilasso, being that of the Yapura river tribes, who burn the bones of their dead and then mingle the ashes with their drink.

An interesting custom in this connexion is the rite of bestowing the name of the deceased upon another person, who is then supposed to have assumed the dead person's character:

> 'It has often been said that the dead were brought to life by making the living bear their names. This is done for several reasons—to revive the memory of a brave man, and to incite him who shall bear his name to imitate his courage; to take revenge upon the enemies, for he who takes the name of a man killed in battle binds himself to avenge his death; to assist the family of a dead man, because he who brings him back to life, and who represents him, assumes all the duties of the deceased, feeding his children as if he were their own father—in fact, they call him their father, and he calls them his children. Mothers or other relatives who love a son, or a daughter, or any of their kindred, cause such persons to be resuscitated, through a desire to see them close by them—transferring the affection that they felt for the deceased to the persons who take their names' (Thwaites, xxii. 289; cf. xxvi. 155–63, where the ceremony of resuscitating a chieftain is described in detail).

Nor must we forget the Indian messiah of the 'Ghost-Dance Religion,' who taught that the Indian dead were to be resurrected, the old life restored, and even the buffalo and other game of former days to be brought back in the body (see *14 RBEW*, pt. 2). Christian influences were at work here, but they fell on well-prepared aboriginal ground.

H. B. ALEXANDER.

**INCARNATION** (Buddhist).—I. It has been held that certain Australian tribes deny all connexion between conception and sexual intercourse, and believe that the spirit—an animal totem or the soul of an ancestor—takes its place in the womb of the mother in accordance with certain mysterious laws and under certain trees, without the normal intervention of any physical cause.[1] The savage theories of conception, however, do not necessarily imply such ignorance of physiological laws. It would be more accurate to say that many primitive peoples believe in the pre-existence of the soul of the child, and hold that it is independent of the soul and life of the parents. From all time it has been accepted as a fact that only divine union is always productive—*οὐκ ἀποφώλιοι εὐναὶ ἀθανάτων* (Hom. *Od.* xi. 249)—and from this it has been logically concluded in Australia and India that sexual intercourse, though it may condition conception, is not the cause of it. A living and intelligent germ is necessary. The Brāhmans thought that this germ was a soul descended from the moon through air, smoke, rain, rice, and seminal fluid. Among the Australians and Hindus the belief was that a kind of spirit, a totem or a *gandharva*, lay in wait for a suitable opportunity to penetrate the womb of some woman and so become reincarnated.

According to Buddhist belief, three causes are necessary to conception: (1) that the father and mother have intercourse, (2) that the mother fulfil her time, and (3) that a *gandharva* should be in readiness. Such is, in so many words, the reply of the Buddha when he is asked how children are born (*Majjhima*, ii. 156; *Divyāvadāna*, 440; *Milinda*, 123). In scholastic circles this *gandharva* is given a name which is really a definition—*antarābhava*, an intermediary being, succeeding the *maraṇabhava*, 'the being in the dying state' or 'death,' and preceding the *upapattibhava*, 'the being in the state of being born' or 'conception.'

[1] See, *e.g.*, S. Reinach on the Ratapas, in *CAIBL* xii. (1912).

A certain sect possesses a *sūtra*, which is lacking in the Pāli canon, where the Buddha speaks of the *antarābhava*; the Pāli canonical sources mention only the *gandharva*.

2. All sects do not believe in the *antarābhava*.

In this connexion we might quote more particularly the case of the Mahāsāṅgikas (W. Wassilieff, *Buddhismus*, St. Petersburg, 1860, pp. 266, 274, 281; W. W. Rockhill, *Life of the Buddha*, London, 1884, p. 191) and the school of the Kathāvatthu (viii. 2; cf. xiv. 2). In the time of Vasubandhu (3rd–4th cent. A.D. [?]) a certain sect of India proper considered the doctrine of the *antarābhava* heretical, and its arguments coincide in many respects with those of Tissa-Buddhaghoṣa (Kathāvatthu); but, while the Pāli school preserves the traditional text: 'Three causes are necessary . . . that a *gandharva* should be in readiness,' the Sanskrit scholars, who deny the existence of the *antarābhava*, read: '. . . that a being in the dying state (*maraṇabhava*). . . .' They believe that, just as an object projects its reflexion directly and without intermediary on a mirror, so the constituent elements (*skandhas*) of the dying being are immediately replaced by other elements, situated in a suitable womb, which form a new being who inherits the *karma* of the dying being. It is in this sense that we must understand H. C. Warren's formula (*Buddhism in Translations*, Cambridge, Mass., 1900, p. 234): 'Rebirth is not transmigration' (see the long and interesting discussion in *Abhidharmakośabhāṣya*, Fr. tr., London, 1914, p. 16 f.).

3. The belief in the *antarābhava*, however, is not contradictory to the doctrine of non-identity or to the denial of 'transmigration' (*saṁkrama*), *i.e.* the passage of a person (*pudgala*), or *skandhas* (the five constituents of the ego), from one existence to another. The *skandhas* do not pass from one existence to another, but, as a flame, continually renewed, sweeps over the whole prairie, so the *skandhas* of the dying being engender the *skandhas* of the intermediary being, which, being continually renewed, finally arrive at the point where they are to enter a womb and engender the *skandhas* of the new being.

The *sūtra* (*Dīgha*, ii. 63), as a matter of fact, speaks only of the 'descent of the *vijñāna* into the womb,' *i.e.* the descent of 'thought,' 'the spiritual element,' 'the series of thoughts'; but here, we are told, we must understand by *vijñāna* the five *skandhas*. In the sphere of desire and matter (*kāma°*, *rūpadhātu*; see COSMOGONY AND COSMOLOGY [Buddhist], vol. iv. p. 130), thought is too weak to exist without the support of matter.

The opinion, common to several European writers, that only the *karma* is reincarnated, would be of more weight if confirmed by undisputed texts. In cases where the existence of the intermediary being is denied, it is believed that the *skandhas* of the dying being project their substitutes into the womb, and such *skandhas* indeed—infernal, brute, human, or divine—as the retribution of *karma* requires. But it is not to be explained how a *karma* could exist independently of the *skandhas*, or produce the *skandhas*.

4. The intermediary being is 'projected' by the same *karma* as projects the future existence. It will in consequence have the form and aspect of the future being, *i.e.* it will be infernal, human, divine, and so on, according to the nature of the future being. Its dimensions are those of a child of 5 or 6. Its organs are developed; *e.g.*, the intermediary being which is to generate a Bodhisattva bears all the marks of a Bodhisattva. It penetrates the womb, not along with aliments, but by the natural way; that is why the second-born of twins is considered the elder. The body of the intermediary being is transparent and subtle and is 'not susceptible to touch.' Nothing can stop its progress towards the place of its birth, since it is armed with the magic power of *karma*; it feeds on the aliment called 'in mouthfuls' (contrasted with touch, joy, etc.), but only on the subtle part of it, viz. the smell (*gandha*), from which it derives its name, *gandharva*, 'smell eater.' Some say there is no fixed rule as to how long this being lasts; it simply exists till the conditions requisite for conception are realized, *e.g.* till the union of the animal, human, or divine couple of the species it is to belong to is completed, or else, in the case of beings born of heat, *i.e.* from the exudation of the elements (*saṁsvedaja*), till masses of flesh in a state of decomposition permit of its incarnation as a worm, and so on. Others maintain that the intermediary being lives seven days. If, at the end of this time, incarnation has been impossible, it dies and is reborn for another week. Others put the length of the period at seven weeks. Instead of being reincarnated as an ox, a dog, or a black bear, it may be reincarnated as a buffalo, a jackal, or a brown bear, if it is not the season for oxen, etc. But the animal class may be definitely determined; in this case the *karma* which has determined the intermediary being will bring about the realization of the causes necessary to incarnation, irrespective of season.

5. How is the intermediary being incarnated? With an eye born of the force of *karma*, it recognizes, even from a great distance, the place where it is to be born and where its father and mother are united. When it is female, it conceives a desire for the father; when it is male, for the mother. Troubled by thoughts of love and hate, it hovers round the place of its birth; in its desire for the delights of love, it imagines that it is the agent, and it enters into the impurity (seminal fluid and blood) already formed in the womb. The *skandhas* of the intermediary being then grow hard; it dies, and conception takes place. Conception presupposes also the destruction of the elements of productivity—sperm and blood; the first cause of the embryo is the intermediary being, for sperm and blood are devoid of thought. This is how the beings which are to be born out of the chorion or the egg are incarnated.

Those which are to be born of the exudation of the elements are attracted by smell. There is a fourth matrix (*yoni*) or category of birth: the apparitional beings (*aupapāduka*, *i.e.* 'easily born') which come to life instantaneously, with all their organs intact, and all their members and sub-members complete. To this category belong the gods, the beings of the lower world, the intermediary beings themselves, and some privileged men, who are born without the aid of blood, seminal fluid, or the exudation of the elements. The intermediary beings who are to be born in this way are attracted to the place of their birth by a desire to be in a special place or to dwell in a certain abode, *e.g.* the nether world. 'How does the future infernal being come to desire to dwell in the lower regions? He is troubled in spirit, he thinks he is tormented by icy wind and rain, and he sees the fires of hell burning; his desire for heat hastens him thither. The inverse takes place in the case of the cold infernal regions' (*Abhidharmakośabhāṣya*, Fr. tr., p. 26). In this class, incarnation is rapid, for it depends solely on the conditions proper to the intermediary being itself. For the beings born in what is called the 'immaterial' domain (*ārūpya*; see COSMOGONY AND COSMOLOGY [Buddhist], vol. iv. p. 130), the intermediary being is useless. Under the very tree where the saint dies in meditation, and at the very moment of his death, he begins an existence above and beyond space.

6. A detailed account of the incarnation of the 'future Buddha' (Bodhisattva [*q.v.*]) would require too much space, so we must be content with indicating a few of the chief points, some of them unpublished as yet.

(*a*) The old school, represented in this case at least by the Sanskrit school of Abhidharma, makes no essential distinction between the incarnation of the Bodhisattva and that of other men:

'Which is the best of all matrices (*yoni*)? The apparitional matrix (*aupapāduka*). It is exempt from sperm, blood, and all foreign matter on which an intermediary being could fix. Why then did the Bodhisattva at his last birth choose the matrix of the chorion (*jarāyu*)? He possesses the "mastery" over birth, *i.e.* he can be born where he wills. Because he saw the great advantages of being born of the chorion, the advantage of binding the great family of Śākyas by ties of parentship to the Dharma, the advantage of inspiring with respect the people who would say of him: "He belongs to a family of Sovereign Kings (*chakravartin*)," the advantage of encouraging the faithful who would say: "He is a man; even men can attain to this perfection." If he had neither race nor family, people would ask: "Who is he? A magical man or a demoniacal being (*piśācha*)?"—There is another explanation: nothing remains of the bodies of apparitional beings at death, just as no oil remains in the lamp at morning. Now, the Bodhisattva wanted to leave behind him at death remains through the worship of which thousands of men could gain heaven and deliverance. That is the reason why he was born of the chorion. But this explanation cannot be accepted by the Buddhists, who attribute to the Buddha a magic power of creation; he could have created remains' (*Abhidharmakośabhāṣya*, Fr. tr., p. 14).

The Bodhisattva, however, is not incarnated in exactly the same way as the intermediary beings destined for the human race. These generally enter the womb under the impression that it is a hut to protect them from rain and cold (in the case of common beings), or a palace (in the case of noble beings). The Sovereign Kings enter the womb knowing that they are entering it. So also do the Pratyekabuddhas, who in addition, while remaining, know that they are there. The Buddhas

alone enter the womb, remain there, and leave it in full consciousness of what they are doing.

The future Bodhisattva does not assume an animal form to penetrate the womb of the mother, the vision of Māyā (in which the Bodhisattva becomes a white elephant with six tusks) being merely a portent of the future.

(*b*) The Great Vehicle, in its first stages (viewed from the logical point of view), continues to believe that the Bodhisattva is a man, 'not a god.' Men must not be given the chance of thinking 'we are only men, incapable of fulfilling this task, incapable of reaching this state of perfection' (*Lalitavistara*, 87 f.). But the blessed or noble (*bhadrika*) character of his descent into and sojourn in the womb is insisted on; he is not soiled by the impurities of the womb or by excremental matter. The question of the 'virginity' of Māyā, of the absence of blood and seminal fluid, has been settled, since Māyā (*Lalitavistara*, 42. 9) takes the octuple vow before conception; but the author of the *Lalitavistara* does not press the point.

The *Mahāvastu*, the *Suvarṇa*, etc., hold that the Buddha is born as an apparitional being; his body is, therefore, defined as 'spiritual' (*manomaya*), which means 'produced by the spirit' without the aid of the elements of generation. It follows from this that there are no remains of his body after death.

The Bodhisattva was also regarded as a magical apparition (*nirmita*), the unreal reflexion of the true body which is resplendent in the Tuṣita heaven or in the distant and colossal empyrean familiar to the later *sūtras* (*Saddharma*).

L. DE LA VALLÉE POUSSIN.

**INCARNATION** (Chinese).—Incarnation in anything like the meaning attached to that term in Christian theology is unknown in Chinese religious thought. We find there the idea of human beings elevated to the sphere of the divine in the case of those worthies who are worshipped with divine honours. We find also the idea of the manifestation of spiritual beings, or the possession by them of human persons who are their mediums in such a way that the spiritual power may be regarded as temporarily resident in the medium; but in neither is there any approach to the thought of true incarnation.

When we disregard the secondary spiritual powers and confine ourselves to the consideration of Shang Ti, we find that the idea of the Incarnation of the Supreme is as remote from Chinese religious thought. We have, it is true, such ideas as occur in connexion with the birth of Hou Chi.

'The first birth of our people was from Chiang Yüan. How did she give birth to our people? She had presented a pure offering and sacrificed, that her childlessness might be taken away. She then trod on a toe-print made by God (Ti),[1] and was moved, in the large place where she rested. She became pregnant; she dwelt retired; she gave birth to and nourished a son who was Hou Chi. When she had fulfilled her months, her first-born son came forth like a lamb. There was no bursting, nor rending, no injury, no hurt—showing how wonderful he would be. Did not God (Shang Ti) give her the comfort? Had He not accepted her pure offering and sacrifice, so that thus easily she brought forth her son?' (*Shi King*, pt. iii. bk. ii. ode 1 [*SBE* iii.[2] (1899) 396 f.]).

But the idea of supernatural conception and birth must be distinguished from the idea of incarnation. The former does not imply the latter; and of the latter idea, understood as Shang Ti becoming man and revealing himself in and through the development of a human personality, there is no trace in Chinese thought.

The classical conception of Shang Ti is remarkably high. Physical anthropomorphism is restrained, and no image of Shang Ti has ever been made; but he is freely spoken of as an ethical being, righteous and loving. As the Christian doctrine of the Incarnation, then, finds its fundamental Biblical presupposition in the conception of man as made in the image of God, so, if within the circle of Chinese religious ideas it seeks a point of attachment, it must find such a point in the ethical affinity of Shang Ti and man, which, *e.g.*, makes Shang Ti the ethical standard for man's imitation (*Shi King*, pt. iii. bk. i. ode 7), and underlies the thought of the Emperor, in so far as he is worthy of his position, being, like the theocratic King of Israel, the Son of Heaven. Perhaps, also, there might be brought into connexion with the cosmical significance of the Incarnation the conception in 'The Doctrine of the Mean' of the Sage, in whom the principles involved in nature are brought to perfection, and who in turn brings to perfection the world of men and things.

P. J. MACLAGAN.

[1] 'Made by God' is by some Chinese authorities translated 'made by the sovereign' and so this element of the supernatural is eliminated.

**INCARNATION** (Egyptian).—The ancient Egyptians had great difficulty in forming abstract or general conceptions,[1] therein resembling certain negro races who to this day do not frame such general terms as, *e.g.*, 'woman' or 'crocodile,' but think always of a particular woman or a particular crocodile.[2] Like children, therefore, they found it difficult to think of an ego or self as an integrating conception, and instead of saying 'I see,' 'you walk,' 'he strikes,' they said 'my eyes see,' 'your legs walk,' 'his hand strikes.'[3] Similarly, they lacked originally the concepts 'all' and 'whole'; so that, instead of the expression 'all men,' they used the phrases 'each men,' or, more commonly, 'each eyes,' 'each legs,' etc., according to the bodily organ concerned in the particular case. For 'whole' they had no distinct term, but expressed the idea by some such circumlocution as 'to its limit,' 'to its extent,' 'in its scope.'[4]

This inability to frame abstract ideas operated powerfully upon the formation of religious conceptions among the Egyptians. The thought of a more or less abstract deity, exercising his power in a transcendental manner, was entirely foreign to the Egyptian mind. Even a supreme being was conceivable only as a concrete existence. In order that such a being might conform to earthly norms, it must have earthly attributes, and give effect to its powers by earthly means. The Egyptian deities were accordingly thought of as being embodied in men, or in animals, or, though less frequently, in plants, and even in things fashioned by human hands, such as statues, obelisks, houses, and temples. A deity had to eat and drink;[5] he lived and died. He was, therefore, always connected with a particular locality. If he went elsewhere, he deserted his previous locality, as he could not in his complete individuality be present

[4] Examples, *ib.* p. 91 ff.

[5] According to C. R. Lepsius, *Denkmäler aus Aegypten und Aethiopien*, Berlin, 1851-59, iii. 30*b*, line 16, each of the four obelisks of Thutmosis III. in Thebes received as sacrificial offerings a hundred loaves and four pitchers of beer.

in different places at one and the same time. If he desired to hear or to see, he required ears or eyes; and while, *e.g.*, ears were ascribed to a deity in large numbers[1] in order that he might perceive more sounds and words than human beings can perceive, yet the faculty was of limited range. It is true that certain texts speak occasionally of a deity as omnipresent and omnipotent, but these passages are in reality invocations designed to flatter that particular deity, and to induce him to maintain his reputation as a supreme power by granting his suppliant's prayer.[2] The conception of a truly omnipotent deity was one that the Egyptians never attained; and that the ostensible references to such are, after all, but phrases to which no real conviction attached is made quite clear by the fact that similar qualities were ascribed to the reigning Pharaoh in the panegyrics of his subjects.[3]

When the Egyptians sought to attribute a more universal character to a deity in a precise and complete sense, they had to resort to a kind of syncretism. They fabricated a number of figures as manifestations of the deity, and as bearing in that capacity various names (*ren-u*). To the Egyptian mind, however, the 'name' was not, as in modern languages, a general term. It was a thing by itself, and independent of the object which it denoted, and it possessed an immortality of its own.[4] It was related in the closest way to what it signified, but was not identical with it. To have knowledge of a name was to have power over its bearer, but in certain cases the name might continue to exist apart from the latter. The 'name,' in fact, was related to its bearer in some such way as the *ka*, the *ba*, and other immortal elements were related to the individual human being.

The several 'names' of a deity were not simple incarnations thereof, but were generally distinct personalities. Thus, if Isis was designated by, and worshipped under, various epithets, such as Hathor, Mut, etc., these were not regarded as mere emanations existing in and through Isis, but were figures complete in themselves and endowed with a power and activity of their own. The Egyptians did homage to each by itself, and did not think of such homage as accorded to the central deity. When they wished to worship Isis herself, they required to direct their thoughts specially to her. The primary deity always remained a unity, neither surrendering any of his distinctive characteristics to the subsidiary figures, nor taking from them any of their attributes or achievements.

In order that a deity might exercise his power at a particular place, he required a material body, which served him for a longer or shorter period as a vesture or embodiment; and, by way of facilitating such material manifestation, the temples were furnished with statues or symbols which corresponded to his supposed corporeal form, and could, accordingly, be used by him at once as a place of sojourn. When such object had been animated by the presence of the deity, it was regarded as actually the deity himself. But a material tenement of this kind was not absolutely necessary.

[1] A god with 77 eyes and 77 ears is met with in the Magic Papyrus Harris (vii. 6), ed. F. J. Chabas, *Le Papyrus magique Harris*, Châlon-sur-Saône, 1860, p. 99; cf. E. A. W. Budge, *Facsimiles of Egyptian Hieratic Papyri in the British Museum*, London, 1910, pl. 26, p. 26.

[2] Cf. the remarks in the art. God (Egyptian), vol. vi. p. 276.

[3] Papyrus Anastasi, ii. pl. 6, line 8 ff. = iv. pl. 5, line 6 ff.; cf. G. Maspero, *Du Genre épistolaire chez les anciens Égyptiens*, Paris, 1872, p. 79 f.

[4] Wiedemann, *Die Amulette der alten Ägypter*, Leipzig, 1910, p. 16, *Religion of the Ancient Egyptians*, Eng. tr., London, 1897, p. 298 ff., in *Muséon*, xv. [1896] 49 ff., and in *L'Égypte*, i. [Alexandria, 1895] 573 ff.

Thus the god of Edfu, in order to help the sun-god against his enemies, assumed the form of a winged solar disk, and thereafter some portion of his divinity always inhered in this new figure, which, accordingly, became one of the most potent apotropæic symbols in the religion of Egypt.[1] In exactly the same way statues and symbols likewise permanently retained something of the divine personality. They became separate deities, whose existence in no way interfered with the continued existence of the original deity as an integral entity, or with his capacity to become incarnate in similar fashion at another place. Here we encounter a mode of thinking which is found among many other peoples, viz. the belief that in the painted figure, or even in a mere reflexion, there inheres permanently a part of the personality of the original, though without in any way taking from the latter any portion of his individuality.

Such modes of thought explain the rise of numerous distinct forms of one and the same deity in a single locality, and also, when once he had become embodied there in various objects, their continued co-existence. The several forms were differentiated from one another either by the attributes which the deity had manifested in his various embodiments or by the sacred localities from which he had been derived under a certain characteristic, and at which he usually resided in a particular form. Each of these forms of the original deity had a distinct individuality. They were represented side by side in long rows of statues or reliefs, or else were enumerated in extensive lists.[2]

So far as a deity was not compelled by incantations to abide in a particular place in order to serve the purposes of the person casting the spell, the choice among the various available forms of incarnation lay with the deity himself. By means of certain spells, a dead man, being endowed with magical powers, could, after his resurrection to life, avail himself of existing embodiments or not, having the power to assume whatever forms he liked, as that of a bird, a serpent, a crocodile, the god Ptah, etc., and was subject to no compulsion in the matter.

What we find here is not metempsychosis, but the capacity of the dead to incarnate themselves as they willed. The number of possible transformations was unlimited. It is true that the *Book of the Dead*[3] gives only a few—about twelve—but these are merely a selection of peculiarly important forms, and by no means exhaust the series. The fact that in a text of late origin[4] the regular twelve transformations are brought into relation with the twelve hours of the day doubtless points to a later attempt to reduce the forms to a scheme. But the arrangement of the relative chapters in the *Book of the Dead* shows no uniformity, and the forms given in that text are not exhaustive, while such a relation between forms and hours is nowhere else referred to.

The dead might also assume a human form. Thus, in the first tale of Setna, Ahure becomes incarnate in Tabubuĕ, and Neferkaptah in an old man. In this narrative, indeed, even the pieces of a game have incarnations as the fifty-two human

[1] H. E. Naville, *Textes relatifs au mythe d'Horus*, Geneva, 1870, pl. 12 ff.; tr. H. Brugsch, 'Die Sage von der geflügelten Sonnenscheibe,' in *AGG* xiv. [1869] 173–236.

[2] *e.g.*, the rows of statues exhibiting the forms of the goddess Sechet in Karnak, founded by Amenophis III., and completed by Sheshonk I.; cf. P. E. Newberry, in *PSBA* xxv. [1903] 217 ff., M. Benson and J. Gourlay, *The Temple of Mut in Asher*, London, 1889, pp. 31, 41, 248. Some of the figures in that series bore no distinguishing epithet, and were manifestly intended to represent new, and not as yet distinctive, types of incarnation assumed by the goddess. For a series of reliefs representing forms of Amon, cf., *e.g.*, Lepsius, *Denkmäler*, iii. 36*c*, *d*. For lists of the forms of Osiris, see the *Book of the Dead*, cxlii.—a chapter which can be traced as far back as the Theban period; cf. the important list in W. Pleyte and F. Rossi, *Papyrus de Turin*, Leyden, 1869–76, pls. 11–13, p. 22 ff.

[3] lxxvi.–lxxxviii. The texts of the *Book of the Dead* dating from the Middle Kingdom devote numerous chapters to the subject; cf. the enumeration given by G. Röder, in *ARW* xvi. [1913] 79 f.

[4] Brugsch, *ZÄ* v. [1867] 21–26; Wiedemann, *ib.* xvi. [1878] 96 f.

menials of Tabubuë.[1] The same text tells us that Ahure and her child Merab lay buried in Koptos, and yet that they repose in the tomb of the husband and father. They desire that their mummies should likewise be brought to the tomb—a desire all the more natural because the mummy was regarded as the principal form in which the dead became incarnate; it was a vesture which he could restore to life, and in which he could once more move about.

The mummy was subject to bodily needs, and the more mobile *ba*-soul is depicted as conveying bread and water to it through the shaft of the tomb.[2] Of equal importance with the mummy were the statues,[3] which in the Old Kingdom were erected in the *serdab*, and sometimes also in the chamber of worship; in later times mainly in the latter. They were sometimes given a place in the temple,[4] where, being near the gods, they could more naturally look for a share in the sacrificial gifts than in a tomb situated at a distance. In particular, statues were placed in temples by kings as marks of special distinction for men of merit.[5]

The dead man, moreover, had a singular power of incarnation in relation to the reliefs in his tomb. When he uttered his magic formula, the incidents portrayed in the reliefs became real. He incarnated himself in his own figure, and at the same time compelled the other persons and the animals and things depicted in the relief to become embodied in theirs, and to perform the actions represented.[6] To the same mode of thought belonged the notion that a magician could by means of spells change the wax figure of a crocodile into a real crocodile.[7]

If beatified men could thus become incarnate in so great a variety of forms, there can be no doubt that the same capacity was assigned to the gods also, though it is true that our documents furnish no lists of the forms usually or possibly assumed by the individual deities, or of the magic formulæ employed by them in order to assume such incarnations.

Of more importance among the forms of incarnation resorted to by the gods were the sacred animals. This idea was not indigenous to Egypt. The god-animals were originally the independent deities of the primitive inhabitants. The normally anthropomorphic and spiritually conceived deities introduced into the country during the Nagada period by the invading and conquering peoples were brought into relation with the old indigenous objects of worship.[8] The deity of a conquering tribe that settled in a particular locality was declared to be identical with the sacred animal hitherto worshipped there, and the latter was thereafter regarded as his material manifestation. But the deity did not thereby surrender his independent existence. Thus we find, besides the Ptah incarnate in Apis, the god Ptah; and, besides the ram Amon, the god Amon. In these identifications of deity and animal, no attention was paid to possible differences in the distinctive properties of the associated pair, and this inherent disparity, as we might expect, permanently stood in the way of a real fusion between the primitive and the incarnate deity. Even when the similarity of the two was more marked, as in the case of the hawk of Edfu and the sun-god, they still maintained a mutually independent existence. The incarnation, in fact, added a fresh and independent by-form to the deity, but the distinct individuality of the latter remained as before.

These ideas emanate directly from the Egyptian conception of what is involved in personality. Man was not in himself an integral unity, nor, by analogy, was any other existent being. Each individual existence was rather a mosaic-like complex of various severally independent constituents which merely happened to be conjoined in a particular body, but was not in its own being dependent upon that body or its continued existence. Thus, in the individual human personality there were, besides the body, the various constituents of the soul—the *ka*, the *ba*, the *sechem*, etc.[1]—which, while conjoined in the man during life, first attained complete independence after death, each of them then repairing to the world beyond in order that, according to the Osirian doctrine of immortality, it might, as a result of the judgment before Osiris, be once more united with the rest in the personality so restored in the realm of the dead. In beings of a higher rank, such as kings and gods, the partition of the soul was carried still further. These had not simply a single *ka* and *ba*, but several of each, and in these the various attributes combined in the divine person were at a later date supposed to be severally incarnated.[2]

A crucial instance of the distinct individuality of these elements is found in the idea that the divinity of the king might be detached even from himself. In this case the divine personality *is* figured as a man bearing a general resemblance to the earthly ruler, but sometimes it wears other crowns besides his, and it seldom has even the hawk's head corresponding to the hawk-soul of the Pharaoh. It receives sacrificial offerings from the king himself, and bestows upon him heavenly gifts.[3] The proper divinity of the Pharaoh is embodied in this figure, but such disengagement of a part of the monarch's personality in no way diminishes his own individuality. The sacrificing king remains in himself complete, and is in no sense a merely partial or fragmentary being.

The *ka* of the Pharaoh is often represented as a little child—less frequently as a grown man[4]—who walks behind the king, bearing the royal *ka*-name on his head, and carrying the royal symbols. It sometimes appears also as the hieroglyphic transcript of the *ka*-name, furnished with arms in order to hold the symbols.[5] Here the incarnation of the *ka*-element in a hieroglyphic expression is effected in the same way as the individual life, power, stability, etc., of the king are embodied in the hieroglyphs for 'life,' 'power,' 'stability,' etc., which are fitted with arms and legs, and carry symbols of the monarch.[6]

Further, attributes which seem to us purely abstract were regarded as becoming incarnate, as, *e.g.*, the divine protection, which was embodied in the blood of Isis, and is represented by the knot-amulet *tet*. This amulet likewise is fitted with hands,[7] or, in some instances, with

a head.[1] Similarly, incarnate forms of various senses and ideas, as taste and feeling,[2] hearing and sight, year, eternity, infinity, joy,[3] male and female darkness,[4] etc., are met with as deities to whom homage is paid, and who are, therefore, expected to manifest an individual activity in favour of the suppliant. Of such forms the most frequently mentioned is Truth, who became a goddess—the Maāt worshipped in a number of temples as a woman with the symbol for 'truth' upon her head.[5] Further, the particular truth which dwelt in a particular man or deity could become incarnate in a similar figure, and this type of truth might be eaten or drunk, while the king might offer it to the deity.[6]

The possible co-existence of a number of individually distinct entities in another being which yet maintained an existence independent of them is seen also in a curious conception of the royal person. The Pharaoh comprised in himself the kings of Upper and of Lower Egypt, each of whom retained his own individuality. The monarch not only bore the titles and dignities that severally belonged to the two provinces, and had a double house and a double treasury, but, as king of either province, he also offered two distinct sacrifices, and in some instances had two tombs,[7] which, as it would seem, belonged severally to the king of Upper Egypt and the king of Lower Egypt.

The king was regarded as of divine origin, and even as a god. In this aspect, however, he was not merely the incarnate form of a particular deity, but was a new addition to the pantheon—one who, clothed in a human form and born of a human mother, lived as a man amongst men, and yet could associate with the other gods on a footing of perfect equality. At death he discarded his purely human traits, though he did not completely surrender his human nature. In the earlier period, he was supposed to eat the older gods, thereby acquiring their peculiar qualities, and so becoming the supreme divinity.[8] In later times the process of complete deification after death, by which he became a kind of Osiris, is not depicted in detail.

The Pharaoh owed his divine nature to his having been begotten by a god—a transaction which is often brought clearly before us.[9] When the procreation of a new deity had been resolved upon by the higher powers, the god Rā or Amon-Rā assumed the form of the reigning king, and visited the queen upon her couch in the palace. He revealed to her his divine character; his love suffused her person, and he begot the coming ruler, and decided what his name should be. So far, however, the god had implanted in the mother only the divine element of the son. He now commissioned the god Khnuphis to form the child's bodily members, and accordingly that deity fashioned the body of the future ruler, as also that of his *ka*, which was of like shape with himself,[1] upon the potter's wheel, while a goddess bestowed life upon these fresh creations.[2] Then at length the child was born in the presence of, and with the aid of, various gods and goddesses.

The circumstance that, when the god begot the child, only the divine element of the latter was created enables us to understand why occasionally not merely a single deity was implicated in the act, but why all the gods might claim to have begotten the Pharaoh,[3] and to exist in him. To the purely concrete mode of thought characteristic of the Egyptians such an infusion of deity could be most simply represented after the manner of a procreation. It was only in respect of this divine element, and not in respect of the whole divine personality, that the god became incarnate in the king.

That a mere particle of divinity sufficed to make the newly created king a partial incarnation and a divine person is also implied in the myth of Rā and Isis.[4] Here Isis kneads earth with the spittle of the sun-god, and forms a serpent which, in virtue of the spittle, may be a source of danger to the god himself. The same idea is found in an extant legend from the XIIth dynasty,[5] in which Isis tries to secure a portion of the seed of Set as a means of gaining power over him. In such instances the implanted particle of deity does not always carry with it the entire range of the divine nature as an incarnation in another being. Sometimes, indeed, it is only a particular attribute that is transferred in this way. Thus the man who sucks the milk of a goddess or a sacred cow absorbs thereby, not her entire divine ego, but only her inherent immortality.[6]

The choice of the reigning monarch's figure for the act of procreation was determined by the fact that the god, on other occasions of his intercourse as an incarnate being with the king, chose a form which corresponded externally to that of the Pharaoh then upon the throne. Inasmuch as the two homologous figures both existed at the same time, it is clear that the deity did not become incarnate in the king, but really assumed an independent figure of similar appearance. This figure might be designated by a special name, which applied both to the deity and to the reigning king. Thus we read of the Amon of Ramses II., of the Sechet of Saḥurā,[7] etc. When a monument, and especially a temple or chapel, was founded, not by a king, but by a private individual, the latter was, equally with the king, regarded as the creator of a new divine by-form. Thus, *e.g.*, in the reign of Ramses II. worship is said to have been accorded,

not only to the Ptah of Ramses himself, but also to the Ptah of a certain Menna.[1]

Besides real incarnations, however, considerable interest attaches in Egypt to pseudo-incarnations. The adept in magic, when uttering his spells, frequently claimed to be a particular deity, and as such demanded obedience and threatened the powers that resisted him.[2] It need not be supposed that he actually believed himself to be the god in question, but he was at all events convinced that such a claim would make an impression upon other gods. By way of making the identification more emphatic, the adept in some cases had the name of the particular deity inscribed upon his person. From similar motives the names of Isis and Nephthys respectively were inscribed upon the bodies of the two principal female mourners who recited the dirges in mourning celebrations, and effected the resurrection of the dead person by sympathetic magic.[3] Whether in early times masks of the gods likewise were employed with a view to a more complete identification cannot be decided by the extant records, but the practice is attested in connexion with the cult of Isis in the Hellenistic period, and may well go back to earlier usage.

Again, the glorified dead[4] and the gods might assume the forms of other deities. Thus Isis took the form of a sacred cow, and Horus that of the Apis bull, in order to reach the city of Apis unmolested.[5] In this case the incarnation was effected, not in the sacred cow and the Apis bull themselves, but in figures resembling them, and so, of course, commanding a like degree of respect. The story in which Batau is said to have assumed the form of a bull with all the beautiful symbols in its hair, and thus to have been honoured as a sacred bull—though in reality it was not such[6]—must be interpreted in the same way. This text also shows the vast variety of possible metamorphoses which a higher being might assume in his incarnations. When the bull had been slaughtered, Batau caused two trees to arise from the drops of its blood, and in these he then took up his abode. From the trees, again, he passed, in the form of a splinter, into the body of a woman. She became pregnant, and the child she brought forth was his final form of incarnation, *i.e.* Batau himself.

In most cases a particle of the being incarnating himself was implanted in the new form that he adopted, though, as we have seen, this was not absolutely necessary. But certainly the Egyptians, with their concrete habit of thought, persistently sought to invest all beings with a tangible and material form. If the gods, or the dead, or any other entities were to endure and to evince their power, they could do so only by means of an incarnate form.

LITERATURE.—There is as yet no monograph on the Egyptian ideas of incarnation. Apart from the passages cited in the article, we have in modern literature nothing to fall back upon except treatises dealing generally with the Egyptian religion, as cited in the artt. EGYPTIAN RELIGION, vol. v. p. 236 f., and GOD [Egyptian], vol. vi. p. 279.

A. WIEDEMANN.

1 See a writing-palette in Berlin, no. 6764. The omission of the cartouche and the mode of writing the name Menna show that the reference here is not, as Erman (*ZÄ* xxix. [1891] 48 ff.) supposed, to King Menes, but to a private individual—perhaps that charioteer of Ramses II. of whom we read in the Pentaur poem.

2 Wiedemann, *Magie und Zauberei im alten Ägypten*, Leipzig, 1905, p. 18 ff. Of peculiar interest in this connexion is the Magic Papyrus Leyden, no. 348, pl. 11, line 2 ff., ed. Pleyte, *Études égyptologiques*, Leyden, 1866, p. 173 ff.; cf. Pap. Ebers, ed. G. Ebers, Leipzig, 1875, pl. 1.

**INCARNATION (Greek and Roman).**—The term 'incarnation' usually implies God becoming man, and connotes the opposite process to 'apotheosis.' But thought wavers in a curious way between the two. When virtue in man's esteem has won its way to heaven, when a Pollux, a Hercules, an Augustus, a Bacchus, a Quirinus—to employ the examples used by Horace (*Carm.* III. iii. 9–15)—have assumed their seat at the celestial board, and begun to quaff the nectar of the gods, then it is suspected that merit so transcendent must have been of heavenly origin, and a birth-story is invented which goes to show that the person who has been apotheosized was in reality already divine.

Strictly speaking, incarnation means the putting on of flesh by the divine; it need not necessarily be—although, as a matter of fact, it usually is—the flesh of man. When Zeus visited Leda in the form of a swan, that was incarnation as much as when he visited Alcmene in the form of Amphitryon; but we must insist on flesh of some kind. There would be no propriety in applying the term incarnation to the visit of Zeus to Danaë in the shape of a shower of gold. Artemis, according to one legend, compassed the destruction of Otus and Ephialtes by turning herself into a stag, and running between the young giants, who shot each other in their eagerness to hit the beast. We have also an instance of this lower form of incarnation in the tale that on the appearance of another of earth's monstrous brood the gods were so terrified that they changed themselves into beasts and took refuge in Egypt, this part of the story being perhaps a Greek attempt to account for the theriolatry in the Nile country.

To the Greek mind the specific difference between gods and men lay in the fact that the former were immortal and the latter mortal (except in case of apotheosis). All other differences, as in wisdom and beauty, were of degree, not of kind. Herein is the key to the Greek concept of incarnation, and throughout the pagan period it was really believed that the gods could and did assume the form of men. Their motives for so doing were many and various, but the most prominent was to gratify their amorous desires. The sons of Zeus by human mothers were innumerable. Among them were Perseus, Castor and Pollux, who were specially called 'the sons of Zeus' (though it is said that only one was really so), Heracles and Bacchus, Æacus and Sarpedon. The mothers of these were Danaë, Leda, Alcmene, Semele, Ægina, and Laodameia. Many, too, were the sons of Poseidon, most of whom are marked by gigantic size and insolence. Of the three brothers who divided the world between them, Hades alone seems to have been without issue of any kind.

The sons of the gods did not fail to follow the example of their sires in the way of amours with mortal maids or matrons; and, in consequence, a particular member of a human family might have in him or her a strain of the divine. Thus Theseus was said to have been the son of Poseidon, Troilus the son of Apollo by Hecuba, Deianeira was said to have been the daughter of Dionysus, Meleager the son of Ares, Linus the son of Apollo, and so on. These were perhaps appreciations arising out of the characters of those persons either in fact or in fiction; but one obvious motive for the invention of such stories was the general desire to ally oneself with the divine. Thus Hellen was said to have been really the son not of Deucalion, but of Zeus, which at once conferred the patent of nobility

upon every Hellene. All Greek physicians claimed to be descended from Asclepius, and so from Apollo; and on the same lines Socrates is made playfully to argue in the *Euthyphro* (11 C) that all sculptors were descended from Dædalus, and so from Hephæstus.

But love was not the only motive which induced divine beings to take human flesh upon them. It was anger at the gods that drove Demeter to leave heaven and incarnate herself as a woman. It was to gratify her spite against Heracles that Hera assumed the form of an Amazon. Occasionally, however, it is the censorship of human morals that is the operating motive. Thus it was to test the insolence of Laomedon that Apollo and Poseidon assumed the form of men; and the great god Zeus himself came to earth in the likeness of a working man (Apollod. iii. 98, *εἰκασθεὶς ἀνδρὶ χερνήτῃ*), in order to make trial of Lycaon and his fifty sons, who excelled all men in impiety. The same motive underlies the well-known story of Baucis and Philemon, which has been immortalized by the genius of Ovid; and we know from Hesiod that the belief was entertained that the gods roamed the earth in the likeness of men to take note of human conduct. That is the highest moral use that is made of the idea of incarnation in pagan mythology.

The idea of divine birth appears now and then among the Greeks even in historical times. Plato, after he had achieved immortality for his writings, was reported to have been the son of Apollo. He is the only philosopher who has attained the honour of a birth-story. The Spartan king Demaratus, we are told by Herodotus (vi. 69), was declared by his mother to have been the son of the hero Astrabacus; but then there was a malicious counter-statement that the supposed hero was really the donkey-driver. Alexander the Great was believed even in his own lifetime to have been the son of Ammon; and there is a story told by Plutarch (*Alex.* 3) that the reason for the loss of Philip's eye was that he had peeped through the keyhole of his wife's chamber, and had seen the god in the form of a serpent entwined about her couch. The birth-story of Romulus and Remus is an echo of many similar tales in Greek mythology.

ST. GEORGE STOCK.

**INCARNATION** (Indian).—The tenet of incarnation (*avatāra*) is a fundamental one in mediæval and modern Hindu religion as taught in the *Purāṇas* and similar works; it is so especially with the Viṣṇuites, the greater number of whom worship either Rāma or Kṛṣṇa, the two last incarnations of Viṣṇu, not that god in his proper form; the reverse holds good with Śiva, who is adored as such, or under one of his various forms which cannot be properly called incarnations. We must, therefore, examine the incarnations of Viṣṇu in order to comprehend the nature of incarnation as conceived in India, and to form an idea concerning the origin and development of the complex body of beliefs on the subject.

The theory of the incarnations of Viṣṇu presupposes the recognition of Viṣṇu, or, as he is more appropriately called in this connexion, Nārāyaṇa, as the Supreme God, the creator and ruler of the universe, the upholder not only of the cosmic, but also of the moral, order of the world. When the enemies to his rule endanger the order of the world, the god incarnates himself for the purpose of defending it. This is expressed in two much quoted verses of the *Bhagavadgītā* (iv. 7 f.):

'Whenever there is a decline of the Law, O Bhārata, and an increase of iniquity, then I put forth myself (in a new birth). For the rescue of the pious and for the destruction of the evil-doers, for the establishment of the Law I am born in every age.'

Originally, therefore, the number of these appearances or births of the Lord seems to have been regarded as indefinite; but theological speculation tended not only to fix the number of incarnations, but also to define more clearly their relation to the Supreme God. This can be seen from the account of the incarnations in the *Harivaṁśa*, i. ch. 42 f. It commences with a verse made up of the beginning and the slightly altered end of the passage from the *Bhagavadgītā* just quoted:

'Whenever there is a decline of the Law, O Bhārata, then the Lord appears for the establishment of the Law.'

And it continues:

'One form of him, the best one, for ever abides in heaven practising austerities [Nārāyaṇa seems to be intended], the second [form] is gone to sleep on his couch, for the destruction and creation of beings, meditating on his mysterious self; who after sleeping a thousand æons becomes manifest for the purpose of action, at the end of a thousand years, as the god of gods, the Lord of the world [Viṣṇu].'

Then some of his incarnations are related, the last of which—that of Kalkī—being designated as the tenth (v. 2368), proves that the number of his incarnations amounted to ten, as in later times. It is worthy of note that in this place the incarnations are called *prādurbhāva*, 'manifestation,' and not *avatāra*, which has since become the current term; thus it is usual to speak of the ten *avatāras* of Viṣṇu. According to the common belief these are: (1) Fish, (2) Tortoise, (3) Boar, (4) Man-lion, (5) Dwarf, (6) Paraśurāma, (7) Rāma, (8) Kṛṣṇa, (9) Buddha, and (10) Kalkī, whose incarnation is still to come.[1]

Now, if we examine the various incarnations of Viṣṇu, we shall find that they fall into several groups. First the Vāmana, or Dwarf, incarnation is a legend developed from a mythical feat of Viṣṇu frequently mentioned in the Rigveda, viz. the three strides with which he measured the three worlds. Secondly, the Kūrma, or Tortoise, and the Varāha, or Boar, incarnations ascribe to him deeds which originally were believed to have been performed by Prajāpati the Creator (see *Śatapatha Brāhmaṇa*, VII. v. 1, 5; *Taittirīya Saṁhitā*, VI. ii. 42; *Taittirīya Āraṇyaka*, i. 13; and *Śatapatha Brāhmaṇa*, XIV. i. 2, 11). Prajāpati is frequently represented as taking one form or other for some special purpose; in our case the reason of his being assumed to have taken the form of a tortoise and of a boar may have been that his primitive worship had been of a theriomorphic character, at least with some classes of the people. When Nārāyaṇa (Viṣṇu) became the Supreme Deity, the Creator

[1] The incarnations (*prādurbhāva*) actually related in the *Harivaṁśa* (*loc. cit.*) are: (1) Varāha, (2) Man-lion, (3) Dwarf, (4) Dattātreya, (5) Jāmadagnya (Paraśurāma), (6) Rāma, (7) Kṛṣṇa, and (8) Kalkī, which, as stated in the text, is called the tenth. In the Śāntiparvan of the *Mahābhārata* (cccxxxix. 103 = 12966 f.) the following incarnations (*prādurbhāva*) are enumerated: (1) Haṁsa, (2) Tortoise, (3) Fish, (4) Boar, (5) Dwarf, (6) (Paraśu) Rāma, (7) Rāma Dāśarathi, (8) Sātvata (Kṛṣṇa), and (9) Kalkī. The *Bhagavadgītā* (*loc. cit.*) speaks of the 'many births' (*janmāni*) of the god; the *Mahābhārata*, *Vanaparva* (487), of the 'thousands of his manifestations' (*prādurbhāva*). Of the account in the *Matsya* and *Bhāgavata Purāṇas*, Muir (*Orig. Skr. Texts*, iv.[2] [1873] 155 f.) says: 'Viṣṇu's incarnations are then enumerated (*Matsya Purāṇa*, xlvii. 234–254), viz. (1) a portion of him sprung from Dharma, (2) the Narasiṁha, or Man-lion, and (3) the Dwarf, incarnations, which are called the celestial manifestations (*sambhūti*), the remaining seven being the human incarnations caused by Śukra's curse. These seven are: (4) the Dattātreya, (5) Māndhātṛ, (6) Paraśurāma, (7) Rāma, (8) Vedavyāsa, (9) Buddha, and (10) Kalkī incarnations. (Eight instead of seven are obtained if, with the Marāthī expounder, we understand the beginning of verse 243 to refer to Kṛṣṇa.) The *Bhāgavata Purāṇa* gives twenty-two incarnations (i. iii. 1 ff.), viz. those in the forms of (1) Puruṣa, (2) Varāha, or the Boar, (3) Nārada, (4) Nara and Nārāyaṇa, (5) Kapila, (6) Dattātreya, (7) Yajña, or Sacrifice, (8) Ṛṣabha, (9) Pṛthu, (10) Matsya, or the Fish, (11) Kūrma, or the Tortoise, (12 and 13) Dhanvantari, (14) Narasiṁha, or the Man-lion, (15) Vāmana, or the Dwarf, (16) Paraśurāma, (17) Vedavyāsa, (18) Rāma, (19 and 20) Balarāma and Kṛṣṇa, (21) Buddha, and (22) Kalkī. The last two are represented as future. But the incarnations (*avatāra*) of Viṣṇu are innumerable, like the rivulets flowing from an inexhaustible lake. Ṛṣis, Manus gods, sons of Manus, Prajāpatis are all portions of him.'

and Lord of the world, he stepped into the place of Prajāpati, the Creator in the period of the *Brāhmaṇas*, and the deeds of Prajāpati were transferred to Viṣṇu. In this class of incarnations we may reckon, besides the Tortoise and Boar incarnations, the Matsya, or Fish, incarnation, which refers to the legend of Manu's being saved by a fish during the Deluge; for that fish, according to the later version of the story in the *Mahābhārata* (iii. 187 = 12474 ff.), reveals himself as Brahmā Prajāpati. The incarnation of Narasiṁha, or the Man-lion, stands by itself, or might be ranged with the Dwarf incarnation; it refers to a popular legend of Viṣṇu killing, in the form of a Man-lion, the demon Hiraṇyakaśipu—a legend which is once alluded to in the Vedic literature, viz. *Taittirīya Āraṇyaka*, x. i. 6.

The remaining three incarnations, viz. those of Paraśurāma, of Rāma Dāśarathi, and of Kṛṣṇa, have this in common, that those heroes had originally no connexion with Viṣṇu. The story of Paraśurāma itself, as told in the *Mahābhārata* (iii. 115 ff., xii. 49), has no reference to Viṣṇu, but the first book of the *Rāmāyaṇa*, which is a later addition to that epic, contains a continuation of Paraśurāma's story, according to which the hero was in possession of Viṣṇu's bow and met the young Rāma, son of Daśaratha, expressly to subdue him; but the latter, who had already broken Śiva's bow, now bent Viṣṇu's bow and deprived Paraśurāma of his glory. This legend, apparently a late invention, would be absurd on the supposition that both Rāmas are incarnations of Viṣṇu, since then the god would humiliate himself; but it shows that Paraśurāma had, in popular tales, been brought into some connexion with Viṣṇu; and this circumstance, together with the name Rāma, which he shares with the more famous seventh incarnation of Viṣṇu, may have facilitated his reception in the series of incarnations of that god. He was recognized as such at the time of the redaction of the present text of the *Mahābhārata* (see note on p. 193b), and thus in the introduction of his story there (iii. 115) a confused passage is inserted (v. 15–19) in order to make allowance for the current belief.

The incarnations with which we have dealt seem more or less to be set up by theological speculation rather than to have constituted part of a general and popular belief. It is different, however, with the two next incarnations, those of Rāma and Kṛṣṇa. They are the only ones which have any practical importance in the religion of India; for, as stated above, their worshippers form a considerable part of the Hindus and the great majority of Viṣṇuites. Hence it will be necessary to enter into more details with regard to these two *avatāras*. According to the unanimous belief of the Hindus, Rāma came long before Kṛṣṇa, the former at the end of the Tretā, the latter at the end of the Dvāpara, Yuga. The reason of this belief is, no doubt, the fact that the *Rāmāyaṇa*, which celebrates the life and deeds of Rāma, does not mention Kṛṣṇa, while, on the other hand, the *Mahābhārata*, in which Kṛṣṇa plays a most important part, not only frequently mentions Rāma and the other heroes of the *Rāmāyaṇa* as belonging to a past age, but also relates his adventure in a lengthy episode (Rāmopākhyāna).

In the case of Rāma we seem to watch an incarnation in the making, for in the original parts of the *Rāmāyaṇa*, viz. bks. ii.–vi., the poet regards his hero as essentially human, and seems entirely to ignore his divine character. The latter, however, is fully acknowledged in bks. i. and vii., which by common consent of all critics are declared to be later additions.[1] Therefore between the composition of the original work and the addition of these later parts the belief that Rāma is an incarnation of Viṣṇu must have arisen and have gained universal assent. Before that time Rāma had been an epic hero, but the *Rāmāyaṇa* seems to have made him immensely popular. Since the poet has described him as the best of men, the most dutiful son and loving husband, as possessed of every virtue, in short, as a model of morality, he became the favourite of the people at large and so the subject of veneration.[1] There is still another cause for Rāma's promotion to divine rank. His adventures are of such a wonderful character that he certainly appears more than a common mortal; he associates with superhuman beings represented as monkeys and bears, he undertakes an expedition against Laṅkā over one hundred *yojanas* of sea, fights and vanquishes the demon race of the Rākṣasas, etc. Thus it is not difficult to imagine that the epic hero became a popular god, and that in order to account for his divine dignity, notwithstanding his human character, he came to be regarded as one of the manifestations of the highest god—as an incarnation of Viṣṇu.

This belief has a popular as well as a speculative side. The latter is determined by the ideas about *brahma*, the evolution of the world from it, and the identification of Nārāyaṇa with Brahmā. The popular side of the belief in the incarnation of Viṣṇu is to some extent founded on that god's popular character as destroyer of demons (*daityāri*); Viṣṇu vanquishes the fiends to relieve the world, gods and men, from their oppression. The same function, ascribed to some minor deity, becomes the bond that connects him with Viṣṇu in popular opinion. The idea of manifestation was probably beyond the grasp of the mind of the people; they required a more material link between the god and his incarnation. In fables and epic poetry the connexion of a hero with a god is usually accounted for by a myth relating how the god begot the hero in question with some girl or woman; the hero is the offspring of the god. This relation did perhaps savour of illegitimacy; at any rate, it was not assumed in the case of the highest god and his manifestations, but was replaced by one of a more mystical character. The story about Viṣṇu's incarnation in Rāma is told in the *Rāmāyaṇa*, i. 15 ff.

The gods complain to Brahmā about the oppression and violence of the Rākṣasa Rāvaṇa, on whom he had conferred the boon that he could not be killed by a god. But, as he could be slain by a man, Viṣṇu consents to be born as such in the persons of the four sons of King Daśaratha by his three wives. When that king celebrates a sacrifice for the purpose of begetting sons, Viṣṇu appears in the sacrificial fire and gives Daśaratha a big vessel filled with divine sacrificial food (*pāyasa*) which he enjoins him to divide among his wives. Kausalyā gets half of the potion, and Sumitrā and Kaikeyī the remaining part, but in unequal portions.[2] In due time all the three queens are delivered of sons, Kausalyā of Rāma, Sumitrā of Lakṣmaṇa and Śatrughna, and Kaikeyī of Bhārata.

In accordance with this story, the incarnation of Viṣṇu is not of the same degree in all four sons; but his essence is present to a greater degree in Rāma than in his brothers. Probably Rāma alone was originally considered an incarnation, and his brothers were only later, through their connexion with him, regarded as partial incarnations. By a similar process the wife of Rāma, Sītā, came to be regarded as an incarnation of Viṣṇu's wife, Lakṣmī, though originally Sītā seems to have been a chthonic deity before she became an epic heroine.[3] These details, however, are apparently

[1] This question has been discussed at great length by Muir, *Orig. Skr. Texts*, iv. 441 ff. As it is important for the problem under discussion, we adduce here an argument which, in the writer's opinion, is conclusive. Near the end of the original work occurs a chapter (vi. 117) which is, without doubt, a later addition. It relates that, when Sītā entered the fire, the gods appeared and Brahmā declared Rāma to be Nārāyaṇa, the highest deity, etc.; for Rāma had thought himself a man till then. Now, if in the preceding part of the original poem Rāma had been asserted to be Nārāyaṇa, no such passage as the above could have been inserted in this place; nor would the author of the original work have deferred till its end mention of the fact that the hero is no other than the highest god. It may be noted that this is the only passage in this epic in which we meet with a name of Kṛṣṇa.

[1] In the original story on which Vālmīki based his epic, the character of Rāma does not seem to have reached perfection. He perfidiously killed Vālī—a deed which the poet struggles hard to show in a good light.

[2] The same story is told in different *Purāṇas* and other works; but there is no agreement regarding the proportion of the several parts of the *pāyasa* given to the three queens.

[3] Cf. art. HEROES AND HERO-GODS (Indian), vol. vi. p. 661.

the outcome of theological speculations, not of popular belief.

The remarkable change in Rāma's position from an epic hero to an incarnation of Viṣṇu, which, as stated above, took place between the redaction of the original *Rāmāyaṇa* and the addition of its first and last books, does not appear to be the result of a slow development of religious ideas, but seems to have been caused by the application to him of a theory already fully established. In other words, it is not likely that the theory of incarnation was first suggested by the story of Rāma; in all probability there was already another similar incarnation of Viṣṇu acknowledged by the people of India. This must have been his incarnation as Kṛṣṇa, since the preceding incarnations, as appears from our remarks on them, seem to have had little importance as far as popular religion was concerned. In the opinion of the present writer, the wide-spread worship of Kṛṣṇa as a tribal hero and demi-god, and his subsequent identification with Nārāyaṇa, the Supreme Lord of creation in that period, gave birth to the theory of incarnation, not as a philosophical speculation of learned mythologists and theologists, but as the great principle pervading and upholding a popular religion. For Kṛṣṇaism in this sense prevailed in India probably centuries before the beginning of our era, while Rāmaism, so popular from the 10th cent. A.D. downwards, is a comparatively late development. The incarnation of Kṛṣṇa is, therefore, the most important one for the elucidation of the problem under discussion—the origin and the development of the theory of incarnation.

The identity of Kṛṣṇa and Viṣṇu (or Nārāyaṇa) is generally acknowledged in the original sources of the history of his life and deeds, viz. the *Mahābhārata*, *Harivaṁśa*, and the *Purāṇas*. References to him in the literature which precedes the redaction of our text of the *Mahābhārata* are few and short; but they are of the highest interest, and therefore deserve to be examined with great care. In these ancient allusions to Kṛṣṇa we must distinguish between the names Vāsudeva and Kṛṣṇa, though in historical times they denote the same person. Vāsudeva is mentioned first in the *Taittirīya Āraṇyaka*, x. i. 6, as a god together with Nārāyaṇa and Viṣṇu, apparently as mystically identical with them. We next meet with this name in Pāṇini, IV. iii. 98, where the wording of the *sūtra* and the context in which it stands indicate that Pāṇini regarded him not as a Rājput, but as a person of the highest rank, probably as a god.[1] Kṛṣṇa's name occurs first in the *Chhāndogya Upaniṣad*, III. xvii. 6, where it is said that Ghora Āṅgirasa imparted a particular piece of secret knowledge to Kṛṣṇa, the son of Devakī. Here, then, Kṛṣṇa is still regarded as a man and not as a god. But in a verse quoted in two late *Upaniṣads*, the *Nārāyaṇātharvaśiras* and the *Ātmabodha Upaniṣads*, he, the son of Devakī, is mentioned together with Madhusūdana (= Viṣṇu) as having the attribute *brahmanya*; whatever that word may mean in this connexion, it is evident that the son of Devakī is here regarded as equal to Viṣṇu, or at least as a deity. The testimony adduced seems to warrant the assumption that, when the Vedic period drew towards its end, Vāsudeva was considered an equal of Nārāyaṇa and Viṣṇu, but that Kṛṣṇa, the son of Devakī, was still regarded in the Vedic period as a wise man inquiring into the highest truth, and only at some later time was he put on an equality with Viṣṇu. We conclude that Vāsudeva, the god, and Kṛṣṇa, the sage, were originally different from one another, and only afterwards became, by a syncretism of beliefs, one deity, thus giving rise to, or bringing to perfection, a theory of incarnation.

Vāsudeva is unanimously explained by all Indian writers as a patronymic of Vasudeva, his father according to the epic narratives. But Baladeva, who is likewise reputed a son of Vasudeva, is never called Vāsudeva. Besides, an old variant of Vāsudeva, noticed by lexicographers and used by Bhāsa in the *Dūtavākya*, v. 6, is Vāsubhadra, a form which recalls the similar name of another popular deity, Maṇibhadra, king of the Yakṣas. Now, as Maṇibhadra is also spelt Māṇibhadra (Māṇibhadda in Jainaprakrit), and Narasiṁha Nārasiṁha,[1] by an inorganic lengthening of the first syllable, so Vāsudeva and Vāsubhadra seem to have been forms, perhaps popular, of Vasudeva and Vasubhadra—names directly derived from *vasu*, denoting either 'wealth, riches,' or the gods of that name. If this etymology of Vāsudeva is right, we must assume that the story of his being the son of a knight Vasudeva and the name of his father have been developed from his very name Vāsudeva. In support of this assumption it may be said that the oldest tradition does not mention Kṛṣṇa's father, but his mother, calling him the son of Devakī.

If the narrative of Kṛṣṇa is more closely examined, we find indications that two different persons, a god and a man, are combined in him. For the story itself is naturally divided into two distinctive parts; the first (*bālacharita*) relates his early life among the cowherds as foster-child of Nanda; and the second, covering the rest of his life, relates his adventures as the leader of the clan of the Vṛṣṇis, and his alliance with the Pāṇḍavas, especially with Arjuna. In the former part it is easy to recognize him as a cowherd-god (Govinda, the cow-finder), and in the latter, as a Rājput hero. As infant, child, and young man, he worked many wonders, destroying demons chiefly, and mostly in company with Baladeva, his brother, who is also called Rāma and Hali, 'he with the plough,' or Halāyudha, 'he whose weapon is the plough.' Now, Baladeva too was a popular god—of husbandmen, as his plough proves. He is called Rauhineya, the son of Rohiṇī; but the story is that he was conceived by Devakī and afterwards transferred to the womb of Rohiṇī.[2] This story is apparently invented in order to make him a brother of Kṛṣṇa; probably the two popular gods Govinda-Vāsudeva and Baladeva[3] were closely connected, and, after the former was identified with the Rājput hero Kṛṣṇa, the latter came to be regarded as his brother. They are always found together till Kṛṣṇa has slain Kaṁsa and placed Ugrasena on the throne of Mathurā. Henceforth he appears as the tribal hero of the Yādavas; he is their leader in all important events of their history; he defends their town Mathurā against mighty enemies, and when resistance seems hopeless he leads the tribe of the Yādavas to the shore of the western ocean; there he builds Dvārakā, the new capital of the Yādavas. He enters into an alliance with the Pāṇḍavas, and with their help overcomes his great enemy Jarāsandha, king of Magadha; and he slays the latter's general Śiśupāla, king of Chedi. He took part in the tribal feuds of the Yādavas, and at last witnessed their ruin and the destruction of Dvārakā. His death was occasioned by the hunter Jaras (old age), who mistook him for an antelope and pierced his foot with an arrow. The unmistakably epic character of this story seems to prove that it has been the subject of an epic or a cycle of epic songs. This epic must have been current among the Yādavas, the Rājput race which revered Kṛṣṇa as its tribal hero; and, as the numerous clans of the Yādavas were settled in Northern as well as in Western India, the assumed epic must have had a wide circulation. The originals, if ever they were written down, have been lost, but the matter they contained has been preserved in the *Harivaṁśa* and some *Purāṇas*. Their great popularity in so large a part of India seems to have been the cause of their hero Kṛṣṇa having, by an epic syncretism to be observed in other literatures also, been introduced into the great national epic of the Bhāratas, where he appears as the friend and counsellor of the Pāṇḍavas.

Now in the *Mahābhārata*, the *Harivaṁśa*, and the *Purāṇas* the poets take every opportunity of

[1] See Patañjali's remarks on the *sūtra* in question. It is clear that Pāṇini did not regard Vāsudeva as a *kṣatriya* in the usual sense of the word, since he then would fall under the rule in the next *sūtra*. The compound *Vāsudevārjunābhyām* is against Pāṇini's own rule (II. ii. 33), according to which Arjuna should be placed first. The inversion of the order in the compound was apparently occasioned by Pāṇini's regarding Vāsudeva as superior to Arjuna, *abhyarhita*, though the rule which assigns the first place in a Dvandva compound to the *abhyarhita* was first given by Kātyāyana, his successor (II. 2. 34, *vārtt.* 4).

[1] *Taittirīya Āraṇyaka*, x. i. 7.

[2] A similar transfer of an embryo is told by the Śvetāmbara Jains of Mahāvīra, who was transferred from the womb of Devānandā to that of Triśalā.

[3] Notice the similarity of the names Vāsudeva and Baladeva, and of their variants Vāsubhadra and Balabhadra.

glorifying Kṛṣṇa as the Supreme God; but their description of his deeds, and especially of the counsels he gives to his allies, reveals to us a man, certainly not eminently good, like Rāma, but rather the contrary—a crafty Rājput chief who is not over-scrupulous in his choice of means for accomplishing his ends. Even the Hindus seem to have been conscious of the fact that he is not quite an ideal hero; for there is a very interesting chapter in the *Viṣṇu Purāṇa* (iv. 13) which undertakes a vindication of the character of Kṛṣṇa in one particular instance.

The question, then, is how this Rājput hero should have come to be acknowledged not only as a god, but as the incarnation of the Supreme Deity.[1] Christian influence, assumed by Weber, is excluded by chronological considerations, for the Jains have built up their entire hagiology on the model of the history of Kṛṣṇa; they assume nine Vasudevas, Vāsudevas, Baladevas, and Prativāsudevas. As this curious system of the Jains, which presupposes the worship of Kṛṣṇa as a very popular religion of India, is already found in some of their canonical books, and as these are prior to our era, there can have been no Christian influence at work in originating the worship of Kṛṣṇa. R. G. Bhandarkar supposes

'that a Kṣattriya of the name of Vāsudeva belonging to the Yādava, Vṛṣṇi, or Sātvata race founded a theistic system as Siddhārtha of the Śākya race and Mahāvīra of the Jñātṛka race founded atheistic systems.'[2]

This theory seems scarcely tenable for a very weighty reason: the deeds and adventures of Kṛṣṇa related by the authors of the great epic and the *Purāṇas* are essentially those of a warrior and Rājput chief, and there is none which shows him in the light of a founder of a religion. All that may safely be conceded, as a surmise, is that this Rājput chief, like some other kings of *Upaniṣad* renown, took a great interest in the highest theosophical questions, and thus gave an impetus to the formation of a new religion. Bhandarkar proposes an alternative theory:[3]

'Or, perhaps, it is possible that Vāsudeva was a famous prince of the Sātvata race and on his death was deified and worshipped by his clan; and a body of doctrines grew up in connexion with that worship, and the religion spread from that clan to other classes of the Indian people.'

This theory is, in the opinion of the present writer, more probable than the former, but it requires some alteration. We must keep in mind three significant points. (1) Vāsudeva seems to have been regarded originally as a god and as distinct from Kṛṣṇa; for, besides the general reason adduced above, there is an interesting story related in the Sabhāparvan of the *Mahābhārata* (ii. 14) in connexion with the history of Jarāsandha. Paundraka, king of the Bangas, Pundras, and Kirātas, pretended and was believed to be Puruṣottama (*i.e.* Viṣṇu); he was known under the name Vāsudeva, and had assumed the emblems of Kṛṣṇa. In the *Harivaṁśa* and several *Purāṇas*[4] his conflict with and destruction by Kṛṣṇa are related at some length. Now, whatever facts, if any, may underlie this legend, it is obvious that it could not have been invented unless at that time the dignity of Vāsudeva was not thought inseparable from the person of Kṛṣṇa; or, in other words, Vāsudeva was still regarded as an independent deity, probably a form of Viṣṇu. (2) A religious system based on the worship of Vāsudeva-Kṛṣṇa as the highest god is that of the Pāñcharātras or Bhāgavatas. The oldest account of it is contained in the Nārāyaṇīya section of the *Mahābhārata* (xii. 334–351).

There 'the Pāñcharātra is represented as an independent religion professed by the Sātvatas and is also called the Sātvata religion (cccxlviii. 55, 84, 84); and Vasu Uparichara, who was a follower of that religion, is spoken of as worshipping the Supreme God according to the Sātvata manner (*vidhi*) which was revealed in the beginning by the Sun' (cccxxxv. 19, 24).[1]

It appears from the above quotations that the new religion was originally a tribal religion confessed by the Sātvatas. Now, the Sātvatas are an important section of the Yādava race; thus we see that the religion which recognized Kṛṣṇa as the Supreme God was originated in that race to which Kṛṣṇa belonged. On this supposition we can understand that Vāsudeva-Kṛṣṇa is not found in the *Rāmāyaṇa* and the early Buddhist writings; for these works belong to Eastern India and the home of the Yādavas was Northern and Western India. (3) Some indications of the character of the religion professed by Kṛṣṇa may be found in the *Chhāndogya Upaniṣad*. There (III. xvii. 1 ff.) human life is described under the form of a *soma*-sacrifice, the natural functions—eating, drinking, etc.—are interpreted as elements of the sacrifice, and the cardinal virtues as the reward (*dakṣiṇā*). Then the text goes on:

Ghora, son of Aṅgiras, having explained this [subject] to Kṛṣṇa, son of Devakī, said: 'He who has become exempt from desire should repeat, at the time of his death, these three [Yajur Vedic mantras]: "O! thou art undecaying! Thou art unchanging! Thou art the true essence of life!" About it there are these two stanzas from the Rigveda [VIII. vi. 30 and I. l. 10]: "They see the morning light of that primeval seed which burns beyond the sky"; "Having beheld the superior light from beyond the darkness, we go to the Sun-god amongst the gods, to the highest light."'

The idea that human life itself is equal to a Vedic sacrifice is more than once expressed in the *Upaniṣads*;[2] it tends to lessen the importance of sacrificing, which was the highest duty in the old Brāhmanical religion, but has no place in a popular religion. Further, the imperishable nature of the soul is insisted upon, and its ultimate union with the Highest Light. These are some principles which have been fully developed in the religion which teaches the identity of Kṛṣṇa with the Supreme God.

The facts explained above allow us to form an opinion on the origin and gradual development of the belief in Kṛṣṇa's incarnation. During the Brāhmaṇa period Prajāpati the creator was believed to assume, on occasions of distress, various forms, as that of a boar or a tortoise, in order to rescue the creation. After him came Nārāyaṇa; he was identified with Viṣṇu, the slayer of demons. About the end of the Vedic period a popular deity, Vāsudeva, came to be acknowledged as a form of Viṣṇu. Now the race of the Yādavas, whose clans were settled both in the North and in the West of India, revered as their tribal hero Kṛṣṇa, the son of Devakī, who, like other princes of the *Upaniṣad* period, had the renown of having been an earnest seeker of religious truth. We assume that about this time the worship of Vāsudeva as a form of Viṣṇu had become the popular religion of the same people who worshipped Kṛṣṇa as their tribal hero, and that both kinds of worship influencing each other became in the end one in such a way that Kṛṣṇa was believed to be a manifestation of Viṣṇu—in a word, a human incarnation of the Supreme God.

To continue the account of Kṛṣṇa's incarnation, a myth must now be mentioned which connects his incarnation bodily with Nārāyaṇa. When the latter was implored by the gods to save the earth from the oppression of her enemies, Nārāyaṇa plucked out two of his own hairs, a black and a white one. Descending

[1] A good account of the opinions put forward by various writers on this problem is given by Richard Garbe in the introduction to his (German) tr. of the *Bhagavadgītā* (Leipzig, 1905). The reader will find there the references to the original papers.

to the earth and entering the womb of Devakī, the black hair was born as Kṛṣṇa, and the white one as Baladeva. This legend explains the names Kṛṣṇa, 'black,' and Keśava, fancifully derived from *keśa*, 'hair'; it accounts, moreover, for Kṛṣṇa being of dark colour and Baladeva light. It is to be noted that this myth makes Baladeva also an incarnation of Viṣṇu, though he is generally declared to be an incarnation of Śeṣa, the snake-god.

As has already been mentioned, the incarnations of Nārāyaṇa seem originally to have been termed 'manifestations' (*prādurbhāva*), whereby it is indicated that the god continued to exist in his true form though at the same time he manifested himself in a form chosen for a particular purpose.[1] However, instead of *prādurbhāva*, another term has become current, viz. *avatāra*, literally 'descending.' It was imagined that a part of the deity descended from heaven and took bodily form as a man, etc., or was born as such; we find also the word *aṁśāvatāra*, 'partial incarnation,' and even *aṁśāṁśāvatāra*, 'incarnation by a part of a part.' These terms were probably originated by a somewhat materialistic conception of the process of incarnation, evidenced also in the case of the four sons of Daśaratha. The orthodox opinion in the case of Kṛṣṇa, however, denies that the Supreme Deity is not wholly present in him. What the orthodox opinion was will be seen from the following extract from a commentary on the *Viṣṇu Purāṇa* which we transcribe from Muir, *Orig. Skr. Texts*, iv. 258:

'Puruṣottama is here figuratively said to have become incarnate with a portion of a portion of himself, because in the Kṛṣṇa incarnation he was manifested in a merely sportive body in the very circumscribed form of a man, and not because of any diminution of his power, since even in the Kṛṣṇa and other incarnations he is said to have shown himself in every possible form, and to have possessed all divine power, and so forth. But is it not the case that, if a portion is taken from a whole composed of parts, there is a decrease of power, etc. [in that whole], and that thus an inferiority of power will attach to the portion relatively to the whole, just as when a heap of grain, or any other such whole, is divided? I answer, No; since such a diminution does not occur in him whose nature is light; for though there is a seeming difference in the individuality of one lamp, and of another lamp derived from it, yet an equality of power is perceived in each; agreeably to the text from the Veda . . ., "That is full, and this is full; a full arises out of a full: if a full be taken from a full, a full remains"; and also agreeably to such texts as this, "The supreme Brahmā with the form, and with the characteristics, of a man, is a great mystery; but Kṛṣṇa is the lord of himself." And the employment of the term "hairs" in the words, "My hairs shall descend to the earth," and "This hair shall slay Kaṁsa," etc., is intended to signify that the task of removing the earth's burthen was such as Brahmā in all his plenitude could effect by a very slight instrumentality, and not to assert that the two hairs were identical with [Bala]rāma and Kṛṣṇa: for two insensible hairs, not being conscious spirits animating the bodies of those two persons, could not fulfil their task. If it be said that the lord occupying the bodies of Balarāma and Kṛṣṇa, which were produced by the magical operation of the hairs, will do so and so, we reply, "Yes; for there is no difference in the result, and because he himself said, 'I [shall be born] on the eighth night of the dark fortnight of the moon.'"'

It remains to notice the application of the incarnation theory to other gods besides Viṣṇu-Nārāyaṇa. We may exclude as alien to the present subject the various forms under which Śiva is adored as Rudra, Bhava, Mahākāla, Ardhanārīśa, etc., and the worship of his spouse as Gaurī, Pārvatī, Devī, Vindhyavāsinī, Chāmuṇḍā, etc.; for these are not limited and successive manifestations of the deity, as in the case of Viṣṇu's *avatāras*, but they may be said to be co-existent with each other. Different from them are the *avatāras* or *aṁśāvatāras* of many gods which are acknowledged in epic or classical works, and are intended to establish a connexion between a person, famous in mythical or legendary history, and some god or goddess. In original epics, in India as elsewhere, many of the heroes are supposed to be sons of a god. Thus, in the *Rāmāyaṇa*, Hanuman is the son of the Wind-god, Vālī of Indra, Sugrīva of Sūrya, etc., and in the *Mahābhārata* Bhīma is the son of the Wind-god, Arjuna of Indra, Karṇa of Sūrya, Yudhiṣṭhira of Dharma, Nakula and Sahadeva of the Aśvins, etc. The same view still prevails in the first book of the *Rāmāyaṇa* (ch. 17) where Brahmā exhorts the gods to beget sons with nymphs and demi-goddesses—sons who as monkeys and bears will be the helpers of Rāma in his strife with Rāvaṇa. In the *Mahābhārata* (i. 67, xv. 31), on the contrary, all the heroes of the epic are declared to be partial incarnations of gods, demi-gods, demons, great saints, etc. Here it is obvious that the idea of incarnation becomes mixed with that of re-birth; for only the latter could apply to the two last-named categories. It may be mentioned that something similar holds good also in the fully developed theory of Viṣṇu's *avatāras*; for the demon Hiraṇyakaśipu, whom Viṣṇu slays as Nṛsiṁha, is born again as Rāvaṇa, and for a third time as Śiśupāla, to be killed by Kṛṣṇa. But in the case of gods we have true *avatāras*, and, in this part of the epic, partial incarnation is substituted for the original parentage. In some cases, however, opinions differed. Thus Arjuna is the son of Indra, and should, therefore, also be an *avatāra* of Indra, and so he is called in a passage of the *Harivaṁśa* (v. 3040); but in the *Mahābhārata* he is considered an *avatāra* of Nara. The reason for this opinion, apparently, was that he is associated with Kṛṣṇa, and, as the latter is an incarnation of Nārāyaṇa, who is also named together with Nara, Kṛṣṇa's friend was regarded as an incarnation of Nara. For a similar reason, Baladeva is occasionally regarded as an incarnation of Viṣṇu, because his brother Kṛṣṇa is one; but usually he is regarded as an incarnation of the snake-god Śeṣa.

This theory of *avatāras* has become very popular, and is being applied in many cases even now. When a local saint has a proper shrine where he is worshipped, and his fame continues to increase, a legend is sure to be fabricated which declares him an *avatāra* of some god or *ṛṣi*. A similar notion of *avatāras* is also frequently met with in Sanskrit and Prakrit tales; a hero or heroine of the fable is declared to be an *avatāra* of a Gandharva, Vidyādhara, Apsaras, etc., in the sense that the latter has been born as a man or woman on earth, usually by a curse of some higher god whose displeasure he or she has incurred, and will resume his divine state when the period assigned for his punishment is over. Finally, the notion of incarnation has occasioned a frequent metaphor in Sanskrit; a man may be called an *avatāra* of Kāma, or a girl of Rati, just as we would say of a man that he is an Apollo, or a woman that she is a Venus. Such expressions prove how deeply rooted the idea of incarnation is in the Indian mind.

LITERATURE.—The necessary references have been given in the article. The subject has not been treated systematically before.

HERMANN JACOBI.

**INCARNATION** (Muslim).—Among the Muslims an interesting development of belief in incarnation occurred, though it is confined to the Shī'ites or Persian section of Islām and is in no sense Semitic. The details of the belief have varied with different sects and individuals, but its general outline is clear. It arose out of the fact that 'Alī, whom Muhammad desired as his successor, was set aside by the leaders at Medina until after Abū Bakr, 'Umar, and 'Uthmān had occupied the position of Khalif, and out of the further fact that 'Alī was assassinated in A.D. 660 by a Kharajite dagger. Al-Ḥasan, his elder son, died of poison nine years later, while al-Ḥusain, the younger, perished at the battle of Kerbela in 680. In time these tragic events led the followers of 'Alī in Persia to regard him and his sons as semi-divine, or even as incarnations of God. Thus the Shī'ites, who are called *ghāliya* or *ghulāt* ('ultras') or *'Alī ilāhī* ('deifiers

[1] A similar power is ascribed to the accomplished *yogī*, who is credited with the faculty of creating several bodies and being present in all of them at the same time (see *Yogasūtra*, iv. 4–6).

of 'Alī'), go the length of believing that God became incarnate in the person of the Prophet's son-in-law by descent (cf. T. Haarbrücker, *Schahrastâni's Religionspartheien*, i. 199). The best known of these sects, the Nuṣairī, regard 'Alī as the first of the three persons of the triad.

According to the more general Shī'ite view, 'Alī and his two sons were *imāms*, or divinely appointed leaders, and were succeeded for a time by other *imāms*. By some of the sects these *imāms* are regarded as *Nuqaṭ*, or 'Points,' of divine manifestation. The Shī'ites are divided as to the number of *imāms*, one part holding that there were seven, the other that there were twelve. Both agree that the last *imām* did not die, but is concealed, awaiting the proper time of his full manifestation. From each of these branches of Shī'ites important claimants of incarnation have appeared.

From the believers in seven *imāms* arose the sect called by Europeans 'Assassins,' a branch of which was established in Syria during the Crusading period. 'The Old Man of the Mountain,' Rāshid-ad-Dīn Sinān, who was for many years the terror of the region, claimed to be not only an *imām*, but an incarnation of the deity. His claim won large acceptance among the Ismā'īlians, though some hesitated to believe it because he was lame (see art. ASSASSINS, vol. ii. p. 138 ff.). From those who believe in twelve *imāms* there arose in the last century the Bābīs and Bahā'īs. On May 23, 1844, Mīrzā 'Alī Muḥammad, a merchant of Shīrāz in Persia, announced himself as the Bāb, or gate through which men might communicate with the concealed *imām*. He rapidly advanced from this point, soon claiming to be an incarnation of God—a claim that was allowed by a number of enthusiastic followers, some of whom suffered martyrdom for the belief. The Bāb himself was martyred at Tabrīz, July 9, 1850. One of the followers of the Bāb named Bahā'u'llāh in the year 1866–67 proclaimed himself as 'He whom God shall manifest,' whom the Bāb had foretold, claiming that the Bāb had been but as a John the Baptist to him. This caused a schism, the followers of Bahā'u'llāh being known as Bahā'īs and claiming that their founder was an incarnation of God (see art. BĀB, BĀBĪS, vol. ii. p. 299 ff.).

Another interesting outcome of the Shī'ite doctrine occurred in Egypt, where, in A.D. 967, the Fāṭimid dynasty, founded upon the claims of 'Alī, was established. In the reign of the Khalīf Ḥākim (A.D. 996–1021), of this dynasty, there came to Egypt an Ismā'īlian named Darazī, and publicly expounded Ismā'īlite doctrines. Though repulsed by the people, he was well received by the reigning family. In time he taught that the soul of Adam had entered into 'Alī and so had passed to the Fāṭimid line, and that consequently Ḥākim was an incarnation of God. Ḥākim was an eccentric character, whose persecutions of Christians and Jews, and whose attempt to purge Egypt of sexual immorality, had taken fantastic forms. It is doubtful whether he was altogether sane. The teaching of Darazī appealed to him, and, while he lived, these views appear to have dominated the court at Cairo. When Ḥākim finally vanished in a mysterious way, the followers of Darazī were driven out and went to the Lebanon, where they founded a new sect, called Darasæan, now commonly termed Druses. The Druses still regard Ḥākim as an incarnation of God. During the lifetime of Ḥākim a difference arose between Darazī and another teacher named Ḥamzah. The teaching of Ḥamzah prevailed. He became the real founder of the Druses. It thus happened that Darazī is counted a heretic by the sect that bears his name. The Druses hold that at the beginning there emanated from God a pure spirit of light called the universal mind, who became the medium of creation, and that, when God was incarnate in Ḥākim, this universal mind was incarnate in Ḥamzah. For a fuller account of them see SECTS (Christian) and SECTS (Muslim).

GEORGE A. BARTON.

**INCARNATION** (Parsi).—Incarnation in the proper sense of the term has no place in the religion of the Avesta ('the incarnation of Ahura Mazda' not being a proper designation of Zarathuštra [R. Edulji Dastoor, *A True Zarathosti Guide*, Bombay, 1913, p. 182]), but the conception of the king's sacred endowment, or 'holiness' (see art. HOLINESS [General and Primitive]), in virtue of the somewhat vague personification of its supernatural efficacy, developed into something in the nature of incarnation. This *khwarenah* was the mysterious element which made the gods (*Yt.* xiv. 2, xvii. 15, v. 89, x. 141; *Nyā.* iii. 11; *Ys.* lvii. 3, i. 1) and the souls of the dead (*Yt.* xiii. 1, 9, 11, 14–16; *Ys.* lx. 4) powerful (*Yt.* xix. 9 ff.) and worthy of worship; which gave the sun (*Yt.* vi. 1 ff.), the moon (*Yt.* vii. 5 f.), the stars (*Yt.* viii. 1), the pre-eminent star, Sirius (*Yt.* viii. 2 ff.), and water (*Yt.* viii. 34, xiii. 65; *Ys.* lxviii. 11, 21) their benign influences; which protected the house (*Ys.* lx. 2, 7) and the nation (*Yt.* xix. 64, 69, x. 27); which, as the 'Aryan glory' (*Sīr.* ii. 9), or the 'glory of the Aryans' (*Yt.* v. 42; *Sīr.* i. 25), bestowed wealth upon the Aryans, *i.e.* the Iranians (*Yt.* xviii. 1 f.), endowed men with vigour and wisdom, with the power of overcoming the hostility of nature and of demons (*Yt.* xviii. 2), with success and prosperity (*Yt.* v. 86; *Ys.* lx. 7); and effected what they sought to attain by their sacrifices (*Yt.* xiii. 24, 41, xvii. 6, x. 108, xxiv. 34, 46).

Etymologically the word *khwarenah* means 'light,' 'lustre,' and there is perhaps some connexion between this original meaning and the fact that, when Zarathuštra's mother, who was richly endowed with the *khwarenah*, was a young girl, she glowed like a great fire (*Dīnkart*, VII. ii. 7 f.), and so also the body of the Saošyant will shine as the sun (*ib.* VII. xi. 2; cf. iii. 7). In the Avesta, however, the 'glory' is never spoken of as 'light.' Here it flies in cosmic space (*Dīnkart*, VII. ii. 3) like a bird (*Yt.* xix. 34 ff.); it swims and hides in the sea (*Yt.* v. 42, xix. 56 ff.); it sojourns in reeds and in milk (*Bund.* xxxi. 32); in the form of an animal it accompanies the Chosen.[1]

The *khwarenah* of the Kavi dynasty was of a special and distinct type; here the 'Kavi *khwarenah*' becomes the 'king's glory' (*Ys.* i. 14; *Yt.* i. 21, xix. 9, 69 ff.). It was in virtue of this Kavi glory that the world-rulers of that dynasty acquired their title to their position, and their ability to perform their exploits. Now, as this power-substance manifested itself as a deity, and was invoked and worshipped as such (*Yt.* xviii. 7 f.; *Sīr.* ii. 9), we may speak of it in this aspect as in some sense an incarnation. The line of the Elect, of the men inspired and possessed by the *khwarenah*, begins with Haošyanha (*Yt.* xix. 26), and is continued through Takhma Urupi to Yima, the ruler of the blissful primal age (31). When once, in foolish arrogance, Yima spoke false words, the power-substance broke forth from him thrice (*Yt.* xix. 34, *i.e.*, doubtless, as priestly glory, warrior

[1] According to the *Kārnāmak*, 41 ff., and the *Šāh-nāmah* (E. G. Browne, *The Literary History of Persia*, London, 1902 ff., i. 137, 143), '"a very large and mighty ram" caught up Ardašīr and rode beside him on his horse, the fine ram being the royal glory.'

glory, and peasant glory, respectively; cf. *ib.* 53), passing to the god Mithra and the heroes Thraētaona and Keresāspa (cf. *Dīnkart*, VII. i. 25 ff.), and, finally, after a fierce struggle between the god of fire and the dragon for its possession, seeking shelter in the world-ocean. Here the Turanian chieftain Franrasyan vainly sought by dint of swimming to gain possession of it. The legend that tells how this head of a Turanian people, hostile to the Iranians (*Yt.* v. 41 f., ix. 18, 22, xix. 56 ff.), once delivered the Iranian country from an Arab conqueror is in all probability based upon pre-historical events (cf. E. Blochet, *Introd. à l'hist. des Mongols*, Leyden, 1910 [*Gibb Memorial Series*, xii.], p. 205 ff.). A fragment preserved in the *Hymn to the Khwarenah* (*Yt.* xix. 93) actually recognizes that Franrasyan too possessed the Kavi glory. At that period, however, it properly belonged to the monarchs of the pre-Zarathuštrian Kavi dynasty (*Yt.* xix. 71 ff.) down to Vištāspa, who at length embraced the religion of Zarathuštra. But the richest in glory was Zarathuštra himself (*Yt.* xix. 83). From him the supernatural endowment passes to the renewers of the world (xix. 22), and especially to the Saošyant, who comes in the final age (89). According to certain lost additions to the Avesta, the Kavi glory was transmitted to Ardašīr (Artaxerxes) and the Sasanian dynasty (*Dīnkart*, VIII. xiii. 17 ff.).

LITERATURE.—In addition to the works cited in the art. see J. Darmesteter, 'Le Zend-Avesta,' in *AMG* xxi.-xxiv. (1892-93).

N. SÖDERBLOM.

**INCARNATION** (Semitic).—One cannot expect to find among the ancient Semites a doctrine of incarnation as the term is ordinarily understood in Christian theology, for such a doctrine presupposes a reasoned conception of the universe, in which the natural and the supernatural, or the divine and human, are set over against one another. The Semites were far too primitive in their thought to have made such a distinction. In the period in which their religious ideas took shape they conceived that gods, men, and animals formed a single society, and even plants were sometimes thought to have a connexion with this society. One might, accordingly, expect divine potency to manifest itself in men, animals, and trees. Such a stage of thought is preparatory to that in which real incarnation may be thought to take place; it is itself too primitive. The Semites did not approach the later conception of incarnation until they came under the influence of the philosophical Greeks, and even then their thoughts were coloured by their earlier and less philosophical views.

**1. Rocks, springs, and trees.**—In its earliest form their thought pictured the manifestation of the divine as exhibited in springs of water, trees, and crags of natural rock.[1] This was, of course, not incarnation, but materialization, or rather the recognition of a divine power as resident in these material forms. It is not really materialization, for they had never conceived the gods as pure spirits separated from these things. Survivals of this stage of thought are seen at the present day in the East, where Muslims hang personal offerings on sacred trees, as at Sûf.[2]

**2. Animals.**—A closer approximation to incarnation was the conception of gods as living in animal forms. This stratum of thought is exhibited in its greatest perfection in Egypt (see 'Egyptian' section, above, p. 190). The sacred animals of Egypt were at the beginning but the totems of the originally distinct tribes, and what the ultimate explanation of totemism may be is not yet clear.

[1] Cf. W. R. Smith, *Rel. Sem.*[2], London, 1894, pp. 132, 167, 185. 196; G. A. Barton, *Semitic Origins*, do. 1902, pp. 87-97.

[2] Cf. Barton, *A Year's Wandering in Bible Lands*, Philadelphia, 1904, p. 162.

Among the Semitic peoples the traces of totemism are not so pronounced as among the Egyptians, and yet the investigations of Robertson Smith[1] made it a probable view that the Semites had also passed through the totemistic period of religious thought. It seems that among the heathen Arabs there may have been animal-gods, for some of the tribes trace their descent from animals, as other Semites trace their descent from gods, as will be shown later. One or two animal-gods clearly existed in Arabia. Yagûth, the lion-god,[2] was worshipped in the time of the prophet. Ya'ûq was an idol in the form of a horse,[3] while Nasr was said to have the figure of a vulture.[4] At Erech in Sicily, Ashtart was thought to have the form of a dove,[5] and at Tyre the head of a bull.[6] Ancient Babylonian hymns often speak of gods as bulls,[7] and in Palestine the Baals were symbolized by images of bulls. Whether the deity was actually thought to reside in the animal, or the animal was only a symbol of the strength and creative power of the god, is an open question. It is quite possible that the thoughts of the worshippers were not clear as to this. Obscure and equivocal as some of the evidence is, it is, nevertheless, clear that in varying degrees, and at times in a shadowy way, the Semites frequently thought of the gods as incarnate in animals.

An early stratum of thought discernible in a few passages in the OT conceived of God as taking the form of a man and then discarding it at will. Such was the man who came to Abraham's tent in Gn 18, the one who appeared to Gideon in Jg 6, to Manoah's wife in Jg 13, and to Joshua in Jos $5^{13-15}$. These were special manifestations of Jahweh; cf. art. DEMONS AND SPIRITS (Hebrew), I., 2.

**3. Descent from gods.**—The possible incarnation of a god in human flesh appears to have given rise to two different conceptions. These are the descent of men from gods, and the deification of certain men. Of these two conceptions the former seems to be the older. In Gn $2^7$ God is said to have breathed into man's nostrils the breath of life, and man became a living soul. This implies that man has a kind of kinship to God. In one of the Babylonian myths of Oannes it is said that he mingled his own blood with the soil and thus made man. This myth expresses in this way the sense of man's kinship to the divine which Gn $2^7$ expressed. In Gn $6^{2-4}$ it is said that beings of the divine order (*bĕnê hā-elōhîm*) married human wives, and that the issue of such marriages consisted of the heroes and men of renown of olden time. This is a recognition of a divine element in men of unusual or heroic qualities. The Babylonian Adapa, a man of unusual wisdom, is called a son of the god Ea.[8]

The view that unusual persons were god-begotten was undoubtedly universal in the early Semitic world. It lingered in an attenuated form down to the beginning of the Christian era. Philo Judæus declares that Zipporah was found by Moses 'pregnant by no mortal';[9] Isaac was 'not the result of generation, but the shaping of the unbegotten';[10] Samuel was 'born of a human mother' who 'became pregnant after receiving divine seed';[11] Tamar was 'pregnant through divine seed.'[12] It is possible that in the mind of Philo there was no thought of setting aside the

human father. He may have thought that the divine life-giving power of God was manifested through Abraham and Elkanah. His language with reference to Zipporah is, however, hardly open to that construction. But, whether he thought of the human father as an agent in these births or not, it is clear that the older conception lived in some form in his mind.

At least as old as this conception is the idea that whole tribes are of divine descent. Thus the Moabites are called the sons and daughters of Chemosh (Nu 21[29]). Jeremiah (2[27f.]) speaks as though the heathen Semites generally claimed descent from their gods; and, since these gods were represented by idols, he sarcastically refers to them as 'a tree' and 'a stone.' Virgil (*Æn.* i. 729 f.) by the phrase 'Belus et omnes a Belo' describes the Tyrians as claiming descent from Bel. As pointed out above, the Arabian tribes who claimed descent from animals probably in reality claimed descent from gods.

This more general conception, that whole tribes were descended from gods, is further removed from what we understand by incarnation than the conception that heroes or eminent persons are god-begotten. The ordinary plane of human life is too commonplace for early men, who are as yet unable to distinguish the spiritual from the material, or to have any strong realization that God is in it.

**4. Deified kings.**—Another close approach to the idea of incarnation is presented by the deification of kings in Babylonia, where, however, this was not as common as in Egypt. Most Babylonian kings recognized that they were quite distinct from the gods. Urumush, king of Kish, seems, however, to have been deified in his own lifetime, and his name enters as that of a god into the name of another man.[1] Shargani-sharri has the determinative for god written before his name[2] during his life, while Naram-Sin,[3] of the same dynasty, is constantly called a god, and had himself portrayed with the horns which represented divinity.[4] Naram-Sin is called on some seals the 'god of Akkad.' What led these kings to assume, contrary to the general Babylonian custom, that they were gods, we can now only conjecture. Some have supposed that it was the possession of the shrine of Nippur, but many monarchs who controlled that shrine never claimed divine honours. Others have suggested that it was the sudden world-wide expansion of the territory of these kings that led to their deification. Still others attribute it to Egyptian influence.

Two or three centuries later these kings of Agade were imitated by Dungi, Bur-Sin, and Gimil-Sin, kings of the dynasty of Ur. The founder of the dynasty, Ur-Engur, had not been regarded as a god, but Dungi greatly enlarged the dominion of Ur and contemporaneously began to write the determinative for divinity before his name. He had a festival ordained to himself as a god, and rearranged the calendar so that one month should be called *Ituezen-dungi*, or 'Month of the festival of the god Dungi.'[5] His name also enters, as the name of a deity, into the composition of the names of a considerable number of other men. Perhaps he and his successors in his dynasty meant by these claims to inform the world that they were the equals of the great monarchs of Agade. During the reign of these kings of Ur, offerings were made to Gudea and Urlama, former *patesis* of Lagash, as though they were gods. This was a post-mortem deification, for during their lifetime these rulers had claimed no divine honours.

[2] *Ib.* 251.
[3] *Ib.*
[4] Cf. J. de Morgan, *Délégation en Perse*, Paris, 1900, ii. 52.
[5] See King, *op. cit.* pp. 288, 298.

Apart from these cases we have no clear evidence of the deification of Babylonian kings. Ishmi-Dagan, of the dynasty of Isin, claimed to be the 'beloved spouse'[1] of the goddess Ishtar of Erech. Possibly this was because the king himself laid claim to divine rank. From whatever source or cause the deification of these kings arose, it was an even more emphatic way of marking their unusual quality than their supposed descent from a god would have been. To represent them as full-fledged gods in human form was to claim for them a real incarnation. It was all the more effective because opposed to the general customs of Babylonian thinking.

LITERATURE.—This has been fully cited in the footnotes.

GEORGE A. BARTON.

**INCARNATION (Tibetan).**—The theory of incarnation attains its most extreme development in Tibet. It is utilized there not merely in the usual Buddhist (and Hindu) way to explain by re-incarnations the ethical doctrine of retribution by the *karma* acquired by the individual, but also as a practical method of regulating the succession to the hierarchy, and even to postulate the perpetual incarnation of Buddhist gods within the bodies of the Grand Lamas.

The theory of hieratic succession by re-incarnation appears to have been introduced by the first of the series of Dalai Lamas, named Geden-dup (± A.D. 1473), the successor of Tsonkhapa who founded the now dominant Yellow-hat sect, the Ge-lug-pa. It seems to have been a device, on quasi-Buddhistic principles, to secure stability for the succession, by providing to some extent against the intrigues of rival party leaders. It assumes the continuous succession to the headship by the same individual under an uninterrupted series of consecutive re-embodiments. This obviously differs from the orthodox Buddhist conception of re-incarnation of an individual, which is not confined to any one particular channel. It supposes that the deceased head Lama is always re-born as a child within the country and often in the neighbourhood of the monastery, and the infant is to be discovered by oracular means and then duly installed in the vacant chair. On his death, he is similarly re-born, and so the process is repeated *ad infinitum*.

At first this system of selection appears to have been restricted solely to the Dalai Lamas of Lhasa; but about A.D. 1662 it was extended by the then Dalai Lama to the newly instituted Grand Lamaship of Tashilhunpo, and now it has been adopted by nearly all the great monasteries throughout Tibet, China, and Mongolia. It gives opportunities for much intrigue; and China as the suzerain of Tibet has found it necessary politically to take an active part in controlling the 're-incarnation' of the Dalai Lama, the temporal sovereign of the country. In A.D. 1793, China prescribed for the selection of this priest-king a lottery-scheme called the 'oracle of the urn,' by which the names of the competing infants are written on slips of paper and put into a golden urn, and, after prayer and other rites, the name first drawn is the fortunate one. The official directions for the working of this scheme are notified in a Chinese Imperial edict of A.D. 1808 engraved on stone slabs at the door of the great temple of Lhasa and translated by the present writer. It is a long document, and states near its beginning:

'On the passing away of the Lama the individual born in his stead is called "the incarnation of the illusory emanation" (*sprul-sku*), which in Chinese is called "So-so-i," meaning "the accepted and undoubted individual [re]-born"' (*sic*).

The lottery takes place in the immediate presence of the Chinese ambassador, the Amban, and it is also prescribed for the other three Grand Lamas of the Yellow-hat Church, namely at Tashilhunpo,

[1] See King, *op. cit.* 310.

Peking for inner Mongolia, and Urga for outer Mongolia. In practice the Lamas occasionally contrive to evade this form of nomination. In the exercise of its control over these 're-incarnations' the Chinese Government arrogates to itself powers which if taken seriously would imply direct interference with the soul, or its Buddhist equivalent. Thus the *Peking Gazette* of 31st March 1877, in denouncing a recalcitrant 're-incarnating' Lama who had insulted the Imperial Chinese Resident at Lhasa and carried off the official seals, intimates that the Emperor as 'Son of Heaven' had decreed as a punishment that 'his [the Lama's] soul should not be allowed to transmigrate at his decease.'

The fiction which credits the Dalai Lama of Lhasa with being the perpetual incarnation of the greatest and most popular of the Buddhist divinities, Avalokiteśvara (*q.v.*), the God of Mercy and the special object of the popular *Oṁ-maṇi* magical formula, has been shown by the present writer to have been the invention of that Dalai Lama who was the first of the Lhasa priest-kings, namely Lo-bsang Gya-mts'o (A.D. 1615–1682). He posed thus as a priest-god as well as temporal sovereign. Contemporary evidence of this title and position is found also in a letter from the Jesuit missionary (J. Grueber) then resident in Lhasa in the middle of the 17th cent., which refers to this Dalai Lama as 'that devilish God-the-Father who puts to death all such as refuse to adore him.'

**INCENSE.**—The custom of burning sweet-smelling substances in religious ceremonies, or sometimes as a separate rite, has been of wide-spread occurrence, especially in the higher religions.

**1. Kinds of incense.**—While frankincense and other gum resins are more strictly to be called incense, many other substances have been used for the purpose of producing an agreeable odour when burned—various kinds of wood or bark, branches or roots of trees, herbs and odoriferous plants, seeds, flowers, fruits, aromatic earths, etc.

Of substances referred to in the Bible which are known to have been used by the Hebrews and other peoples as incense there are: (1) *Wood*—aloes (eagle-wood), Ca $4^{14}$, cf. Dioscor. i. 21; sweet cane, Jer $6^{20}$. (2) *Bark*—cassia, Ps $45^{8}$; cinnamon, Rev $18^{13}$. (3) *Roots*—costus, Ex $30^{34}$. (4) *Gum resins*—balm (? mastic), Gn $37^{25}$, Ezk $27^{17}$; tragacanth (spicery), Gn $37^{25}$; balsam (spices), Ca $5^{1.13}$; bdellium, Gn $2^{12}$, cf. Dioscor. i. 80; galbanum, Ex $30^{34}$; ladanum (myrrh), Gn $37^{25}$; stacte, Ex $30^{34}$; frankincense, Ex $30^{34}$. (5) *Flower products*—saffron, Ca $4^{14}$; spikenard, Ca $4^{14}$. (6) *Animal products*—onycha (the operculum of a marine mollusc), Ex $30^{34}$.

The sacred incense used in later Hebrew ritual was a compound of stacte, onycha, galbanum, and pure frankincense, seasoned with salt and reduced to a fine powder.[1] In still later times—the Herodian period—Josephus records that thirteen ingredients (sweet-smelling spices) were used.[2] Plutarch gives a list of sixteen ingredients used by the Egyptians in preparing *kuphi*—honey, wine, raisins, sweet rush, resin, myrrh, frankincense, seselis, calamus, asphalt, thryon, dock, both kinds of arceuthids, cardamum, and orris root.[3] In both cases the compounding was of ritual importance and a matter of mystery. Sacred books were read aloud while the *kuphi* was being mixed.

Frankincense (Gr. λιβανωτός, Heb. *l<sup>e</sup>bhônāh*, Med. Lat. *olibanum*, *libanus* in Vulg. of Sir $24^{21}$ $39^{18}$) is the gum resin of trees of the genus *Boswellia* (*B. Carterii*, *B. Frereana*, *B. Bhua-Dajiana*), and is exported from Somaliland, probably the Punt of Egyptian inscriptions. Pliny[4] refers to it as a product of Arabia (Hadramaut), and says that the Sabæi alone behold the tree which produces it, and of these only 3000 families by virtue of hereditary succession. The trees are sacred; and, while pruning the trees or gathering the resin, men must

[1] Ex $30^{34}$.

[4] *HN* xii. 14 ff.

not contract pollution by sexual intercourse or contact with a corpse. It is carried to Sabota, where the priests claim a tithe of it in honour of their god Sabis; until this is paid, none of it may be disposed of. Herodotus[1] speaks of winged serpents which guard the trees and are driven off by burning styrax. It was one of the ingredients of Jewish incense,[2] as it is still of that used in Christian ritual. Classical authors, in speaking of frankincense, usually refer to its exporting place as the seat of its origin, *e.g.* Syria and Phœnicia.

**2. Purpose of incense.**—The use of incense is connected primarily with the psychical aspects of the sense of smell. Pleasant-smelling perfumes, in whatever way they are obtained, are agreeable to men. They were offered to honourable persons in ancient times, or diffused over the roads on which they travelled.[3] Incense was also used at banquets as an agreeable accompaniment of food and wine. Hence it was supposed that such perfumes would also be agreeable to gods or spirits, on the same principle as that by which foodstuffs which men liked were offered to them. This is obvious when we consider that the smoke of sacrifice is pleasing to the gods, and that they are thought to seize on 'the unctuous smoke' with delight,[4] and that flowers are commonly offered to the gods, or scented oils applied to their images.[5] The bodies of the dead are also decked with flowers, aromatic oils, and perfumes for the same reason. Disagreeable odours, being obnoxious to men, were also obnoxious to supernatural beings. Hence it came to be thought that beneficent gods not only liked, but actually themselves possessed, pleasant odours.

Egyptian texts illustrate these beliefs. Isis has a wonderful odour which she can transfer to others, *e.g.* to the dead. Osiris transfers his odour to those whom he loves. At the anointing of the corpse, the 'perfume on the head of Horus' is besought to place itself on that of the deceased.[6] Similar ideas are found in Mandæan belief. The Light beings have a perfume which invigorates those who smell it.[7] In Persian belief the righteous after death are said to have a sweet odour.[8] The region of the gods, the place of bliss, has also a sweet perfume. The Polynesian *Rohutu* is free from all noxious odours.[9] In the Persian texts the deceased, approaching the blissful regions, is surrounded by a perfumed breeze.[10] Sweet odours form one of the characteristics of Hindu and Buddhist Paradises, and, where Divine beings or saints descend to the malodorous hells, they change the evil odour to sweet perfume.[11] Evil odours characterize the Persian regions of punishment, as well as the Muhammadan and Christian hell.[12] The idea that Paradise has a pleasant odour is found in Jewish, Christian, and Gnostic writings. Thus in the regions of the eastern Paradise and the 'garden of righteousness' visited by Enoch there are many fragrant aromatic trees, *i.e.* those which yield material for incense, and among them one 'with a fragrance beyond all fragrance.'[13] The idea that Paradise is a region of fragrant perfume appears already in the *Apoc. of Peter*, and is found in most accounts of visits to or visions of the Other-World, while the same idea is referred to in inscriptions on Christian gravestones.[14] Spiritual persons and martyrs also possess this fragrance.[15] In Gnostic writings this perfume is connected with

the powers of the upper world, or the various heavens.[1] In Gnostic and Christian circles the anointing with fragrant oil had the effect of repelling the demons, because it was 'a type of that sweet odour which is above all things.'[2]

While evil odours are obnoxious to gods, they also scare off demons, who are likewise put to flight by pleasant odours, *e.g.* that of incense, which is one of the material objects commonly credited with magical virtues. The Andaman Islanders believe that the smell of bees'-wax is offensive to a demon of epidemic, who is kept off by stakes painted with it.[3] The Kei Islanders (New Guinea) burn the scrapings of buffalo horn to drive off demons.[4] The Thompson River Indians scare off ghosts by burning juniper.[5] In India, incense, which pleases the gods, drives off demons, who are also kept off by offensive odours.[6] In Canton, on the third day of the tenth month, filth is swept out of the house, and three sticks of incense are used to drive off the demon of penury.[7] In Palestine it is commonly used as an apotropæic,[8] and in Morocco before and during the 'Great Fast' incense is burned to keep off the *jinn*.[9] Incense, because dreaded by evil spirits, is one of the ingredients of the 'amulet-box' in Tibet.[10] In Greece, at the *Anthesteria* and also at child-birth, doors were smeared with pitch to keep out ghosts and demons.[11] The Book of Tobit[12] illustrates this belief among the Jews. The liver and heart of a fish are laid on 'ashes of perfumes' so as to cause a smoke. When the demon smells this, he flees away to Egypt. In modern survivals similar ideas are found. In the Tyrol, witches are expelled by fumigating houses with juniper, and by burning rosemary, hemlock, aloe, and resinous splinters. Fairies are also kept off by strong odours, *e.g.* burning an old shoe, or by garlic.[13] Hence, generally, fumigation is a method of purifying persons and places, and of scaring off all kinds of evil influences; and for this incense is often used, as, *e.g.*, in mourning ceremonies in China.[14]

Besides the primary purpose of the use of incense as an offering pleasing to the gods, there were other practical, symbolic, or mystical uses which it served. (1) It was burned to neutralize the strong odours of bloody or burnt sacrifices, especially in hot regions. It was also used for sanitary reasons, *e.g.* in places where the dead were buried.[15] (2) It was likewise a symbol or vehicle of prayer. This is already found in Egypt, where it was thought that the smoke as it rose bore words of power or of prayer to the gods, who were pleased by its odour. The soul of the dead ascended to heaven by the smoke of the incense burned on his behalf.[16] In Jewish thought, prayer was connected with incense. In Ps 141[2] it is compared to incense. Cf. Rev 5[8], where golden bowls full of incense represent prayer. In Rev 8[3, 4] prayer rises with the smoke of the incense, as in the Egyptian view. So in Christian thought incense has usually been regarded as symbolic of prayer, though it also typifies contrition, the preaching of the faith, etc. (3) More mystical views have sometimes been entertained. Plutarch explains the beneficial effect of the Egyptian *kuphi* by saying that its sixteen ingredients are a square out of a square. Being composed of aromatic ingredients, it lulls people to sleep, loosens the tension of daily anxieties, and brightens the dreams. It is made of things that delight most in the night and exhibits its virtues by night.[1] Plutarch also gives medico-mystical reasons for the burning of other substances at other times, *e.g.* resin in the morning to purify the air, because of its strong and penetrating quality; myrrh at midday, because its hot nature dissolves and disperses the turbid qualities in the air.[2] Philo explains the four ingredients of the Hebrew incense as symbolizing the four elements, and thus representing the universe.[3] Josephus writes that the altar of incense, with the thirteen kinds of sweet-smelling things gathered from all places, points to the fact that God is Lord of all.[4] In the Orphic hymns the different substances used and offered to the gods are chosen because of some occult reason in each case.

W. R. Smith (426 f.) considers the religious value of incense as originally independent of animal sacrifice, since frankincense was the gum of a very holy species of tree collected with religious precautions. The right to see the trees was reserved to certain sacred families. While harvesting the gum they must practise continence and take no part in funerals.[5] The virtue of the gum lay in its being regarded as the blood of a divine plant.

**3. Ritual use of incense in ethnic religions.**—(*a*) *Lower races*.—The use of incense among lower races is hardly known, save perhaps where they have been in contact with higher races using it. We may, however, note the American Indian custom of offering tobacco smoke to the gods, and the Polynesian offering of flowers and aromatic substances.[6] Among the Sakai, Semang, Jakun, etc., the only common kind of offering is the burning of incense (benzoin). At a death among the Sakai, the magician waves a censer seven times over the body, recommending the dying man to think of his dead ancestors. As the smoke mounts up and then vanishes, so does the soul. Good spirits love its smell and evil spirits hate it. In sickness, among the savage Malays of Johore, the magician burns incense. The fumes rise to the abode of Jewa-Jewa and gratify him. He welcomes the soul of the magician and grants him medicine for the sick.[7] Incense is burned as an offering at shrines, saints' tombs, etc., among the Malays, and is the usual form of burnt sacrifice, with invocation to the Spirit of Incense. It reaches the nostrils of the gods and propitiates them as a foretaste of other offerings to follow.[8] It is also used in magical ceremonies, *e.g.* to make one walk on water or remain under water in an ordeal, in the use of the divining rod, or to cause a spirit to possess a magician.[9] Callaway refers to 'incense' burned with Zulu animal sacrifices (blood and caul of a bullock) to the spirits, in order to give them a sweet savour. It is apparently some native product and is also used in rites for the cure of sickness.[10]

(*b*) Among the *Semites* the use of incense came to be wide-spread. Its name among the Babylonians was *ḳutrinnu*, and the incense-offering

consisted of odoriferous woods (cedar, cypress), myrtle, cane, and sweet herbs, by which the gods were made to smell a pleasing odour. After the Deluge, its survivor offered calamus, cedar, and fragrant herbs, and 'the gods inhaled the sweet odour' and 'gathered like flies round the sacrificer.'[1] Incense is frequently mentioned in the texts—*e.g.*, 'before Šamaš he makes an incense-offering'—or kings are represented making this offering. Nabonnedos is described as filling the temple with the odour of incense.[2] Herodotus[3] says that 1000 talents of frankincense were offered on the great altar of Bel at his annual feast, and the author of Is 65$^{3}$ refers to Babylon as the land where incense is offered on bricks. It was burned as a ritual accompaniment of incantations, prayers, and the presentation of oracles, and also at the yearly mourning for Tammuz, with which was combined a memorial of the dead, who are said to 'arise and inhale the incense of offerings,' as well as at funeral rites.[4] It was also used as a fumigatory, *e.g.* of the gods' table and its accessaries and the place whither the gods were supposed to come, of houses, and of persons.[5]

Evidence of the popularity of incense-offerings among the peoples of Canaan and the surrounding districts is found in the fact that it is the most commonly denounced form of idolatry in Israel. Incense was offered on altars of brick or on the housetops to Baal, the sun, moon, stars, etc.[6] Lucian describes the sweet odours and the incense smoking without ceasing in the temples of the Syrian goddess.

(*c*) Although in the OT the *Hebrew* use of incense seems to be early, this is due to the rendering of the word *ḳᵉṭôreth* as 'incense,' when, strictly speaking, it means the savoury odour or smoke of a burnt sacrifice.[7] The word translated 'frankincense' is *lᵉbhônāh*, λίβανος, Arab. *lubān*, meaning a sweet resinous gum, and incense in this sense was not certainly used until the 7th century.[8] *Ḳᵉṭôreth* also came to mean 'incense.'[9] Ezekiel makes no reference to incense in his description of the reformed ritual. The first distinct reference to its use in the cult of Jahweh is in Jer 6$^{20}$ 'To what purpose cometh there to me frankincense from Sheba, and the sweet cane [calamus] from a far country?' Cf. 17$^{26}$ 41$^{5}$ and Is 43$^{23.24}$ 60$^{6}$ 66$^{3}$—the latter passages show that it was not required, and was an innovation in the cult of Jahweh and was expensive. Once admitted, however, it came to be a regular part of the ritual, and is frequently referred to in the Priestly Code (P). Incense was offered either (1) by itself, or (2) as a part of other sacrifices. (1) It was offered in censers, *e.g.* on the Day of Atonement when the high priest appeared before the mercy-seat;[10] or when Aaron passed through the congregation to stay the plague with his censer and incense (an atonement and fumigation).[11] The incense used in these rites was carefully compounded according to a set formula,[12] and was obviously regarded as sacred—'most holy' and not to be used for common purposes. It must not be consumed on 'strange fire,' *i.e.* fire from some other source than the glowing altar coals,[13] and it

must not be offered by any but the priests.[1] Probably as a later custom a separate altar on which this incense was burned came into use, and on it incense was burned morning and evening.[2] (2) Frankincense (*i.e.* not the compounded incense of Ex 30$^{34}$) was offered with the meat-offering,[3] and firstfruits,[4] and burned with them on the altar. It was also placed on the shewbread as a 'memorial,' *'azkārāh*, in two golden vessels and then consumed on the altar at each weekly renewal of the bread.[5] But it was not to be offered with a sin-offering or with the 'meal offering of jealousy.'[6]

In later times the daily offering of incense became an elaborate ceremony, and priests were chosen by lot to offer it.[7]

(*d*) In *Egypt* the burning of various kinds of incense was always an important rite, each ingredient of it having magical properties, and, as has been seen, its smoke was supposed to carry the words of prayer as well as the souls of the dead to heaven. Prayer was made, *e.g.*, to Rā, that he would draw the soul up to heaven on the smoke of the incense. Probably the earliest reference to the use of incense in any religion occurs in the notice of Sanchkara, a king of the XIth dynasty, who sent an expedition for aromatics through the desert to the Red Sea towards the incense land of Punt. Hâtšepsu, a queen of the XVIIIth dynasty, also sent an expedition by sea thither. Punt is probably Hadramaut and Somaliland.[8] Incense was also obtained from Gilead.[9] A common representation on the walls of temples is that of a king offering incense. He holds a censer in one hand and with the other throws little balls or pastilles of incense upon it, praying the god to accept it and give him a long life. Immense quantities of incense are often spoken of as having been offered, *e.g.* 1000 censers, or, as an inscription referring to Rameses III. reports, 1,933,766 pieces of incense, etc., during the 31 years of his reign.[10] It was offered to all the gods, who delighted in its odour, their statues being censed with it and perfumed. Often it accompanied other offerings, greater or smaller—*e.g.*, frankincense, myrrh, and other perfumes were placed in the carcass of the bullock offered to Isis[11]—or was presented by itself, as described above. The censer was an open cup holding fire, with or without a handle, but other forms were also used.[12] At funerary rites the deceased was purified with incense. Five grains were twice offered to mouth, eyes, and hand, once for the north and once for the south; then incense from foreign parts was similarly offered, along with the litany of purification. Myrrh, resin, etc., but not frankincense, were placed in the body which was embalmed.[13]

(*e*) Incense, in the sense of a gum resin, does not seem to have been used in *Greece* until post-Homeric times, and Pliny says that people knew only the smell of cedar and citrus as it arose in volumes of smoke from the sacrifice.[14] The idea of a fragrant odour, *e.g.* of sacrifice, being pleasant to the gods was well known.[15] The wood of odoriferous trees, *e.g.* a kind of cedar (τὸ θύον),[16] as well as myrtle was burned in houses for its fragrant smell. In Homer[17] *θύος* probably means no more than the burning of such wood or some native pro-

duct as an offering, or it may simply mean 'sacrifice.' Later it came to mean 'incense,' and was the source of Lat. *tus*. The word for 'frankincense,' λιβανωτός, was of foreign derivation. Incense as such was not used before the 8th cent. B.C.,[1] and is first mentioned in Euripides.[2] Schrader is of opinion that it may have been introduced through the cult of Aphrodite, and it was certainly traditionally thought to have come from Phœnicia *via* Cyprus, where it was used in her cult.[3] It was brought into Greece commercially from Arabia, and imported thence by Phœnicians.[4] Incense was burned with bloody sacrifices as an offering or to combat evil odours,[5] or with fruits, cakes, wheat, etc.,[6] or as a separate offering, both in domestic ritual and in the cult of the gods; *e.g.*, it was burnt to Zeus Meilichios, to Demeter before consulting the oracle at Patræ, and to Hermes and Sosipolis.[7] The inventory lists of some temples contain evidence of the large quantities which came to be used, and it was sometimes given as a gift by one person to another.[8] Incense of different kinds was also used largely in the Orphic cult, as the hymns show. It was offered along with cakes of honey, πέλανοι, without being burned, in the rites of certain divinities.[9] The method of burning incense was to throw it on the altar so as to mingle with the smell of the victim, or to fill the victim with it,[10] or to burn it in braziers standing on or near the altar, or even outside temples, or in vessels which could be borne on the hand.

(*f*) In *Roman* religion, incense (*tus*) was one of the most important of the bloodless offerings (*libamina*), and indeed without it no rite was regarded as complete. But, as in Greece, odoriferous woods and herbs had probably been used first, as described by Ovid in his account of the Palilia[11]—olive, pitch-wood, laurel branches, and Sabine herbs.[12] Gums and resins came to be used—frankincense (*masculum tus*),[13] myrrh, crocus, costum.[14] In the case of animal sacrifices, incense, saffron, and laurel were burned as a preliminary, and, as the animal was led up, incense and wine were sprinkled on the altar. It was also offered with the blood, and burned with the *exta*.[15] Incense was also offered by itself in public or private ritual; and this is illustrated by the fact that one method of forcing a renunciation of Christianity was to burn some incense on an altar before an image or to the Emperor. Incense was offered to the *lar familiaris* daily.[16] The method of using it was to burn it on the greater altars, or in braziers, or small portable altars (*focus, turibulum*). It was carried in a casket called *acerra* (much used in funerary ceremonies), whence it was taken and burned.[17] It was also offered for the averting of prodigies *c.* 296 B.C.,[18] and burned in magical ceremonies.[19] The introduction of incense into the cult was connected with Bacchus, the first to make offerings of cinnamon and frankincense[20]—an obvious suggestion of its entrance into Roman ritual through the Greek cult of Dionysos. Elsewhere Ovid[1] speaks of its importation from the Euphrates region, perhaps connecting it with the Oriental cults which introduced it into Greece.

(*g*) Hindus have always been fond of pleasant odours, and *India* was already celebrated for its perfumes in ancient times. Incense from Arabia was early imported there, but many native kinds of sweet-smelling materials have long been in use—benzoin, and other gum resins, seeds, roots, dried flowers, and fragrant woods. These are burned ritually or in ordinary domestic usage. In ancient times sandal-wood was burned as incense in temples and as a fragrant stuff in houses, and in the daily rites the sacred fire was fed with consecrated wood, usually from the Palāśa tree.[2] In modern Hinduism the use of incense is wide-spread in all forms of cult. Thus in the cult of Śiva it is daily burned by the priest before the stone representing the god at Orissa, and perfumes are also placed on it. In the Vallabha sect of Vaiṣṇavism the Mahārājas offer incense and swing lights before the images, and the same act of homage is paid to them by the people. Camphor and incense are burned before the image of Kṛṣṇa, and in the demon cults of Western India perfumes are commonly burned. In the *Pañchāyatana* ceremony of the Brāhman householder perfumes and flowers are offered, and among the sixteen acts of homage is the offering of perfumes, sandal, flowers, and incense (*dhūpa*; see Monier Williams, *passim*).

(*h*) Incense was unknown in early *Buddhism*, which was opposed to external ritual, but in the course of time its use, especially in northern Buddhism, has become general. Thus, in Ceylon, perfumes and flowers are offered before the image of Buddha, and in the Pirit ceremonial incense is burned round the platform on which the relics of Buddha are exposed.[3] But it is in Tibet that the use of incense is most prevalent, and Huc and other travellers there have referred to the likeness of its ritual use and of the censers to that of the Roman Catholic Church. It is used in the initiation of a monk; it is offered to the good spirits and Lamas in the daily cult of the monasteries and of the village priesthoods; it is one of the usual offerings in the temples, and is prominent in the festivals at which 'clouds of incense fill the air'; it is used in exorcisms, in baptisms, and other ceremonies; it is burned in censers before the Lamas at the performance of religious dramas, or in shrines and chapels, etc. Perfumes and incense form one of the five sensuous offerings, and figure prominently in the 'presentation of offerings,' which is one of the seven stages of worship. These seven offerings are 'essential,' and among them flowers and incense occur as early as the 7th century. They bear Sanskrit names, and are borrowed from Hinduism.[4] In Japanese Buddhism, incense is also commonly used, and has influenced the native Shinto religion. In earlier Shintoism incense was unknown, but it is now burned in censers at many ceremonies, *e.g.* at the new moon, and at magical rites.[5]

(*i*) In *China*, incense is much used in public and private cults. It is offered in the temples as part of the daily worship, and it is burned at festivals and in processions. It is also offered before the ancestral tablets or before the household deities, and is used in consulting the gods and in magical

ceremonies. Chinese Buddhism also used it extensively.[1] In Chinese funeral ceremonies the burning of incense plays an important part, both as an offering and as a fumigatory, and one purpose is to gratify the olfactory nerves of the soul of the deceased.[2]

(*j*) In the ancient *Persian* religion incense was in use. It was burned five times daily in the official cult, and at times was used in large quantities. Herodotus[3] describes Darius burning 300 talents of frankincense upon the altar. It was also burned as a method of purification or fumigation, and in a passage of the Vendīdād[4] it is called 'incense of *vohu-gaona*'—'Thou shalt perfume Vohu-mano [perhaps an idol; see above, p. 153ᵃ] therewith.'[5] Sandal-wood and incense are burned in modern Parsi ritual.[6] The *Bahman-Yašt*[7] describes how, in the 'sheep period,' firewood and incense will be properly supplied.

(*k*) Incense was very largely used in the religion of ancient *Mexico*, and was offered to all the gods, and in all festivals, processions, and sacrifices. Incense-burning was performed four times daily in the temples. Images of gods were censed in the temples and in processions, and the chief officiant was also himself censed. Some gods desired only bloodless sacrifices, of which incense was one, *e.g.* Quetzalcoatl, who delighted in fragrant odours and perfumes. The incense was carried in an embroidered bag and thrown on an open censer (*tenaitl*) of baked clay containing fire. It consisted of copal, or it was sometimes made from a herb called *yiauhtli*. Its fumes were of a narcotic kind and were also used to stupefy human victims. The fumes of incense were regarded as typifying prayer.[8] Incense consisting of sweet-scented gums was used in *Peruvian* ritual and offered as a sacrifice. Golden censers or braziers stood in the temples.[9]

(*l*) In *Muhammadan* cultus proper, incense is not used, but it is commonly offered at the shrines of saints, and is permitted by the traditions as a perfume for a corpse. Muhammadans in India, possibly as an influence from Hinduism, use it in their rites, *e.g.* circumcision, marriage, funerals, etc., and it is supposed to have the effect of keeping off evil spirits. But among all Muhammadans it is burned in houses on braziers, or at marriage processions it is burned in a *mibkharah*, and it is also commonly used in magical ceremonies, *e.g.* to counteract the evil eye, or in the 'science' of *da'wah*, a method of incantations in which various perfumes are burned according to a table showing the letters of the alphabet. The letter of the name of the person for whom the incantation is made gives the required perfume. The materials used for incense are frankincense, benzoin, storax, coriander-seed, aloes-wood, etc.[10]

4. **Incense in the Christian Church.**—Although incense was used in Jewish ceremonial, while such a prophecy as Mal 1[11] might seem to point to its continued use in the new dispensation, and though it was one of the offerings of the Magi and its use is referred to in the Apocalypse, there is no evidence that it was part of early church ritual; indeed there is strong evidence against it. Some of the Fathers refer to it as a type of prayer; but Tertullian, Athenagoras, Arnobius, and Lactantius clearly witness against its ritual use.

Tertullian[1] says: 'Not one pennyworth of incense do I offer Him.' Athenagoras[2] declares that God does not require the sweet smell of flowers or incense. Arnobius,[3] referring to the fact that the early Romans did not use it, maintains that Christians may safely neglect it. Lactantius[4] says that odours are not desired by God, and agrees with Neo-Platonist writers that frankincense and the like should not be offered to Him.

The fact that it was a Jewish usage may have tended to make Christians neglect it, but what had probably a more powerful effect was its use among pagans and the common practice during the ages of persecution of insisting that Christians should offer a few grains of incense to the gods or on the altar of the Emperor as a token of their renunciation of their faith. Such apostates as yielded in this way during the Decian persecutions were called *Thurificati*. Incense was, however, used for fumigations as a sanitary precaution, *e.g.* at burials or in places with a disagreeable odour;[5] but otherwise its ritual use was almost unknown during the first four centuries. The *Apostolic Canons* refer to the use of incense (θυμίαμα) at the Eucharist, but this is probably a later interpolation. It was used at the vigil offices on Sunday in Jerusalem towards the end of the 4th century.[6] Pseudo-Dionysius[7] speaks of the priest censing the altar and making the circuit of the holy place. In the Liturgy of St. James it is used in the pro- and post-Anaphora portions, and in that of St. Mark before the gospel, at the great entrance, at the kiss of peace, and at the commemoration of the dead. In the Liturgy of St. Chrysostom the sacred vessels, the Gospels, altar, priest, and sanctuary are censed in the pro-Anaphora, and the altar is censed in the Anaphora. Evagrius[8] refers to the gift of a thurible to a church in Antioch by a Persian king c. 594. In the West the *Ordines* of the 8th cent. describe the swinging of the censer during the procession of the pontiff and his acolytes from the sacristy to the altar in the church at Rome. 'As for censing the altar, or the church, or the clergy or congregation, such a thing is never mentioned.'[9] The further use of incense was gradual, since it is not mentioned by writers of this period who treat of ritual, and its use at the elevation and benediction was not known in the West till the 14th century. In the Roman Catholic Church at the present time incense is burned at solemn Mass before the introit, at the gospel, offertory, and elevation, at solemn blessings, processions, choral offices, consecration of churches, burial rites, etc. In the Church of England there is no decisive evidence of its ritual use in Divine service during the period after the Reformation. It was used, however, for sanitary purposes, as a fumigatory, and for the sake of its agreeable odour in churches, at feasts, at coronations, etc. Its ritual use was resumed towards the middle of the 19th cent., but this was decided to be illegal in Martin *v.* Mackonochie, 1868, and in Sumner *v.* Wix, 1870.[10] Incense is used ritually in many churches of the Anglican communion, and the practice is certainly spreading as a pleasing adjunct to worship, and as a symbolic rite typifying prayer.

**INCEST.**—See CRIMES AND PUNISHMENTS, ETHICS AND MORALITY.

**INCUBATION.**—Incubation, a translation of the Gr. technical term ἐγκοίμησις, denotes in comparative religion the practice of sleeping (or at least of passing the night) in a shrine or other sacred place with the object of receiving a Divine revelation or Divine aid; in a still more specific sense—which is also the one most commonly denoted by the word because of the Greek use of the rite—the aid in question is currently held to be the cure of disease, though this limitation is of later development. Naturally, the subject of incubation is connected with those of communion with Deity, disease, divination, dreams, omens (*qq.v.*), etc.

In the state of sleep, when the soul is released from the ordinary trammels of the body, it is particularly subject to Divine visitations, and may receive revelations from Divine beings (cf. Gn $28^{12ff.}$ $37^{5ff.}$ $41^{1-36}$, 1 K $3^{5-15}$ etc.). Indeed, the whole basal theory of incubation could not be better expressed than in the words of Job ($33^{15f.}$):

'In a dream, in a vision of the night, when deep sleep falleth upon men, in slumberings upon the bed; then he [God] openeth the ears of men, and sealeth their instruction.'

It is perfectly true that Divine revelations in dreams may come in almost any place (for examples, see art. DREAMS); and, as when the American Indian goes forth in search of the revelation of his *manitou*, the inquirer may have no idea as to the spot in which the Divine will draw near to him (cf. art. COMMUNION WITH DEITY [American], vol. iii. p. 741). Yet it is obvious that a god will reveal himself more readily in a distinct locality with which he is already associated by legend or by cult, and where he has a dwelling provided in the shape of temple or shrine. In some instances this dwelling may be only temporary, and prepared for the special occasion on which Divine revelation is sought.

Thus, among the Malays, after a proper site for a house is found, four sticks are laid down to form a rectangle in the centre of the plot, and a clod is taken from this enclosure, with the prayer to the lords of the spot:

'If it [my purpose] is good, show me a good omen,
If it is bad, show me a bad omen.'

After this, 'wrap the clod up in white cloth, and after fumigating it with incense, place it at night beneath your pillow, and when you retire to rest repeat the last two lines of the above charm as before and go to sleep. If your dream is good proceed with, if bad desist from, your operations' (W. W. Skeat, *Malay Magic*, London, 1900, p. 142; cf. also p. 144; and, for a similar usage in Torres Straits, see *ERE* iv. 776ª). The ancient Irish had a kindred practice in the *tarbfess*, which is usually translated 'bull feast,' although *fess*, 'feast,' is probably identical with *fess*, 'to pass the night' (H. Pedersen, *Vergl. Gramm. der kelt. Sprachen*, Göttingen, 1908–13, ii. 524, 559; cf. also i. 80). In *Serglige Conculaind*, 22 f. (ed. E. Windisch, *Irische Texte*, i. [Leipzig, 1880] 212 f.) we read that the Irish kings Medb, Ailill, Curoi, Tigernach, and Find assembled, but did not decide upon a king for Ulster because they were united against that kingdom. 'Thereupon a *tarbfess* is made there among them, that they might know from it to which of them they should give the kingdom. 'Tis thus this *tarbfess* was done, *i.e.* a white bull to be killed, and a man to eat to satiety of its flesh and its broth, and slumber for him from this satiety, and the *ós firindi* [a certain charm] to be sung over him by four druids, and the sort of man who should be made king there was seen by him in vision from his form and from his description and the sort of work he did. The man awoke from his sleep, and his dream is told to the kings.' Similar in principle was the ancient Irish *imbas forosnai*, in which incantations were pronounced over his palms by him who sought a revelation, after which he placed his palms to his cheeks and fell asleep, being guarded against any interruption. During his slumber the future was revealed to him (see above, p. 128ᵇ; the text is conveniently given by Windisch, 616). Very frequently incubational dreams are facilitated by fasting, vigils (*qq.v.*), and the like (cf. *PC* ii. 410 ff.; M. Hamilton, *Incubation*, pp. 114, 151, 159, 164 f., 169).

The place where such a revelation was vouchsafed would naturally be regarded as an abode of the Deity (cf. Gn $28^{16-19}$ $35^{1.7}$), and might long be held a centre of worship, as in the case of Bethel ('house of God,' cf. 2 K $2^{2f.}$, Am $7^{10.13}$). Incubation might also be practised at sacred stones and sacred trees. An excellent example of the former is found in the instance of the pre-Islāmic priests who slept near the oracular stone of al-Jalsad (J. Wellhausen, *Reste arab. Heidentums*², Berlin, 1897, p. 55), and of the latter in the revelation received by Alexander the Great as he slumbered under the plane tree at Smyrna (Pausanias, VII. v. 2). Consultation might likewise be sought in grave crises of the State, as was done on at least one occasion in Greece (Pausanias, III. xxvi. 1).

The usual locality for incubation is the shrine or temple.

Thus, among the Meitheis, when the king and his people had been alarmed by the gods, who desired to show their power lest they be forgotten in Meithei prosperity, a *maibi* ('wise woman') gave a message to the king directing him 'to send all the *maibas* and *maibis* of the country to sleep in the temple of Thāngjing [the god of the country of Moirang] wearing their sacred clothes. . . . There in their dreams they were instructed to divide the people into sections, some for one duty and some for others. . . . Then, when they had told the King all the wonderful things communicated to them in their dreams, they were bidden to do as the God had said' (T. C. Hodson, *The Meitheis*, London, 1908, p. 131).

Incubation in shrines for advice in all sorts of problems of life is common, as in ancient Egypt (cf. *ERE* iii. 762ª, and especially v. 35 f.) and among the modern Berbers (cf. *ERE* ii. 513). Of modern Mesopotamia we are told that

'the shaikhs, the Muhammadan mullas, the Kurds, and the Arabs lie down in mosques or places of pilgrimage, and in ancient convents which formerly belonged to Christians, and to which they give the generic name of *mazār* [from *zār*, 'to visit, go on pilgrimage'], with the purpose of obtaining good dreams or inspirations suited to guide them in their dreams. In Mesopotamia it is not uncommon to find heretical or Catholic Christians who seek slumber in churches or convents to have good and lucky dreams' (J. Tfinkdji, in *Anthropos*, viii. [1913] 506).

From such consultation as to the proper course to be adopted in problems of various kinds has developed that type of incubation which, because of its prominence in Greece, has gained a natural, though not wholly deserved, prominence in the common parlance of comparative religion. This is incubation for the purpose of gaining cure from disease of the most diverse kinds. The subject has been so thoroughly discussed (see Literature appended below) that the briefest summary will be sufficient here (cf., for some special instances, also *ERE* vi. 542, 548 f., 552). There was a primitive American centre at Izamal.

'In their heathendom those Indians [the Mayas of Yucatan] raised one altar and temple on another to their king or false god Ytzmat-ul, where they placed the image of a hand which served them as a memorial; and they say that there they carried the dead and the sick, and that there they were resuscitated and healed by touching the hand. . . . And therefore it was called and named Kab-ul, which means "artificial hand"' (Lizana, in Landa, *Relacion de las cosas de Yucatan*, ed. C. E. Brasseur de Bourbourg, Paris, 1864, p. 358, quoted by H. H. Bancroft, *NR* ii. [1882] 796, n. 44).

The principal classical accounts, apart from the burlesque in Aristophanes' *Plutus* (v. 634 ff.), are the stelæ of cures at Epidaurus (*CIG* iv. 951 f.; J. Baunack, *Stud. auf dem Gebiete des Griech. und der arischen Sprachen*, i. [Leipzig, 1886] 120–144; Hamilton, *op. cit.* 17–27); the *Sacred Orations* of Aristides (ed. W. Dindorf, Leipzig, 1829, summarized by Hamilton, 44–62); and the inscription set up at Epidaurus in the 2nd cent. A.D. by Julius Apellas, a Carian sophist (*CIG* iv. 955; Baunack, 110–118; Hamilton, 40 f.). In the earliest period there was entire dependence upon the god for healing, and he might work the cure either by himself acting as surgeon or by advising certain medicaments. Later skilled medical men became connected with the shrines, co-operating with, but not superseding, the revelations given by the god in visions. Much obscurity exists as to the precise methods of procedure, and details doubtless varied at different times and places, and under special circumstances. The general mode, however, seems to have been as follows:

On arriving at the shrine, the patient probably received instruction from the priest or priests, and was caused to perform

some rites and sacrifices to bring him to a thoroughly recipient frame of mind. After successful incubation, during which the patient, sleeping within the shrine of the god, had been visited by the deity with actual cure or with counsel, the person thus healed was required to make payment of a fee (ἴατρον), non-payment being punished by recurrence of the disease. Votive offerings would also be made, and in some instances were commanded by the god. The costliness of these votive offerings—which, it is to be conjectured, were the earlier mode of showing gratitude, the 'fee' being introduced only when the shrine had become comparatively elaborate and expensive in upkeep—naturally varied according to the means of those who had been cured. Phalysius of Naupactus gave 2000 gold staters (£1900) when healed of blindness (Pausanias, x. xxxviii. 7); a boy offering the god ten dice for cure was healed without charge (Stele of Epidaurus, i. 68–71).

The rite of incubation for the cure of disease still prevails widely in churches of the Greek and, to a less extent, Latin countries, as in Tenos, Cyprus, Mytilene, Rhodes, Argolis, Achæa, Phocis, Bœotia, Laconia, Cyzicus, Amalfi, Sardinia, and Styria; and in the Middle Ages the practice is mentioned in connexion with Saints Cosmas and Damian, Therapon, Cyrus and John, Martin, and Fides (cf., *e.g.*, Hamilton, 109–233). The reality of at least some of the cures resulting from incubation is acknowledged by even the most prejudiced of writers; and there can be no doubt that faith is a potent agency in the amelioration and even complete cure of bodily ills.

There is, however, at least one point where scepticism seems warranted. It appears rather questionable whether the Greek system of incubation can be definitely derived (as by E. Thrämer, above, vol. vi. p. 542[a]) from Babylonia by way of Lydia. Incubation in its full meaning is far too wide-spread to be traced to any single locality for its origin; it is an expression of a religious conviction to a large part of the earlier human race; even the exact relation of the incubation of Asia Minor to that of Greece (cf. *ERE* vi. 549[a]) is not certain. It may, in view of the lateness of our sources, have been influenced by the Greek practice; or it may (and this, perhaps, is the more probable hypothesis) have been an independent development.

LOUIS H. GRAY.

**INDEX.**—The Index (*i.e.* 'librorum prohibitorum') is the catalogue of books which ecclesiastical authority forbids Roman Catholics to read or have in their possession; by an extension, the name Index is used to cover the rules for the proscription of pernicious literature, and for the examination and censorship of books before publication. The Index is a product of positive ecclesiastical law; it is based on the assumption that bad books are dangerous, and concerns society as such; the moral law forbidding the reading of pernicious books is motived by the real danger lurking in them, and affects the individual directly.

I. *HISTORY.*—It is natural that every religious authority should set itself to prevent the publication and reading of such books as might disturb the faith and religion of its followers, or corrupt their morals. In the first centuries of Christianity the Church condemned and prohibited the apocryphal and heretical writings (see especially the catalogue known as the *Decretum Gelasianum* 'de libris recipiendis vel non recipiendis' [*PL* lix. 162–164, 175–180]); and commanded pernicious writings to be committed to the flames (cf. Ac 19[19]); and the burning of heretical works, decreed by the Church, was sanctioned by Christian Imperial law (cf. lex 3 Cod., lib. i. tit. i. 'de Summa Trinitate,' anno 449). Throughout the Middle Ages we find cases of heretical books being condemned. The true history of the Index does not begin, however, until the introduction of printing—when bad books were likely to be multiplied as rapidly as good ones. Before the close of the 15th cent. the University of Cologne passed the measure that finally became the 'Imprimatur,' or preliminary censorship of books; it prescribed the examination of every book before printing, and earned for the University the congratulations of Sixtus IV. and Innocent VIII. (14th Nov. 1487). By the constitution 'Inter multiplices' (1st June 1501) Alexander VI. extended this practice; he forbade the printers of the dioceses of Cologne, Mainz, Trèves, and Magdeburg, on pain of excommunication and fine, to print any book whatever without the permission of the bishop; as for books already in print, the bishops were required to demand the printers' catalogues, and make them hand over the pernicious works to be consigned to the fire. These prescriptions became common law at the Lateran Council (Leo X., constitution 'Inter multiplices,' 4th May 1515). The prohibition of books by name began in 1520 by Leo X.'s bull 'Exsurge Domine,' condemning all the writings of Luther; in 1524, Clement VII. inserted excommunication *latæ sententiæ* in the bull 'Coenæ,' as the penalty for reading books in support of heresy; this has remained unchanged to the present day.

Lists of prohibited books soon began to be published by the Universities (Paris, 1542; Louvain, 1546; Cologne and Venice, 1549, etc.), the bishops (Milan, 1554, etc.), and the Inquisitions (Venice, 1554, etc.). Such an important movement demanded the attention of Rome; Paul IV. ordered the recently established Congregation of the Holy Office to make a catalogue of prohibited books; their first effort, printed in 1557, failed to give satisfaction, and a revised edition appeared at the beginning of the year 1559—the first official Roman Index. All the books in it are prohibited on pain of excommunication, and they are classified in three divisions: (1) authors condemned, with all their writings; (2) condemned books whose authors are known; and (3) pernicious literature, mostly anonymous. This Index was very strict; after a decree of the Holy Office, recently discovered, dated 14th June 1559, Cardinal Michel Ghisleri (afterwards Pope Pius V.) published, by order of Paul IV., a modification (*moderatio*) of the Index (24th June 1561). Almost immediately the Council of Trent took up its interrupted labours. In session xviii. (26th Feb. 1562) it commissioned eighteen fathers, assisted by theologians, to re-compile the catalogue of prohibited books and revise the general rules of the Index. The Commission had accomplished its task when the Council was abruptly concluded; but a detailed discussion of its work was impossible, and the assembly remitted the whole matter to the pope (sess. xxv., 4th Dec. 1563). The catalogue was almost the same as that of Paul IV., with its distribution into three classes; the rules, ten in number, were aimed principally at the books of heresiarchs and heretics, and the editing and reading of the Bible; rule x. demanded the bishop's 'Imprimatur' for every printed publication. These rules, with several additions, remained in force until the time of Leo XIII. The Index and the rules of the Council of Trent were published by Pius IV. (bull 'Dominici gregis,' 24th March 1564).

In order to relieve the Congregation of the Holy Office without impairing its competency, Pius V.

established the Congregation of Cardinals 'de reformando Indice et corrigendis libris' in March 1571. This institution, improved by Gregory XIII., was included by Sixtus V. in the general re-organization of the Congregations (bull 'Immensa,' 22nd Jan. 1588), with the title 'Congregatio pro Indice librorum prohibitorum.' This Congregation was composed of a fixed number of cardinals, a permanent assistant, the Master of the Sacred Palace (a Dominican, specially entrusted with the preliminary censorship of books in Rome), a secretary (also always a Dominican), and several consultors, and has continued almost unaltered down to our own day, Pius X. having retained it in his reorganization of the Roman Curia (constitution 'Sapienti consilio,' 29th June 1908). It is responsible for the successive editions of the Index since Sixtus V. and for various additions to the general rules, as well as for the majority of condemnations of books deemed pernicious.

A few words will suffice about the successive editions of the Index. Those of 1590 and 1593, printed, but not published (cf. Hilgers, *Der Index der verbotenen Bücher*, pp. 12, 524, 529), were superseded by the 1596 edition, by order of Clement VIII. In Alexander VII.'s edition (1664) the three classes of the Trent Index were combined into one alphabetical series. In 1757, Benedict XIV. provided a more correct edition, of which later editions, until that of Leo XIII., were simply reprints, supplemented by works condemned since the preceding edition. Of the additions to the rules, we may mention the Instruction of Clement VIII. on the preliminary censorship; the constitution of Benedict XIV. 'Sollicita ac provida' (9th July 1753) on the procedure in carrying out the same, the only document preserved by Leo XIII.; and the general decrees of the same pope on the prohibited books not contained in the Index. Then, without any notable alteration, we come to the reform of Leo XIII. by his constitution 'Officiorum ac munerum,' 25th Jan. 1897.

II. *MODERN LEGISLATION.*—The rules and the Index of the Council of Trent had been drawn up at a time when the Roman Catholic Church had to struggle against militant Protestantism, when they hoped that it would be possible to control all books on account of their small number, and when reading was not wide-spread among the lower classes. In the 19th cent. these conditions were greatly changed, especially since the civil authorities almost everywhere lost their interest in the preliminary censure and in the publication of books. Reform was necessary: the law had to be fitted to the new conditions, and at the same time carried into execution with more force, as was now possible. In the preamble of his constitution, Leo XIII. recalls these changes: he mentions the demands for reform addressed to the Holy See by the bishops of various nations, especially at the time of the Vatican Council; it was on their account that he ordered a thorough revision of the Index and of the general rules. All previous law, except the constitution 'Sollicita' of Benedict XIV., is abrogated by the new general decrees. These are divided into two classes: (1) the prohibition of books, and (2) their preliminary censure. The first contains ten chapters, and the second five, the whole forming a single series of forty-nine articles.

1. **Prohibitions.**—(*a*) There is now no general prohibition of all the works of any heretical writer; books which uphold heresy or schism, and those which attack the very foundations of religion, are banned; but the writings of the heterodox, even on religious topics, are no longer banned if they contain nothing against the faith—much less those that do not treat of religious matters at all (artt. 1-4).

(*b*) The reading of the Bible, which was the object of the minute prescriptions of rules iii. and iv. of Trent, is the object of modified prescriptions: those who are engaged in theological studies may use heterodox editions of the sacred text, and versions in vulgar or non-vulgar tongues, provided the introductions and notes contain nothing against the faith. Before being allowed, the versions in vulgar tongues must be approved by the Holy See, or published under the supervision of the bishops, with annotations taken from the Fathers of the Church or from Roman Catholic writers; versions in vulgar tongues by heterodox authors and Bible Societies are still prohibited to Roman Catholic lay-people at large (artt. 5-8).

(*c*) Obscene books are always banned; the classics alone are allowed as far as necessary for professional ends, but they must not be put into the hands of young people without being expurgated (artt. 9-10).

(*d*) Books derogatory to God or the Saints, to the Roman Catholic Church and the liturgy, to Scripture and the hierarchy, are banned; also books which propagate magic, divination, and spiritualism; works published without approval which recommend new cults, apparitions, and prophecies; and those which defend as lawful duelling, suicide, divorce, free-masonry, etc., and also the errors condemned by the Holy See (artt. 11-14).

(*e*) Holy images which deviate from the authorized tradition, and apocryphal indulgences, are condemned; formal approval is demanded for all books, summaries, collections, and sheets of indulgences (artt. 15-17).

(*f*) Ecclesiastical approval is required for official liturgical books, litanies, prayer-books, books of devotion, and books of religious instruction (artt. 18-20).

(*g*) Ecclesiastical law also proscribes bad newspapers and periodicals already condemned by natural law; it desires the bishops to dissuade the people from reading these, and hopes that Roman Catholics will not publish anything in these periodicals without a good reason (artt. 21-22). Bishops may, and ought to, condemn and prohibit in their dioceses pernicious or dangerous newspapers and periodicals, especially 'modernist' writings.

2. **Censorship.**—(*a*) The permission to read and to keep prohibited books is given by the Congregation of the Index, accessorily by that of the Propaganda for its subjects, and for Rome by the Master of the Sacred Palace. Bishops may give this permission in isolated cases, but they receive more ample powers from Rome by indults. Those who have permission to read the books on the Index are not exempt from the observance of the moral law; they must observe the reservations regarding their permission and take care that the prohibited books do not reach other hands (artt. 23-26). Permission to read books condemned by a bishop naturally depends on that bishop.

(*b*) Denunciation of wicked books to the Holy See is open to all; it is an official duty of the representatives of the Holy See and of bishops; it is desirable that the denunciation, which is kept secret, should be accompanied by a review. To this outside denunciation Pius X. has added the obligation of the Congregation of the Index to inquire officially into pernicious books (artt. 27-29; const. 'Sapienti,' 29th June 1908).

(*c*) The steps taken by the Congregation of the Index to condemn books denounced or inquired into are explained in the constitution 'Sollicita' of Benedict XIV.: first the secretary, with two consultors, makes a cursory examination of the book; if he concludes that the work should be

retained, he appoints a competent reviewer to make a detailed study of it and indicate the objectionable passages; this report is discussed at a preliminary meeting in which several consultors take part, together with the secretary and the Master of the Sacred Palace; the opinions of these men, along with the report, are presented to the assembly of cardinals who form the Congregation; they pronounce the condemnation of the work either absolutely or until correction (the condemnation 'donec corrigatur' is now very rare). There is no injustice in condemning a book by a Roman Catholic author without hearing him, as the condemnation is directed not against him but against his book, which is circulated among the public, and against which readers must be warned. Benedict XIV., however, recommended that the Congregation should inform such an author and receive his defence. The decrees of prohibition are declared and promulgated in the name of the Congregation; the books are condemned everywhere and in every language (art. 45). Below the decrees are published the submissions of the authors received by the Congregation.

3. **The preliminary censure of books and their publication.**—(*a*) Certain books must be specially authorized; *e.g.*, books put on the Index cannot be reprinted unless the corrections have been approved by the Congregation; official documents and collections of decrees of the Roman Congregations cannot be edited except with their permission (artt. 30–33).

(*b*) Further, there are special regulations for certain classes of persons: missionaries must observe the decrees of the Propaganda; monks must obtain the permission of their superiors, besides that of the bishop; priests cannot publish any work or undertake the management of any periodical without the permission of their bishop (artt. 34, 36, 42).

(*c*) It is necessary to have the permission to print—the 'Imprimatur'—of the bishop of the place of publication for all books on religious topics or sciences, but not now for all books, as rule x. of Trent desired. The bishop entrusts the examination of the MS to a competent, upright, and impartial censor, who studies it without bias; if, on examination, he sees nothing objectionable, he writes on the MS 'Nihil obstat,' and signs; on this evidence, coming even from a censor of another diocese, the bishop of the publisher gives permission to print. All this must appear at the beginning of the book, except in Britain, according to a decision of 1897 (artt. 35, 38–41).

Preliminary censure of religious newspapers and periodicals was practically impossible; Pius X. substituted for it a special censor to read every publication officially and then submit his report (encyc. 'Pascendi,' 8th Sept. 1907).

4. **Penalties.**—There are two kinds of penalties. Excommunication is incurred by those who wittingly and without permission read, keep, print, or defend, not any book on the Index, as many people say, but any books of apostates and heretics countenancing heresy, or the works condemned directly by the pope with mention of this penalty. Excommunication is the penalty also for those who without permission print or cause to be printed the books of Holy Scripture, or annotations, or commentaries on those books. For all other delinquencies the penalties are awarded by the bishops according to the degree of culpability (artt. 47–49).

5. **The Revised Index of Leo XIII.**—The Index revised by order of Leo XIII. was published in 1900, and reprinted in 1907 and 1911. It has been greatly modified; and the prohibitions are mitigated; *e.g.*, the clause 'Opera omnia' put after the author's name does not now include those of his books that are not objectionable.

6. **Conclusion.**—While the rules of the Index are wise and prudent, we must admit that the catalogue leaves room for criticism, owing to the conditions of our time rather than the actions of authority. It is abundantly evident that the Index is unsatisfactory. While allowing numerous harmful books by non-Catholic authors to pass, it seems to reserve its severity for the works of Roman Catholics which expose themselves to criticism by certain tendencies rather than by definite errors. For this reason the uniformity of condemnations without any indication of the degree of harmfulness, as if all the books on the Index were equally pernicious, is the more regrettable. Further, the faithful are led to regard the books inscribed in the catalogue of the Index as the most harmful, while they do not pay sufficient heed to the general rules, and think that every book that does not appear in the Index may be read. It would be far more to the purpose to appeal to the conscience and the observation of the general rules; for the Church finds it difficult to sanction its prohibitions in present-day conditions, and is forced to grant permission to read prohibited books far and wide.

A. BOUDINHON.

**INDIA.**—See VEDIC RELIGION, BRĀHMANISM, and HINDUISM. CASTE and other subjects are treated separately, and under each of the great subdivided topics, like BIRTH, DEATH, DEMONS, etc., there is an Indian article. See also the various provinces and the religious cities each under its own name, and the art. MUHAMMADANISM IN INDIA. Christianity in India will be dealt with under MISSIONS.

**INDIAN BUDDHISM.**—The religion which was founded by Buddha (*q.v.*) towards the end of the 6th cent. B.C. is one of the three great world-religions, and has been calculated (but with considerable uncertainty) to have 500 millions of adherents. Its original and essential doctrine is that all earthly existence is suffering, the only means of release from which is renunciation and eternal death. The main importance of the Indian form of Buddhism lies in the fact that it represents the earliest phase of the religion; that it produced all the canonical texts of the faith; that without a knowledge of it the Buddhism of the many countries to which it has spread could not be understood; and that without the evidence of its architecture and sculpture the history of Indian art would be impossible. Though, like Christianity, it disappeared many centuries ago from the land of its birth, it has profoundly influenced the civilization of the Farther East, much as Christianity has done in the West. In India itself, Buddhism deeply affected the spiritual life of the country for over a thousand years, and occupies a prominent place in the history of its literature.

1. **History.**—Buddhism arose on peculiarly favourable soil, the S.E. half of the Ganges territory, which, being far removed from the centre of Brāhman culture, was imperfectly Brāhmanized. This geographical area comprised the two principal kingdoms of Kosala (the modern Oudh) and Magadha (now Bihār).

Buddha's death has been calculated with the greatest probability to have taken place about

480 B.C. This, the earliest approximate date in Indian history, is of the utmost importance in the chronology not only of Buddhism, but of Vedic and Epic Sanskrit literature also.

According to the statements of the Pāli texts, a few weeks after the death of the Master one of his most trusted followers, Kāśyapa the Great, proposed, now that the Order was without a head, to hold an assembly of monks who had been the immediate disciples of Buddha, for the purpose of rehearsing the precepts of the Master, and fixing a canon of the doctrine (*dhamma*) and discipline (*vinaya*) of the Order. An assembly was accordingly held at Rājagṛha, constituting the so-called *first Buddhist Council* (see COUNCILS AND SYNODS [Buddhist], vol. iv. p. 182). Buddhist tradition is unanimous in stating that exactly a century after Buddha's death the *second General Council* was held at Vaiśālī (*ib.* p. 183). In the reign of the famous king Aśoka (*q.v.*) a *third Council* was held at Pāṭaliputra after the schism of the Mahāsāṅghika (or Āchāryavāda) had arisen (*ib.* p. 183).

The reign of Aśoka, who ruled over the whole of India except the extreme south, forms an epoch of the highest importance in the history of Indian Buddhism. The patronage of so powerful a king must undoubtedly have supplied a mighty stimulus to the growth and spread of Buddhism in India, for it raised the religion of what was only one of several sects to the dominant position of a State religion. An era of zealous propaganda, not only throughout India, but in distant foreign countries, was inaugurated. Since all the Buddhist traditions agree as to the latter statement, it may be accepted as a historical fact. The conversion of Ceylon (see CEYLON BUDDHISM, vol. iii. p. 331) was the most important result of these missionary expeditions. It is ascribed to Mahendra (Mahinda), son or (according to the Skr. Buddhist texts) younger brother of Aśoka and a pupil of Tissa Moggaliputta. All sources agree in attributing the introduction of Buddhism into Ceylon to the reign of Aśoka. Another prominent apostle was Madhyāntika, who carried the faith to Gandhāra and Kaśmīr, while Mahādeva proselytized Mysore.

That a body of canonical texts already existed in the time of Aśoka is shown by one of his edicts (that of the Bairat rock), in which he enumerates some such works, and recommends their study by monks and nuns as well as by the laity. Some of the titles, moreover, show that works of the doctrinal (*sutta*) and disciplinary (*vinaya*) type of canonical text were among them.

It is to be noted that, in consequence of his zeal for the faith, there arose in Aśoka's reign that religious architecture which furnishes continuous and striking monumental illustrations of the history of Buddhism in India for many centuries till the disappearance of that religion from the land of its origin.

During the 330 years that elapsed between the death of Aśoka and A.D. 100, Buddhism steadily strengthened its position in the north of India, though it was not favoured by the kings of the Sunga dynasty, the founder of which, Puṣyamitra, is stated in more than one Buddhist source even to have been a persecutor of the faith. In the 2nd cent. B.C. the doctrine certainly flourished in the N.W. under the Græco-Indian rulers. There seems no reason to doubt that the most celebrated of these, king Menander (Milinda), became a convert to Buddhism about 100 B.C., as stated in the Pāli work *Milinda-Pañha*, or 'Questions of Menander.' Meanwhile, Buddhist doctrine spread beyond the confines of India to Bactria and China, while in Ceylon it established that supremacy which it has retained ever since. In India itself, however, dissensions and schisms had been growing to such an extent that by the end of this period eighteen distinct sects were in existence.

With the reign of the Indo-Scythian king Kaniṣka (*q.v.*), from whom probably dates the Śaka era (A.D. 78), a new epoch in the history of Indian Buddhism begins. The wide dominion conquered by him comprised Kabul, Gandhāra, Kaśmīr, Sindh, and part of the United Provinces of to-day. The memory of this mighty monarch was revered by the Buddhists of Northern India almost as much as that of Aśoka. Like the latter, he was not originally a Buddhist, as is indicated by the fact that most of his coins bear the symbols of an Iranian religion; comparatively few of them have Buddhist emblems, but one shows a figure of Buddha, with the legend 'Boddo' on the reverse. The Skr. Buddhist tradition ascribes his conversion to Sudarśana, but we have no evidence as to the probable date of its occurrence. Under Kaniṣka's auspices, another *Buddhist Council* was held, probably about A.D. 100 (see COUNCILS AND SYNODS [Buddhist], vol. iv. p. 184). The place where it met is variously stated as Jālandhara (in the Eastern Panjāb) or Kuṇḍalavana (in Kaśmīr). The traditional accounts given of it are vague and conflicting; but we may conclude that it was attended by representatives of all the 18 sects of the older Buddhism called Śrāvakas or Hīnayānists, and that the views of the new school of the Mahāyānists (see artt. HĪNAYĀNA, MAHĀYĀNA) were either not represented or found no support. Yet all the Indian Buddhists, including the Mahāyānists, acknowledged the authority of the Council. The Ceylon branch of the Buddhist Church, however, took no part in its deliberations. The main result of this meeting was the cessation of the dissensions that had prevailed for a century among the Hīnayānists, although it by no means extinguished the new doctrine of Mahāyānism; and the statement of a Tibetan authority that on the occasion of this Council the sacred books were revised, and that some parts of the canon were then written down for the first time, is not improbable. None of the sources says anything about the language in which the sacred books were now recorded, but the Chinese pilgrim Hiuen Tsiang appears to assume that they were written in Sanskrit.

Under the influence of Hinduism the Mahāyāna doctrine, combining a fervent devotion (*bhakti*) to Buddha with the preaching of active compassion, was a kind of theism in which Buddha occupied the place of the personal deity in the Vedānta system of the Brāhmans. This doctrine was destined to have a far-reaching influence on the history of Buddhism as a world religion; for by appealing to the sympathies of the masses it ultimately not only absorbed all the Buddhist sects of Northern India, but became the religion of all the countries that derived their faith from Skr. Buddhism. The old orthodox faith of the Pāli canon henceforth became restricted to Ceylon and the countries proselytized from that island. Since even the name of Kaniṣka is not found in the religious literature of Ceylon, its Buddhism appears to have been cut off from that of India by the 1st cent. A.D.

Many inscriptions, ranging from the time of Kaniṣka over more than two centuries, show that Buddhism flourished at Mathurā (Muttra) by the side of Jainism. Other sources indicate that the Doctrine prospered in Kabul, Kaśmīr, and the N.W. of India. The epigraphic evidence of Nāsik and Kārli proves that there were numerous Buddhists in the West, while that of Amarāvatī shows that there were many in the South also.

About A.D. 400 one of the Chinese pilgrims, Fa Hian, describes the condition of Buddhism as very flourishing in Udyāna (the

Swat territory), in the Panjāb, and at Mathurā, though he makes no mention of Nālanda (in Magadha), the chief seat of Buddhist learning two centuries later. The same authority informs us that at this time four Buddhist philosophical schools were fully developed; two, the Vaibhāṣikas and the Sautrāntikas, who were realists, were adherents of the Hīnayāna, while the Yogāchāras and Mādhyamikas belonged to the Mahāyāna. The Mādhyamikas, whose reputed founder was Nāgārjuna, were pure nihilists, holding that the phenomenal world is a mere illusion, an adaptation of the Māyā doctrine of the scholastic Vedānta of Hinduism. From Fa Hian we also learn that at Mathurā the Bodhisattvas Mañjuśri and Avalokiteśvara were worshipped, and that at Pāṭaliputra the Hīnayānists had one monastery and the Mahāyānists another, with 600 or 700 monks between them. Two other Chinese pilgrims, Hiuen Tsiang and I-Tsing, who visited India in 629–40 and 675–98 respectively, tell us much about the state of things in the 6th and 7th centuries. During this period Buddhist scholasticism flourished greatly, the contention between the sects gradually weakening and resolving itself into rivalry between the two main parties of Hīnayānists and Mahāyānists. The great patron of the faith in the 7th cent. was the famous king Harṣavardhana of Kanauj (A.D. 606–648), who, originally a Śaivite, became an ardent Mahāyānist, but was tolerant to all sects except the Hīnayānists. In fact, such religious rancour as prevailed existed between Mahāyānists and Hīnayānists, while the relations between Hinduism and Buddhism were peaceful. Hiuen Tsiang found Buddhism prospering not only in India, but in Kaśmīr and Nepāl, where Buddhists and Hindus lived in harmony. The last great literary champion of Buddhism in India was Dharmakīrti, who flourished between the visits of Hiuen Tsiang and I-Tsing.

In the 8th and early 9th centuries a revival of Hinduism took place, chiefly under the influence of the two great dialecticians Kumārila and Śaṅkara (born A.D. 788), whom the tradition of the Buddhists regards as the two most formidable adversaries of their creed. Partly owing to the activity of these opponents and partly to its own degeneracy caused by increasing approximation to Hinduism, the religion of Buddha gradually lost ground in India. Its decline set in about A.D. 750, and was accelerated in the West by the Muhammadan conquest of Sindh by the Arabs in A.D. 712.

This decline went hand in hand with the growth of Tantrism, a kind of degraded *yoga*, which, with the aid of mental concentration, muttered prayers, spells, and other magical expedients, sought to secure all kinds of material advantages and supernatural powers. This system of sorcery flourished under the kings of the Pāla dynasty of Bengal (A.D. 800–1050), who were protectors of Buddhism. Under their successors, the Sena kings, who were Hindus, though not active opponents of the Faith, Buddhism still further declined till it received its death-blow in Magadha from the Muhammadan invasion in A.D. 1200, all the monks either being killed or escaping to other countries. It lingered on for a considerable time after that date in other parts of India. Thus a Buddhist stone inscription of A.D. 1220 from Śrāvastī shows that the doctrine was not altogether extinct in Oudh early in the 13th century. In Bengal it still had a few adherents in the 16th century. In Orissa it died out in the middle of that century, in consequence of the conquest of the country by the Musalmān Governor of Bengal. In Kaśmīr the accession to power of a Muhammadan ruler put an end to Buddhism in A.D. 1340. In Nepāl, however, Buddhism has maintained its existence, in a degenerate form, by the side of Hinduism down to the present day.

2. **Literature.**—For this see art. LITERATURE (Buddhist).

3. **Doctrine.**—Since Buddhism arose on the basis of Brāhmanism, its essential features cannot be fully understood without clearly ascertaining which of the religious ideas of the antecedent religion it rejected and which of them it retained. On the one hand, Buddha repudiated the authority of the Vedas and the Vedic sacrificial system; he condemned self-mortification; he denied the existence both of a world-soul and of the individual soul; he discarded the distinctions of caste within the monastic order, though not as a general classification of society; and he was entirely averse to speculation on metaphysical problems, to which the adherents of Brāhmanism were so prone. On the other hand, Buddha held fast to the belief in transmigration (*saṁsāra*) and retribution (*karma*) practically unchanged; he also adhered to the doctrine that the great goal of endeavour is release from transmigration to be attained by means of renunciation. But this meagre residuum of Brāhman tenets could not possibly have constituted a new religion. What, then, were the fundamental features that made the teaching of Buddha a new force in the life and thought of India? Stated quite generally, the doctrine of Buddha, on its philosophical side, was pronounced pessimism: the deep-rooted conviction that all earthly existence is suffering, the only means of release from which is the abandonment of all desire. Even this fundamental doctrine is only a development of the view of life already apparent in the *Upaniṣads*. Buddha may in this respect be regarded as a genuine descendant of the Yājñavalkya of the *Bṛhadāraṇyaka Upaniṣad*, who turned with aversion from this unsatisfying world and sought refuge in the homeless life of the spiritual mendicant. It must also be noted that H. Jacobi and R. Garbe hold that the Sāṅkhya (*q.v.*) supplied the foundations of the metaphysical side of Buddhism. On the other hand, we know this most pessimistic of all the Brāhman systems of philosophy only in its fully developed form, as it appears in the classical texts of the system, which are posterior by many centuries to the rise of Buddhism. Yet it is possible that, as the Sāṅkhya doctrine and the philosophical side of Buddhism have some points in common, a much earlier phase of the Sāṅkhya (of the existence of which we have no direct evidence) may have exercised a certain influence on primitive Buddhism in India. On what may be called its religious side—it was rather a religion of humanity—primitive Buddhism was a system of practical morality, the key-note of which is universal charity: kindness to all beings, animals as well as men. It is here that the originality of Buddha's teaching is chiefly to be found; for the sphere of ethics had been neglected by Brāhman thought, which was mainly directed to ritual and theosophical speculation. To this source is to be traced the profound influence exercised by Buddhism as a world religion.

The whole of the early Buddhist doctrines are set forth in the fundamental 'Four Noble Truths,' the first three of which represent the philosophical, the fourth the religious, aspect of the system. These truths are: all that exists is subject to suffering; the origin of suffering is human passions; the cessation of passions releases from suffering; the path that leads to the cessation of suffering is the eightfold path. They already play the chief part in the first address of Buddha, the sermon of Benares, and they continually recur in the sacred books of the Buddhists.

(1) The very first of them shows the thoroughly pessimistic character of the Buddhist attitude. Indeed, the Buddhist scriptures constantly dwell on the transitoriness and worthlessness of all things, and no other religion is so penetrated by the belief in the utter vanity and misery of existence.

(2) The origin of suffering is described as due to 'thirst' (*tṛṣṇā*, Pāli *taṇhā*), or the desire of life, which, until it is destroyed, leads to continued transmigration and the return of suffering. The origin of 'thirst' is explained by the formula of causation (*pratītya-samutpāda*, Pāli *paṭichcha-samuppāda*, 'origination from an antecedent cause'). This is one of the fundamental teachings of Buddhism as supplying a solution of the problem of evil.

'Thirst' is traced backward through a chain of several causes to its ultimate source, 'ignorance' (*avidyā*), or lack of knowledge of the doctrine of Buddha. From ignorance are derived the latent impressions (*saṁskāras*) of former acts, constituting predispositions leading to further acts. Buddha taught that man on his own initiative could influence these predispositions and determine his own fate, while his contemporary Maṅkhali Gosāla, founder of the Ājīvika (*q.v.*) sect, denied the freedom of the will. But he who did not know the formula of causation could not be freed from the predisposition to a new birth. From the *saṁskāras* were produced 'consciousness' (*vijñāna*), the thinking part of the individual, regarded as a non-corporeal element that does not perish with the body, but remains along with the *saṁskāras* after death, and with them forms the germ of a new existence. From consciousness are evolved 'name and form' (*nāma-rūpa*), equivalent to 'the individual.' From these, again, arise the six organs, that is, the five senses and 'mind' (*manas*); in other words, the individual assumes a practical form. From the organs are produced 'contact,' thence 'perception,' which is the immediate source of 'thirst.' From 'thirst' arises 'attachment' (*upādāna*) to worldly objects. This leads to continued 'becoming' (*bhava*), an infinite series of new existences. These, finally, are the cause of birth, old age, and death, pain, suffering, sorrow, and despair.

The doctrine next in importance to that of causation is the doctrine of the five *skandhas* (Pāli *khandha*), or elements of existence, of which every thinking being is composed: body, sensation, perception, *saṁskāra*, and *vijñāna*. In this connexion *saṁskāra* means mental powers or emotions, such as reflexion, joy, and hate, of which there are 52. *Vijñāna* as a *skandha* signifies critical cognition or judgment, of which there are 89 subdivisions.

A being thus composed was regarded as not in a permanent condition, but always in a state of becoming, personality being only a sum of perpetually successive movements. A man remained the same in the next existence; as only the elements of which he was composed constantly changed, like the flame of a lamp in successive watches of the night, he thus suffered the consequences of his deeds in the previous existence.

Similarly, 'what was called *soul*' was regarded by Buddha only as an aggregate of changing individual elements, not as eternal and unchangeable, different and separate from the body. *Vijñāna*, 'consciousness' or 'thought,' is spoken of as ruling the body, but it is not essentially different from the mental powers and the sensations which it surveys. There is no conception of an internal entity which sees, hears, thinks, or suffers, a separate soul or self, a spirit or ghost, existing inside the human body.

(3) With the view of Buddha regarding the soul is closely connected that of *Nirvāṇa*, which means 'extinction' like that of a lamp. This is of two kinds, representing two stages of release. The first, which is a necessary condition of the second, is the extinction of desire (*tṛṣṇā*), resulting in 'blissful calm' during the remainder of life (corresponding to the *jīvanmukti* [*q.v.*], 'deliverance while alive,' of the Brāhmans). The enlightenment now attained causes the cessation of ignorance and consequently of re-birth, but the results of deeds done before enlightenment have to be suffered while the released man is still alive. The second stage is not reached till decease, after which there is no awakening, transmigration is at an end, and birth and death are overcome without a remainder. This is *Parinirvāṇa*, or 'complete extinction,' often inaccurately spoken of simply as *Nirvāṇa*.

Buddha has sometimes been thought to have avoided a clear definition of complete *Nirvāṇa*, because in many passages he puts aside the question what the exact condition after death is when release has been obtained. But he appears to have done this because he considered the question immaterial, the main object of his doctrine being deliverance from suffering. He left no doubt as to the goal to which his teaching led: the cessation of all the *saṁskāras*, annihilation of all the *skandhas*, eternal death. The glowing colours, however, in which the bliss enjoyed in the first or living stage of release is described gave rise to the transformation of complete *Nirvāṇa* into a positive paradise in Skr. Buddhism.

(4) The first three noble truths, being concerned with the philosophical side of Buddha's teaching, were meant for the learned only. It was the fourth truth, the way leading to the cessation of misery, embracing practical morality, and meant for the people, that made Buddhism a religion. It is the 'eightfold path' comprising right belief, right resolve, right word, right deed, right life, right endeavour, right thought, right meditation.

The first stage, true belief, was, of course, indispensable for all who entered on the path of salvation, but especially for the monk who had renounced the world. The next five stages comprise the five commandments prescribed for laymen, and include duties to one's neighbour. The cardinal virtue dominating them all is charity (*maitrī*, Pāli *mettā*), which Buddha declared to be of far greater value than all other means of acquiring religious merit, and the practice of which is constantly emphasized in the Buddhist scriptures. From this fundamental principle of human kindness flow compassion (*karuṇā*), sympathy (*muditā*), and equanimity (*upekṣā*), these together being called the four 'lives in God' of Skr. Buddhism. One of the precepts inculcated in connexion with *mettā* is to requite evil with good. The history of Buddhism shows that such precepts were actually practised.

That the standard of the moral law in Buddhism is very high appears from the five commandments mentioned above. The first of these is 'Thou shalt not kill.' The meaning conveyed by the prohibition is that one should refrain not only from taking life directly or indirectly, but from doing harm to creatures both strong and weak. With the desire to avoid crushing insects and the shoots of plants was connected the practice of remaining in the monasteries during the rains. For similar reasons the Buddhists abominated the animal sacrifices of the Brāhmans as well as hunting and war. A practical result of this appears in one of the edicts of Aśoka, which forbids the killing and sacrificing of animals. The extension of kindness to animals was undoubtedly influenced by the doctrine of transmigration. The far-reaching application of the principle made Buddhism the most tolerant of religions, for it has never extended itself by the sword or by force. But this very toleration was disastrous to it, especially when it came into contact with Islām.

'Thou shalt not steal,' the second commandment, means that one should refrain not only from taking what is not given, but from causing or approving of such action. On its positive side it implies liberality, which comes next to *mettā*, seems sometimes to be accounted the chief of all virtues, and is even expected to go the length of giving one's life for others.

The third commandment, 'Thou shalt not be unchaste,' as applied to laymen, prohibits adultery, but in regard to the monastic order further enjoins celibacy.

The full meaning of the fourth commandment, 'Thou shalt not lie,' is that falsehood of every kind, including calumny, misrepresentation, and false witness, is to be avoided. On the positive side it implies that one should say only what is good of one's neighbour and only what is conducive to harmony.

The last of the five, 'Thou shalt not drink intoxicating liquors,' also implies that one should not cause others to drink or approve of their doing so, because it leads to folly and ends in madness.

These five commandments are to be observed by the Buddhist monk also, but there are five additional ones specially applicable to him. These enjoin that he should (6) not eat at unlawful times; (7) not engage in dancing, singing, music, or plays; (8) not use garlands, perfumes, and ornaments; (9) not sleep in a high or broad bed; (10) not accept gifts of silver or gold.

The last two stages of the eightfold path, right thought and right contemplation, concern the individual himself only.

Thought could only be represented by confessional formulas and hymns in praise of Buddha and the Church. But there was no prayer; for there was no god to whom prayer could be addressed, and Buddha was only a human being who, after he had entered *Parinirvāṇa*, no longer existed. Thus to the early phase of Buddhism prayer was unknown. Its place was taken by contemplation. The four stages which are distinguished in it, and which can be practised only by the monk, are concentration of the mind on one point; the attainment of certainty; deliverance from joy and sorrow; and indifference to all things. As aids to mental concentration, exercises in expiration and inspiration were much indulged in by the monks. Thus, though Buddha rejected all self-mortification, he was not unsympathetic towards some of the practices of *yoga*.

There are, moreover, four stages of holiness called the 'four paths.' These are represented by the following four classes. (1) The *srota-āpanna* (Pāli *sotāpanna*), 'he who has joined the stream,' is one who has become a member of the community with a vow that he will obey the commandments. Such a one is freed from re-birth in the hells, or in the world of ghosts and of animals, but he must be born again seven times. (2) The *sakṛd-āgāmin* (Pāli *sakad-āgāmi*), 'who returns once,' is one who, having overcome desire, hate, and delusion, will be born again only once in this world. (3) The *an-āgāmin* (Pāli *an-āgāmi*), 'who returns not again,' is one who is born again only once in one of the worlds of the gods before attaining *Nirvāṇa*. (4) The *arhat* (Pāli *arahāt*) (*q.v.*), the 'saint,' being free from all sins and desires and enjoying perfect mental calm, has attained earthly *Nirvāṇa*. The Sanskrit Buddhists have also a threefold classification comprising the *śrāvaka*, or 'disciple'; the *pratyekabuddha*, or 'individual Buddha,' who by his own efforts has gained all that is necessary for the attainment of *Nirvāṇa*, but cannot communicate the law to others; and the *bodhisattva* (*q.v.*), or 'future Buddha,' who can be born again even as an animal, but can never commit sin.

High above all is Buddha, 'the (fully) enlightened one.' In descriptions of him it is said that no being, no Brāhman, no god, can equal him, and no one can fathom his grandeur. Among his innumerable qualities 32 were later singled out as the characteristics of a great man. One of these is the *uṣṇiṣa*, a round excrescence on the top of the head, always represented in images of Buddha. In the latter there also generally appears between the brows a kind of wart (*ūrṇā*, Pāli *uṇṇā*), which is described as emitting powerfully illuminating rays of light. Nevertheless, Buddha was regarded as a man, perfect indeed, but mortal.

Gautama is not the only Buddha. Each cosmic age is supposed to have at least one Buddha, sometimes as many as five. The names of the last 27 are enumerated, a short life of 24 of them being given in the *Buddha-vaṁsa*, a work of the Pāli canon. Of the present age Gautama is the fourth Buddha, while the fifth will be Maitreya (Pāli Metteyya), who at present is in the stage of a Bodhisattva.

4. **Organization and cult.**—The Buddhist Church was organized as a celibate order of monks and nuns by Buddha, who only gave fixity, by rules of ordination, to conditions which already existed in the antecedent Brāhmanism. In the latter system the institution of the four *āśramas* (*q.v.*), or stages of life, already contained all the elements of a monastic order. Thus the *brahmachārin*, or religious student, was required, during the whole course of his apprenticeship to a teacher, both to practise absolute chastity and to beg his food daily. He might remain a student all his life. He did not in that case differ essentially from the mendicant ascetic (*bhikṣu*) of the fourth stage. Groups of the latter type in all probability formed the nucleus of distinct sects, which both during the lifetime of Buddha and after his death developed into monastic communities with disciplinary rules and outward characteristics of their own. Since Buddha laid great stress on the propagation of his doctrine by means of missionaries, his monks were scattered all over India and beyond its confines, forming many small and remote communities, over which his influence could not possibly extend. There was thus during his lifetime not one community, but very many. His personality, however, gave unity to the Order. But he neither designated nor made provision for a successor as visible head of the Church. This necessarily resulted in the formation of many sects, of which, two centuries after Buddha's death, there were no fewer than eighteen, with their own monasteries. The highest authority was the whole Church, or *Saṅgha*. 'Elders' (*sthavira*, Pāli *thera*) were distinguished, but they were not officials, the term being merely an honorary title bestowed on monks who had long been ordained. This obvious looseness of organization in the Buddhist Church was undoubtedly a great source of weakness throughout its history, and was one of the main causes leading to its ultimate downfall in India.

(*a*) *Confession.*—The disciplinary and penal code of the Church was embodied in the *Pātimokkha* (Skr. *Prātimokṣa*), a formulary of confession constituting one of the oldest parts of the Pāli canon. It is a list of sins enjoined by Buddha to be recited twice a month on the days of full and new moon in an assembly of at least four monks. At the end of each section the reciter inquired whether any of those present had transgressed any one of the articles that it contained. These two confessional days are called *upavasatha* (Pāli *uposatha*), a term originally meaning 'fast-day,' since it was inherited from Brāhmanism, in which it designated the fast-day on the eve of the great *soma*-sacrifice. The eighth day after new and the eighth after full moon were also *upavasatha* days, though not for confession. These four days together constituted weekly recurring festivals of the nature of Sabbaths. On these days laymen put on their best clothes, and the pious refrained from business and worldly amusements. Laymen were also regarded as irreligious if they did not observe, on the Sabbath, the first three of the five commandments specially enjoined on monks.

(*b*) *Admission.*—A man became a Buddhist layman by pronouncing the creed consisting in the words, 'I take refuge in Buddha, I take refuge in the Law, I take refuge in the Order'—these refuges being called the three 'jewels.' He then had to promise to keep the first five commandments. To the life of a monk or nun any one, without distinction of caste or rank, could be admitted excepting murderers, robbers, slaves, soldiers, and persons suffering from contagious diseases or certain bodily defects. The act of admission is called *pravrajyā* (Pāli *pabajjā*), 'leaving the world,' every one becoming a monk (*pravrajita*, Pāli *pabbajita*) by putting on the yellow robe, shaving his hair and beard, and uttering the creed thrice in the presence of an ordained monk.

(*c*) *Ordination.*—Ordination proper, called *upasampadā* ('accession'), which gave all the privileges belonging to the Order, might be conferred on all who had been admitted excepting those who had been guilty of serious crimes or offences. Twenty was the lowest age for ordination. Young novices, above seven years of age, could be received, but only with the consent of their parents. Converts from heterodox sects were, in addition to the ordinary formalities, subjected to a probationary period (*parivāsa*) before ordination. The ceremony of ordination was more formal than that of admission, taking place before a committee of at least ten monks. The candidate was examined as to his qualifications and possible disabilities by the president, who, if the proposed ordination was

accepted by the assembly, exhorted him to restrict himself to the four 'requisites' and to avoid the four capital sins. A monk could be temporarily or permanently expelled for committing any of these sins, or for general unsuitableness; but he could also voluntarily leave the Order. A result of entering the Order was the dissolution of marriage. The new monk had also to give up all private property, and was debarred from acquiring anything individually.

(*d*) *Clothing and equipment.*—A monk might possess only one suit of clothes, consisting of three parts: an under-garment, equivalent to a shirt; a lower garment, a kind of skirt reaching to the knee and fastened with a girdle; and a mantle which, coming down to below the knees, was thrown over the left shoulder, leaving the right shoulder and part of the breast bare. The colour of the garments in early times was yellow (as it still is in Ceylon), but in the Middle Ages it was reddish. Only a few other articles were required to complete the monk's equipment. One of these was an alms-bowl, which he carried in his hand for the purpose of collecting food. He was also provided with a razor, which he used for shaving his head and his beard twice a month on the *upavasatha* days of new and full moon. The rest comprised a needle, a water-strainer, and later also a mendicant's staff. Besides regularly paring his nails, he used tooth sticks for cleansing his teeth.

(*e*) *Housing.*—Originally the monks had no fixed abodes, but lived in woods or caves, though within easy reach of a village or town, so as to be able to beg food. It was their duty to wander about preaching the doctrine, but during the rains they went into retreat (*vārṣika*, Pāli *vassa*), generally several of them together. For their use during this season pious laymen often built shelters to which they annually returned during the rains. These were called *vihāras*, in which monks later began to live even at times other than the rainy season. In this way regular monasteries gradually grew up.

(*f*) *Food.*—In early times the monk was allowed only one daily meal, and that at noon, after his return from his begging rounds. The use of *ghī*, butter, oil, honey, and sugar was permitted to members of the Order only in times of sickness; otherwise it was treated as an offence requiring confession and absolution. Fish and meat were allowed under certain restrictions. Thus Buddha himself is recorded to have eaten pork. Like the Brāhman religious student, the Buddhist monk had to beg his food, but he was not allowed to ask for alms by word of mouth.

(*g*) *Worship.*—In the early days of Buddhism, religious observances were of a very simple character. Twice a month all the monks of a district assembled to celebrate the *upavasatha*, or Sabbath days, at new and full moon. The meeting, having been convoked by the eldest among them, was held in the evening at the place designated. It was restricted to ordained monks, but all of these had to be present. It consisted, as has already been said, in a ceremony of confession. The Sabbaths in general were days of rest and fasting, when no trade or business was allowed, hunting and fishing were forbidden, and schools and courts of justice were closed. Preaching and hearing sermons were a common feature of the celebration of every Sabbath. But the regular time for this was the retreat during the rains—an institution dating from the very commencement of Buddhism. The retreat began on the day of full moon in the month of Āṣāḍha (June–July), and ended with the day of full moon in the month of Kārttika (about the middle of October). Its conclusion was marked by the *Pravāraṇā* festival, held, before the wanderings of the monks again began, on the 14th and 15th days of the light fortnight, the latter being at the same time a Sabbath. This was made an occasion for giving presents, especially in the form of clothes, to the monks, for inviting them to dinner, and for celebrating processions.

In later times there was also a quinquennial festival, called *Pañchavārṣika*, on a grand scale, its distinctive feature being the practice of extraordinary liberality to the Order. In the first half of the 7th cent. King Harṣa of Kanauj regularly convoked such assemblies. In the 7th cent. the date of the *Nirvāṇa* of Buddha was also celebrated as a great festival.

It was not long after the establishment of Buddhism that the worship of relics and the adoration of sacred sites began to develop. Buddha himself, before he died, recommended four sites as deserving to be visited by the pious: his birthplace, the places where he obtained enlightenment, where he first preached, and where he entered into *Parinirvāṇa*. After the cremation of Buddha, his relics, as we are told in the *Mahāparinibbāna-sutta*, were divided into eight parts, over which the various recipients built *stūpas*. The veneration of relics later became a much developed form of worship. Among these, the tooth relic, with which a whole *sutta* is concerned, played a prominent part. The records of the Chinese pilgrims show that *stūpas* were also erected over the relics of Buddha's disciples and of saints in various cities, such as Vaiśālī and Mathurā. Fa Hian, about A.D. 400, saw Buddha's alms-bowl at Peshawar, and his staff near Nagara (south of the Kabul river). In the 7th cent. the head-dress of Buddha when a boy was to be seen in South India at Koṅkanapura, where it was displayed on Sabbath days and honoured with flowers. In the same century, shadows, regarded as relics left by Buddha, were shown in caves at Kauśāmbī, Gayā, and Nagara. From the 1st cent. A.D. onwards, images of Buddha, of Pratyekabuddhas and Dhyānibuddhas, and of Bodhisattvas began to be made.

5. **Art.**—Indian Buddhist art is peculiarly important, not only because it is of great value as illustrating the fortunes of Buddhism in India during nearly the whole course of its existence there, but because, if it had been lost, there could be no history of Indian art at all. The remains of Buddhist art in India are almost entirely architectural and sculptural. None of them, with one exception, goes back to a period earlier than the reign of the emperor Aśoka (variously fixed at 272–231 B.C. and 264–223 B.C.). The nine centuries over which they spread may be divided into three roughly equal periods. In the first, 250 B.C. to A.D. 50, stone began to be employed in India for building. Before this the architectural use of brick was known, as is shown by the *stūpa* of Piprahwa, which dates from about 300 B.C. or perhaps earlier. But the ornamental edifices of the pre-Aśokan age must have been built of wood, like the modern palaces of Burma, the substructure alone being of brick. The whole history of Indian architecture points to previous construction in wood, the stone monuments being largely imitations of wooden models.

(*a*) *Architecture.*—Indian Buddhist architecture may be divided into three classes: (1) *stūpas*, or relic mounds; (2) *chaityas*, or assembly halls, corresponding to our churches; (3) *vihāras*, or dwellings for monks.

(1) The *stūpa* was a dome-shaped structure, developed from the sepulchral mound, in which baked bricks were substituted for earth with a view to durability. They were first intended to serve as monuments enclosing relics of Buddha. Some, however, were only commemorative of important events connected with his history. The best extant example of a *stūpa* in India is that at Sānchī, which probably dates from the 3rd cent. B.C.

The *stūpa* is a hemispherical dome erected on a low circular drum, the upper rim of which formed a procession path round the base of the dome. On the top of the dome was a box-like structure surrounded by a railing, and surmounted by an umbrella. The *stūpa* itself was encircled by a massive stone railing which had gates on four sides, and enclosed a procession path and a sacred precinct. Both the rails and the gates are unmistakable imitations of wooden models. The *stūpa* became to the early Buddhist *the* religious edifice. In the oldest sculptures we constantly find representations of its adoration by

celestial beings, men, and even animals, such as elephants. It was also the sacred object always set up for circumambulation in all the temples of early Buddhism in India.

(2) The *chaitya* (*q.v.*), or assembly hall, is the exact counterpart of Christian churches not only in form, but in use. Till recently only rock-cut examples, to the number of about thirty, were known in India. The typical assembly hall consists of a nave and side aisles terminating in an apse or semi-dome. The pillars separating the nave from the aisles are continued round the apse. Under the apse and in front of its pillars is the *stūpa*, in nearly the same position as that occupied by the altar in a Christian church. The tee was doubtless usually surmounted by a wooden umbrella, which has, however, everywhere disappeared except at Kārli, the finest cave of this type in India. The roof is semicircular. Over the doorway, which is opposite the *stūpa*, is a gallery, and above this a large window shaped like a horse-shoe. This window is constantly repeated on the façade as an ornament.

In the rock *chaityas*, the excavation of which extended from about 260 B.C. to about A.D. 600, the development of their style can be followed step by step throughout these nine centuries. The oldest, dating from near the commencement of the reign of Aśoka, are at Barābar, 16 miles north of Bodh Gayā. The front of one of these is carved so as to represent in rock the form of the structural *chaityas* of the age, all the details clearly imitating those of wooden buildings. All the most important examples of *chaityas* occur at six places in Western India. As we pass from the earliest to the latest specimens, we can clearly trace progress towards stone construction on the one hand and degeneracy in cult on the other. In the later specimens at Ajantā (*q.v.*) a striking change is the fact that figure sculpture has superseded the plainer ornamental carvings of the earlier caves. The greatest change, however, is that figures of Buddha have now been introduced in all his attitudes. In the earlier caves only ordinary mortals are sculptured, but Buddha himself never appears. Now he is the object of worship, his image being introduced in the front of the *stūpa* itself, which alone was adored in the older *chaityas*. In place of the earlier total lack of images we are here confronted with an overwhelming idolatry, in which Buddha, originally regarded as a human being, is the chief deity. In the latest of the Ajantā caves, dating from about A.D. 600, the sculptures are more mythological, evidently approximating to the iconography of Brāhmanism.

The caves of Ellora (*q.v.*) are particularly interesting, because here the juxtaposition of Buddhist with Hindu and Jain temples throws light on the relation of the three religions. The large Buddhist assembly hall at this place dates from about A.D. 600.

Besides many other evidences of architectural lateness, its most striking feature is the *stūpa* which, instead of being circular, has a large frontispiece that makes it rectilinear on this side, and contains a figure of a seated Buddha surrounded with attendants and flying figures in the latest style. In what is probably the most recent Buddhist cave temple in India, at Kholvi, the *stūpa* is no longer solid, but is hollowed out into a cell, in which an image of Buddha is placed. This marks the latest step in the development of the *chaitya*. A link connecting this stage with the later Jain and Hindu temples is to be found in an old structural Viṣṇu temple dating from about A.D. 700. Here the *stūpa* is superseded by a cell for the image, but this cell still has a semicircular back, and is separated from the wall behind by a passage for circumambulation. The transition is completed by making the cell square, as is the case at Pattadkal in an early Hindu temple, otherwise the same in plan as the one just described. The archæological evidence of the development of the *chaitya* thus shows how the Buddhist religion gradually grew idolatrous, and came nearer and nearer to Hinduism. It supplies us with concrete evidence showing how by this time that religion was gradually disappearing before the encroachment of the new form of the faith, from an earlier phase of which it had itself sprung.

(3) Beside the *chaityas* there arose *vihāras*, or monasteries, as residences for the Buddhist monks. Our knowledge of these is still more dependent than that of *chaityas* on rock-cut examples. There are about 900 Buddhist examples of this class in India.

The *vihāra* consisted, as a rule, of a hall, generally square but sometimes oblong, surrounded by a number of cells or sleeping-cubicles, and shaded in front by a pillared verandah. The cubicles in the oldest caves usually contain a stone bed. There is generally only a single floor, but two-storeyed *vihāras* also occur. Nearly all the caves of this class are found in Western India. Probably about forty were excavated before the Christian era. The most important of them are found at Bhāja, Bedsa, and Ajantā. In those of the earliest period there are no figure sculptures, no reliefs, not even carved emblems. The only ornament consists of horse-shoe arches and the Buddhist rail as a string course, with an occasional pilaster. Towards the end of the first period, four pillars supporting the ceiling began to be introduced. In the second period the number of pillars was increased, and finally reached twenty-eight. This feature is always accompanied by the introduction in the back wall of a sanctuary containing an image of Buddha.

The *vihāras* at Ajantā are specially important, because they constitute a complete series of examples of Buddhist art without any admixture from Hinduism or any other religion. They extend from 200 B.C. to A.D. 600, and thus belong to all three periods. The *vihāras* at Ellora, on the other hand, are interesting mainly because they illustrate the inter-relation of the three Indian religions, Buddhism, Brāhmanism, and Jainism. For here we have three groups of caves which distinctly represent these religions, and in which the transitions from one to the other can be clearly traced. Most of the eleven *vihāras* at this place have sanctuaries containing figures of Buddha seated. Thus the Buddhist monastery is seen to be becoming a place of worship, in which images of Buddha are ousting the monks from their cells. These *vihāras* come down to about A.D. 700, at which point the earliest Brāhman examples begin. Three two-storeyed caves at Ellora illustrate clearly the transition from Buddhism to Brāhmanism. The first is entirely and unmistakably Buddhist. The second is similar in plan, and the sculptures are still all Buddhistic, but deviate sufficiently from the usual simplicity to have justified the Brāhmans in appropriating this cave as belonging to their religion. The plan of the third resembles that of the second, but the sculptures are all unmistakably Brāhman. This is evidently the earliest Hindu cave, being a close copy of the preceding Buddhist example.

(*b*) *Sculpture.*—In the earliest period there are no images of Buddhas or Bodhisattvas. No sculpture of Buddha, in any of his conventional attitudes, that has been executed in India can be assigned to an earlier date than the end of the 1st cent. A.D. Reverence was paid during the first period to relics, *stūpas*, Bo-trees, footprints of Buddha, and sacred symbols, such as the trident and the wheel of the law. These are constantly represented in the sculptures as adored by men, and even animals.

The sculptures of this period are found at Bhārhut (now in the Calcutta Museum) and Sānchi, at Bodh Gayā, and in the early temples and monasteries of Western India. They appear on the rails and gateways of *stūpas*, on monolith columns, on the pillars and façades of *chaityas* and *vihāras*. The most ancient railings, as those at Sānchi, are quite plain. But they soon began to be adorned with bosses, panels, and friezes. The railing at Bhārhut (200-150 B.C.) is covered in every part with elaborate sculptures in relief, and is practically a treatise in stone on Buddhist mythology. The gateways of Sānchi are covered with sculpture, including all sorts of incidents connected with Buddhist legend. It is worthy of note that both here and at Bhārhut occur representations of Lakṣmi, the Hindu goddess of fortune, with an elephant on each side pouring water over her from pots. This is the earliest example in Indian sculpture of worship being paid to any being, divine or human.

The commencement of the second period of Buddhist religious art coincides with the rise of the Mahāyāna school. Its history begins in the extreme north-west, the region of Gandhāra.

Representations of Buddha and of numerous Bodhisattvas suddenly appear in the Buddhist monasteries of this district for decorative purposes in the first cent. A.D. It is characteristic of this new phase of Buddhism that figures of Buddha occupy the cells originally meant for monks, and that the heads of these figures are always adorned with a halo. In this corner of India was created the conventional type of Buddha which, spreading from this source to other parts of India, was finally diffused over the whole of the Buddhist world. From the already stereotyped character of the figure on the votive casket discovered in the *stūpa* of Kaniṣka at Peshawar in 1909 we may infer that some nameless Greek artist first produced this type of the Enlightened One in the century preceding our era. It has perhaps been the most enduring, as well as the most widely dispersed, type that the history of art has ever recorded. In the hands of the artists of Gandhāra the image of Buddha became a centre for groups of sculpture in which Buddha plays the same part as Christ in Christian works of art.

Buddhist art, even in the western caves, represents the figures of its mythology in ordinary human form only, while it is characteristic of Hindu sculpture frequently to represent the gods with several heads and many arms. Probably the earliest figure of a Hindu god with more than two arms is one of Śiva on a coin of Kadphises II., dating from the 1st cent. A.D. This feature of Hinduism made its way into Buddhist sculpture only in the third and decadent period. Thus we find in one of the caves at Kanheri the Bodhisattva Avalokiteśvara represented with eleven heads. These disfigurements never extended to images of Buddha. But the sculpture of the second period furnishes melancholy evidence of the most striking feature in the degeneration of Indian Buddhism: Buddha, who denied the existence of a supreme god and rejected the worship of gods altogether, himself came to be treated as a supreme god, and the images representing him gave rise to a vast development of idolatry in the later forms of Buddhism.

(*c*) *Painting.*—About half-way through the second period another branch of art—painting—begins to appear as a handmaid of the Buddhist religion. The actual remains of these early paintings are chiefly limited to the frescoes found on the ceilings, walls, and pillars of several of the Ajantā caves. The oldest belong to the end of the 2nd cent. A.D. They extend through the third period of Buddhist art, the best and most interesting specimens dating from *c.* A.D. 550 to 650. They comprise pictures of Buddha with drapery and nimbus in the style of the Gandhāra school of about the 4th century. The frescoes, like the sculptures on the rails at Bhārhut and Amarāvatī, were intended for the edification of pious Buddhists. The subjects are confined to such as are drawn from Buddhist mythology or legend. Among them may be mentioned frescoes (of about the 6th cent.) illustrative of the *Jātakamālā* accompanied by inscriptional verses by its author, Āryaśūra.

As regards sculpture, Buddhist religious art declined more and more in the third period, gradually approximating to that of Hinduism. The Buddhists now used images as freely as the Hindus. The mediæval statuary of Bihār is found to be almost identical with that in the Hindu temples, and the two classes of images became so similar that they are often confounded even by skilled archæologists. Thus the history of the art of Indian Buddhism shows how that religion lost its original characteristic features, and became almost indistinguishable from reviving Hinduism.

LITERATURE.—*GENERAL.*—The chief works on Buddhism in general are: H. Oldenberg, *Buddha, sein Leben, seine Lehre, seine Gemeinde*, Berlin, 1881 ([6] 1913); T. W. Rhys Davids, *Hist. of Indian Buddhism* [3] (Hibbert Lectures), London, 1897, *Buddhism*, do. 1904, *American Lectures: Buddhism, its History and Literature* [2], New York and London, 1904; H. Kern, *Der Buddhismus und seine Gesch. in Indien*, Leipzig, 1882–84, *Manual of Ind. Buddhism*, Strassburg, 1896; E. Hardy, *Der Buddhismus*, Münster, 1890; R. S. Copleston, *Buddhism* [2], London, 1908; R. Pischel, *Leben und Lehre des Buddha* [2], Leipzig, 1910.

*HISTORY.*—H. Kern, *Manual*, pp. 101–134; Rhys Davids, *Buddhism*, ch. ix., *Amer. Lect.* ch. vi.

*DOCTRINE.*—Oldenberg, *op. cit.* pp. 235–387; Rhys Davids, *Buddhism*, chs. iv.–v., *Amer. Lect.* iii., v.; Kern, *Manual*, pp. 46–73; L. de la Vallée Poussin, *Bouddhisme, Opinions sur l'histoire de la dogmatique*, Paris, 1909; Pischel, *op. cit.* pp. 62–99; F. O. Schrader, *Ueber den Stand der ind. Philos. zur Zeit Mahāviras und Buddhas*, Strassburg, 1902; M. Walleser, *Die buddh. Philos. in ihrer geschichtl. Entwicklung*, pt. i. 'Die philos. Grundl. des älteren Buddhismus,' Heidelberg, 1904, pt. iii. 'Die mittlere Lehre des Nāgārjuna,' do. 1911. On the problem of the relation between Buddhism and the Sāṅkhya philosophy: H. Jacobi, 'Der Ursprung des Buddhismus aus dem Sāṅkhya-Yoga,' in *GGN*, 1896, pp. 43–58, and 'Über das Verhältnis der buddhist. Philosophie zum Sāṅkhya-Yoga,' in *ZDMG* lii. [1898] 1–15; R. Garbe, *Sāṃkhya-Philosophie*, Leipzig, 1894, *Sāṃkhya und Yoga* (=*GIAP* iii. 4), Strassburg, 1896, and *Philosophy of Ancient India*, Chicago, 1897; the theory is criticized by Oldenberg, *ZDMG* lii. 681–694, and *Buddha* [6], pp. 65–71.

*ORGANIZATION AND CULT.*—Oldenberg, *op. cit.* pp. 388–445; Rhys Davids, *Buddhism*, ch. vi.; Pischel, *op. cit.* pp. 100–124.

Smith, *A History of Fine Art in India and Ceylon*, with 386 illustrations, Oxford, 1911, chs. ii. (architecture), iii.–v. (sculpture), viii. (painting), with copious bibliographical notes.

A. A. MACDONELL.

**INDIFFERENTISM.**—This doctrine makes its first clear appearance in Stoic ethics. Virtue consists in living according to nature; but certain things are in our power, certain things are not. The latter are ἀδιάφορα, things indifferent; they have nothing to do with the motives of the virtuous man; he must be entirely independent of them, taking them as they come, but trying to do nothing—for, indeed, it is really impossible—either to secure or avoid them. 'Some things are in our power, such as desire, impulse, inclination; others are not, such as the body, property, reputation. . . . If you really know what is your own, and what is not your own, no one will be able to exercise compulsion or restraint over you: you will never blame or chide another; no one will injure you, and you will never have an enemy' (Epict. *Man.* i. 1 ff.). Virtue is nothing but the good will; Epictetus illustrates this by the story of two lads who were sent to fetch Plato: the one sought for him everywhere, but missed him; the other spent his time listening to strolling jesters in the street, and then happened to see Plato passing, and gave him the message. 'Ἀδιάφορα, on the other hand, are things which, properly speaking, 'neither help nor injure, such as life, health, pleasure, beauty, strength, wealth, good repute, good birth, and their opposites, death, disease, toil, disgrace, weakness, poverty,' etc. (Diog. Laert. vii. 102). It is this conception that is the chief element in the popular view of Stoicism; and it forms an interesting contrast to Aristotle's description of the 'great-souled man,' for whom the things in the first class of ἀδιάφορα as described above are a necessity, but who despises what can only be received from other people.

But there are three objections to the conception. (1) It leaves man without guidance in a large part of life; (2) it is too severe for most men; (3) it is impracticable, since all life involves a continuous

series of choices, even in our dealings with ἀδιάφορα. Even if pain is an indifferent thing, does it not matter how one acts under it? Hence the doctrine was modified, but only in the direction of the second—and least important—objection; and a distinction was introduced between what were known as καθήκοντα (*officia media*) and κατορθώματα (*officia perfecta*), the former denoting acts that are suitable and commendable, the latter acts that are positively right. The latter term refers to virtue and vice, *i.e.* things according or contrary to nature; they are absolute. The former refers to things relative to ends; they involve degrees, and allow of considerations of convenience; hence only with κατορθώματα can there be no compromise; there the imperative is, as Kant would say, categorical. It must be noted here that we are not dealing with counsels of perfection, as they have been called, for κατορθώματα are necessary for all; and in the same way all may have the benefit of the principle of the καθῆκον. Nor is casuistry involved; for casuistry (*q.v.*), whose existence the Stoics did not recognize to any great extent, arises in the case of a conflict of duties.

The distinction between καθήκοντα and κατορθώματα implies a further distinction in indifferent things, between προηγμένα and ἀποπροηγμένα, things to be preferred or rejected, or ἄξια and ἀπάξια, *i.e.* things with or without value; thus, even in the class of indifferent things is found the distinction of being either according to or contrary to nature; and objects in the one class may be lawfully pursued, in the other avoided.

This, however, is really an excrescence on the system, not an integral part of it. For, if an act is according to nature, surely it is a κατόρθωμα; how could it be anything but definitely wrong to turn from what is according to nature, or pursue what is contrary to it? Or, if ἄξια are what they are because they involve ends at which we may rightly aim, on what grounds are these aims admissible? They are either good or bad. What makes them so? Nature again. Further, if ends are right, are all the means to them right? If not, how are we to decide between the different means? Only as they involve virtue or vice; in any case, we are driven back to κατορθώματα. Indeed, the Stoic ideal is now destroyed, for the sage is no longer a rival of Zeus—'rex denique regum'; he is jostling in the crowd for objects whose lack makes him confessedly in an unsatisfactory position, and to secure which he will at least be tempted to evil. Hence, the introduction of this distinction does nothing to relieve Stoicism from the burden of the doctrine of ἀδιάφορα in general.

The question did not again take an important place in ethics till Kant. Kant recognized in the Stoics a school with whose views he could not but sympathize; most austere of moralists as he appears to be, however, he blames them for not seeing that, while happiness cannot be the cause of virtue, it ought to be its accompaniment and result. It is the second, though only the second, element in the *summum bonum*. To the Stoic doctrine of ἀδιάφορα, however, he does not explicitly refer; but by implication it is roundly condemned. For, just as to Kant there is nothing good except the good will, so there is no freedom save in the absolute obedience of the will to the Moral Law; and whatever is not of freedom is immoral. But to be guided by inclination or preference is to set other ends above the Moral Law.

'Freedom and the consciousness of it as a faculty of following the moral law with unyielding resolution is independence on inclinations, at least as motives determining (though not as affecting) our desire' (*Critique of Practical Reason*, tr. Abbott, London, 1879, p. 310). So also religion is 'the recognition of all duties as divine commands, and here, too, all remains disinterested and founded merely on duty, neither hope nor fear being made the foundation springs, which, if taken as principles, would destroy the moral worth of actions' (*ib.* p. 329).

It thus appears that, while Kant criticizes the Stoics for neglecting happiness altogether, he is totally opposed to the issue in which they as a matter of fact recognize it, and there can be no doubt that he has logic on his side. On the other hand, he has certainly laid himself open to Schiller's well-known epigram.[1] Argument by epigram is dangerous, however; and Kant did not call an act done from affection wrong necessarily, but only an action done from affection instead of from respectful obedience to the Moral Law. Strictly speaking, affection which leaves such respect intact is itself an ἀδιάφορον, unimportant from the point of view of morals. But here Kant is on dangerous ground. The consideration, indeed, that led the Stoics to their doctrine of προηγμένα he would neglect, since he is confessedly describing the implications of complete virtue, and he has no interest in the secondary virtue of the ordinary man; but he cannot avoid challenging comparison with the NT, to which, indeed, he constantly, though somewhat patronizingly, refers in the *Religion within the Bounds of Pure Reason*. In Paul's experience, Christianity, as with Kant, is essentially a principle of freedom; but it is freedom *from* a purely moral law, *to* a supreme person. Moreover, the spring of obedience to this person, *i.e.* Christ, is not respect, but gratitude and love. The relation of obedience to love in Christianity is similar to the relation of happiness to virtue in Kant. In each pair the former member has its roots in the latter, and without the latter is of no value. But, when it is said that Christian freedom is freedom from the law, this does not mean that the necessity for conformity to the law disappears. It is rather 'established' (Ro 3[31]). Its scope, indeed, is infinitely extended. 'Whatsoever ye do . . . do all to the glory of God' (1 Co 10[31]). Thus nothing can be indifferent; there is no place for ἀδιάφορα; for there are certain things at which a Christian will never think of aiming (Lk 10[42]); there is nothing to which his attitude is not of supreme importance.

As long as respect for the law is the sole motive, it is difficult to escape such distinctions as that between προηγμένα and ἀποπροηγμένα. But Kant himself has provided a way out in his second statement of the categorical imperative: 'Treat everyone as a member of the Kingdom of Ends.' This formula shows the real strength and weakness of Kant's system. Obedience to the formula brings one very near to the Christian rule of loving one's neighbour as oneself; and, indeed, the two formulæ explain one another; and both exclude ἀδιάφορα, since in dealing with oneself there are no ἀδιάφορα. At the same time, such an attitude is impossible unless the deepest emotions and affections, instead of being expelled, are made central.

LITERATURE.—For the Stoic doctrine see Diog. Laert. vii.; Epictetus, *Enchiridion*; E. Zeller, *Philosophie der Griechen*[4], Leipzig, 1909. For Kant see his *Religion innerhalb der Grenzen der blossen Vernunft*, pt. i. (in *Werke*, ed. Rosenkranz, do. 1842), or T. K. Abbott, *Kant's Theory of Ethics*, London, 1879, p. 300 ff. For the ecclesiastical doctrines of acts and of rites and ceremonies see art. ADIAPHORISM; and for the psychological doctrine of the Liberty of Indifference see art. WILL.

W. F. LOFTHOUSE.

**INDIGITAMENTA.**—The Roman Indigitamenta were those portions of the pontifical books (Serv. *Georg.* i. 21: 'in indigitamentis . . . id est, in libris pontificalibus') whose origin was traced to King Numa Pompilius (Arnob. ii. 73: 'Pompiliana indigitamenta'). The citations made from them by the ancients go back to the work of Granius Flaccus (Censor. *de Die Nat.* iii. 2:

[1] 'Gerne dien' ich den Freunden, doch thu' ich es leider mit Neigung, | Und so wurmt es mir oft, dass ich nicht tugendhaft bin' (*Die Philosophen*, 'Gewissensskrupel').

'Granius Flaccus in libro quem ad Caesarem de indigitamentis scriptum reliquit'), and to the *Antiquitates rerum divinarum* of M. Terentius Varro (cf. R. Agahd, *Jahrb. für Philol.*, Suppl. xxiv. [1898] 131 ff.). As the verb *indigitare* (which is not connected with the *di indigetes*) has, on the testimony of the ancient lexicographers (Paul. p. 114; Serv. *Æn.* xii. 794; *Corp. gloss. Lat.* vi. 564), the same meaning as *invocare*, the Indigitamenta were formulæ of invocation not to be differentiated from the 'comprecationes deorum immortalium quae ritu Romano fiunt' which Gellius (xiii. 23. 1) cites from the *Libri sacerdotum populi Romani*—*i.e.* the books of the *pontifices*. Accordingly, the Indigitamenta were lists containing the names and epithets of the gods, and specifying the occasions on which the help of each should be invoked; and the fact that the function and sphere of a deity were generally indicated by his name explains the statement of Servius (*Georg.* i. 21) to the effect that the Indigitamenta had contained 'et nomina deorum et rationes ipsorum nominum.' The few passages that explicitly mention the Indigitamenta, or else make use of the word *indigitare*, refer to the deities Bona Dea (Macr. *Sat.* I. xii. 21), Tiberinus (Serv. *Æn.* viii. 330), Genius (Censor. iii. 2), Numeria (Nonius, p. 352), and Apollo (Macr. *Sat.* I. xvii. 15). The last-cited passage may seem to conflict with the testimony of Arnobius (ii. 73: 'non doctorum in litteris continetur, Apollinis nomen Pompiliana indigitamenta nescire?'), but we must suppose that, while the name of Apollo may not have occurred in the oldest portions of the Indigitamenta, the latter were in course of time supplemented in order to correspond with the expansion of the Roman pantheon.

The absence of Apollo's name from the Pompiliana indigitamenta is referred to by Arnobius, or his source, as conclusive evidence that that deity was unknown in the earliest religion of Rome. This proves that when the Indigitamenta were composed they must have embraced all the deities then worshipped in Rome. It is, therefore, an error, and one that has become fairly common since its promulgation by J. A. Ambrosch (occurring recently, *e.g.*, in A. v. Domaszewski, *Abhandl. zur röm. Religion*, Leipzig and Berlin, 1909, p. 159), to regard the Indigitamenta as lists of those deities whom Usener (*Götternamen*, Bonn, 1896, p. 74 f.) has designated *Sondergötter*, *i.e.* gods whose sphere of power was narrow—being restricted to particular actions and circumstances of human life—and to apply the name 'indigitamenta-deities' exclusively to these. That the Indigitamenta really contained the names of such deities is distinctly implied by Censorinus:

> 'Sed et alii sunt praeterea dei complures hominum vitam pro sua quisque portione adminiculantes, quos volentem cognoscere indigitamentorum libri satis edocebunt' (iii. 4; cf. Serv. *Georg.* i. 21);

but that they were not wholly confined to that class of deities appears from the mention of Bona Dea, Tiberinus, and Genius in the fragments cited above. The much discussed lists of *di minuti*, which were arranged according to the various phases of divine action, and which can be reconstructed, especially from the writings of the Church Fathers (cf. Agahd, *op. cit.* 36 ff.), are not derived in that particular form from the Indigitamenta, but were drawn up by Varro (*Antiquitates rerum divinarum*, xiv.) as lists of the *di certi*, *i.e.* deities regarding whose function and signification the ancient scholars were still able, as he thought, to speak with certainty. Varro may have taken many of the names and interpretations from the Indigitamenta, but many were derived from other sources, and most of the accompanying explanations rest entirely upon etymologies which are open to question or even demonstrably false.

LITERATURE.—J. A. Ambrosch, *Über die Religionsbücher der Römer*, Bonn, 1843; R. Peter, art. 'Indigitamenta,' in Roscher, ii. [1897] 129 ff.; G. Wissowa, *Gesammelte Abhandlungen zur röm. Religions- und Stadtgesch.*, Munich, 1904, pp. 176 f., 304 ff.; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911, p. 159 ff.

G. WISSOWA.

**INDIVIDUALISM.**—The term 'individualism' may be taken either in a genetic or in a normative sense. In the former sense it denotes the systems which appear in religious and political society and their laws, as well as in the great manifestations of the human mind, creations of isolated or associated individuals; in the latter it denotes a principle according to which the integral and free development of the individual ought to be the aim of social life. Individualism in the genetic sense has a historical significance; individualism in the normative sense has a moral significance. They may stand independently of each other; but, as a matter of fact, individualism in the genetic sense of the word is often allied to a tendency which is individualistic in the normative sense, *i.e.* individualism in the genetic sense only traces back to the origins of societies, which thus form a First Cause, the aim which we claim to assign to them, or, in other words, transfers into the historical mode a certain conception of moral and social life. It seems best, therefore, to treat these two notions without separating them; as a matter of fact, they are often united and even confused. We shall discuss: (1) religious individualism, (2) moral individualism, and (3) political, social, and juridical individualism.

**1. Religious individualism.**—Primitive religions regarded the individual merely as the member of a clan, tribe, or race. Even their deities are not developed individualities, but personifications of forces of nature or of social laws. It was only gradually that the imagination of the poets gave them more definite characteristics. In this connexion the religion of Israel has the same character as the other national religions. Jahweh is the God of a people. It is to this people that He has given His law. For transgressions of this law He demands satisfaction indifferently from just and unjust—the descendants who have not sinned as well as the ancestors who are guilty. The individual simply shares the lot of the whole of which he is a part.

The time of the prophets witnesses a transformation of ideas in the meaning of individualism. The prophets themselves were powerful individualities who, strong by means of their inspiration and the revelations of which they were the conscious objects, opposed the people and the national tradition, preaching the religion of justice in opposition to the religion of worship, and realizing in their person an individual communion between God and man. They undoubtedly still speak to the people as a whole; they announce the punishments of God to the people as a whole, but in a different spirit. On the one hand, there appears the idea that the sufferings of the just are not punishments, but dispensations of God in view of the salvation of sinners by means of expiation: it is prominent in the parts of Deutero-Isaiah referring to the servant of God; on the other hand, Ezekiel develops the idea of a strictly individual justice: every one will suffer for his own sins; they will no longer say in Israel: 'The fathers have eaten sour grapes, and the children's teeth are set on edge' (Ezk $18^2$). The book of Job also marks an important stage in the development of religious individualism in Israel. Conscience was still subordinated to facts; the Israelites judged people according to their fate, and they judged themselves in the same way. This is the point of view of Job's friends: they prove to him that he is guilty because he is unfortunate. But Job protests. To the verdict of

outward conditions he opposes that of his conscience, and maintains that, even if he were to despair of the justice of God, his exceptional misfortunes are not the proof of exceptional wickedness. He does not regard himself as an example of a sinner; his predominant feeling is that his conduct has been upright; and his friends are in the end disowned by God Himself, whose cause they thought they were defending. This is the triumph of the individual conscience over the collective conscience—the slave of appearances. The victory of individualism is completed by the coming of the doctrine of resurrection and the judgment of the dead which is announced in the book of Daniel and gradually becomes implanted in the mind of the Jewish people. The triumph of this belief was due—at least in the minds of many scholars—partly to the effect of foreign influences on the Israelitish mind. Certain religions, *e.g.* Parsiism and the ancient Egyptian religion, in their beliefs concerning the life to come and the judgment of the dead, have a very important individualistic element. As regards Jewish piety, it more and more assumed the character of an individual effort to merit eternal life, by good works and a strict observation of the law. The ancient idea of national solidarity did not disappear, however, and religious hopes still continued to bear a national character.

The individual soul is the special interest of Jesus. It is the object of His appeals, His solicitude, His promises. To Him the work of saving souls is more important than that of saving His people, although this too is not neglected. He was the real initiator of religious individualism, by the announcement of His filial connexion with God and of God's solicitude for all sinners, and by His invitation to His followers to enter into a communion with the heavenly Father similar to, if not identical with, His own communion with the Father. With St. Paul also the care of individual souls is predominant; we find in him, however, the idea of the Church as the body of Christ. He does not place it above individual souls, but there appears in his Church the notion of a spiritual reality which enters into competition with the individual. Afterwards the Church is regarded as an institution of divine origin, the mediator between God and man, and the regulator of the thought and life of the individual. In fact, if not in theory, the individual exists for the Church rather than the Church for the individual. The Christian becomes a member of the Church by a sacrament which is officially administered to him at a time when he has not the power to reject it, and he remains a member, not because of personal qualities, but because of the sacrament, as long as the Church does not think fit to exclude him from its communion.

Alongside of the Church institution another type of religious association appears in the Middle Ages, viz. the sect—if we may use this word to signify communities to which persons voluntarily attach themselves on account of personal convictions, and membership in which consists in the fulfilment of certain rules or vows. The sects were incontestably, in many cases, the refuge of individual piety and conscience from the hand laid by the Church on the religious autonomy of individuals. The Reformers proclaimed the principle of justification by faith, *i.e.* by a certain disposition of the soul with regard to the promises of God, and so brought the individual face to face with God, and prepared for the maturing of personal piety and religious thought. The consequences of their principle, however, were of slow development. The two great Churches resulting from the Reformation preserved the idea of the Church-institution on the whole, and took up a position against the sect of Anabaptists, which was based on the individualist principle. But the idea of universal priesthood expounded by Luther did not readily harmonize with the Church's dogma of a special priesthood. On the other hand, the idea of predestination favoured individualism, and relegated to the second place the idea of a Church as the guardian of the means of salvation. In the Lutheran Church, Pietism sought to realize the idea of universal priesthood, and, without attacking the ecclesiastical institution in general, to revive it by the formation of groups of Christians animated by a conscious personal piety. The Reformed Church gave birth to a series of sects, Baptist and Methodist, which are all founded on the idea that the holiness of the Church and the efficacy of its work depend upon the character of its members—that the Church is an association of living and converted Christians who have adhered personally to the Christian faith.

As the doctrine of the Church came to be contested more and more by criticism, the question of the rights of individual religious thought in the Church was a pressing problem. Catholicism could not solve it except in a negative way; the traditionalist section of Protestantism could do no more than make certain concessions; while the reformist section set itself to ensure the independence of individual thought, by insisting on liberty of thought as an essential element of Christian liberty, or by reducing the doctrinal consensus to a minimum, or by making thought and doctrine quite secondary elements of the religious life, and seeking to unite souls in mystical and practical aspirations. In this order of ideas, of which Schleiermacher was the instigator, religious thought follows religious experience, which by its nature is much more individual than collective. The rights of the individual with regard to every religious doctrine are, therefore, assured, and the doctrinal decisions of the Church have to take account of them. And, in addition, although mysticism properly so called has always offered a protective refuge to individual piety, it is not positively favourable to individualism, as it tends to absorb the human individualities in God rather than to make them independent.

Once at this point of development, religious individualism necessarily generated in the bosom of the official Protestant Churches a movement in favour of ecclesiastical individualism, which the sects had been practising for a long time, and this movement had its reflex action on the connexion of the Churches with the State. The Church-institutions were all united to the State. At first the effect of this union was to enslave the Church, but afterwards it produced exactly opposite results. The Western Catholic Church very soon regarded itself as invested with spiritual glory in Christendom, while the State held the temporal glory under its authority and for its protection. The Protestant Churches too, at first, spoke more or less consciously of the idea of 'Christendom'—a politico-religious body, of which the Church (subject, of course, to the State) was the inspiration. The union of Church and State, therefore, was part of a system in which the individual was surrounded in every respect, even intellectually and morally, by society, and in which the State was the prop of a particular form of the Christian religion. In so far as the State, under the influence of the widening of ideas and the enfranchisement of intellect, became more unconfessional and even unreligious, its union with the Church appeared to many minds prejudicial to the liberty of the latter, and to the liberty of the individual. The idea of a civilization founded on religion became gradually more vague, and in some places

disappeared entirely. A new notion made its appearance—that of the Church-association, composed of men animated by one and the same faith, independent of the State, and exerting no influence whatever on it or on persons who do not voluntarily belong to its membership. This is the system of the Independent Churches, or of ecclesiastical individualism. The great theorist of this system was Alexander Vinet, the promoter of the Free Church movement in the canton of Vaud. According to this system, persons cannot become members of a church except by voluntary adherence to a confession of faith which forms the base of the Church (Churches of professing Christians). The Churches have no longer anything in common with ethnic or historical groups; they are regarded as free creations of the spirit of God by means of individual souls who, on coming into contact with each other, form religious societies. As a matter of fact, the principle of ecclesiastical individualism has nowhere been carried out to its full extent, even in the communities in which infant-baptism is not practised. It clashes with the existence of the Christian family, which is itself a small church, and which, in reality, entails membership of the Church on the children born within it.

From the Protestant point of view religious individualism is legitimate, and inseparable from every higher form of religion, in so far as it asserts the right and the duty of the individual to enter into direct communion with God, to think freely about religious matters, to join or not to join such and such a religious society, and in so far as it asserts the decisive influence of the great religious individualities on the historic march of religions. Religious individualism, however, runs the risk of weakening religion, when it does not recognize its social past, its origin in beliefs common to all the members of a society, and the inevitable connexions between the religious society and the political society—connexions which are beneficial when they are based on respect for the real nature of the two institutions.

2. **Moral individualism.**—Moral individualism is seen mainly in three forms: (1) the criticism of national customs and traditions; (2) the view that moral obligation is born in the individual conscience, and that the latter is also the heuristic principle of moral duties; and (3) the view that the development of the individual is, if not the only aim, at least one of the chief aims, of the moral life.

We find the first form in antiquity. The Sophists submitted the traditional morality to a dissolving criticism, which opposed individual reflexion to national tradition. Socrates, building on the ruins, appealed to reason to re-construct a morality. This we may call individualism in its second form. Naturally, this rational morality of Socrates is strongly influenced by tradition; it is even more so with Plato, who, when not under the influence of his mystic ideas, places the city above everything; and it is equally so with Aristotle. The Epicureans and the Stoics represent in their way the third form of moral individualism. They aim above all at the happiness of the wise man considered 'alone by himself.' This individualism, however, is very relative, or, rather, negative, for it allows of hardly any variety in the conception of the moral ideal. Each school produces only one uniform type, but this type is no longer that of the citizen who lives for his country; it is now the man who seeks his way and his place in the universe and in humanity. The Catholic Church regards morality essentially as obedience to a collection of divine and human laws. In the Middle Ages, Abelard was almost the only one who (in his *Scito te ipsum*) invited man to look within himself for the foundation of morality. The Renaissance was, in theory at least, if not in practice, a very pronounced individualistic movement. Powerful individualities asserted themselves to such an extent that in many cases they freed themselves from all tradition and all law. Among the Reformers, Luther especially laid emphasis on the internal character of the moral obligation; the only actions with any moral value in his eyes were those accomplished by the individual in virtue of this inner constraint; while Calvin insisted above all on the notion of the divine law, not forgetting, however, that this law is inscribed on the conscience. The philosophy of Kant exaggerates Luther's theory: moral obligation is not only internal, but absolutely autonomous, and this obligation, which proves the liberty of man, is in a way his proper aim: all the contents of morality flow from it. Kant is the most characteristic representative of the second and third forms of moral individualism: morality comes from the individual, and it has as its aim the freedom and the dignity of the individual. Fichte's idea is similar, although less formalistic. For Hegel, on the contrary, the moral subject is only a stage towards the realization of the objective mind in the State. The last word of morality for Hegel is the sovereignty of the State, which shows its majesty by sacrificing individuals, if need be, to the maintenance of its independence and authority. Hegelian morality is the finished type of an anti-individualistic morality, although Hegel had really no intention of sacrificing the individual and disregarding his dignity. It is the spirit of Hegel that animates Ludwig Feuerbach when he attempts to make the idea of space (*Gattung*) the predominating idea of morality, and D. F. Strauss when he makes a similar attempt in his work entitled *Der alte und der neue Glaube* (Bonn, 1872). Later, however, Feuerbach passes to an individualism so extreme that it was exceeded only by Max Stirner (whose real name was J. Kaspar Schmidt), author of a book entitled *Der Einzige und sein Eigenthum* (Leipzig, 1893), which recommends not only individualism but egoism, and which ends in the paradoxical idea of an association of egoists.

If the philosophy of the second half of the 18th cent. and the first half of the 19th was in general favourable to moral individualism, the literature was equally so. In Germany the *Sturm und Drang* period, an age of geniuses, was ultra-individualistic; the neo-humanism of the classics also made much of human individuality, without disregarding, however, man's social aspirations and work. Romanticism, again, exalted the individual in a way sometimes approaching the morbid, and now and then carried the cult of the individnal so far as to forget all moral rules. It was as a disciple of Romanticism that Schleiermacher, encountering the abstract individualism of Kant, which he criticized with sagacity, developed a concrete individualism which takes account of the difference between individuals, and no longer cultivates the single individual, but individuality. This is the object of the *Monologues* (Berlin, 1800), which are all impregnated with the Romantic spirit. If in his later works on morality Schleiermacher attributed more importance to society, he none the less sought to safeguard in every sphere the rights of individuality, whose development alone renders possible the complete moral life. Richard Rothe, the disciple of Schleiermacher, defines morality as the penetration of nature by the personality; he was clearly dominated by the idea of the value of the human person. The individualism of these two theologians can be traced back to the Gospel; it is no less connected with the philosophic and literary

movement of their time. Another theologian and writer, Sören Kierkegaard, the Dane, opposed the Hegelian tendencies in his country, and became the defender of a very extreme individualism which he identifies with true Christianity. This individualism is both intellectual and practical: subjective experience alone grasps the truth; the suffering which is born of the opposition of the individual to his surroundings is inseparable from moral life. Kierkegaard was driven by the logic of his position into conflict with the Established Church.

In England an individualism which is the parent of German Romanticism, and has yet a distinct character as in a way the privilege of the powerful, appears in Byron. Alongside of this great poet we must mention Carlyle, who, in his praise of a sort of hero-worship, sets forth great individualities as the flower and the perfection of humanity.

In France, moral individualism in the spirit of Kant was the distinctive characteristic of the morality of the spiritualist and neo-criticist school. The Positivism of Auguste Comte, on the other hand, was anti-individualistic; it made society the aim of the individual, and ended by preaching a kind of social religion. The neo-Positivism of which Emile Durkheim and Lucien Lévy-Bruhl are the principal representatives goes still further in this direction. It identifies morality with custom, and submits the individual unreservedly to the laws of society; for man owes everything to society—his development from the animal state, the creation of language, religion, and law.

In opposition to this extreme anti-individualism there is at present a new form of individualism, viz. Nietzschianism. Nietzsche exempts the strong man from all rule, despises moral laws as an invention of the weak in order to triumph over the strong, and sees in the Superman the terminus of human evolution. In the fragments of his last work, *The Will to Power* (in *Nachgelassene Werke*, Leipzig, 1901), however, there is a tendency to make the superman the creator of a new social rule.

**3. Political, social, and juridical individualism.**—Primitive races present the spectacle of the absorption of the individual in the clan or the tribe. Later, when the family, in the modern sense of the word, was constituted, it generally exercised, in the person of its chief, considerable rights over its members. The State gradually weakened this family authority in order to put itself more or less in the place of the family, although at the same time recognizing important rights in the individual. Græco-Roman antiquity, to the very end, imposed an official cult on every individual. The Roman Catholic Church afterwards tried to impose a similar conception of society upon the State, and Protestant Churches did not at first proclaim the principle of individual religious liberty. The idea of tolerance and of non-interference of the State in religious matters did not begin to obtain a footing in Europe, and especially in America, until the Revolution in England. Apart from religion, the ancient State and the feudal State of the Middle Ages, for different reasons, were less concerned about the happiness of individuals than the modern absolutist State, at least at the beginning of the 18th century. It had no hesitation in unscrupulously sacrificing the individual, when necessary, for the benefit of the State. At the beginning of the epoch of Cesare de Beccaria (1735–94), author of *Dei Delitti e delle pene*, Milan, 1764, there are signs of benevolence even with regard to criminals. From the end of the 18th cent. the system of economic guardianship and direction of commerce and industry by the State was gradually attenuated, or even abandoned, in favour of a system of liberty and of free competition, which is often called economic individualism. Adam Smith, Cobden, and Bright in Britain, and Bastiat in France, were the chief exponents of this movement.

As regards the general welfare of individuals, Great Britain was for a long time the only country where serious precautions were taken to ensure imprescriptible liberties for the individual. British traditions, the Anglo-Saxon temperament, and the Calvinist education all tended to the enfranchisement of the individual. The idea of inviolable individual liberties was afterwards recognized in several constitutions of the States of North America, whence it passed into the *Déclaration des droits de l'homme* in 1789. The French Revolution was at first bent on establishing the liberty of the individual, though it was forced in the end to sacrifice it. The Liberal school took up this aim, and reduced the State to the position of guardian of the rights of the individual. This theory, however, could not meet the reality, and to the abstract individualism of the Liberals socialism opposed a more practical care for the material welfare of all—at the risk, it is true, of compromising their liberty, and of making them purchase a moderate happiness at the expense of their independence; though idealist socialists claim that this will not follow. Anarchism is the extreme form of political and social individualism. It seeks to put free and contractual association in place of the State, and repudiates all constraint of society with regard to individuals. Down to the present it has not been able either clearly to define its ideal or to put it actively into practice.

We must now consider, independently of these theoretical and practical efforts to make the individual the chief or, at least, one of the chief concerns of the State and social life, the theories according to which governments and societies are the product of the conscious will of individuals. The idea that governments owe their origin to contracts entered into by individuals was known even to antiquity. It is found in the Middle Ages, and later among the Jesuits, with the distinct tendency to break down civil governments, originating as they do from contracts which are always revocable, in favour of the Church, an institution which goes back to God Himself. In the hands of the theorists of modern natural law, *i.e.* non-religious, the idea of contract becomes, on the contrary, a means of freeing the State from the Church. Hobbes was the first to trace back not only government, but society itself, to a social contract. Rousseau was his disciple in this matter, but with neither of these two thinkers did this theory profit individualism. Both of them, on the contrary, make the individual abdicate in favour of the society which he has helped to create—with this difference, that Hobbes makes society itself abdicate in favour of an absolute monarch, while Rousseau makes society supreme. Rousseau's theory of social contract, treated in the book which bears the same name (1762), shows the wildness of his dreams about the happiness of the savage, free from all fetters because he lives outside of society, and makes for the support of a civic ideal which is not even compatible with full religious liberty. The French Revolution was inspired by him when it instituted an obligatory civil religion, without any regard to the rights of conscience.

There is a kind of individualism also which has attacked the family and the institution of marriage. At the beginning of the second half of the 19th cent. marriage began to be looked at far more from the individual point of view than from the

social. Under the influence of Romantic ideas, even a theologian like Schleiermacher held for some time that marriage could be dissolved if the two individuals united by it no longer suited each other. Free love, or a conception of marriage which is very near to it, has been extolled by a series of writers (*e.g.* the brothers Margueritte, Ellen Key), in the interests of individual liberty. It is far from being the case, however, that all the attacks against marriage and the family have been inspired by individualistic tendencies; sometimes they are the result of an anti-individualistic tendency which regards the strongly constituted family as an obstacle to the omnipotence of a society which aims at equality.

With regard more particularly to the idea of law, individualist theories and social or socialistic theories stand in opposition. The former maintain that the essential origin and aim of the law is the establishing of the liberty and dignity of individuals whose spheres of action and of influence are so prescribed as not to encroach on one another. This is especially the theory of Kantianism and French spiritualism. The German historical school, on the other hand, finds in law a manifestation of the national spirit holding sway over the individual. Auguste Comte, with his Positivism, opposes the idea of individual rights, and insists on the rights of society and the duties of the individual towards it. The same theory is held by contemporary neo-Positivism. Every school that finds in law only the expression of the social relations demanded by the nature of men and things or by social utility either limits or entirely suppresses the individualist character of the law.

Moral and social individualism is an enormous improvement on the instinctive and brutal solidarity of ancient times. It ennobles man, but at the same time it runs the risk of isolating him, on the one hand, and, on the other, rendering him proud and making him forget what he owes to the community and to tradition. Individualism is fruitful only when it leads man to accept solidarity with his fellows without reserve, and to make it an instrument of justice and liberty for all.

E. EHRHARDT.

**INDIVIDUALITY.**—**I. The term.**—The word *individuum* is simply the Lat. translation of the Gr. ἄτομον, and thus originally signified 'that which cannot be cut,' or 'divided.' In this sense the word is found in Cicero, and Seneca uses it in the same way.[1] Even by the later period of antiquity, however, the word had come to denote a single thing as 'unique,' 'distinct from others,' 'alone of its kind.'[2] The mediæval writers adhered to this sense of the word, and, by the 12th cent. at latest, they had also coined the terms *individualis* and *individualitas*. The modern usage of the words in the sense specified is mainly due to Leibniz.

**2. Historical survey.**—Just as the word *individuum* has two meanings, viz. that of a 'single' thing, and that of a 'unique' or 'peculiar' thing, the corresponding idea is associated with two main problems, which, it is true, are closely connected. These problems are: (1) whether human society is to be traced chiefly to the action of single individuals or to a general order which is superior to them; and (2) whether the development of the qualities shared by all or the development of those peculiar to the individual is to be regarded as of more importance in the sphere of education and culture. These two questions are closely related also in the process of historical development.

The historical process of human society exhibits a rhythmical tendency; we perceive in it a movement from a general order to the individual, as also a movement from the individual to a general order, and the culmination of either seems to lead inevitably to the other. In the earliest stages of culture the human individual is but part of a social economy which hedges him in with its laws and customs, and rigorously controls his conduct. The progress of civilization brings with it a more extensive division of labour, and at the same time carries the individual to a position of greater independence; the human units do not now simply hearken and obey, but begin to question the authority of the existing order, and at length, feeling themselves superior to it, they repudiate all outward control, and refuse to recognize anything that does not clearly and definitely approve itself to their minds. Such emancipation, however, tends naturally to bring about a state of things in which the stability of life is dissolved, and all communal existence abolished, with the result that a counter-movement sets in, and attempts are made, by spiritual means, to restore that relationship of human beings which in its natural form had been irretrievably lost. At this stage the distinctive quality of the individual may be duly recognized so far as it fits in with the wider order. But, even when such an order has been attained, it by no means implies finality. In the further progress of humanity it may be found to be too narrow, too inflexible, and may at length become intolerable. There will then set in once more a movement in favour of the individual, and a concomitant transformation of the entire situation.

In this conflict between the general order and the individual the former is usually defended by an appeal to the necessity of a fixed and stable organization, transcending the aims and powers of the individual units, while, on the other hand, the individuals maintain that the true human life wells up in the individual soul alone, that that life re-

[1] Seneca, *de Provid.* 5: 'quaedam separari a quibusdam non possunt, cohaerent, individua sunt.'

[2] The various senses borne by the term *individuum* towards the end of the ancient period are set forth by Boethius in his commentary on Porphyry (Basel, 1570, p. 65): 'Individuum pluribus dicitur modis. Dicitur individuum quod omnino secari non potest, ut unitas vel mens; dicitur individuum quod ob soliditatem dividi nequit, ut adamas; dicitur individuum cujus praedicatio in reliqua similia non convenit, ut Socrates; nam cum illi sint caeteri homines similes, non convenit proprietas et praedicatio Socratis in caeteris, ergo ab iis quae de uno tantum praedicantur genus differt eo quod de pluribus praedicatur.' The leading passage in Porphyry runs as follows: ἄτομα λέγεται τὰ τοιαῦτα, ὅτι ἐξ ἰδιοτήτων συνέστηκεν ἕκαστον, ὧν τὸ ἄθροισμα οὐκ ἂν ἐπ' ἄλλου τινός ποτε τὸ αὐτὸ γένοιτο τῶν κατὰ μέρος. This definition held its ground throughout the Middle Ages till modern times.

quires perfect freedom for its development, and that a far greater inwardness and fullness of life is to be looked for from such unhampered development than any general order could ever produce.

This oscillation between the two sides can be distinctly traced in the history of European civilization. The complete emancipation of the individual, as manifested in the philosophical sphere by the Sophists, was presently recognized as a grave danger, and the political constitutions drawn up by Plato and Aristotle are largely dominated by the idea of once more giving a commanding position to the conception of a general order. By availing themselves in particular of the idea of a living organism, these thinkers illustrated, on the one hand, the absolute subordination of the individual to the community, and, on the other, the distinctive function of each individual within the community. While Aristotle certainly concedes to the individual a position of greater importance than does Plato, that position must nevertheless lie within the whole; he never admits that the individual has any rights as against the community, and sets no limit to the community's claims upon its single members. Aristotle's view finds its most significant expression in his assertion that the State (the organized community) is prior to the individual.[1]

The idea of the organism was extended by the Stoics to the universe as a whole. At the same time, however, the Stoics insisted strongly upon the unique character of every particular element in the whole, asserting that no two hairs or grains of corn were perfectly alike.[2] Thereafter the metaphor was adopted by Christianity, and was applied to the Kingdom of God, as, *e.g.*, in the figure of the vine and the branches, although this conception is found only in the Fourth Gospel, which was strongly influenced by Greek modes of thought. The endeavour made in the later period of antiquity to fortify the individual by the formation of permanent associations appears also in the rise of various schools—as, *e.g.*, those of the Stoics and the Epicureans—the object of which was not merely unity of opinion, but also a certain community of life.

The movement towards a stable organization of human society, however, attained success not through the instrumentality of philosophy, but by linking itself to religion. It was, in fact, the Christian Church that first proved capable of creating an organization which united its members in a firm bond, and imparted truth and salvation to them individually. The commanding position won by that organization was largely due to the rise of new nationalities, which required to be trained to independent spiritual effort. But philosophy likewise had a share in bringing about the alliance with religion—in so far, namely, as it gave the individual a link of relationship with the cosmic whole. The outstanding name here is Plotinus, who includes all things in their multiplicity and variety in a universal life, and regards all individual existence as being permeated thereby. Thus, as the universal life is immediately present in the individual, and may indeed become his own essential nature, he is undoubtedly raised to a much higher position; nevertheless he is still dependent upon the universal, and the development of his peculiar qualities is left out of account. This mode of thought was fostered by mysticism. But, while mysticism advances to the desired unity with the All by means of individual effort, and aspires to realize that unity directly, and while it

[1] *Polit.* 1253*a*. 19 (Bekker): *πρότερον τῇ φύσει πόλις ἢ οἰκία καὶ ἕκαστος ἡμῶν ἐστιν.*

[2] Cf. Cic. *Acad.*, *Quaest.* iv.: 'Stoicum est . . . nullum esse pilum omnibus rebus talem qualis sit pilus alius, nullum granum,' etc.

therefore admits of a greater freedom than does the ecclesiastical system, yet here too all life is derived from the universal, and devotion thereto prevails over the development of individual qualities.

Of the modern period, again, nothing is more characteristic than the fact that it came to find the mediæval form of human life too narrow and restrictive, and brought the independence and opulence of the individual life to their full development. The various civilized peoples have furthered that development in various spheres: the Italians in art, as is shown by the Renaissance; the Germans, as the people of the Reformation; the British, in the political and economic sphere; the French, in the structure of social life. These movements have generated enormous activities, unchained vast forces, and radically altered the entire conditions of life—facts so palpable as to require no fuller treatment here. In the modern period, moreover, the full development of individual characteristics came to be recognized as an end of the first magnitude. Here, on the theoretic side at least, it was especially the Germans who led the way; thus Leibniz enunciated with telling effect the unconformable character of the individual 'monads'; Schleiermacher and the older Romanticism asserted that the great end of life was to be an individual, a personality, and to invest every action with one's own individuality; while German pedagogy made it its aim to give the most careful attention to the peculiar qualities of individual children, and bring those qualities to their full development. J. H. Pestalozzi emphasizes the opposition between individual and 'collective'; he scoffs at 'collective actions,' at the idea of a 'collective conscience,' at 'official creeds,' and asserts that the collective life of the race can at best civilize it, but cannot give it a true culture ('kultivieren'; see *Werke*, ed. L. W. Seyffarth, Berlin, 1881, xii. 154). In all this we can trace the powerful influence of Rousseau, who, as regards the whole range of human life, was the first to bring out with perfect clearness the antithesis between the individual and society.

Valuable as were the results of this individualistic tendency, and powerfully as it still operates, we nevertheless cannot fail to see that its limitations and its dangers are being more and more recognized, and that a counter-movement is setting in and increasingly asserting its power. This counter-movement is due to various causes. Among these we should note first of all the theory which from various sides directed attention to the significance of societary groups, and to the individual's dependence upon them—facts emphasized by history and the historical mode of thought, to which, in particular, Romanticism gave an artistic form of expression; by philosophical speculation, which, in the hands of Fichte, Schelling, and Hegel, interpreted the manifold of experience as the evolution of a single principle; and by modern sociology, which showed that the individual cannot exist at all except in connexion with others, and also made manifest the close dependence of the individual's personal characteristics upon the social environment—the *milieu*.[1]

Theoretic considerations, however, were much less effective than practical experience in counteracting the preponderance of the individual. The perils of the unlimited freedom of the individual manifested themselves, above all, in the economic sphere. As labour became more and more technical in character, and was more and more concentrated in huge factories, and as, in consequence,

[1] The term 'milieu,' as comprehending all the surrounding conditions of life, was probably first used by Lamarck in his *Philosophie zoologique*, Paris, 1809. It was transferred from the sphere of zoology to that of sociology by Comte, but it was Taine's predilection for the term that gave it general currency.

the antagonisms between varying interests became increasingly fierce, the evils of unrestricted competition became ever the more marked, and the social process seemed to be less and less capable of self-regulation. In such conditions some interference of the State was imperative, and this policy has been more and more adopted even among those peoples who by their character and their history are in a pre-eminent degree the champions of individual freedom.

If a tendency to narrow the sphere of State action was characteristic of the 18th cent., a reversion to the opposite procedure asserted itself strongly in the course of the 19th. If reason and morality were to rule the societary life of man, it appeared to be urgently necessary alike to strengthen the power of the State and to circumscribe that of the individual. No exaggeration of this idea—such as we find very specially in the proposals of Social Democracy—can detract from its rightful claims.

This reaction against a sheer individualism takes its ground, in the first instance, upon the conditions necessary to the mere maintenance of life, and treats the inward interests of man as matters of secondary importance. Yet it cannot be denied that a movement towards a closer association of mankind is increasingly at work in the inward sphere as well—that there is a growing desire for spiritual fellowship. The inner experience furnished by religion has for many people at the present day become all but evanescent, and the spiritual association based on such experience is likewise largely dissolved. The individual realizes that he is thrown upon his own resources, and begins to feel himself isolated; even in what he regards as exalted and sacred he encounters endless inconsistency. In such a state of things his convictions cannot attain stability or win power over his conduct. The more earnest a man is in the spiritual life, the more intensely does he feel his isolated position to be unsatisfactory, and, indeed, intolerable, and the more eagerly does he crave for some fresh spiritual bond of union with his fellow-men, and for the support that such a connexion would afford. It may be said, in fact, that the unmistakable movement towards religion at the present time proceeds in a special degree from such desires—from a positive reaction against the threatened isolation and the growing apathy of the individual. Here emerge great problems for the future; the present generation is engaged in the search for a new mode of life and a new framework of human society.

3. **The problem of individuality.**—On the problem of individuality itself we would add but a few reflexions suggested by our historical survey. Mankind is acted upon by two opposite tendencies, each of which has its own strong points as well as its own weaknesses. It is indisputably the case that the immediate sources of spiritual life lie in the individual alone, and thus a system of things which places the individual above all else must undoubtedly prove superior to any other system in originality, mobility, and variety. But, on the other hand, the individual would appear to be incapable by himself of fully developing and consolidating such spiritual capacities as he possesses, while, again, the separate individuals tend to come into such opposition and conflict with one another as threaten the existence of all fellowship whatever. Society then develops a form of organization, but this in turn is exposed to the danger not only of permanently fettering human life to the organized structure of a particular age, but also of seriously hemming in the individual and depriving him of all freedom in life and thought. It is thus quite intelligible that in the process of history now the one tendency, and now the other, should gain the upper hand.

It is scarcely to be expected that we shall arrive at a solution of the problem that would avail for all ages, but we may at least discover certain points of view which help towards a decisive conclusion. Such a conclusion will depend, first of all, upon the value attached to the spiritual and moral capacity of the individual *per se*. Those who take an optimistic view of that capacity will base society as far as possible upon the will and ability of individuals, while a pessimistic estimate prompts the demand for a social order higher than, and as far as possible independent of, its individuals. Thus modern liberalism is pervaded by a vigorous optimism, while pessimists like Hobbes and Schopenhauer were in favour of absolute forms of government. In another aspect of the subject it is important to note the value that is attached to the element of change in human history. Changes are brought about primarily by individuals, and, accordingly, the more human affairs are regarded as being in a state of flux, the greater is the rôle assigned to the individual, while, in societies where human life is felt to be sustained by eternal truths, a social order, as preserving and bearing witness to these truths, ranks as the higher factor. In any case the actual decision between the two tendencies depends, not upon abstract considerations, but upon the existing conditions of human life.

A question of a different character is how far a particular age does justice to the peculiar nature of the individual. Manifestly the various periods differ very greatly in this respect, some developing more fully the characteristics common to all, while others rather foster the qualities which differentiate individuals from one another. The present age finds itself in great perplexity in this matter, its conscious purposes being at variance with the actual social structure. Modern culture favours a high estimate of individual qualities, and seeks to develop them fully, while the contemporary forms of social, political, and economic life tend strongly to work against them. Modern life, with its technical arrangements of labour, its huge aggregations of human beings, its increased power of locomotion and its annihilation of distance, its complicated inter-relations of individuals, its railways and its newspapers, tends strongly to wear down the distinctive traits of individuals and to produce a uniform and average type. The social environment is asserting its power ever the more forcibly, and man appears to become a mere product of that environment. The dangers involved in this process were clearly recognized by John Stuart Mill, who did his best to counteract them. The immense influence of Nietzsche in our own day is due, above all, to his vigorous crusade against the levelling tendencies of our modern social system. It is true that the positive elements of his polemic, and especially his doctrine of the Superman, are hardly adequate to the task of circumventing the evils against which he fought. In a world of necessary law there can be no freedom or independence for the individual.

4. **The educational problem involved.**—From ancient times the demand has been put forward that education should recognize and foster the individuality of the pupil, but men have often failed to realize the perplexities inherent in this demand. To begin with, education must maintain against an extravagant optimism its right to put all individual qualities to the proof; its task here is not simply to recognize, but, if need be, to reject; and hence it must first ascertain which elements of the individual character are of value and worth cultivating. Even so, however, it is not implied that the valuable elements spontaneously combine

to form a rounded individuality; on the contrary, the several characteristics of the individual often hang loosely together and even conflict with one another, so that it is only with great pains that a leading and controlling tendency can be won from the materials. A complete individuality is not the starting-point, but the goal; it is no mere gift of nature, but a high ideal that in most cases calls for strenuous effort. Think of the travail undergone by great minds, as, *e.g.*, a man like Goethe, before they came to a clear understanding of their peculiar gift. Here too, then, we light upon an arduous task in what is often regarded as simple and self-evident.

LITERATURE.—R. Eucken, *Main Currents of Modern Thought*, London, 1912, pp. 341–384, 'Society and the Individual'; Theobald Ziegler, *Die geistigen und socialen Strömungen des 19ten Jahrhunderts*[3], Berlin, 1901; H. Dietzel, in *Handwörterbuch der Staatswissenschaften*[3], v., Jena, 1910, *s.v.* 'Individualismus.'

R. EUCKEN.

**INDO-CHINA (Savage Races).**—The name 'savages' is applied in French Indo-China to a group of half-civilized races inhabiting Tongking, Annam, Cochin-China, Cambodia, and Laos, and called Muongs, Mois, Penongs, or Khas, according to their locality. All these words mean 'barbarians' or 'savages.' These races are scattered over a vast district of 130,000 sq. miles, extending from 22° to 12° N. lat., from the frontiers of China to the confines of Cambodia, Cochin-China, and Annam. The length of territory occupied by them is 30 miles between 21° and 22°, 300 between 20° and 21°, and 90 to 180 between 12° and 18°.

1. **Habitat.**—The country inhabited by the savages is an immense forest stretching from the plain (where they seldom stay) to the higher slopes and mountains. This forest, which is more or less dense, has little variety of growth in the plain, but great variety on the slopes. Along the river-banks impenetrable undergrowth affords shelter for all the beasts of the forest, birds, and innumerable insects. The temperature varies, according to the season, from 30° to 40° C. during the day, and from 10° (sometimes 5°) to 25° during the night.

Visited on different occasions by missionaries, officers, military doctors, explorers, and colonists, these tribes have been the object of several monographs, which are usually sincere and interesting, but always wanting in precision and method. Since 1900 the 'École française d'Extrême-Orient' has been conducting a very full inquiry into this subject—an inquiry which will no doubt occupy many years.

2. **Origin.**—At the present day it seems possible to make the assertion that the savages of French Indo-China form one race, practically the same in all the districts in which they are found, except for modifications due to admixture with the more civilized Khmer, Tai, Annamese, and Tibeto-Burman races round about them. It is even possible to see in some of them the relics of a Malay or Indonesian race, to which the Chams of Cambodia also belong.

3. **Physical characteristics and mode of life.**—Generally speaking, the different sections of the people present certain physical, psychological, and social affinities, so that the account given of one of them may be applied to all, except in minor details. They nearly all belong to the physical type (with very slight differences) whose characteristics have been summarized as follows by Noël Bernard, medical officer to the colonies, in a study of the Khas of French Laos: 'Straight black hair, yellow skin with a tinge of red, smooth body, short stature varying in the different tribes from 1 m. 52 to 1 m. 59, long narrow head (dolichocephalic), average cephalic index 76, flat nose, generally bruised, breadth of nose average, transversal nasal index varying between 85 and 94, prominent cheek-bones, short broad face (chamæprosopic), general shape of head viewed from front pentagonal or lozenge-shaped—these are the characteristic features of the Indonesian race' (Bernard, *Les Khâs*, p. 36).

They are robust, active, and hardened against fatigue, and they sleep little. Their senses of hearing, smell, and sight are acutely developed, and seem to be much superior to their sense of taste. Very abstemious as a rule, they can live on a handful of rice or on roots torn up in the forest; but under easy circumstances they eat as much as they can, and then drink more beer or rice-wine than is wise. They are very improvident, and famine fails to make them more economical when a piece of good fortune comes, or more careful to prevent the return of want by cultivating a larger area or sowing a greater variety of crops. The only thing that rouses them from their idleness is actual need: when the savage sees his rice-granary empty, and hears his wife and children complain of hunger, he puts aside his apathy, lays down his eternal pipe, and, with a basket on his back and a pruning-hook in his hand, sets out for the forest to hunt or gather fruit; then no difficulty baffles him, and for whole days he will scour the woods in search of food for his family.

The savages have no ambition, and are naturally generous. They are, nevertheless, as greedy as children, and sometimes mercilessly impose upon ill-protected strangers who come asking guides, carriers, or simply shelter. Because they themselves are ruthlessly robbed by all the Annamese, Siamese, Chinese, and Laos who deal with them, they naively believe that they in their turn are justified in imposing upon any strangers whose merchandise attracts them. But they are not such thieves among themselves as might be imagined from their covetousness, and people of the same village preserve the most absolute respect for each other's property.

They are very suspicious of a stranger, because they firmly believe that he comes with evil intent on their lives or goods. Yet they very rarely break their promise to him. They are not cruel, but timid rather, in spite of their innate bravery. They never kill any one unless they believe their own life to be in danger, or when moved by a superstitious terror which urges them to avenge on an intruder a ritual offence, committed, it may be, in ignorance, which would bring misfortune on the whole village. The perpetual state of tribal war in which they live, always in danger of being taken unawares and sold as slaves, makes them reserved. Generally speaking, they are hospitable, proud, and extremely polite without becoming obsequious. Conspicuous among their qualities is their love of liberty. They submit to no authority or legal constraint. To agree to any kind of taxation is regarded as a mark of slavery. They would rather live in poverty and wretchedness, always on the alert, than obey any authority—even among themselves. Quite unconsciously they realize the spirit of perfect anarchy.

Their communism is equally striking, for a truly brotherly solidarity reigns among them. Great works are always undertaken in common, and, if a man's property keeps him, he always shares with his neighbours. In time of famine those who have rice divide their resources equally with those who have none. When one of their number kills a pig, a buffalo, or a goat, he divides it into as many parts as there are inhabitants in the village; his own share is no larger than his neighbour's, except in the case of an animal slain in the chase, when a little extra allowance is made to the hunters as compensation for their exertions. Even a hen is doled out among 50 persons to satisfy this instinct of brotherhood. So strong is this feeling, even among the children, that, when one catches an earth-crab, a lizard, or a mouse, he will not eat it until he has given all his comrades a share. By the same instinct of solidarity the whole village takes the part of any one of the inhabitants who complains of injury or loss at the hands of some member of a neighbouring village. They will even take vengeance for an insult dealt to a stranger who has once made friends with them.

All the missionaries and explorers who have stayed any time among them are at one in praising the general purity of their morals, exception, of course, being made in the case of a few tribes (Jarais, Bolovens, etc.). Although their rules of morality are not the same as ours in every detail, it is noticeable that they are modest and have a keen sense of decency. These remarks apply specially to those savages who have not come into contact with the more civilized populations. The result of such contact is that they lose the best of their traditional virtues, and adopt the vices of their Khmer, Annamese, or Laotian neighbours.

4. **War.**—Although they live with arms continually at hand and in a constant struggle with the animals of the forest, the savages (with the exception of a few bellicose tribes of pillagers like the Jarais and the Sedangs) do not like war. They hardly ever make war except to avenge some injustice suffered by one of their number, and only after repeated conferences with the enemy with a view to compromise. Nevertheless, they sometimes launch into war from sheer covetousness, or even from poverty, in order to steal cattle or elephants, or to get possession of prisoners, whom they then release for a ransom, employ, or sell as slaves, and thus enrich the village. Slavery, in fact, is a perpetual menace to their lives, and war is their best means of obtaining those feasts for which they long so much after the periodic famines.

The savage employs a very clever ruse to start an offensive war: he glides noiselessly across the almost impenetrable undergrowth of the forest either to surprise the hostile village—this is a common occurrence—or to carry off women, children, or solitary men who have left their shelter to work in the fields. In either case, old men are mercilessly massacred, being worthless as slaves, and liable to raise the alarm if spared. Except in cases of offensive war, the fighting of the savages is not very serious; it is merely a few simple and dexterous razzias. In defensive war, however, the savage sometimes proves resolute even to heroism; he would never dream of leaving wife and children and fleeing. When the village is surrounded, the warriors place the old men, women, and children in the middle and defend them to the death. Under such circumstances there is nothing that will make them draw back—neither fire-arms nor the prospect of a cruel death,—and the enemy, excited by the fight, usually finish it with a general massacre of the weak. The Sedangs have a custom of eating the livers of their slain enemies.

Before declaring war, the village always convenes an assembly of the men, at which the youths' enthusiasm for war is some-

times in conflict with the prudence of the older men. This council is always accompanied by invocations to the spirits, sacrifices, and a feast. If war is decided on, one of the councillors announces it to the enemy, giving an enumeration of the wrongs which his tribesmen have suffered without reparation. Of course, the exact time of the war is not specified, and from this event onwards the two villages live in a state of constant alarm, while their neighbours maintain an anxious neutrality, lest they too become involved in the conflict.

When the war has been bloody and directed against the whole village, the rejoicings on the return of the victors are in proportion to the risks that they have run. Among the Bahnars, especially, the very solemn feast called the 'Festival of Victory' is announced every night for a fortnight beforehand by the beating of gongs and warlike marches in the common house. The number of buffaloes to be slain is equal to the number of prisoners taken.

If weariness of the war on both sides does not lead to reconciliation by means of a mediator, every expedition is inevitably followed by a series of others, for vengeance is a sacred duty among the savages. The tribes which are too weak themselves will suffer injustice under force, but will never become resigned to it; they cherish the secret hope of some day being avenged by means of alliance with a more powerful tribe. The savage spirit of independence of each village, however, makes these alliances very rare. The confederation attempted in 1884 between the Bahnars, Rôngaos, and Sedangs by J. B. Guerlach, director of the Roman Catholic Mission, who assembled almost 1200 warriors of different villages under his command, in order to put an end to the continual and unjust incursions of the Jarais, was such an extraordinary phenomenon that it succeeded in defeating the Jarais by its moral effect. When establishing Christianity among the more peaceable tribes, which are always the first to receive them, the missionaries try to unite them in order to guarantee them material as well as moral security.

5. **Social organization.**—The family, constituted among the savages by marriage, as a rule includes the immediate predecessors and descendants as far as first cousins; but first cousins on the male side are often excluded, as marriages are allowed to that degree in almost all the tribes though forbidden on the female side. This reservation arises from the belief that in heredity the maternal strain is much stronger than the paternal. Among the Radès it is the woman who occupies the first place in the home. Consanguinity among the savages forms a sacred bond which entails the avenging of each other's injuries, and never permits war with each other.

*Marriage* is endogamous, although some small tribes, such as the Alak, allow their daughters to marry men of neighbouring villages. It generally takes place at puberty, *i.e.* at the age of fourteen or fifteen years; and in almost all the tribes the older the girls are, and, therefore, the more skilled in household work, the better marriages they make. Among the Kha-Pi, however, marriages are mentioned where the wife is only eight years of age. Rich Halang chiefs often marry girls at this age, who continue to live with their parents at the husband's expense until puberty, when the marriage is consummated. As a general rule woman is greatly respected among the savages, and everywhere rape and seduction are punished by a heavy fine. It is even forbidden to abuse women prisoners of war. Among the Western savages, sexual relations before marriage are not considered improper, and a woman is often married at an advanced stage of pregnancy. The custom of sending the young boys to sleep in the common house fosters a strict morality. The Niahöns and the Bolovens impose a fine of three buffaloes for a case of seduction; but, if there is an acknowledged betrothal, the betrothed pair have full liberty of intercourse.

The woman nearly always chooses her husband, and the latter very often pays an indemnity to the woman's family; or he lives for a certain time—for some months to several years—in a kind of slavery in the family of his parents-in-law, in order to compensate them for the loss of their daughter. When he does not want to do this, he nearly always offers them a strong healthy slave instead. Under these conditions we can understand how many of the tribes welcome the birth of a daughter with more enthusiasm than that of a son: if the one will afterwards defend the tribe, the other will enrich it. Among the Alak the husband is compelled to provide a dowry, which usually includes four buffaloes and two Cambodian jars. Among the Kha-Pi, custom prescribes that the rich must marry among themselves, and the poor likewise members of their own class.

Among a great number of tribes, the intended husband gives only a few unimportant presents, and works for a year with his future father-in-law. The eldest daughter, however, even after marriage, never leaves the paternal roof. The asking in marriage is almost always done by the youth himself, through his parents or a mutual friend. The length of the betrothal depends on individual circumstances, especially on the time necessary for the making of all the rice-wine for the marriage-festival. The date of the marriage is usually fixed by the chief of the village, who for this purpose examines the entrails of a chicken. After the omens relating to the marriage have been received, and invocations and sacrifices made to the spirits, the marriage is celebrated, followed by a feast more or less magnificent according to the resources of the couple, in which the whole village takes part until a state of satiety and complete intoxication is reached. Rich and poor alike find means to pay the expenses. Among the Kha-Pi, where marriages take place earlier, it is noteworthy that they are arranged by the parents; among the Radès, on the contrary, it is the girl herself who chooses her husband and asks him in marriage.

Although chiefs and rich men marry as many wives as they can support, monogamy is the rule. The savage has generally only one wife, to whom he is very much attached and faithful; but the wife is never in any way opposed to new alliances, which would bring her valuable assistants in her household work.

*Divorce* is rare, and takes place on either side. The man sometimes seeks divorce on account of incurable illness or barrenness in his wife; the wife, when she sees an opportunity of getting a better home, or when her husband requires her to do too much work. The assembly of the old men, or the chiefs of the village, hears complaints and pronounces judgment. The husband as far as possible avoids seeking a divorce, for his wife represents for him an actual value—the dowry he has paid to get her and the compensation he will have to pay for casting her off. Among the Niahöns this fine is three buffaloes; among the Halangs seven slaves. In a case of divorce the children are divided between the two parents, the mother usually taking the younger ones. As a rule this course of action is seldom resorted to, for the family ties of the savages are nearly always very strong.

*Adultery* is even rarer than divorce; some missionaries state that during twenty years among the Bahnars, Sedangs, and Stiengs they have not recorded a single case of it. Among all the tribes it is punishable by heavy fines, varying according to the rank of the injured husband, who always has the right to kill culprits taken *flagrante delicto*, and in some cases the right to sell the lover as a slave. Among the Stiengs, only the man is punished by being sold into slavery, the woman being considered irresponsible. As a rule, in practical life, punishment is limited to a fine paid by the lover; then the husband takes back his wife.

Among the Kha-Pi there is a sort of expiatory ceremony before this peaceful settlement: a pig is killed at the expense of the culprit, and the right foot of the injured husband is sprinkled with its blood; then he takes back his wife.

Though the moral and legal condition of the

*women* is based on the principle of complete equality of rights with the men, their material condition is miserable. On them devolves all the labour of the household, the fields, etc. They work from dawn like beasts of burden, carrying water and wood, grinding rice, cooking, weeding, planting, weaving, plaiting, and dyeing, under the calm eye of their husbands, who pass most of their time drinking or smoking on the doorstep of the common house. In spite of real affection for his wife, the savage would feel degraded if he did anything but fish, hunt, or fight. His duty is to protect the home, and to provide sustenance in time of famine, when he can show extreme bravery and devotion.

As a result of the spirit of anarchical independence of these tribes, the authority of parents over their *children* is very feeble. Correction is rare, and, besides, useless. Owing to the sweetness of the domestic harmony, parents are honoured by their children, and love them tenderly. In cases of serious offence on the part of children, the Kha-Pi perform the expiatory ceremony mentioned above in connexion with adultery.

The *old men* are very much respected, but in spite of this their importance in the life of the village is diminished by their physical uselessness. Their number is very small, however, on account of the hardness of the savage life.

6. **Death and disposal of the dead.**—When a savage dies, his family proclaim their grief by cries and tears, and among certain southern tribes, particularly the Bahnars, by laceration of their bodies and faces with their nails or even with weapons. Young men have been known to wound themselves even mortally in such circumstances. In the north, under the influence of the Laotians, death soon loses its mournful character; and relatives and friends flock to the house of the deceased in order to prevent the near relatives from giving themselves over to too keen sorrow, as well as to mourn. Hence the Bolovens, Niahöns, etc., hold great feasts, with generous supplies of alcohol, at which the survivors get intoxicated in honour of the dead. In the south, as well as in the north, burial, not cremation, is the rule; the ceremony is more or less complicated according to the wealth and position of the dead man.

In the case of the death of a poor man, as soon as he has breathed his last, his relatives or his children wash him, put on his best clothes, and, leaving his eyes wide open, wrap him in a mat, along with several small axes, pots, necklaces, and baskets for his use. They close the mat with a strong piece of rattan, and then bury him in a grave with the remainder of his personal goods, within 24 hours, taking care to put beside him two baskets of rice and two jars of alcohol, one of each at his head and one at his feet. The grave is filled up and covered with tree-trunks to prevent wild animals from disinterring the body. For a chief or a rich man a coffin is always made, hollowed out of a tree-trunk. The use of coffins is becoming more prevalent throughout the south, and the shape of the coffin is improving the nearer the savages come to civilized races. The making of the coffin of a chief requires from 48 to 72 hours, that of a poor man 24 hours: this is what settles the time of burial.

Before laying the dead man in his coffin, the Bahnars bind up his lower jaw with a cotton thread fastened on the top of his head, his arms are stretched by his sides, and his great toes are tied together with a cotton thread. The Radès bind the dead man's hands and feet with a cotton thread. Among these two tribes the coffin is filled to the brim with the dead man's most precious belongings, closed up with a resinous substance, or, more simply, with a paste of glutinous rice, and carried out of the house to the sound of gongs. At the burial-place, while one party of mourners digs the grave, the other kills the buffalo, ox, pig, or chicken (according to the station of the survivors) which is to be given to the dead man. A bamboo, pierced from one end to the other, is fitted into a little opening made in the coffin at the place where the head is. When the grave is sufficiently deep, the coffin is lowered into it with the customary two baskets of rice and two jars of alcohol; then, besides these, part of the buffalo, ox, pig, or chicken, raw; and, finally, various utensils for the dead man's use. The generosity with which the relatives deprive themselves for his sake shows the depth of their sorrow at his death. The grave is filled up, everything being covered except the bamboo tube. But the soul of the dead man is not yet supposed to have left his original dwelling; the body alone is in the ground with its vital needs. This is the reason why the widow or the children of the deceased come every morning for a variable period of time, usually two or three months, and pour a little soup, rice, and alcohol down the bamboo tube, and blow down some puffs of tobacco smoke, to cheer him. At the end of this period a small thatched shed is erected over the tomb, which becomes the dwelling-place of the ghost. As soon as this is achieved, the dead man finally leaves the family. This event is celebrated by a feast, and the animals which are to form the banquet are sacrificed near the tomb. The dead man receives his share of the food, and what is left is carried back to the home of his heirs.

From that time the dead man is not visited any more except at the end of each lunar month. When the moon is disappearing from the horizon, the relatives and friends, to the sound of tom-toms, gongs, and tambourines, carry food and alcohol to the dead man with the customary lamentations. The offerings are left on the tomb, and, after begging the deceased not to come back and torment the living, the mourners retire. They eat and drink till sunset, when they return home to wait until the next moon. This ceremony is called *glom por*, 'throwing down cooked rice,' among the Bahnars.

This worship hardly ever lasts for more than a year, and it is completed by a ceremony which marks the final separation of the deceased from his terrestrial parentage and his entrance into the kingdom of the dead. It varies in grandeur and importance in different tribes. Among the Bahnars the ceremony is very costly; the families of all those who have died within the year in a village unite in celebrations at the common expense. A month or two before the appointed day, the cleverest artisans of the neighbourhood carve wooden statuettes representing each of the dead to be honoured, and bearing the name of *kon ngai*, 'eyeball.' These puppets are dressed in mourning costume, ornamented with hair or beards of grass tufts, and set up in a row side by side on a common burial-mound covered with a roof of bamboo trellis-work. Each one has its arms stretched out, laden with little pieces of food, and holds in its left hand a wax torch, and in its right a piece of meat; and a pipe rests on each one's breast. At their feet are little wheels, baskets, axes, cross-bows, pots, and cups—all the utensils which the dead had used during life. This common tomb is surrounded by a strong enclosure of stakes, many of which are surmounted by other *kon ngai*, seated, with their heads in their hands as if weeping.

On the morning of the ceremony the relatives and friends come great distances, each bringing a chicken and a jar of rice-wine—the rich sometimes bringing a pig. A large opening allows the mourners to enter the enclosure and present their offerings to the dead. Buffaloes, oxen, and pigs are killed; and the frontal bones of the buffaloes and the jaws of the pigs are carefully fastened to the arms of the *kon ngai*. The mourners dance, laugh, play most unmusical instruments, and make most licentious jokes, all to entertain the dead, to whom they offer wooden platters of carefully prepared food. The living in their turn eat and drink by the side of the tomb until they are quite intoxicated; then, as the day advances, they plant banana-trees, pumpkins, and sweet potatoes in the enclosure, the fruit of which nobody will dare to eat. Any person impious enough to risk it, besides incurring the anger of the gods, must pay a heavy fine to the village. Before departing the mourners tie a chicken to a little stake by a cotton thread and imprison it in the enclosure. The creature soon breaks its feeble bonds: if it escapes into the forest, it is a good sign; if it returns to the village, it is pursued with bows and arrows, and, when killed, is thrown into the forest. There is no more thought of the dead after this feast.

The period of mourning varies with the different tribes and circumstances. Mourning for a chief always lasts longer than that for an ordinary man.

The rules regarding re-marriage are also very variable.

Among the Radès the widow may give a feast after three months at her own expense in the home of her deceased husband's parents, and, if they have another son, she may ask him in marriage. If refused, she marries any man whom she chooses. Among the Kha-Pi the duration of mourning and, consequently, of inability to contract a fresh marriage is two years. Of course, these rules do not affect the poor; they may re-marry whenever they get the opportunity. One of the characteristics of mourning among all the tribes that wear long hair is that they keep their heads shaved during the whole period.

From what has been said, it is clear that ancestor-worship is by no means general among the savages, and that, as far as death is concerned, all that takes place is a few funeral rites performed at the time of death and at intervals comparatively soon thereafter.

There is a vague notion among certain tribes that the soul of the dead relative wanders round his former dwelling-place, on the threshold of which the son places offerings for his acceptance; but this practice is neither fundamental nor general. At the end of a year the dead are supposed to have gone to join their fellows 'in the mysterious regions

of the South.' If they return, they are feared rather than honoured, and it is not necessary to offer sacrifices except to the *manes* of those who have been very rich or powerful during their lives and might be able to transmit a little of their good luck to their descendants.

Suicide is very rare, though not unknown, among the savages. It entails, particularly among the Bahnars, an isolated burial, in the forest, far from the haunts of men. Those who have buried a suicide must not enter the village again until they have performed certain purificatory rites and a sacrifice.

7. **Eschatology.**—If ancestor-worship is vague among the savages, their ideas of what follows death are even more so. They almost all believe that the personality subsists after death and continues its terrestrial life in another place and another way; but among many of the tribes the idea of a judgment of the dead and a reward for good deeds in this world is very confused. The Bolovens, the Kha-Pi, and the Radès do not, as a rule, believe in the rewards and punishments of a future life. The Kalangs believe in these things, but without any clear notion as to what they may be.

The Bahnars believe in a whole *mang lung*, 'kingdom of the dead,' which the dead enter, a year after their burial, by means of the feast described above and called *mut tö kiek*, 'to enter the cemetery.' This kingdom is hidden in the depths of the earth. The dead do not reach it until after they have crept in fear and trembling between two huge stones which continually strike against each other. They must slip through at the instant when the stone which is acting as hammer is raised in the air. They have next to avoid the formidable motion of two gigantic scissor-blades, and then to cross a frightful precipice on a bridge of tree-trunks, stripped of their bark, and animated by a constant rotatory movement which makes the smallest step dangerous. The bridge, moreover, does not reach across the whole abyss; there is a considerable empty space, which the dead man must leap across. Only those who have done good deeds on earth can accomplish this leap; thieves and liars fall into the chasm, without hope of resurrection. When a person issues victorious from this third trial, he finds himself standing before the cottage of an old witch or sorceress who is busy pounding rice from morning till night, and who in return for glass-ware or little axes provides the *manes* with fire and light, which are absolutely necessary in these gloomy realms. If the ghost cannot pay in current coin, he must allow his ears to be cut off. They immediately attach themselves to the sorceress's ears, which, as a result of additions of this kind, reach down to the ground. Equipped with safe fire, the dead man reaches a cross-road—the junction of two roads leading to two cities. One of these roads, strewn with brambles and briars, is for men who died a natural death; the other, very smooth and bordered with red flowers, is taken by those who have met a violent death—*e.g.*, warriors slain by the enemy, in expedition, or by their own arms, or from wounds inflicted by a dart. Dressed in brilliant red, because of the blood which they have shed, they dwell in a specially privileged village. In both the cities and the village, life is much the same as it was on earth, and the dead there are happy in proportion to the abundance of the supplies of meat, flocks, utensils, slaves, and necklaces which their relatives place in their coffins or on their tombs, of *glom por*, and, above all, of *mut tö kiek*. Slaves are represented by rough little figures placed along with pots, cross-bows, wooden sabres, etc., at the foot of the *kon ngat*.

The Bahnars have no definite idea of a judgment of men after death, but their traditions imply that only the good can reach the cities of the kingdom of the dead; the wicked succumb to the trials of the journey.

8. **Sorcerer-chiefs and sorcerers.**—Although the savages of Indo-China do not recognize any constituted power, it is worthy of mention that there are among them three individuals with mysterious moral power. The best known are the 'water king' and the 'fire king.' We have only vague information about the 'wind king.' The designation *sadetes*, which they receive in Indo-China, is simply the Laotian *sadet* (=Khmer *sdĕč*), 'king.' They belong to the powerful Jarai tribe. In spite of their title, they have no effective power, and their authority, which is purely spiritual, is not even recognized except by the few villages bordering on their own territory. But all the savages know them by name, and dread them. They seem to offer an analogy with the god-kings of whom Frazer speaks (*GB*[2] i. 164). Their influence can greatly facilitate the movements of an explorer if he manages to approach them and to get into their good graces. The *sadete* who is most feared is the fire *sadete*, known especially by the savages of the Annamese slope; the water *sadete* exercises a less perceptible sway over the Laotian slope; the power of the wind *sadete* seems insignificant.

The *sadetes* live in the neighbouring villages, and it is believed that at least those of fire and water are always at hand in a certain pair of families which are related to each other. They possess objects endowed with magic power. The fire king has a sacred sword, or magic blade, badly hewn, and carefully rolled in white cotton rags. No savage would dare to approach it. If the *sadete* drew this blade half-way, they say it would be enough to make the sun disappear and men and animals fall into a profound sleep; if he were to draw it full length, the whole world would be devoured by flame. The traditions of Chams, Cambodians, and Laos claim that this magic sword was stolen from them long ago. The Cambodians, monks and laymen, and even a rebel chief, it would appear, have several times gone right into these inhospitable regions to ask for it or to try to get it back again. They never returned, being destroyed, the savages say, by fire from heaven in punishment of their unjust claim.

The water *sadete* has a magic cup and wand, according to some authorities, and, according to others, a rattan bearing flowers that never fade, and a bindweed saved from the Deluge, but still green. Armed with these objects, the *sadete*, if he is roused to anger, is able to bury the earth under the waters.

Although legends of the most confused kind are current about the *sadetes*, and although the savages shrink from giving explanations of the subject to strangers, and the *sadetes* themselves are very difficult to approach, it seems certain that, in spite of their occult power, they live the simple life of the other savages, and go through the villages asking a tribute of alms, which is seldom refused them, but still more rarely offered. Certain Radè villages, of their own accord, present the fire *sadete* every year with a little cotton, some rice, and a chicken.

The *sadetes* must never die a natural death.

When one of them falls ill, the chiefs and the old men assemble to examine his condition. If this is judged to be very serious, the invalid is dispatched by spear-thrusts. The *sadetes*, alone among the savages, are cremated, not buried. The ashes are gathered, and honoured for five years. The widow receives some of them, which she has to carry on her back in an urn when she goes to mourn at the tomb of her husband.

It is certain that, in spite of its prerogatives, the office of *sadete* seems to be forced upon the members of families which benefit from it. To succeed the *sadete* a descendant on the female side is always sought; and the nomination of the new *sadete* often meets with undisguised unwillingness from the privileged family. This has given rise to several stories.

It has been claimed that immediately after the death of a *sadete*, all his relatives eligible for succession flee to the forest to escape this honour. The village inhabitants set out to look for them, and the first one discovered is nominated. Another tale is that all go to sleep in the common house; an old man enters quietly during the night, and asks the sleepers in a loud voice, 'Who will succeed?' The spirits prompt one of them to answer, 'I.' The old man ties a cotton thread, as a guarantee of the will of the spirits, to the wrist of the chosen one, who is thus recognised next day. Surer and more numerous testimonies lead us to believe that the new *sadete* is chosen by the old men from the appointed family.

Until the time of king Norodom, predecessor of the present king Sisowath, the sovereigns of Cambodia, at their accession, used to send expensive presents to the fire *sadetes*: elephants, silk stuffs to wrap round the sacred sword, glass trinkets, etc. The two savage chiefs in return sent several rural presents to Phnom-Penh: rhinoceros-tusks, rice, sesame, and cakes of unwrought wax, on which was seen the impress of a finger as signature. Rice, sesame, and wax were sent to the *bakus*, or Brâhman priests of the royal palace, who used them in certain ritualistic ceremonies. In spite of the objections of the *sadete*, Norodom put an end to these traditional customs without giving any reason for his action. Perhaps he saw in this gift a form of disguised tribute to Cambodia, which doubtless recalled either the services rendered long ago to the Khmer kings in the evolutionary epoch, or a relation of kinship between the sovereigns and the savages.

The *sadetes* or *pataos*, still so little known, remain, as regards both origin and attributes, one of the most interesting problems to be solved in

the political and religious organization of the Indo-Chinese.

The extremely wavering beliefs and the complicated worship of the savages have given rise also to a whole class of sorcerers expert in soothsaying and in nullifying the evil designs of the *yang*. They may be grouped in two categories: (*a*) wizard-doctors, who are employed in exorcizing diseases and prescribing remedies and sacrifices; they are in greatest demand, and best paid, but not most influential; (*b*) wizard-soothsayers; they alone know how to burst eggs, and their business is to discover by this means theft, murder, or death by witchcraft. All-powerful among these superstitious tribes, they are very much feared, for their word alone is sufficient to have a man convicted of witchcraft and reduced to slavery. Naturally many sorcerers abuse their terrible power. Certain wizard-soothsayers practise casting spells by means of wax figures, and belief in the effects of this practice is general among the Indo-Chinese savages.

A man is either born a sorcerer or may become one; there is, in the one case, direct inspiration of the spirits, and, in the other, preliminary initiation. The wizard-soothsayers who practise divination by means of the crushing of eggs receive their mission directly in a dream from the spirit of the lightning. The wizard-doctor (*bŏjău*) may also be directly inspired by a special spirit called *yang gru*.

When the *yang* takes possession of a man, the latter becomes aware of it from the fact that he can no longer eat certain foods without becoming sick or fevered: dogs, frogs, lizards, and mice, from which sorcerers always abstain. Soon he is seized with a sort of hysterical delirium, which often lasts five or six days, and flees into the forest to follow the *yang*; then he has paroxysms of fever, refuses to eat, and holds long conversations with his *yang gru*, who reveals to him all the diseases with which such and such inhabitants of the village are to be smitten; and then he goes to sleep, overcome by fatigue. These paroxysms seize him periodically for several months, but each time becoming feebler, and at last the initiated one appears to have returned to his normal condition, except that he has become a *bŏjău*, *i.e.* seer and healer. He always has with him in a little bag his special *dŏmong*, one of which contains the *yang gru*, or spirit which inspires him.

The *bŏjău* may also be initiated by another sorcerer.

He first of all feels himself becoming feverish after having eaten the foods mentioned above. An initiated sorcerer examines him, and then, lifting up his eyelids, by the light of a small candle, and repeating a certain incantation, communicates the magic power to him. Thereupon the *yang* makes sure that the initiated man finds several *dŏmongs*, and he immediately becomes a perfect sorcerer. But many of the savages show greater confidence in the sorcerer who has waited till the spirit possessed him than in one who compels it by means of a fellow-sorcerer.

It is a remarkable fact that the majority of these sorcerers, the soothsayers as well as the doctors, are women. The *bŏjău* of the Bahnars, Rŏngaos, and numerous other tribes, with her hysterical stamping and her cataleptic sleeps, resembles the *pajau*, the pythoness of the Chams.

9. **Penal law.**—The crime most severely punished is theft, especially of domestic animals or of rice; the latter is sometimes punishable by death. A less serious theft is punished by a fine, almost always equal to double the value of the stolen object. If the thief cannot pay, his debt makes him the slave of the man whom he has robbed. Crimes of passion—adultery, rape, and murder—are, as a rule, punished with a variable fine, which is handed over to the injured family or person. The laws of the savages are averse to punishing by death, because a man can always be useful to the village. Crucifixion, however, is practised among certain tribes, and cudgelling to death is allowed. Slavery for debt is fairly frequent, but the slave may always regain his freedom by paying the sum due.

10. **Oaths and ordeals.**—When a person denies his guilt, the savages have recourse to ordeals, which are undergone in the presence of a sorcerer. The most usual, the water test, is a custom still in vogue among the Khmers:

The accused and the accuser, both holding on to a post firmly fixed in the river, plunge at the same time underneath the water. If the accuser remains longest under the water, the accused is judged to be guilty; if the accused, he is innocent. The savages firmly believe that the hæmorrhage which occurs in the weaker of the two at the beginning of asphyxia results from the fact that the spirit of the waters, indignant at his falsehood, has pricked his nostrils.

Other ordeals consist in making the culprit plunge his hand into boiling pitch or even into molten lead. If his hand remains unhurt, he is proclaimed innocent. A more formidable test, because it allows more scope for manipulation or wickedness, is the ordeal of 'breaking an egg between the thumb and the first finger,' among the Bahnars, Rŏngaos, Sedangs, etc. It is used in cases of theft and poisoning; and, especially in cases of witchcraft, it takes place with the aid of a sorcerer or a sorceress.

When, by superstition, ignorance, or brazen-faced falsehood, a savage of any village accuses a member of the same village, or, more usually, of a neighbouring village weaker than his own, of having stolen something from him, or cast over him a spell of illness or of death, the two villages assemble to decide the issue. As a rule the accused is a poor man or woman, or one of no lineage; and it also very often happens that, having no faith in the fairness of the ordeal, and fearing that he will be abandoned by his village or that he may involve it in war, the victim pleads guilty rather than resist, and, though innocent, allows himself to be sold as a slave to the Annamese or the Laotians. When the accused is rich and of influential family, the attitude of his relatives and of the whole village sometimes makes the accuser beat a rapid retreat. When the parties are about equal in rank, the case is nearly always decided by the egg-test. The *bŏjău* takes an egg between his thumb and forefinger and asks it if there has really been *deng*, 'witchcraft.' The egg, if cleverly pressed, never fails to break if the sorcerer wishes it. Other eggs are then taken to find out in which village the *deng* is; generally one of the eggs collapses with a crackle at the name of the guilty village. A third time the sacred eggs are interrogated, to find out which person in this village, the inhabitants of which are all enumerated by name, has the power of casting spells (*deng*); when the egg breaks at the mention of one of these names, the unfortunate individual, irrefutably convicted, is immediately bound, and handed over as a slave to the accuser. It is evident that the greed or wickedness of the *bŏjău* may draw great profit from such a custom.

Another very repugnant test is to make the accused lick the decomposed corpse of the person he is suspected of having poisoned, while saying: 'May I die within the year if I am guilty of the death of this man!' If he reaches the end of the year without accident, he is pronounced innocent. When the body has been buried for some time, the accused may clear himself of the accusation of poisoning by repeating the same formula while swallowing some of the earth taken from under the coffin and pounded with dry leaves.

Very often the peaceable tribes, *e.g.* the Bahnars, are satisfied with a more kindly ordeal.

The families of the deceased and of the accused and the accused himself go into the cemetery. A little earth is taken from the grave, and a model of a tombstone is made with it. This is sprinkled with rice-wine and the blood of a chicken, while one of the company pronounces the following imprecation: 'Thoué! We are making libations of chicken's blood and wine in order that this business may be ended! May the perjurer die, slain by the axe or the knife! May he be caught in a snare! May he be drowned in the water! May the lightning strike him! May his enemies pierce him with arrows! May they slay him with the sword in battle! May cancer eat him away! May the blood gush from his nostrils and his mouth!' Then they mix the earth, moist with the blood and wine, with a little ground stag-horn, each one present swallows some of it, and a bumper of alcohol all round closes the ceremony. According to the savages' ideas, the culprit, if there is one, is sure to die within the year.

The oath of friendship is a complicated one, for it serves to create a bond as sacred as kinship between those who exchange it.

Intermediaries are chosen between two persons who wish to swear allegiance to each other, and are charged with sounding their intentions. They receive two jars of rice-wine and two chickens from the contracting parties; one half is to pay them for their trouble, and the other is required for the ceremony. One of the chickens is roasted, and each of the future friends receives an equal share of the heart, the liver, and the legs,

which he must eat. Then both drink together from the same jar of rice-wine by means of a flexible bamboo tube, while the spectators utter the usual imprecations: 'Remember that to-day you become brothers. . . . If one of you betrays his brother, may he be struck by lightning! May he be reduced to slavery! May he die miserably, and may his unburied body become the prey of the ravens!' In most cases they prick the arms of the two friends with the point of a dagger, in order to mix their blood with the wine, which they have to drink together. The solemnity is greater still when not two individuals, but two villages, swear indissoluble friendship after a war. Into the jar of rice-wine are put a boar's tusks, spear-heads, and arrows; above it are hung fish, ropes, fetters, and a serpent's head. Then the whole assembly drinks, after having uttered the most terrible maledictions against the village which should try to break the peace.

The savages are somewhat extravagant with their oaths when they wish to affirm or convince. They 'eat' their sword, their spear, their pipe, or their clothing—which means that, if they lie, they give themselves over to be killed by the sword or by the spear, or to smoke their last pipe, or wear their last dress in this world.

11. Religion.—The religion of the Indo-Chinese savages appears to be Animism strongly tinged with fetishism and polytheistic naturalism. It is both public and private, demands an infinite number of duties, often very onerous, and constitutes a utilitarian worship based on the fear of evil powers and the desire to conciliate them in order to obtain satisfaction of personal interests. The savages give souls or spirits to animals, objects, plants, and phenomena; these evil spirits take vengeance for even involuntary neglect of a rule or an offering. Famine, bad luck at fishing, hunting, etc., illness, accidents, and death are the result. Everything that the savage does to guard his wretched life must be preceded or followed by rites and sacrifices to baffle these formidable powers. These spirits, which are very numerous, are the possessors of considerable but not hierarchical power, and are dependent on one another. Having the same passions as men, they are in constant rivalry, contending for the offerings of men. Among the savages all manifestations of a supernatural power —genii, souls, spirits—bear the generic name of *yang*, a word of Malayo-Polynesian origin.

The spirits, or genii, are divided into two great categories: the good and the wicked. Among the good are those whose mission is to make the fruits of the earth grow, who dispense light and heat, rain, cold, or wind as there is occasion, and who bestow rich harvests, health, and happiness. Although much honoured (for their anger might become dangerous in a case of neglect of an offering), yet they are less honoured than the maleficent spirits, who hate men, and try to torment them in every possible way, or to make them die, and whose neutrality must be conquered by means of sacrifices. These evil genii live in large trees, in huge rocks, or in mountain caves. A savage would not dare to cut down a large tree or begin to cut wood in the forest without first having killed a dog, dipped some arrows in its blood, and drawn them across the tree. Then the tree may be cut down; the *yang* has changed its abode.

These spirits vary in power, attributes, and dwelling-place. First of all, there are the most powerful, the spirits of the sky. At their head is the god of lightning, whose voice is the thunder. This god, called by the Bahnars *Bŏk Glaih*, 'the Grandfather who thunders,' comes down to the earth in the guise of the storm, and with a stone axe strikes those who have offended him; hence the veneration among the savages for cut flints and meteoric stones. He is also the god of war, and then he assumes the form of a goat or of a shaggy old man with a long beard. He lives in the sky with the goddess of the harvest (Bahnar *Yang Sĕri*; cf. Skr. *Śrī*, and Malayo-Polynesian *Sĕri*) and her mother, who has a pair of wings, and is ugly, dirty, and poor, but very fond of the liver of victims, and who comes down to earth to test the enthusiasm of men. The person who gave her a good welcome, in spite of her repulsive appearance, was immediately loaded with fortune's gifts, but he who turned her away through pride came to misery.

Between the sky and the earth, in a zone of space, live certain ill-intentioned spirits, of whom the most famous is Grandfather Nu, who, without a rag to cover him, tries to snap up the livers of victims, the blood, and the wine offered to other gods. These deities hurl their wrath on the unfortunate savage who is believed not to have offered anything, and becomes the prey of mischance. This spirit is by nature such a thief and so maleficent that it would be useless to attempt to stop his depredations by heaping him with sacrifices.

The inferior spirits live in holes under the earth. Wounded unwittingly by the savage who is ploughing his field, they have their revenge by inflicting internal diseases upon him, which become fatal unless they are disarmed by means of offerings. Along with these should be mentioned the earth-spirit and the water-spirit.

Among the inferior spirits, many become incarnated in the form of human beings or enter inanimate objects. There are certain crickets whose cry always foretells a successful hunting expedition to the savage. In order to thank them, an offering is made in their honour of certain hairs of the captured game (these hairs are roasted and a libation of rice-wine is then poured out) and of birds whose singing is taken as an omen. Omens are also taken from the kite—the sight of which in time of war fills all hearts with joy—and certain sparrows, whose flight, to right, to left, in front, or behind, decides what action the savage is to take. He never starts on any expedition or voyage without consulting the birds.

The savages also worship rocks which have roughly the shape of a man or an animal; they are supposed to harbour a *yang*. There is nearly always a legend attached to them. Libations are offered to them, or a leaf from a neighbouring tree is plucked in passing.

Practically all the Bahnars, Sedangs, Jarais, and Hadrongs still believe that spirits reside in those huge jars which, along with the gongs, constitute the chief wealth of the savages. The presence of spirits in the jar is shown by some external sign, but they are not incontestably *ge yang*, 'spirit-jars,' nor are they honoured as deities, until a dream reveals their value to the savage who possesses them or wishes to buy them. On holidays the mouths of these jars are coated with blood and rice-wine. When a Sedang makes up his mind to sell a very expensive one, he breaks off one handle of the jar in the hope of keeping the *yang* in the handle, and continues to worship it in the same way as before.

We have still to mention the protecting spirit of villages. The coarse figure which represents him is made of wood and adorned with a plume of grass, and he is armed with a sword and a bow, bound to his diminutive arms. As soon as the grain is cut and the rice stored, the images of this spirit, carefully sprinkled with the blood of a chicken and with rice-wine, are fixed on the palisade of the village and on the roofs of the houses, with the notion that he will pierce with his arrows the evil genii who might kill or ruin the inhabitants. The next year the little figure, very much worn out, is replaced by another of the same kind without ceremony, the spirit having left the old one when it became too dilapidated.

More formidable is a malevolent spirit with human form, his body torn with wounds, his en-

trails hanging out of his lacerated body, and his heart visible in his open breast. He wanders about unceasingly through the mountains and forests, chuckling and groaning alternately, leaving large bloodstains as he goes. The savages are in mortal terror of him, and never dare to ask: 'What blood is this?' The angry *yang* would pursue them, seize them by craft, and drown them in a sea of blood. Perhaps we may recognize in these spirits, whom the Bahnars call *laih lem klong bri*, 'spirits which bar the forest,' the souls of men who have died a violent death and lain unburied in the forest or been devoured by wild animals: for these and the souls of women who have died in child-birth are particularly malevolent spirits in the eyes of the savages. This last belief is very wide-spread throughout the whole of the Far East, and is found among the Malaysians, the Khmers, and the Annamese.

The worship of the savages consists chiefly in *sacrifices* and offerings, varying according to the circumstances and rank of the *yang* to whom they are offered. Almost every action of their life entails a sacrifice: the choice of the site of a village, the building of a house (there are special rites for the erection of the first pillar and for the arrangement of the hearth), the act of drawing water from a well for the first time, birth, marriage, death, war, hunting, fishing, sowing, reaping, the gathering of roots in the forest, etc. These sacrifices include several ritual actions, an invocation, and the presentation of certain offerings and certain dishes to the gods. They are always concluded by a feast, at which the savages consume almost the whole of the victims and drink rice-wine until they are quite intoxicated. The principal animals offered in sacrifice are the buffalo (for expeditions of war, to celebrate a victory, in cases of serious illness, and at funerals), the pig, the goat (in cases of reparation of a crime or to celebrate a gorgeous *glom por*), and the chicken (in all the many daily occasions). The share of the *yang* is the victim's liver, a little of its blood, and some rice-wine. In sacrifices made after a successful chase, the hunter generally adds to the liver and the blood an ear or the tip of an ear of the quarry. Offerings of food are usually presented to the *yang* by the sorcerer on a board adorned with little candles stuck on the edge; he then throws several grains of rice over his left shoulder, reciting formulas which the bystanders repeat in chorus. In several villages small buildings are erected with a miniature roof and a platform, on which are placed dishes of meat for wandering or hungry spirits.

The Radès still remember the *human sacrifices* which they used to offer at the funerals of great chiefs; but this custom has disappeared everywhere except among the Sedangs, who, at the construction of a common house, cast a prisoner of war alive into the hole dug for the first post, and crush him under the post.

12. **Cosmogony.**—Almost all the savages of Indo-China have ideas, identical in their confusion, of the creation of beings and of the world. The sky and the earth existed always, but the human race comes, in their opinion, from the 'Grandfather and Grandmother with the big box.' These two survivors of a deluge which destroyed everybody long ago were saved in a large box, where they took refuge along with a pair of animals of every species. Warned by the cry of a chicken sent by the *yang*, they came out at last from their floating prison, and, while the animals again spread over the earth, from their union was born a new race of human beings—a race happy in every way, for another messenger from the *yang*, a big black ant, had brought to the 'Grandparents of the big box' two grains of celestial rice which grew without cultivation, and a single grain of which filled a pot. By the help of a magic fire, which burned without fuel and made savoury dishes—a fire which one of the sons of the Grandfather of the big box had stolen from a powerful fairy—the Golden Age reigned on the earth; the dead, buried at the foot of a certain tree, were restored to life in adult state; the earth abounded in happy beings. Then credulity and the malice of the *yang* deprived them of order; the magic fire, the celestial rice, and the tree of resurrection disappeared. Since then the savages have been troubled, and suffer famine, cold, and death.

The evil was aggravated by the confusion of tongues which, among the direct sons of the Grandparents of the big box, followed the building of a vague tower of Babel. This confusion led to the dispersion of the races, or, rather, of the different savage tribes.

The legends of the savages still mention the existence of heroes of gigantic size who declared war against the gods. All were killed except their chief, Diŏng, a Bahnar who conquered Bŏk Glaih, the god of lightning. This Diŏng also became reconciled with the *yang*, for he fought the Jarais, who sought a quarrel with him, by getting the gods to stop the sun in order to allow him to obtain his victory. In order to console the Jarai chief, trampled in the *mêlée*, the *yang* transformed him into a constellation—an honour granted to several other people famous for their misfortunes or their bravery in the savages' traditions.

Although the savages do not know how or by whom the world was created, they hold that it will come to an end by a terrible fire due to a giant who lives in the centre of the earth.

13. **Fetishes.**—Pebbles of uncommon shape or colour, pre-historic axes or arrows of flint, and splinters of meteoric stones are the favourite fetishes of the Indo-Chinese savages. When a savage comes upon one of these objects, he picks it up, wraps it in cotton thread, and puts it into a basket which he carefully closes. He waits until the spirit of his fetish manifests itself in a dream and shows him by what sacrifice it wishes to be honoured. If the *yang* of the fetish-pebble does not reveal itself during the night in human form, or if it demands a sacrifice as costly as, *e.g.*, a buffalo, the savage throws the pebble away in the forest, and there the matter ends. Otherwise he offers it a chicken and a jar of rice-wine; then the pebble, rubbed with the chicken's blood and sprinkled with wine, is put, along with similar objects, into a bag made of bamboo fibre, and the bag is attached to one of the pillars of the house.

These fetish-pebbles, which among the Bahnars receive the name of *dŏmong*, are not peculiar to any individual; the village possesses a large number of them, carefully preserved in the common house, on a little altar placed on the principal pillar, or *jŏrang*. They are the city-protectors, and a savage is specially employed to sprinkle them with blood and wine during the ceremonies. Those most reverenced are the *dŏmong* of war, which are generally picked up on the return from an expedition, and whose spirits manifest themselves in the form of strong shaggy men. After the return from a successful razzia, they are coated with the blood of a sacrificed buffalo.

When fire breaks out, if the flames reach the *dŏmong*, they are thrown away, for it is believed that the *yang* must have gone away before the fire had reached them. These *dŏmong* are the protectors of the rice, of fishing, hunting, health, etc. Each one has his own particular sacrifice by which the others also benefit, receiving after him their share of blood and wine. Perhaps the *dŏmong* who is most worshipped is the rice *dŏmong*, but great care is taken not to sprinkle him with

buffalo's or even pig's blood. In order that he may not get accustomed to such costly sacrifices, he is never offered anything but a chicken. Both male and female *dömong* exist. Their sex is determined by the sorcerer. Their power is equal.

We may add that, according to the missionaries, the savages, amid the great number of supernatural beings to whom they render worship, have an idea of a higher Being, the creator and absolute master of all that exists, rewarding good and punishing evil; but this Supreme Being, stripped of all ill-will towards men and inspiring no fear in them, is not an object of worship.

**14. Tabu.**—Prohibitions are as numerous as offerings among the savages. The words *dieng, deng, kö, tan, man, köm*, etc., in Lower Laos, *kalam* in Upper Laos, or even *tabung*, among certain tribes bordering on ancient Champa, mean the prohibition against doing certain things at certain times, certain ritual interdictions—in a word, an ensemble of tabus.

When a village removes to another place, no one is allowed to walk on the road which it followed at its exodus. When a woman is confined, or when any one is married or dies, the village, or merely the house, is tabued for a variable period. When there is a famine, the village which is suffering from it is forbidden to strangers, for fear that the rice-*yang*, already angry, may want to go with them. When the wind blows in a certain way, hunters must not kill such and such an animal in the chase. The small spaces round the *ge yang*, 'spirit-jars,' and round the pillars where the *dömong* are hung are tabued. Gold and silver are *kalam* for several villages of the Stiengs round Attopen (Laos), who, on the other hand, accept copper. Every action not in accordance with the settled traditions of the savages at once appears to them unlawful, and a great many presents and arguments are required to prove their innocence. It must be said, however, that among the savages who are neighbours of more civilised races, and especially since the French occupation, the extent and inflexibility of tabus are on the decline.

**15. Totemism.**—Properly speaking, food abstinences do not exist among the savages; nor do they appear to render special worship to any animal, and so far no clearly totemistic tradition has been recognized among them. Nevertheless it must be said that all the savage tribes speak of the tiger with timid reverence, and, when they do bring themselves to eat its flesh, it is only out of revenge, and only among tribes which abstain from the flesh of the domestic elephant.

Among the Radès, when a domestic elephant is wounded, they offer him a roasted pig, place some rice on his head, and pour libations of alcohol, all the while reciting prayers. The Stiengs beg the animals' pardon before slaying them. A curious legend of the Bahnars 'of the first ages of the world' relates that the men of the village had gone away on business, and, on their return, found their wives and children transformed into monkeys, doubtless by the vengeance of the *yang*. In order to restore these metamorphosed beings to their human form, their relatives made incisions on themselves, and with the blood that flowed forth rubbed them limb by limb; all that were thus treated immediately resumed their human appearance. All the savage tribes and the Indo-Chinese in general—like the Indonesians—have a strong antipathy to killing monkeys.

**16. Festivals.**—The chief festivals are the Festival of Victory (see § 4), the Festival of the Dead (see § 6), and the Festival of the Fructification of the Rice.

When rice is sown, a chicken is first sacrificed; but the real ceremony in its honour does not begin until the rice is in the blade. To ensure fructification, the *dömong* are taken down from the granary where they stay, and placed in the house after a chicken or a goat and a jar of rice-beer have been offered to them. Then early next day the owner of the field carries them off with a chicken whose beak and claws have been washed in the juice of a certain forest-plant, and a tube of bamboo filled with millet-wine. In the middle of the field he digs a hole, into which the *dömong* of the rice are laid; he surrounds this hole with a circle of sticks ornamented with tufts of bamboo and joined together by seven strands of cotton thread. The chicken is killed, and with its blood are sprinkled the fetish-pebbles, which are then buried. Over their grave a post is stuck, adorned with tufts of bamboo, and smeared with blood; this post ends in a leaf rolled up into the shape of a horn and filled with wine and chicken's blood; to the foot of the post is fastened a small bamboo tube full of millet, wine, and chicken's blood. The sacrificer offers the contents to the beneficent *yang*, after having adjured the malevolent spirits to depart from his field.

ANTOINE CABATON.

**INDONESIANS.**[1]—**1. Names for the conception 'soul.'**—The Indonesian peoples use two names for the conception 'soul,' and by these names they express two different things. The first soul plays a part only in this life on earth; it occurs both impersonally as the vital force which animates all nature, and personally. With the peoples whose life is still strongly communistic, and among whom there is therefore little room for the individual, the impersonal character of the soul stands out more clearly. Where the feeling of individuality is more developed this soul is more personal. The second soul plays a part only in the next life; then the first soul vanishes, and the second appears as an essence of the human being itself. The first soul we shall call 'soul-substance,' in contradistinction to the second soul. Soul-substance is therefore the spiritual substance which pervades man during his life on earth; in its impersonal character man can have too little of it, and then he must add some soul-substance to it, derived from men, animals, plants, or things; in its personal character it is addressed and flattered. After the death of the human being this soul-substance animates another part of nature—an idea which has given rise to the belief in metempsychosis. The soul, however, which only after death separates from man, carries on a personal existence in a realm of spirits, which is similar to the earth. This soul dies several times (mostly seven or nine times), and finally turns into soul-substance. Sometimes the Indonesian says that he has more than one soul, even as many as seven; but these are simply different modes of appearance of the one soul-substance which is in him during his life on earth. For the impersonal soul the Indonesians have no general name. A very common name for the soul-substance is *sumangat* with the Malays, with several variations, as *sumangè* in Minañkabau, *sumanga* and *sumange* with the Macassars and the Buginese, *esmangan* in Buru, and *sumangan* in Ambon. In Northern and Central Celebes we find words meaning 'little man,' whereas the Dayak words *ham-*

[1] On the geography and ethnology of the region dealt with in this article cf. art. AUSTRALASIA. See also art. PAPUANS.

*baruas* and *bruwa* point to a derivation from *ruwa*, 'two'; so that these names probably mean 'companion,' a meaning which we find in *rĕnga-ringan* of the inhabitants of Minahassa, *kakĕduañ* of the Sañirese, *katutubo* ('of the same nature as another') in Luzon, and *ikararua* of the Ibanag. Among the Batta tribes in Sumatra we meet with *tĕndi* and *tondi*; and the races which have been strongly under the influence of the Hindus, as the Javanese and the Balinese, use Sanskrit words, e.g. *yitmă* and *sukmă*. Besides these names for the soul-substance, *njawa*, originally 'breath,' is often used. The soul, *i.e.* man as he lives on after death, bears quite different names. A word of frequent occurrence is *nitu*, *anitu*, *onitu*, meaning 'souls' in the Moluccas, but 'spirits' in Celebes, Nias, and other islands. The Batta tribes and the Niassians use the word *begu*, which means 'spectre,' *anga* in Central and *andja* in Southern Celebes. The Dayak tribes in Borneo have words such as *liau*, *andiau*, *luwa*, etc. The belief in a life after this life is so vague with the Indonesians, and the conception they form of the soul is therefore so indistinct, that, having come into contact with monotheistic religions, they have adopted words for the soul from other languages—*e.g.*, the Sanskrit *jiva* among the Malays and Javanese, and the Arabic *mala'ekat*, which all through the Malay Archipelago does not stand for 'angel,' but for the soul of man after death.

2. **The impersonal soul-substance in man.**—All parts of the human body, and its secretions, contain impersonal soul-substance. This may be extracted from any part; and then pain is felt at the part.

(1) Many customs show that the Indonesians consider the human *head* to contain soul-substance. The great object of head-hunting is to possess themselves of their enemy's soul-substance, in order to increase their own. In the Moluccas, missionaries have sometimes been charged by the natives with having made medicine out of human heads.

(2) Other important storehouses of soul-substance are the *bowels* and the *liver*. For this reason it is a general usage in the Archipelago to offer to the gods a piece of the liver of an animal, which means that not only the material part, but also the soul-substance of the animal is sacrificed. The Olo-Ngaju in Borneo and other Dayak tribes regard the liver as the seat of all emotions. The Battak also hold this belief, and are therefore very much afraid of abdominal operations, because they think that then the soul-substance is removed from the body. With the Javanese, the Malays, and the inhabitants of the Mentawey Islands and Halmahera also the liver is the seat of the emotions, with the Papuans the bowels. Among a few tribes (Minañkabauians, Niassians, and Kailians) the heart is believed to be a receptacle of soul-substance.

(3) The *blood* is of much greater importance in this respect. It is sacrificed as containing soul-substance. In the consecration of the house it is customary to rub the blood of the victim on the woodwork, in order to give it strength. The Macassars smear old sacred objects with blood, in order to infuse new life into them. The Orang Sakai in Siak sprinkle, as *pars pro toto*, a few drops of their blood on a corpse, lest the soul of the dead man should take with it all their soul-substance and they should die. Throughout the Archipelago the law holds that the blood of a man guilty of incest must not be spilled, because this would make the soil barren.

(4) That soul-substance is found in the *placenta* and *umbilical cord* appears from the connexion which the Indonesians see between child and afterbirth; the latter is called elder or younger brother. The placenta is carefully preserved or buried. The Battak call upon the soul of the afterbirth. Other peoples (Macassars, Tomorians) preserve the placenta with salt and tamarind. The little piece of the umbilical cord which has fallen off is generally preserved by the Indonesians, and administered as medicine to the child when it is ill.

(5) A great amount of soul-substance is thought to reside in the *hair* of the head; hence many object to having their hair cut, as this might cause them to fall ill for want of soul-substance. When a Javanese has lost two or more children by death, he does not shave the head of the next child. After their conversion to Christianity, many of the Battak were afraid that they would die if their long hair was cut. In case of accident or disease the mother rubs her child with her hair, to supply it with new soul-substance (Minahassa, Sañi, Central Celebes, Añkola, Central Nias). Among the Dayaks, parents protest against the cutting of the hair of school children, for fear of disease. Hair is laid at the foot of fruit trees to make them more fruitful, *i.e.* to adduce soul-substance (Torajas, Malays, Karo Battak, Timor, Dayaks). The Kayans in Borneo administer burnt human hair to delicate people by way of medicine. Betrothed couples exchange some of their hair, in order to become one in soul and always to think of each other (Moluccas, Central Celebes, Minahassa, Timor, Battak, Dayaks). With the Karo Battak the hair of bride and bridegroom is knotted together at the wedding. Father and mother give some of their hair to a child, that it may feel that its parents are near it, and that it may not cry too much during their absence (Central Celebes, Minahassa). Therefore it is a prevailing custom to preserve some hair of deceased relatives, lest they should die with longing for the dead. According to Indonesian belief, a little hair (hence a little soul-substance) taken from a man gives power over all his soul-substance; whatever happens to the hair happens also to the man. This idea is at the root of all the sorcery with hair which occurs among the Indonesians. As a rule the hair is first wrapped up in a parcel with pungent spices, and then buried or hung in a tree; the owner of the hair is afflicted with all kinds of diseases as the consequence of this. The worst thing one can do is to burn a person's hair with an imprecation. The person is then sure to die. Hair is also used as a sacrifice: a Toraja pulls out a hair when he has told a lie the consequences of which he fears. A Boni prince offered his hair when he had delivered his country from the enemy. Dayaks sacrifice some of their hair when they have returned uninjured from war. A general form of sacrifice in the Malay Archipelago is the cutting off of the hair of children. Frequently, however, a lock of hair is spared, as if to retain the soul-substance. The sacrifice of hair at a death is common: the relatives offer part of their spiritual existence, that the soul of the dead one may leave them undisturbed (Moluccas, Halmahera, Timor, Bali, Dayak tribes, Eñgano, Malays, Battak, Malagasy). This entire or partial cutting or shaving off of the hair is sometimes required only of the widow or widower, sometimes of the nearest relatives, at other times (when a chief of special importance has died) of all the subjects.

(6) Of equal value with a man's hair are his *nails*. Hair and nails are therefore generally mentioned together. Great care is taken that nail parings do not fall into the hands of people who might do harm with them. Among many of the tribes the nails must not be cut after sunset, because the spirits wandering about then might seize them.

(7) The Indonesians imagine the *teeth* to be filled with soul-substance. This appears from the knocking out of teeth (as it occurs still in Central Celebes, Formosa, and Eñgano), and from the general custom of filing off teeth, which reaches its height in the skilful way practised by the Javanese and others. Originally this was intended as a sacrifice when entering upon puberty. What is left of the teeth after they have been filed off is blackened—originally for the purpose of hiding from the spirits the fact that part of the sacrifice was withheld. The sacrifice of teeth as a mourning rite is still found among the Indonesians in Kedu in Java, in Benkulen in Sumatra, and in the isle of Saleier.

(8) The *secretions* of the human body also contain soul-substance, as, *e.g.*, the *saliva*. Many Dayak tribes spit on an offering or bite it, that the spirits may know that it comes from them. Spitting occurs as a sacrifice, in order to get rid of something impure or sinful. When the Indonesian hears some ominous sound, he spits; the Battak do so when a corpse is carried past them; the Galelarese immediately spit when they have pronounced a forbidden name. A dying man leaves some of his saliva, that the survivor may not long too much for him (Macassars, Olo-Dusun in Borneo, and Javanese). By the possession of a person's saliva one gets power over all his soul-substance; therefore the Indonesians do not spit near graves or high trees, because the spirits might avail themselves of this saliva to take away all their soul-substance. Saliva is used in sorcery also, generally in the form of a quid (Moluccas, Nias). All the tribes are careful with everything that has been in contact with the mouth (with saliva), *e.g.* remains of food. That saliva contains soul-substance, force, is proved by the fact that tools are rubbed with it to make them stronger (Minañkabau)—especially rifles (Añkola, Kaili, and others). The Land Dayaks of Sarawak begged Europeans to spit on bits of coco-nut shell, which were then scattered over the fields to make them fertile.

*Sweat* also—and consequently the clothes saturated with it—contains soul-substance. Hence a Javanese thinks that his child will fall ill if an article of its dress has been carried away by the stream; and it is customary among different tribes to ask for worn clothes of European children, that their children, wearing them, may thrive the better through the sweat which the clothes contain. *Water* in which persons of high standing have washed off the perspiration of their hands and feet is believed to have the power of making the soil fertile, or is taken as a medicine (Dayaks, Macassars, Javanese); and the water in which clothes of certain people have been washed is used to cure all kinds of diseases, but especially (and in this case it is a garment of the husband which is washed) to hasten a confinement. Even *earth* from footprints, to which something of a person adheres, is sometimes used to injure that person by sorcery (Malays, Battak, Galelarese).

From the stories current among Galelarese, Torajas, and Javanese relating to deceased persons who were restored to life by means of *tears*, it appears that this secretion of man is also thought to contain soul-substance. *Urine* has similar effects where it is used as a medicine (Javanese, Kailians, Macassars, Battak, Dayaks). The Buginese rub people with urine to make them bullet-proof, while in Añkola and Halmahera a person's urine is used to destroy him; in the island of Kisser a young man urinates on the urine of his heart's elect, hoping that this will make her love him. Moreover, many stories are found among the Indonesians about animals which were impregnated with a human being by drinking human urine. Among the Macassars and Torajas *fæces* are used to heal wounds. Among the former and the Karo Battak they are also used to practise in sorcery.

**3. Ways in which man increases his soul-substance.**—In the opinion of the Indonesians the soul-substance discussed above is impersonal; it can be both increased and decreased. Primitive man was always bent on increasing his soul-substance in order to make his life stronger. (1) He accomplished this by *eating* and *drinking*. The Indonesian imagines that the soul-substance of the food is absorbed by him (though he does not always realize this), as may be seen from the food which he forbids in different illnesses. This prohibition is not founded on empiricism, but on shape, taste, name, and properties of the various foods. On account of their form, name, etc., they are considered injurious to the patient, and their soul-substance corresponds to their name, form, etc. The Dayaks do not eat the flesh of deer, lest they should become cowardly (like a deer). The eating of white buffaloes causes leprosy (Central Celebes), etc. The Malays believe that they strengthen their own soul-substance when absorbing the soul-substance of the food. They tell a story, in which a poor man grows strong and healthy by eating the flavour of a rich man's food; whereas the rich man, eating the food itself, grows thinner and weaker. Moreover, many Indonesian peoples call rice the strengthener of soul-substance. If a person's shadow falls on food, the food must not be eaten, else the soul-substance of the person is also eaten (Atche, Halmahera). Cannibalism is founded on the idea of eating some one else's soul-substance. It existed (or still exists) among the Battak, some Dayak tribes, and the Papuans; among other peoples we find traces of it in the drinking of human blood, the eating of brains and other parts of the body. That the great object was to add to their soul-substance appears from the parts eaten: the palm of the hand was eaten to get strong hands (Battak, Dayaks, Galelarese); knee-caps, to get strong knees (Battak); scrapings of human bones, to make the whole body strong (Olo-Ngaju, Macassars, Torajas). In the Moluccas, pieces of the heart, liver, and lungs are eaten to become 'brave'; and for the same reason dogs are eaten (Nias, Torajas, Moluccas). It is a general precept that a pregnant woman must not eat pungent, stimulating, hot things, else the child she brings forth will also be 'hot,' *i.e.* unhealthy.

(2) A way of adding to one's soul-substance is by *drinking blood*. The Macassars, Buginese, Torajas, Kailians, Gorontalese, Minahassians, and Tobelorese drink the blood of a slain enemy in order to become brave and strong. Those who conclude peace drink each other's blood, as well as those who wish to become blood-brothers; some drops of blood from the shoulders or arms of the two parties were mixed and drunk; this betokened that their soul-substance, and so also their wishes and thoughts, had become one. This custom is specially prevalent among the Dayak tribes; but it also occurs among the Battak, in many of the islands of the Molucca group, and in Timor. Among the Olo-Ngaju in Borneo, when a child was adopted by others, it was given some blood to drink from the right shoulder of the foster-father and from the right breast of the foster-mother; and a newly married couple on their wedding-day, a man who has been appointed chief, or persons who settle a quarrel are smeared with blood to strengthen their soul-substance. The same customs also occur in the south of Celebes. In Java it is believed that the blood lost during confinement by a woman who has borne a child in *jumat lêgi* or *sêloso kliwon* has a special healing power.

(3) Since saliva contains a large amount of soul-substance, the Indonesians think that they can add to a man's soul-substance by *spitting* on him. This spitting is very general; sometimes some herb or root is chewed to strengthen the effect of the saliva. Dayak parents spit on their children daily to promote their growth; sores and wounds also are spat on; the remuneration which a witch-doctor receives for this spitting is still called 'reward of the saliva' among the Madurese. Some years ago there was a holy man in Padang whose saliva was said to be particularly efficacious; many people had themselves spat on by him to become strong and healthy. The Indonesians try to cure a benumbed leg by rubbing it with their saliva, the numbness being, in their opinion, caused through temporary want of soul-substance.

(4) The *breath* is another manifestation of soul-substance; hence a man may be supplied with new soul-substance by being breathed upon. It is therefore a prevailing custom among the Indonesians to breathe on sick or dying people. This is also done in cases of confinements which do not go smoothly, and when any one faints. With the Muhammadans water is exorcized and breathed on to give it healing power. Soul-substance is also transmitted from one man to another by mere contact. In most parts of the Archipelago the people like Europeans to touch their children; and offerings are touched by the participants. Connected with this is the belief that, if a person has been infected with a skin disease through contact with a person suffering from the disease, the latter will have got rid of his illness.

4. **The personal soul-substance in man.**—The soul-substance of a man is also imagined to be personal; this is specially the case with the tribes among whom the idea of individuality is more highly developed than in the case of a communistic society. This personal soul-substance is then the personification of all the impersonal soul-substance in man. It has the shape of its owner, but the Indonesian always imagines it as a diminutive human being, as large as a thumb: hence it is concentrated soul-substance. It can separate from the body voluntarily or by compulsion. Some tribes, *e.g.* the Toba Battak, endow it even with an independent existence outside of man. This is also found among the Karo Battak, who recall the soul-substance when it is going away, not to its owner, but to his house. A Loda (Halmahera) story tells of a person who keeps his soul-substance in a bottle. Sometimes people procure a certain object of which the soul-substance is supposed to be very fond, and this object is then thought to bind the soul-substance to the house. This custom is specially prevalent among the Battak. Most of the Indonesians hold the belief that, although the soul-substance may carry on an independent existence, it has its home in the body. If it is too long separated from the body, the person falls ill and dies.

(1) The Indonesian sees his soul-substance embodied in his *shadow*. To the question whether a new-born child has soul-substance, the answer in Halmahera is: 'Of course, for it has a shadow.' Some assert that there are people who have no shadow, or only a very faint one; they will die soon, as their soul-substance is gone (Macassars, Kailians, Añkolaians). Food on which a person's shadow falls must not be eaten, else the person is harmed, for his soul-substance is eaten (Dayaks, Niassians, Achinese, Añkolaians, Javanese, Malays). Throughout the Malay Archipelago no one must stand on a shadow, tread on it, hew, or stab it, nor let his shadow fall on a grave or a tree or any other object in which a spirit is thought to reside, as the soul of the dead person in the grave or the spirit in the tree might seize the shadow (soul-substance), and cause the person's death.

(2) There is also a close relation between the *name* and the soul-substance of a man. If sorcery is practised, the soul-substance of the man who is to be ruined is called upon by his name to approach. The Javanese think that writing some one's name on a bier is sufficient to destroy him. The names of those who are out hunting, or on a journey, must not be mentioned by those at home, else their soul-substance returns home, or they fall ill—at all events, they are unable to carry out their intention (Torajas, Galelarese). The Indonesians think that an evil spirit loses its power as soon as its name is pronounced. Many plants owe their supposed healing power only to their name. The names of those who are ill are changed, in order to mislead the spirit who is annoying them. A child who has not yet received a name is not regarded as a human being; when such a child dies, it is put into the earth without any ceremonies (Dayaks, Torajas, Macassars, Javanese, Añkolaians, Toba Battak).

(3) During *sleep* the soul-substance separates from the body, and wanders about; what it sees the man dreams. In sleep the soul-substance meets the souls of the deceased. It is universally assumed by the Indonesians that, when the souls of the deceased receive the dreamer kindly, and give him food, he will soon die. The Dayaks, Torajas, and Javanese court meetings with spirits by going to sleep in places inhabited by them. On various occasions an attempt is made to learn through a dream what the dead say, *e.g.* in case of marriage (Dayaks, Niassians); when trying to find suitable trees when seeking camphor (Battak); when choosing a branch of trade (Javanese), etc. Among some tribes a person watching near a corpse must not sleep, because the soul of the deceased might easily seize the roving soul-substance; and a sick person is not allowed to fall asleep, lest the soul-substance should go away and never return. After an oppressive dream, which may have frightened the soul-substance and caused it to depart, it is necessary to bring an offering to call it back. It is wrong to wake a person suddenly, because the soul-substance may not have had time enough to return. The strict prohibition against stepping across a sleeping person, which at present is only looked upon as bad manners, may be traced to the same idea.

(4) *Fright*, a *yearning* for some one or something, *want*, and *discontent* also cause the soul-substance to move to another place, with the result that the person falls ill. Hence it is only when in a passion that Indonesian parents dare to beat their children; when it is beaten the child gets discontented, then its soul-substance may run away and the child fall ill. To prevent the loss of soul-substance, *e.g.*, in times of epidemics, bits of tape are tied round the wrists (Torajas, Dayaks, Minañkabauians, Niassians, and Battak). The soul-substance goes into and out of the body through mouth, nose, or ears, but usually through the crown of the head, through the large fontanel. Only the Papuans say that it goes in and out at the shoulder, under the collar-bone. The soul-substance does not always leave voluntarily; it may be carried off by other people, or it may follow a man of its own accord. The custom of refusing a stranger admittance to mother and child during the first few days after a confinement must be owing to fear of this; the very frail soul-substance of the child might cling to the stranger and go with him (Achinese, Dayaks, Macassars, Javanese). Women must abstain from festivities, dances, and some daily occupations while their husbands are travelling, in order not to hamper them on their journey

(Central and Southern Celebes). The fear which most Indonesian tribes have of being photographed arises from the thought that the soul-substance may be carried off with the photograph. The soul-substance of a man is often lured away by sorcerers for the purpose of injuring him; and in times of war the soul-substance of enemies is lured away in the conviction that the enemies themselves will follow it—thus causing them to fall an easy prey to their lurking foes. Rice and eggs are always used as an enticement (Battak, Niassians, Torajas, Dayaks). Finally, a man's soul-substance may be tempted away by the soul of one of his deceased relatives, either because it longs to have him with him or as a revenge for some offence.

If the soul-substance remains long separated from its home in the man, the man must die. When it is suspected that the soul-substance is gone it must be brought back. The sick person tells where he first felt ill, and the soul-substance is found there. After a burial the soul of the deceased is accused of having stolen the soul-substance, and it is brought back from the grave. If a spirit has taken away the soul-substance, this is revealed by sorcery or in a dream. The calling back of the spirit is very simple: a mother, thinking that the soul-substance of her child is gone, calls, 'Come, soul-substance,' sometimes accompanying this by the sound with which chickens are called. Among the Olo-Ngaju, when a child falls downstairs, the mother scoops up in a basket the soul-substance, which she thinks has been lost by the fright; and among the Javanese, if a person comes home feeling ill, a relative takes one of his garments, and, trailing this along behind him, runs to the spot where the person first felt ill, catching up the lost soul-substance in this way. Generally, however, they have recourse to a sorcerer. He goes to the spot in question with an offering and a piece of cotton or a branch of a tree. The soul-substance is caught in the piece of cloth or in the branch, carried home, and applied to the sick man's head (Moluccas, Minahassa, Central and Southern Celebes, Timor; among the Dayaks, Javanese, Sundanese, Niassians, Battak, and Gayos). In Bolaã Mofiondou and among the Malays it is sometimes caught in a doll; among other tribes generally in a bowl or in a bag of rice (Southern Celebes, Watubela, Olo-Dusun, Land Dayaks, Karo and Timor Battak, Malays). The priestesses among the Bahau Dayaks declare that they split the sick man's head, and thus open a way for the soul-substance; or remove it by placing a beautiful garment on the patient's head. Occasionally the sorcerer uses a ladder for the soul-substance to pass along; this is a thread (Timorese) or a string of beads (Land Dayaks of Sarawak). When the soul-substance has been caught, it looks like a piece of a leaf (Minahassians, Torajas), a little spider (Timor, Nias), or hair (Dayaks of Sarawak), coal, oil, earth, or blood (Olo-Dusun and others).

(5) *Sneezing* is generally looked upon as one of the signs that the soul-substance is leaving the body or returning to it. The belief is wide-spread that a sick man will recover when he sneezes, because then the soul-substance has come back. The wishes pronounced by a mother when her child sneezes are to the effect that a spirit may not take away the soul-substance which has issued out of the child (Torajas, Javanese, Battak, Dayaks). For grown-up people sneezing is a sign either that friends think of them or that enemies want to harm their soul-substance. In consideration of the latter case imprecations are frequently uttered with sneezing.

When a spirit has caught the soul-substance, a doll is often made representing the sick person, and this, instead of the soul-substance of the patient, is offered to the spirit (Uliassians, Torajas, Minahassians, Macassars, all Dayak tribes, Malays, Battak, Niassians). The name given to this doll often has the meaning of 'ransom,' 'substitute,' 'price for which something is bought,' etc. The doll is generally brought beforehand into closer connexion with the sick person by adding to it a thread of his clothes, a hair, some saliva, or some scrapings of skin and nails, or by simply pressing it against him. Another kind of substitute is a doll representing the patient, which is ill-treated, in order to give satisfaction to the spirit which has caused the disease, that it may refrain from troubling the sick man any longer.

5. **Voluntary departure of soul-substance.**—When the sick person continues to be ill in spite of all efforts, this is a proof for the Indonesian that the spirit has taken the soul-substance to a spot whence men cannot bring it back. Then a priest or a priestess must be summoned, who is conversant with the spirits, and who can conjure up well-disposed spirits to help them in their search for the soul-substance. These priests and priestesses generally intone a litany, in which they record their experiences on the journey to the spirit world. Then the priest invokes the help of the spirits which are well disposed to man. The spirits come for the priest in some vehicle (generally the rainbow), and conduct him (*i.e.* his soul-substance) to higher regions, where after many meetings with gods and spirits, and after some vicissitudes, he regains the lost soul-substance, and, having returned to earth in the same vehicle, restores it to the sick person. The idea which gives rise to this practice is that in sleep the soul-substance can move about freely in the haunts of the spirits. Among the Javanese and Buginese, and in the Moluccas, the priests and priestesses still actually lie down to sleep. Among other tribes sleep is only feigned. The language used by the priests is a mixture of words of their own, circumlocutions, and words derived from foreign languages. All these things have certainly been used to enhance the importance of the priests and priestesses, but among the Indonesians the priests have never practised a secret cult. The above is true of Dayaks, Torajas, Minahassians, Tobelorese, Buginese, Minañkabauians, and Javanese.

The personal soul-substance may separate from the body in order to harm a person. Those who possess this power are wer-wolves and witches. Some tribes believe that the whole wer-wolf changes into a tiger (Malacca, Sumatra, Java), into a crocodile (Philippine Islands, Lombok), into a dog or cat (Timor); but most of them believe that only the soul-substance changes into an animal, and the body remains at home. As a rat, dog, snake, milliped, owl, etc., it penetrates into the houses of people to injure them. When the soul-substance leaves or enters the body, it does so in the shape of a mouse (Timor), a firefly (Bali, Central Celebes), or a lizard (Malays). The harm which the wer-wolf is supposed to do to people is to eat their soul-substance; he does this by taking the entrails (especially the liver) out of a man (Bali, Halmahera, Central Celebes, and other places), by drinking the blood (Southern Timor), or by preying upon the heart (Korinchi). A man becomes a lycanthrope by inheritance or by transmission (Central Timor, Central Celebes, Dayaks, Malays), by pronouncing certain charms (Java, Bali), or by offerings to evil spirits (Halmahera). It is not always possible to recognize a lycanthrope; sometimes, however, he may be known either by twisted feet (Atche), or by want of the groove under the nose in the upper lip (Korinchi), or sometimes by peculiar actions, as, *e.g.*, standing naked on his head (Central Timor). When some

one is suspected of being a wer-wolf, it has to be decided by an ordeal whether he is really guilty or not; if he is guilty, he is killed.

The witch (vampire) is a woman, who can sever her head from her body, and make it fly through the air to harm people; the bowels fly along with the head; she uses her ears (sometimes her lungs) as wings. Generally the name for witch points to this power; *e.g.*, among most of the Indonesian tribes the word is connected with the Malay *tanggal*, 'to draw out, to pull out.' The witch may be recognized by the noises which she makes on her journeys (represented by *ko* or *po*). She works harm in the same way as the wer-wolf. She can go on her expeditions only by night; if she has not returned to her body before daybreak, she dies. The Indonesians try to protect their homes from visits of witches by all kinds of means, the most common being the hanging up of some thorny boughs. The witch is killed when her guilt has been convincingly proved.

6. **Soul-substance of animals.**—According to the Indonesians, the soul-substance of animals is similar to that of man. This appears from their folklore. In the story of creation of the Karo Battak, men were to be born from eggs, but through the carelessness of a mythical personage the eggs broke too soon, and animals and plants issued forth. Numerous stories tell that animals were originally men; this applies specially to monkeys, crocodiles, and birds; but also to deer (Macassars, Torajas, Malays) and to dogs (Halmahera). Women give birth to animals, as is generally told of the crocodile, of the iguana (Papuans, Madurese), of snakes and lizards (Battak). Animals also may bring forth human beings, as monkeys (Malays), dogs (Java, Lombok, Southern and Central Celebes, Nias), buffaloes (Macassars), and deer (Dayaks). Men sometimes turn into animals by eating part of an animal, into birds by eating birds' eggs (Minahassa), into crocodiles by eating crocodiles' eggs (Dayaks), into snakes by eating the flesh of snakes (Minahassa, Padang). Animals sometimes play the part of allies of man.

Man uses the soul-substance of animals for his own benefit: the ashes of the milliped or of the burnt prehensile tail of the cuscus are rubbed between the hands to make them strong in combat (Galelarese); lizards are used in cases of leprosy, on account of their regenerating power (Java); the head and the fat of the tortoise are used to bring splinters to light, in virtue of its power of drawing in or putting out its head from under its shell (Torajas, Battak). The bones have special power; bones of crows make a person dexterous in stealing, and in Central Celebes they make a person invisible. Everywhere we meet with stories that miraculous trees grow out of buried bones of animals. Skulls of deer and pigs are hung up in the house to call the soul-substance of their fellows (Macassars, Torajas, Galelarese, Niassians). The blood of animals plays an important part at sacrifices. Sacred heirlooms are rubbed with blood to give them power (Macassars and Buginese); padi-seeds are sprinkled with blood to make them grow rapidly (Torajas, Dayaks). The Macassars drank deer's blood to assimilate themselves to these animals, in order to catch them more easily. The saliva of animals also has power; we find cases where people are cured by the saliva of a cow (Padang *panjañ*), a tiger (Javanese), and dogs (Añkola, Halmahera). The saliva of hens is applied to cure stings or bites of venomous beasts. On the other hand, the animal itself is very often used, burnt and pounded to powder.

Animals which are of special importance to man are endowed with a personal soul-substance. Thus, among a tribe of hunters dogs are considered to possess personal soul-substance; they have names, and are spoken to and treated as men (Torajas, Galelarese, Dayaks). This continues up to the time when they are no longer hunters (Minañkabauians, Malays). Buffaloes and cows also have personal soul-substance; they are addressed, their soul-substance is invoked, and offerings are given to them (Minañkabauians, Achinese, Battak, Dayaks, Javanese, Timorese, Macassars, Buginese, and Torajas). As a rule one animal in a herd is considered as the leader which keeps the herd together, and is neither killed nor sold.

7. **Soul-substance of plants.**—According to the Indonesians, plants too have soul-substance similar to that of man. The close relation between man and plant appears from stories. Sometimes a person going on a journey gives the relatives whom he leaves behind a plant, which will languish when he is in danger or ill. Many tribes plant a coconut at the birth of a child; the soul-substance of the child is then bound to the tree when it grows up. Other stories tell that some trees were originally men, *e.g.*, the *Metroxylon* and the *Arenga saccharifera*; others deal with persons who have come forth from trees or plants, especially from rotan and bamboo. There are plants to which a particularly strong soul-substance is attributed, on account of their tough vital power. With all Indonesians the *Dracæna terminalis* stands foremost among them. It is the sacred plant, which is used by the priests in all their proceedings, and whose strong soul-substance they try to transfer to man. The name and shape of plants characterize their soul-substance, and to this the Indonesian pays heed when seeking for cures for diseases, or for bringing about some change in his body. In Central Celebes there is a tree called *lenturu*; now *turu* means to sleep, and therefore the leaves of this tree are used to alleviate (cause to go to sleep) pain. The soul-substance of the principal trees and plants which are of great use to man is imagined to be personal: thus fruit-bearing trees are often addressed as persons. The rice is fed by touching the stalks with rice-porridge; wood and leaves of trees with large fruit are laid between the rice, that it may form large grains; all kinds of precautions must be taken, lest the soul-substance of the rice should be frightened and flee. If from the languishing condition of the rice it appears that the soul-substance is gone, then it is brought back as with man. This soul-substance is imagined in the shape of a bird or a snake; particularly at the moment when the rice is to be cut, it is necessary to be careful not to startle the soul-substance; then an object is made out of rice-plants, the 'rice mother,' which will keep back the soul-substance of the other rice; it also attracts the soul-substance of rice which has got lost through birds or in other ways; the soul-substance of the rice mother is still more strengthened by the addition of stones, iron, and plants with strong soul-substance; it is spoken to kindly, and it is told what is desired from it; with great show of honour the rice mother is carried home, and preserved in the barn with the other rice. Among trees the coco-palm has a personal soul-substance. It is said to have grown out of the head of a man. The nut is frequently used in sorcery; various animistic actions take place when planting it. In order to prevent the tree from shooting up too rapidly it is planted in the afternoon, when it casts a short shadow, or the people who plant it squat down; in order to make it bear much fruit, it is planted by a person who has many children and grandchildren, etc. The *Arenga saccharifera* grew out of a woman; the palm wine is milk from her breasts, or it is her tears; during all the operations to which the tree is subjected it is also

spoken to (Torajas, Dayaks, Javanese, Niassians, Battak). In the Moluccas the clove tree is considered and treated exactly in the same way as a woman with child, during the time that it is in bloom; people are particularly careful to avoid anything that might frighten the soul-substance of the tree. The Battak believe that the camphor tree has a spirit of its own to which sacrifices are offered; the camphor-seekers use a language of their own making, lest the soul-substance of the tree should understand what their object is and hide its camphor crystals from them. In Sumba the natives call the sandalwood tree *ai nitu*, *i.e.* spirit wood, and formerly nobody dared cut down such a tree. In a grove of caoutchouc trees there is one tree which is considered the chief of all, and which takes care that the soul-substance of the other trees does not vanish (and with it the sap); such a tree is never tapped.

8. **Soul-substance of objects.**—That objects also have soul-substance appears from the use that is made of them. Very often people carry with them iron objects, stones, china, beads, or hard fruits, as some kinds of nuts, or make their children carry them about, that their soul-substance may be as hard as that of the objects mentioned (Malays, Battak, Gayos, Dayaks, Sundanese, Macassars, Torajas, Galelarese). Brittle objects are brought into contact with hard ones, to make them hard; *e.g.*, an earthen pot is touched with iron or stone (Macassars, Torajas). Objects are also fed: agricultural tools are fed on the new rice (Dayaks, Torajas, Central Timor); the plough gets an offering (Macassars); the loom is given rice to eat (Southern Timor); the rifle gets part of the game (Central Timor); the Javanese offer sacrifices to all kinds of objects—to their cart, their barn, etc. The Indonesian smiths in particular offer sacrifices to their tools. A large piece of gold is supposed to attract other gold (Achinese, Parigians, Torajas, Dayaks); a particularly large diamond to attract other diamonds (Dayaks). The soul-substance of iron plays an important part among the Indonesians: they sit down on iron to make their own soul-substance strong (Malays, Macassars); iron is used to make people invulnerable (Karo Battak); water in which iron has lain is drunk to produce strength (Nias, Java, Central Celebes, Halmahera); a Javanese woman-doctor always carries iron about with her, in order to give additional force to her massage; among the Torajas and Dayaks iron plays an important part in various solemnities. The smith, who handles iron every day, is considered a very important man (Battak, Dayaks, Torajas), and among the peoples who have become Muhammadans he has continued to be the representative of heathenism. In those countries where gold is found there are all kinds of precepts not to drive away the soul-substance of the gold (and with it the gold itself) (Malays, Minañkabauians). The Dayaks believe that the soul-substance of gold can avenge itself on the gold-seeker and make him ill. In the tin explorations among the Malays it is necessary to avoid everything that might frighten the soul-substance of the tin; the tin ore is always heated with great respect.

9. **Metempsychosis.**—What becomes of the soul-substance after death? Some of the tribes believe that it passes into soul, but most of them do not. The facts prove that after the death of a person the soul-substance continues to be distinguished from the soul (Dayaks, Torajas, Papuans, Timorese, and others). The general idea is that after death the soul-substance returns to the chief god, who doles it out again to other people, animals, and plants; or this animation takes place directly. The conceptions concerning the soul-substance have given rise to the belief in metempsychosis—which in its turn has been superseded by the belief in the soul, in man living an independent spiritual existence after death. Even in this earthly life the soul-substance can move to another person. It is universally believed that, when a child resembles its father (or its mother) strongly, it has got possession of that parent's soul-substance, and he (or she) must die. If a child resembles a person who has died, the dead one has been incarnated in the child (Javanese, Balinese, Niassians, Dayaks). The soul-substance of the dead is also transmitted to animals and plants: beasts of prey are ancestors who avenge a violation of moral laws. The dead are also supposed to live on in animals which have something in common with the spirits: the firefly, because of its mysterious light; birds and butterflies, because they can soar up to the realms of the spirits; snakes, because they come forth from holes in the earth, from the under world, etc.; and house lizards and mice, because they live with men in the same house, etc.

The soul-substance of a living person is imagined as a firefly (Torajas, Battak, Niassians); also that of deer and swine (Battak, Dayaks), and of plants (Javanese). Moreover, all the Indonesian tribes look upon the firefly as the incarnation of a deceased person. The soul-substance leaves a sleeping person in the shape of a cricket (Sundanese and Galelarese). The cricket is a dead person, showing the living the way to the Land of Souls (Torajas). Sometimes a blowfly is an embodied curse which comes to some one (Kailians, Dayaks); generally, however, it is a dead person who comes to fetch a relative to the Land of Souls (Torajas, Javanese, Añkolaians, Battak, Niassians); sometimes it is a person who has died abroad, and has come to announce his death to his relatives (Galelarese, Macassars). Only in Añkola and Nias is the butterfly regarded as a dead person; everywhere else it is looked upon as the soul-substance of a friend who has come to announce his visit to some house; sometimes it is the soul-substance of animals (Torajas, Battak). If a butterfly settles on a sick person, the latter improves in health, for his soul-substance has returned (Torajas, Minahassians, and Añkolaians). Soul-substance is also supposed to have the shape of a bird, as is proved by the fact that it is summoned back by interjections with which chickens are called (Buginese, Macassars, Malays, Minañkabauians, Central Celebes). The idea that birds are incarnations of the dead is prevalent throughout Indonesia.

Among the Torajas, Dayaks, and Timorese the mouse is supposed to be the soul-substance of a living person. When a mouse nibbles at the clothes or nails of some one, it is considered by nearly all the tribes as a dead person who has come to take him to the Land of Souls. A snake is generally looked upon as a dead person, whose coming forebodes evil. Among some tribes, *e.g.* the Dayaks, the soul-substance appears as a snake, but as a rule a reptile represents a dead person. If it enters a house, it is a person who has died and has come to fetch one of the inmates. The soul-substance of a lycanthrope appears among some peoples as a house lizard (Malays); but in other cases this animal is taken as the incarnation of a dead person who wishes to continue living in the same house with his relatives.

Remnants of the belief in the transmigration of souls are found everywhere throughout the Archipelago. Man can pass into all kinds of animals; but in these ideas concerning metempsychosis there is not a trace of any thought of retribution. This is met with only among the Javanese and Balinese, who have been under the influence of the Hindus, and who try to find charms to secure

for themselves a new birth into a higher being, or lead the life of a hermit for this purpose.

10. **The worship of animals.**—Closely connected with the belief in the transmigration of souls is the worship rendered to some animals by the Indonesian peoples, because they think their ancestors are embodied in them; such animals must not be harmed. Examples are the white hen (Battak), or another bird (Tagalas), or a species of monkey (Battak, Dayaks), pig (Babar), buffalo, deer (Dayaks), eel (in the Philippine islands, in Southern Celebes, and the Moluccas). An object of universal worship among the Indonesians is the crocodile. In Java and Sumatra it is believed that the souls of the ancestors have become crocodiles, which protect their descendants. They are killed only by way of revenge when they have killed a man. Mothers place the placenta of their children in a small vessel and let it float down the river, as an offering to the crocodiles (to the ancestors). In Bañka good and evil are supposed to be due to the crocodile; it is addressed as 'high lord'; at festivals sacrifices are offered to it; the highest thing imaginable is to become a crocodile after death. Buginese and Macassars see their ancestors in crocodiles, and throw offerings into the water; a crocodile is believed to devour a man only by mistake. Formerly a virgin was offered to the crocodiles by the Timorese when a new ruler ascended the throne. All through the Moluccas the crocodile is worshipped, and people refrain from eating its flesh. In Celebes and the islands north of it the crocodile is called 'grandfather.' In all the temples of the Torajas figures of crocodiles are found. Many Indonesian tribes consider the lizard as the incarnation of the household gods of the ancestors living in the house. If an offering is put ready for those household gods, and a lizard is heard, this means that the souls of the departed have eaten enough, or that they want more (Halmahera, Southern Celebes, Nias). A worship proper, however, as is found among the Polynesians, does not occur in Indonesia. It is probably because there were no crocodiles found there that the lizard cult has developed so strongly. Wherever tigers are found (Java, Sumatra, and Malay peninsula) they are worshipped as incarnations of ancestors; they are called 'grandfather,' and are never hunted. The Timor Battak believe that only very old men who have lived exemplary lives change into tigers, and protect their descendants in this shape.

11. **Fetishism.**—The fetishes of the Indonesians are objects with a soul-substance which is thought to be personal. These objects are used by men to their own advantage. All through the Archipelago stones are found in the shape of men, animals, and plants, but they are not generally fetishes. The Indonesians do not pray to their fetishes, but they feed them on rice, eggs, and blood to strengthen their efficiency and power to bless. The fetish is addressed as a person.

(1) All *objects* can become fetishes; this depends on their singularity or rarity, or the circumstances under which they are found. Very common fetishes are bezoar-stones, which are found in animals and plants. The Indonesians consider them as the concentrated soul-substance of the animal or plant. They are used for various purposes: they are worn on the naked body, to make the strength pass from them into the body; they are supposed to ensure a long life, to stanch blood, to procure invulnerability. In some parts of the Archipelago a trade is carried on in these stones. So-called thunder-stones, objects from the Stone Age, are also treated as fetishes. They are considered as the 'teeth' of thunder and lightning. They occur everywhere, and are used to allay the elements and bring about rain or dry weather. They also render a person invulnerable in war. Among the fetishes common stones are also found. The Indonesians look upon stones and mountains as the skeleton, the bones, of the earth; and, just as they consider the bones of man as the most important, the least transitory part, so they think stones the most important part of the earth; hence their objection to the chipping of stones by explorers. Special stones may become fetishes; sometimes they are indicated in dreams, or their shape or colour reveals them, or they strike some one's fancy. Stones as fetishes are found everywhere; the Minañkabauians have even stones producing sound; they are rubbed with blood to make them efficacious, and fumigated with incense. Stones are used as fetishes mainly in Timor; they tell their owners in a dream what sacrifice they wish; altars are erected for them; they are generally fed on rice and eggs. There are State and family fetishes. The soul-substance of the precious sandalwood is embodied in a stone. Among some tribes a large stone is erected at every village, and this embodies the soul-substance of the whole population (Nias, Minahassa, Borneo). Stones which are said to have brought forth little stones are also found as fetishes (Minañkabau, Central Celebes). Fetishes are frequently used as amulets; they are worn round the neck, on the belly, or across the shoulder, and consist mostly of stones, twigs or roots of a peculiar shape, or teeth of men and animals. War amulets are in general use as fetishes which give luck in warfare. The Torajas use a string of horned shells for this purpose. In Timor this amulet is a little bag filled with stones and roots, which is kept at the top of the house, where the ancestors are supposed to live. In Halmahera and among the Dayaks little pots filled with sacred oil are often worn round the neck. The Dayaks also use strings of the teeth of beasts of prey. Other amulets are hung in fruit-trees, to save them from being robbed of their fruit. They are often known by the name of 'red-eye,' and mostly consist of nettles and other things causing itching, which will bring illness to the thief. They have the distinguishing feature of fetishes—viz. to act self-consciously like persons. A remarkable fetish is the *pangulubalang*, a rough stone image, in which holes have been bored, and filled with a pulpy substance made of eyes, lips, nose, and other parts of a corpse. With this mixture the stone is animated, *i.e.* made into a person. The soul of the corpse of which the mixture has been made has nothing to do with this. These stone images are planted near the villages, and warn the inhabitants of an approaching danger. These stones are also found among the Dayaks, Minahassians, Niassians. Among the first and the last mentioned, life is infused into them by means of blood. The Dayaks sacrificed to them before they went to war, and the captured heads were placed near them. Among the Battak this principle is applied in the magic wands, carved sticks, which are also animated by means of blood, and are used for various purposes—especially to bring about rain or dry weather. The *perminakan* is a pitcher filled with blood, with a wooden stopper, on which a human figure has been carved. *Pagar* ('fence') consists of fetishes prepared in different ways and hung up in the house; these objects guard the owner against all kinds of evil practices and magic spells and poison.

Objects which have gradually become fetishes are old heirlooms, known in the Archipelago as *pusaka*. They derive their fetish power from the circumstance that in olden times they were used by the ancestors. The objects are so sacred that nobody would think of selling them. It is impossible to give an enumeration of the different *pusaka*;

their number is continually added to. We need mention only the *bělangas*, or sacred earthen pots, of the Dayaks, seen all through Borneo. These pots are old and of foreign origin—the Dayaks say, of supernatural origin. Frequent attempts have been made to copy the pots, but the Dayak easily distinguishes the genuine ones from the imitations. The Dayaks pay fabulous prices for these objects. It is recorded that vessels have been bought for £330, £1200, and one for as much as £2000. When a pot breaks the shards are sold separately at high prices. These pots have supernatural power: they bring luck and avert evil. They secure to their owners a flourishing trade, a plentiful harvest, success in hunting and catching fish; they ward off diseases and disasters, and banish all evil spirits from their neighbourhood. Water drunk from them has healing power. They are worshipped like gods; after one has been bought a sacrificial feast is given; frequently they are rubbed with the blood of pigs or of fowls.

Among the *pusaka*, or heirlooms, the State ornaments call for special mention. Each of the different Toraja districts in Central Celebes preserves some object—as a spear, a *baju*, a wooden rice-spoon, a ladle of coco-nut shell, or an earthen pot. These objects are said to have belonged originally to the household of a prince who ruled all the Torajas. Nobody dares to take charge of these old heirlooms but the chief himself, who is the representative of the tribe. Among more primitive tribes these State ornaments are no more than fetishes which bring luck to the country. They have become of more importance to more civilized tribes, as the Macassars and the Buginese. Their State ornaments consist of all kinds of objects; offerings are made to them, and they are fumigated with incense; frequently a vow is made, in cases of disease, pregnancy, childlessness, etc., to sacrifice an animal to these objects. In cases of general disasters, sacrificial feasts are organized for them, at which they are rubbed with the blood of a buffalo. The man to whose care they are entrusted is the ruler of the people. All kinds of wonders are told about the State ornaments in the Padang highlands; they are said, *inter alia*, to emit a glow which is injurious to the health of children. People wash themselves with water in which they have lain. Another ornament killed the person whose shadow was cast on it. In some regions of the Malay Peninsula the natives were so afraid of the ornaments that they did not dare to look at them. The State ornaments at the courts of the Javanese princes are displayed only at feasts and ceremonies; they consist, for the greater part, of solid gold objects representing mythical beings or animals. A cannon was supposed always to warn the prince of imminent dangers, and another cannon could make women fruitful; for this reason barren women made offerings to that fetish, during which they sat astride on horseback like men.

(2) *Persons* may also become fetishes even during their lives,[1] *i.e.* some persons are considered to be endowed with supernatural power, which renders them objects of adoration. This may be said to be generally true of all native princes in the Archipelago: their parents are supposed to have descended from heaven; they have white blood; their curse alone is sufficient to ruin all the land, and so forth. Perhaps the most striking example of this may be found in the *singa-mangaraja*, or priest-king of the Battak: he was said to have been in the womb for seven years; his birth was attended with all kinds of miraculous natural phenomena; when at a more advanced age he slept with his legs upwards and his head downwards, all the rice grew with its roots in the air. His tongue was overgrown with hair, and one word uttered by him could destroy a man or lay waste a region. Another example is furnished by James Brooke, the raja of Sarawak: water which he had blessed, or in which he had washed his hands or feet, was scattered over the land to make it fertile; and he was invoked by the Dayaks in their prayers.

(3) We know only one example of *living animals* becoming fetishes, viz. the worship of the turtle-dove by the Javanese and Malays in Sumatra. This, however, is not purely Indonesian, but was introduced by the Hindus. For the dove with the special marks a high price is paid; it brings its owner all kinds of blessings, averts disease, gives a good harvest of rice, and so on. These birds are tended with great care. Their dead bodies are embalmed and preserved, as they retain their power even after death. (See art. AUSTRALASIA.)

**12. Spiritism; the appearance of the soul.**—The soul living on after death is to the Indonesians a kind of essence of the dead body, having the same shape and the same defects as the material body; *e.g.*, the souls of people whose heads have been cut off by the enemy enter the Land of Souls without heads.

On this belief is based the practice of tatuing, which, as far as the Malay Archipelago is concerned, occurs only in the Moluccas and in Borneo. The tatu marks are also impressed on the soul. It is no longer possible to ascertain for what purpose this is done—whether it serves as clothing for the soul, or as a record of important events, or (and this is most probable) whether it is connected with puberty. Of the same nature is the practice of wounding shoulders and breast, as a proof that one does not shrink from pain, and as a test of courage—a virtue which is highly valued in the Land of Souls.

Most of the Indonesian races believe that the soul is black. During or after a funeral they blacken each other with charcoal, soot, or ashes (Torajas, Minahassians, Dayaks, Niassians, Karo Battak, inhabitants of Halmahera and the Aru islands, Papuans), to make the soul of the dead person believe that they also are souls; else it might resent its own death so much that it would kill its relatives. In Timor people cover themselves with a piece of black cotton for this purpose. There are other occasions when the artifice of making people black is practised to delude souls or spirits; babies are blackened when they are left alone (Dayaks, Niassians), and the custom is followed during a thunderstorm or other natural phenomena, in which spirits are supposed to have a hand (Añkolaians, Toba Battak, Karo Battak).

**13. Man's fear of the soul.**—Now and then we meet with instances of the love for the dead one overcoming the fear of his soul; this happens especially with dead children. But as a rule the Indonesians feel great fear of the soul of a dead person. They naturally think that the dead person resents leaving this earth, and in his resentment wishes to have his fate shared by others. He therefore tries to carry off the soul-substance of the surviving people into the grave, which will cause them to die.

The soul of a woman who has died in childbed is especially feared. Such a soul is called *pontianak* with some variations. It has the appearance of a bird with long claws, which utters a plaintive sound. Resenting that she has died in childbed, she tries to make other pregnant women suffer the same fate that has befallen her. She penetrates for this purpose into the woman's belly, and drives her claws into it. In this way she kills both mother and child. Some peoples believe that

[1] Objections may be raised to ranking men and animals with supernatural power among the fetishes. We have classed them here because they come very near to fetishes.

the *pontianak* tries to emasculate men (Western division of Borneo, Ceram, Key Islands, Savu). As a safeguard against the *pontianak*, people hang up thorny boughs (generally of a particular lemon tree) at the entrance of houses in which there are pregnant women. The *pontianak* will keep outside for fear of being wounded by the thorns. The inhabitants of the Philippine Islands bare the genital parts in order to drive away the *pontianak*.

The fear of the souls of the departed has given rise to innumerable methods of keeping them at a distance. Soul and body are believed to be in close connexion with each other, and it is thought that what is done to the body happens also to the soul. Therefore the corpse of a woman dying in childbirth is bound down to prevent her soul from turning into a *pontianak*. Needles and thorns are stuck into her hands and limbs, that she may be afraid to stir for fear of hurting herself. Eggs are placed in her arm-pits, that she may not open her arms like wings, for fear of losing the eggs. Besides these measures, which are universal, the Achinese give such a corpse an entangled ball of cotton and a needle without an eye; when the *pontianak* wants to go off, she must first sew trousers from her shroud, but spends the time in disentangling the cotton and seeking the eye of the needle.

The corpses of other people also are bound (Engano, Malacca, Halmahera, Central Celebes, the Moluccas), or the thumbs and the big toes are tied together, that the soul may not be able to run and seize (Battak, Niassians, Dayaks). The openings of the head, eyes, ears, and mouth are filled up, that the dead person may not be able to see, hear, or speak (Malays, Achinese, Battak, Niassians). Another way of keeping souls from doing harm is to throw ashes, by which the soul is blinded (Torajas, Battak, Niassians, Baduis in Java, Dayaks, Galelarese in Halmahera, in Ceram, and in Babar). The Indonesians also feel the need of representing symbolically the breaking of all connexions with the dead person: by splitting or cutting through a piece of rattan (Toba Battak, Torajas, inhabitants of Babar); by hewing a bamboo into two (Tanimbar), or a coco-nut (Macassars); by tearing a leaf in two (Papuans); by tearing the waist-cloth of the deceased in two (Niassians). Among the Karo Battak, if a woman dies, the widower splits the oblong stone with which spices are ground or tears a sirih-leaf in two. Another common method of separating oneself from the soul is bathing. Bathing is in general a means of getting rid of something unpleasant, something ominous, especially of something in connexion with the dreaded soul. Among the Olo-Ngaju in Borneo this bathing takes place in a curious way. After the burial the relatives of the dead person sit down in a boat, which is upset in the river, so that they all fall into the water; this is done three times. Among some tribes this rite has been reduced to a partial bathing. Some wash only their hands or their feet (Karo Battak, Torajas, Minahassians, and in Babar). The Dayaks in Sarawak break a stone bottle of water to pieces on the ground after the funeral. The tribes which have adopted Islām generally sprinkle water on the grave. Numerous are the methods used to make the soul lose its way to the house, lest it should return to it and haunt it. The Karo Battak bury the corpse of a person who has died a violent death, and whose soul is therefore supposed to bear malice even more than others, with its head towards the village, that the dead man, when he rises, may not be able to see the village. Some, as, *e.g.*, the Battak and the people of Halmahera, run away from the grave, every one trying hard not to be the last. Of very general occurrence is the custom of making the dead body leave the house through a window or a gap in the wall; this window or gap in the wall must face the west (Central and Southern Celebes, Halmahera, New Guinea, Borneo). Some peoples carry out in this way only the corpses of special personages whose souls are particularly dreaded; thus the Battak and the Balinese of earlier times did so only with the bodies of persons of high rank; in Nias the corpse of a woman who has died in childbirth is removed from the house through the floor. The Minahassians try to bewilder the soul of a dead person by running quickly a few times round the house with the corpse. This is probably the origin of the rapid pace at which the Muhammadans in Java and elsewhere in the Archipelago bury their dead. The Niassians make a special path to the burial-place to mislead the soul. It is a common practice, when returning from a funeral, to erect a forked stalk or piece of wood behind oneself on the road to keep back the soul (Tobuñku, Sea Dayaks, Battak, Niassians). Others block up the road with poles (Buru, New Guinea), or light fires and make noise (Sunda, Minahassa, Bolañ Moñondou, Southern Celebes, Dutch New Guinea; among Dayaks, Battak, and Niassians). Some tribes make the coffin as narrow as possible, to prevent the dead person from taking one of the survivors with him into it (Torajas, Galelarese, Olo-Ngaju, Niassians).

14. **Mourning customs.**—The Indonesians assume that, when a person has died, his soul is angry at renouncing life on earth. Afterwards it gets used to its new condition, but at first it is in a mood dangerous for the survivors. Therefore great care is recommended for the first few days after a death; this fear has given rise to the institution of mourning customs.

During the first days after a death the inhabitants of a village must keep perfectly quiet. No noise must be made, dancing or singing is forbidden, music must not be heard, rice must not be pounded, nor coco-nuts thrown down from the trees, nor shots fired; in fact, they go so far as to forbid fishing, sailing on the water, and carrying goods in the usual way. The intention is that no sound should meet the ear of the soul to indicate the way to its home; people try to conceal themselves from it. Such injunctions are found among all Indonesian peoples.

In the mourning clothing of the Indonesians is embodied the idea of hiding from the departed spirit or making oneself unattractive to it by wearing old, worn clothes; but these clothes have another purpose: the wearer wishes to make himself as much as possible similar to the dead person. Hence the Galelarese wear pieces of the shroud as clothes or as wraps round the wrists. This is found in the Tanimbar Islands and in Southern Celebes. It is also advisable to wear old clothes or clothes no longer in use, because the souls of the departed in the Land of Souls are supposed to wear old-fashioned clothes. Thus the rule survives here and there to wear mourning clothes of bark (Dayaks, Central Borneo, Torajas), or to return in some way to old times (Ceram, Ambon, Aru, Boni). It is a wide-spread custom to take off all ornaments, or to wrap pieces of cloth round them, to prevent them from being seen.

These mourning customs are observed by the nearest relatives, or by a wider circle when the deceased was the chief of a tribe. Widows and widowers especially have to beware of the revenge of the soul. They must have their hair cut or shaved off; among some tribes more distant relatives also submit to this rule (New Guinea, Halmahera, Luañ-Sermata, Babar, Timor, Sarawak, Borneo, Engano, Battaland). In Timor all male subjects shave their heads at the death of a chief,

and among some Dayak tribes the serfs do so at the death of their master. Sometimes this shaving of the head is considered as the laying down of the ornament of the hair, but more probably it betokens a sacrifice of a part of oneself to save the whole.

Widows and widowers must also hide themselves from the souls of their dead mates in a special way, namely, by covering the head with a mat (Torajas), a piece of cotton or bark (Babar, Boni, Kenyah Dayaks, and Battak), a hat or cap (Papuans, Minahassians, Bahau Dayaks, Olo-Ngaju, Enggano), or a net (Papuans).

One of the mourning customs is abstinence from certain food, especially daily food; hence sago-cakes are eaten instead of the usual sago-porridge (Papuans, Galelarese, Tobelorese); or maize instead of the daily rice (Torajas, Minahassians, Dayaks); eating in the house of death is not allowed (Silindung, S.-E. Borneo, Southern Celebes); eating is allowed, but not cooking (Minahassa, Minangkabau); among some tribes the widow is fed (Enggano, Southern Nias). Several authorities regard these customs as a renunciation in order to propitiate the souls of the departed. More probably they are attempts to be taken for souls, and thus to escape the vengeance of the departed soul. The rationale of these practices is that the souls of the departed do not eat—at least not in the same way as men; what they eat is invisible; hence those who wish to pass for companions of the dead must pretend not to eat; therefore they leave the house, or the food is put into their mouths by others.

The Indonesians have a short, deep mourning-time and a long, light mourning-time. The former is generally observed by a wide circle of relatives, and lasts from three to seven days (sometimes also till the new moon, as in some islands of the Moluccas). The light mourning is observed only by widow or widower, and lasts till the feast of the dead has been celebrated, when the soul is supposed to have gone to the Land of Souls. Among some Dayak and Toraja tribes the deep mourning is ended by the sacrifice of some animal, which pacifies the vexation of the departed soul. This may have been general in earlier times.

15. **Human sacrifice.**—The fear that a person who has died, especially when he is of high rank, wishes to have a companion in his misfortune, has led the Indonesians to kill a human being, that the departed soul may be satisfied. Afterwards the thought has been attached to this custom that the victim may serve the dead person in the future life. The Indonesians have also a bloodless human sacrifice. Among the Torajas on the south and east of Lake Posso and among the Balinese, when a chief dies, a family of slaves who are to live in the grave-hut are set apart, and treated as souls; nobody may deny them anything, or talk with them. After the feast of the dead has been held, this family is set free, but they are not allowed to live in the village; they are looked on as dead. This custom must also have been prevalent among the Toba Battak; in former times nobody was allowed to give shelter or food to such slaves. Among the Buginese and the Macassars the custom survives to the present day that the slave, male or female, who receives the water in which the corpse of a high-born personage is washed is set free. The Baduis in the west of Java, who guard the sacred graves of the princes of Pajajaran, are most likely descendants from such a slave-family. It is recorded of numerous Indonesian tribes that for some nights after the death of a person watchers are placed on the grave, that the dead person may not feel lonely. This bloodless human sacrifice might be called the link between the mourning rites and the bloody human sacrifice; it was a preliminary measure, which, however, did not do away with the bloody human sacrifice.

In order to get a victim the Torajas go out head-hunting, or buy a slave from another tribe. The scalp is stripped off the head; with it the people who have captured the head dance seven times round the grave, after which they nail bits of the scalp on the coffin and the posts of the hut. The leader of the expedition rips up the widow's or widower's mourning *baju* in the middle of the back, and cuts off a piece from the other mourning clothes. The Mountain Torajas sing for several days round the victim before they kill him; then the head is placed on the sleeping-mat of the deceased, and the scalp is stripped off and hung up in the house. In former days head-hunting on behalf of a dead person was universal in Minahassa. With the blood of the person killed the woodwork of the grave-hut was painted red, and the heads were buried by the side of the grave. Among the Dayaks in S.-E. Borneo the victim was exorcized on the evening before his death, to drive the soul out of his body; hence they thought that they were killing a soulless man the next day. The bodies of the victims were burned, and the ashes placed with the corpse in the coffin. The Kinjin Dayaks threw the heads into the grave, and placed the coffin on them. In Central Borneo they generally bought a person of another tribe, whom they slowly speared to death; the body was buried under the pole which was erected in honour of the dead person, and the head was placed on the top of it. Among the tribes in the district round Sarawak human sacrifices were of frequent occurrence. The victim was tied to the grave, and left there to starve, or he was slain, or buried alive; generally he was a slave from another tribe. In earlier times the custom of finding victims must have been prevalent among the Battak, as it still is among the Niassians. In Bali it has died out, but there are indications that formerly it was deemed necessary to offer a human sacrifice for a dead person. In Sumba, Savu, and Timor the custom existed, and continues to exist. In the first-mentioned island sometimes thirty men were slain for one chief. Human sacrifice was also universal among the inhabitants of the Philippine Islands. Sometimes a favourite slave was given as a companion to the dead person. Under the corpse of a brave man a bound warrior was buried alive.

The meaning of human sacrifice is generally held to be that it gave the dead man a servant to attend on him in his future life. Taking into account, however, that originally there were no slaves, this conception must be of later date; besides, the conception formed of the Land of Souls is incompatible with the idea of servitude. No doubt the fear of the disappointed soul of the dead man, which would like to make others sharers in his fate, has been one of the principal motives. But there is another reason: valour secures a foremost place to the departed soul in the life hereafter. The human sacrifice was intended to endow the departed man with a show of valour; the idea must therefore be that the valour displayed in head-hunting by the relatives left behind would profit the departed soul. This is rendered the more probable by the custom prevalent among the Torajas and Dayaks of enumerating the brave deeds (which are much exaggerated) of the deceased on certain occasions, in the firm conviction that these brave deeds will benefit the departed soul. That the slaughter of slaves must be of a later stage than head-hunting is proved by the fact that those slaves had nearly always to be from another tribe.

**16. Widow sacrifice.**—Widow sacrifice occurred only in Java, Bali, and Lombok. (It is also reported of the Bimanese and the Orang-bĕnuwa, but this is open to doubt.) It has been said that widow sacrifice was universal, and that the mourning rites are a mitigation of that custom; but this is not probable. In Java and Bali widow sacrifice has undoubtedly been introduced under Hindu influence. In Java women vowed that they would follow their husbands in death, and insisted on being burned with the corpse. The last recorded widow sacrifice took place at the end of the 16th cent. in the empire of Balambañan in East Java. At that time women were stabbed with a dagger. They carried a turtle-dove with them, in which the soul was supposed to soar up.

In Bali the burning of widows exists up to the present day, in spite of the earnest attempts of the Government to prevent it. Only women of the second and third castes are burned. Among the Brāhmans widow-burning is rare; and the fourth caste is too poor to pay the cost required for the ceremony. Widow sacrifice is perfectly voluntary. As soon as they have offered themselves they are considered as saints; offerings are made to them, and all their wishes are satisfied; they are in a state of exaltation about all the delights which await them in heaven. Their death raises their relatives also in the estimation of the people. Widows are burned alive, or they kill themselves beforehand by falling upon a dagger. In Bali also the turtle-dove is used to convey the soul to higher regions.

**17. Sacrifices to the dead.**—Sacrifices to the dead are not voluntary gifts; the dead are receiving what is due to them, *i.e.* their own possessions. Originally there was no private property; everything was the common property of a group of people; there was no question of offerings to the dead; they were not necessary, for the feeling of individuality was so undeveloped that there was no thought of an independent existence of the soul after death. The first individual possessions were no doubt hunting trophies and, in a wider sense, all personal adornments. These ornaments were, of course, taken into the grave, as they were supposed to be of no use to anybody but the deceased.

The offerings to the dead are paid from the inheritance of the deceased; sometimes presents are added, but this is not essential, and is done more for the sake of the survivors than for that of the dead; these presents are returned later. The Indonesians exert themselves, therefore, during their lives to provide themselves with clothes and sacrificial animals which may be given to them at their death. The distribution of the inheritance is also connected with the offerings to the dead. As a rule, the inheritance is not divided; but, if it is, this takes place only after the great festival of the dead, because first all expenses must be paid from the inheritance. Generally the dead man receives the mat on which he slept, his clothes, cooking-pan, rice, water, betel, tobacco, valuables, and ornaments.

In earlier times, when giving possessions to the departed soul to take with him, people were prompted by fear of the dead man's envy, if he should see that his property was used by his descendants, rather than by the wish that the gifts might be useful to him in the life hereafter. This fear must have given rise to the custom of giving the possessions of the dead to others (New Guinea, some islands of the Moluccas, Minañkabau).

At present the Indonesians are universally of opinion that the departed soul really uses these objects, or rather their souls, in the life hereafter; and in order to detach the soul from the objects, the food offered must be cooked and the objects broken. It is also usual to give the deceased some trees of his plantation; these trees are then cut down (New Guinea, Moluccas, Halmahera, Minahassa, Borneo, Engano, Nias, Malacca).

The conviction that the departed soul makes use only of the soul of his possessions must have led primitive men to spare the real objects, and to present the dead person only with representations of them. For this reason shrouds and coffins are painted with figures of men and animals; the Dayaks give two boards to their dead, on which all kinds of desirable objects are represented. Arms especially, so valuable to the Indonesians, are copied in wood and given to the dead man (Key Islands, Buru, Halmahera, Batu Islands, Malacca). All other property of the deceased is only exhibited and put away again after the funeral.

Many of the tribes provide the dead person with money (Madagascar, Battaland, Nias, Timor, Halmahera, Macassar, Central Celebes, Borneo), which is laid on his eyes, in his mouth, on his breast, or in his hand. It is supposed that he can procure something for the money in the Land of Souls; but this interpretation is of later date. The money may be considered as part of the dead man's property, which is given to him to take with him, or as an indemnification for all the rest of his property which is not given to him.
